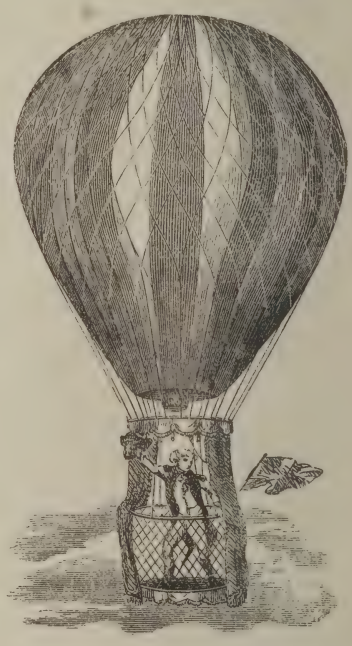
The inventions and discoveries ultimately proving least beneficial to mankind, have generally been received with greater warmth and enthusiasm than those of a more useful character. The aëronautical experiments of the Montgolfiers and others, in France, created an immense excitement, which soon found its way across the Channel to the shores of England. Horace Walpole, writing at the close of 1783, says: 'Balloons occupy senators, philosophers, ladies, everybody.' While some entirely disbelieved the accounts of men, floating, as it were, in the regions of upper air, others indulged in the wildest speculations. The author of a poem, entitled *The Air Balloon, or Flying Mortal*, published early in 1784, exclaims:

'How few the worldly evils now I dread,
No more confined this narrow earth to tread!



Should fire or water spread destruction drear,
Or earthquake shake this sublunary sphere,
In air-balloon to distant realms I fly,
And leave the creeping world to sink and die.'

Besides doubt and wonder, an unpleasant feeling of insecurity prevailed over England at the time. The balloon was a French invention: might it not be used as a means of invasion by the natural enemies of the British race! A caricature, published in 1784, is entitled *Montgolfier in the Clouds, constructing Air Balloons for the Grand Monarque.* In this, the French inventor is represented blowing soap-bubbles, and saying: 'O by Gar, dis be de grand invention. Dis will immortalise my king, my country, and myself. We will declare the war against our enimie; we will made des English quake, by Gar. We will inspect their camp, we will intercept their fleet, and we will set fire to their dock-yards, and, by Gar, we will take Gibraltar, in de air-balloon; and when we have conquer de English, den we conquer de other countrie, and make them all colonie to de Grand Monarque.'

Several small balloons had been sent up from various parts of England; but no person, adventurous enough to explore the realms of air, had ascended, till Vincent Lunardi, a youthful attaché of the Neapolitan embassy, made the first ascent in England from the Artillery Ground, at Moorfields, September 15, 1784. It was Lunardi's original intention to ascend from the garden of Chelsea Hospital, having acquired permission to do so; but the permission was subsequently rescinded, on account of a riot caused by another balloon adventurer, a Frenchman named De Moret. This man proposed to ascend from a tea-garden, in the Five-fields, a place now known by the general term of Belgravia. His balloon seems, from an engraving of the period, to have resembled one of the large, old-fashioned, wooden summer-houses still to be seen in suburban gardens; and the car was provided with wheels, so that it could, if required, be used as a travelling-carriage! Whether he ever intended to attempt an ascension in such an unwieldy machine, has never been clearly ascertained. The balloon, such as it was, was constructed on the Montgolfier, or fire, principle—that is to say, the ascending agent was air rarefied by the application of artificial heat. De Moret, having collected a considerable sum of money, was preparing for an ascent on the 10th of August 1784, when his machine caught fire, and was burned, the unruly mob revenging their disappointment by destroying the adjoining property. The adventurer, however, made a timely escape, and a caricature of the day represents him flying off to Ostend with a bag of British guineas, leaving the Stockwell Ghost, the Bottle Conjuror, Elizabeth Canning, Mary Toft, and other cheats, enveloped in the smoke of his burning balloon.

The authorities, being apprehensive that, in case of failure, Chelsea Hospital might be destroyed in a similar riot, rescinded their permission; but Lunardi was, eventually, accommodated with the use of the Artillery Ground, the members of the City Artillery Company being under arms, to protect their property. When the eventful day arrived, Moorfields, then an open space of ground, was thronged by a dense mob of spectators; such a crowd had never previously been collected in London. As the morning hours wore away, silent expectation was followed by impatient clamour, soon succeeded by yells of angry threatenings, to be in a moment changed to loud acclamations of applause, as the balloon rose majestically into the air. Lunardi himself said: 'The effect was that of a miracle on the multitude which surrounded the place, and they passed from incredulity and menace into the most extravagant expressions of approbation and joy.'

Lunardi first touched earth in a field at North Mimms; after lightening the balloon, he again rose in the air, and finally descended in the parish of Standon, near Ware, in Hertfordshire. Some labourers, who were working close by, were so

LUNARDI'S BALLOON.

frightened at the balloon, that no promises of reward would induce them to approach it; not even when a young woman had courageously set the example by taking hold of a cord, which the aëronaut had thrown out.

The adventurer came down from the clouds to find himself the hero of the day. He was presented at court, and at once became the fashion; wigs, coats, hats, and bonnets were named after him; and a very popular bow of bright scarlet ribbons, that had previously been called Gibraltar, from the heroic defence of that fortress, was now termed the Lunardi. By exhibiting his balloon at the Pantheon, he soon gained a large sum of money; and the popular applause might readily have turned the head of a less vain person than the impulsive Italian.

Mr Lunardi's publications exhibit him as a vain excitable young man, utterly carried away by the singularity of his position. He tells us how a woman dropped down dead through fright, caused by beholding his wondrous apparition in the air;

but, on the other hand, he saved a man's life, for a jury brought in a verdict of Not guilty on a notorious highwayman, that they might rush out of court to witness the balloon. When Lunardi arose, a cabinet council was engaged on most important state deliberations; but the king said: 'My lords, we shall have an opportunity of discussing this question at another time, but we may never again see poor Lunardi; so let us adjourn the council, and observe the balloon!'

Ignorance, combined with vanity, led Lunardi into some strange assertions. He professed to be able to lower his balloon, at pleasure, by using a kind of oar. When he subsequently ascended at Edinburgh, he affirmed that, at the height of 1100 feet, he saw the city of Glasgow, and also the town of Paisley, which are, at least, forty miles distant, with a hilly country between. The following paragraph from the *General Advertiser* of September 24, 1784, has a sly reference to these and the like allegations. 'As several of our correspondents seem to disbelieve that part of Mr Lunardi's tale, wherein he states that he saw the neck of a quart bottle four miles' distance, all we can inform them on the subject is, that Mr Lunardi *was above lying.*'

Lunardi's success was, in all probability, due to the suggestions of another, rather than to his own scientific acquirements. His original intention was to have used a Montgolfier or fire balloon, the inherent perils of which would almost imperatively forbid a successful result. But the celebrated chemist, Dr George Fordyce, informed him of the buoyant nature of hydrogen gas, with the mode of its manufacture; and to this information Lunardi's successful ascents may be attributed. Three days before Lunardi ascended, Mr Sadler made an ineffectual attempt at Shotover Hill, near Oxford, but was defeated, by using a balloon on the Montgolfier principle.

It is generally supposed that Lunardi was the first person who ascended by means of a balloon in Great Britain, but he certainly was not. A very poor man, named James Tytler, who then lived in Edinburgh, supporting himself and family in the humblest style of garret or cottage life by the exercise of his pen, had this honour. He had effected an ascent at Edinburgh on the 27th of August 1784, just nineteen days previous to Lunardi. Tytler's ascent, however, was almost a failure, by his employing the dangerous and unmanageable Montgolfier principle. After several ineffectual attempts, Tytler, finding that he could not carry up his fire-stove with him, determined, in the maddening desperation of disappointment, to go without this his sole sustaining power. Jumping into his car, which was no other than a common crate used for packing earthenware, he and the balloon ascended from Comely Garden, and immediately afterwards fell in the Restalrig Road. For a wonder, Tytler was uninjured; and though he did not reach a greater altitude than three hundred feet, nor traverse a greater distance than half a mile, yet his name must ever be mentioned as that of the first Briton who ascended with a balloon, and the first man who ascended in Britain.

Tytler was the son of a clergyman of the Church of Scotland, and had been educated as a surgeon; but being of an eccentric and erratic genius, he adopted literature as a profession, and was the principal editor of the first edition of the *Encyclopædia Britannica.* Becoming embroiled in politics, he published a handbill of a seditious tendency, and consequently was compelled to seek a refuge in America, where he died in 1805, after conducting a newspaper at Salem, in New England, for several years.

A prophet acquires little honour in his own country. While poor Tytler was being overwhelmed by the coarse jeers of his compatriots, Lunardi came to Edinburgh in 1785, and was received with the utmost enthusiasm. His first ascent in Scotland was made from the garden of Heriot's Hospital, and he came down at Ceres, near Cupar, in Fife. The clergyman of the parish, who witnessed his descent, writing to an Edinburgh newspaper, says: 'As it' [the balloon] 'drew near the earth, and sailed along with a kind of awful grandeur and majesty, the sight gave much pleasure to such as knew what it was, but terribly alarmed such as were unacquainted with the nature of this celestial vehicle.' A writer in the *Glasgow Advertiser* thus describes the sensation caused by Lunardi's first ascent from that city: 'Many were amazingly affected. Some shed tears, and some fainted, while others insisted that he was in compact with the devil, and ought to be looked upon as a man reprobated by the Almighty.' The hospitality and attention Lunardi received in Scotland seems to have completely turned his weak head. When publicly entertained in Edinburgh, and asked to propose a toast, he gave, 'Lunardi, the favourite of the ladies!' to the infinite amusement of the assemblage. His last appearance in England, previous to his return to Italy, was as the inventor of what he termed a water-balloon, a sort of tin life-buoy, with which he made several excursions on the Thames.

OPENING OF THE LIVERPOOL AND MANCHESTER RAILWAY.

One of the 'red-letter' days in the history of railways, a day that stamped the railway-system as a triumphant success, was marked by a catastrophe which threw gloom over an event in other ways most satisfactory. The Liverpool and Manchester Railway was the first on which the powers of the steam-locomotive for purposes of traction were fully established. On the Stockton and Darlington line, formed a few years earlier, traction by animal power, by fixed engines, and by locomotives, had all been tried; and the experience thereby obtained had determined George Stephenson to recommend the locomotive system for adoption on the Liverpool and Manchester line. When this railway was in progress, in 1829, the directors offered a premium of £500 for the best form of locomotive, to be determined by public competition, on conditions very clearly laid down. In October of that year the contest took place; and Mr Robert Stephenson's locomotive, *Rocket*, carried off the prize against Mr Hackworth's *Sanspareil*, and Messrs Braithwaite and Ericsson's *Novelty.* A period of eleven months then elapsed for the finishing of the railway and the manufacture of a store of locomotives and carriages.

On the 15th of September 1830, the Liverpool and Manchester Railway was opened with great ceremony. The Duke of Wellington, Sir Robert Peel, Mr Huskisson, and many other distinguished

persons were invited. Eight locomotives, all built by Robert Stephenson, on the model of the *Rocket*, took part in the procession. The *Northumbrian* took the lead, drawing a splendid carriage, in which the duke, Sir Robert, and other distinguished visitors were seated. Each of the other locomotives drew four carriages; and the whole of the twenty-nine carriages conveyed six hundred persons. They formed eight distinct trains; the first one, with the more distinguished guests, having one line of rails to itself; and the other seven following each other on the second line. The procession, which started from Liverpool about eleven o'clock, was an exceedingly brilliant one, with the aid of flags, music, &c.; and the sides of the railway were lined with thousands of enthusiastic spectators. The trains went on past Wavertree Station, Olive Mount Cutting, Rainhill Bridge, the Sutton Incline, and the Sankey Viaduct, to Parkhurst. Here it was (seventeen miles from Liverpool) that the trains stopped to enable the locomotives to take in water; and here it was that the deplorable accident occurred, which threw a cloud over the brilliant scene. In order to afford the Duke of Wellington an opportunity of seeing the other parts of the procession, it was determined that the seven locomotives, with their trains, should pass him; his carriage, with the *Northumbrian*, being for a while stationary. Several gentlemen alighted from the carriages while the locomotives were taking in water. Mr Huskisson, who was one of them, went up to shake hands with the duke; and while they were together, the *Rocket* passed rapidly on the other line. The unfortunate gentleman, who happened to be in a weak state of health, became flurried, and ran to and fro in doubt as to the best means of escaping danger. The engine-driver endeavoured to stop the train in time, but without success; and Mr Huskisson, unable to escape, was knocked down by the *Rocket*, the wheels of which went over his leg and thigh. The same locomotive which had triumphed at the competition, now caused the death of the statesman. The directors deemed it necessary to complete the remainder of the journey to Manchester, as a means of shewing that the railway, in all its engineering elements, was thoroughly successful; but it was a sad procession for those who thought of the wounded statesman. He expired that same evening.

Mr Huskisson was born March 11, 1770. In 1790, he first entered government service, as private secretary to the British ambassador at Paris. In 1793, he was appointed to an office for managing the claims of French emigrants; in 1795, Under Secretary of State for War and the Colonies; in 1804, Secretary of the Treasury; and in 1807, he resumed the same office, after a short period in opposition. In 1814, he was made Chief Commissioner of Woods and Forests; in 1823, President of the Board of Trade and Treasurer of the Navy; and in 1829, Secretary of State for the Colonies. He had thus, during about forty years, rather a varied experience of official life. Mr Huskisson, in the House of Commons, was not a speaker of any great eloquence; but he is favourably remembered as having advocated a free-trade policy at a time when such policy had few advocates in parliament.

SEPTEMBER 16.

St Cornelius, pope and martyr, 252. St Cyprian, archbishop of Carthage, martyr, 258. Saints Lucia and Geminianus, martyrs, about 303. St Euphemia, virgin and martyr, about 307. St Ninian or Ninyas, bishop and confessor, and apostle of the southern Picts, 432. St Editha, virgin, 984.

ST CYPRIAN,

One of the most famous of the Latin fathers, and reputed to be second in point of eloquence only to Lactantius, was a native of Carthage, and became a convert to Christianity at an advanced period of life, having been led to renounce paganism through conversation with an aged presbyter, called Cecilius, whose name he adopted as an addition to his own. The enthusiasm which he displayed on behalf of his new faith caused him soon to be admitted as a priest, and, within less than a year afterwards, to be raised to the dignity of bishop of Carthage, as successor to Donatus. In the exercise of his office he manifested such zeal, that the pagans, in derision, styled him *Coprianus*, in allusion to a Greek term for filth; and on the commencement of the Christian persecution under the Emperor Decius, the heathen populace rushed into the market-place shouting: 'Cyprian to the lions! Cyprian to the wild-beasts!' The danger that threatened him seemed so imminent, that he deemed it expedient for a time to retire from Carthage, though in doing so he exposed himself to some severe animadversions from his brother-clergy of Rome for thus shrinking from the storm, and suffering his flock to perish. From his place of retreat, however, which seems to have been carefully concealed, he despatched numerous letters to guide and animate his people under their trials. At last, on an abatement of the persecution taking place, Cyprian returned to Carthage, and continued his episcopal ministrations with great zeal and success, till a fresh season of tribulation commenced for the church under the Emperor Valerian, in 257 A.D. On this occasion, the bishop of Carthage shewed no disposition to cower before the blast, but bravely remained at his post to encourage and strengthen his hearers. In the autumn of the last-mentioned year, he was himself apprehended, and brought before the African proconsul, who ordered him into banishment to the city of Curubis, about fifty miles from Carthage. After remaining there for about a twelvemonth, the expectation of still bloodier edicts arriving from Rome, caused him to be brought back to Carthage, and lodged for a time under surveillance in his own country-house near the city. On the reception of the fatal orders, the Proconsul Galerius Maximus caused Cyprian to be brought before him at his country-seat of Sextus, six miles from Carthage. The tide of popular opinion had now turned entirely in favour of the bishop, who, while a pestilence was raging in the city, had exerted himself with the most heroic ardour, both personally and by calling forth the co-operation of others, in relieving the sufferings and ministering to the necessities of the sick. A noble large-heartedness had also been shewn by him in proclaiming to his people the duty of assisting all sufferers in this terrible visitation,

without regard to the circumstance of their being Christian or pagan. An immense and sympathising crowd accompanied him on the road to the proconsul's house. The proceedings before that functionary appear to have been of a very summary description, as Cyprian, on having replied to a few interrogations, and steadily refused to conform to the pagan ceremonies, was forthwith ordered to be beheaded. He was led a short distance into the country, to an extensive plain, planted with trees, which were ascended by numerous spectators, and was there put to death. His relics are said to have been exhumed in the beginning of the ninth century, by ambassadors of Charlemagne, on their return from a mission to Persia, and conveyed by them to France.

Born.—James Francis Stephens, entomologist, 1792, *Shoreham, Sussex.*

Died.—Pope Martin I., 655; Pope Victor III., 1087; Charles V. the Wise, king of France, 1380, *Vincennes;* Dean (John) Colet, 1519; Michael Baius, theologian, 1589, *Louvain;* James II., ex-king of England, 1701, *St Germains, France;* Gabriel Daniel Fahrenheit, constructor of thermometers, 1736; Allen, Earl Bathurst, statesman and man of letters, 1775; Louis XVIII., king of France, 1824.

GABRIEL DANIEL FAHRENHEIT.

The name of Fahrenheit has been familiarised to a large part of mankind, in consequence of his invention of a thermometer, which has come into almost universal use.

Before the seventeenth century, men could only judge of the amount of heat prevailing at any place by their personal sensations. They could only speak of the weather as hot or very hot, as cold or very cold. In that century, there were several attempts made, by tubes containing oil, spirits of wine, and other substances, to establish a satisfactory means of measuring heat; but none of them could be considered as very successful, although both Halley and Newton applied their great minds to the subject. It was reserved for an obscure and poor man to give us the instrument which has since been found so specially serviceable for this purpose.

Fahrenheit was a native of Danzig, who, having failed in business as a merchant, and having a turn for mechanics and chemistry—possibly, that was what made him fail as a merchant—was fain to take to the making of thermometers for his bread. He at first made his thermometers with spirits of wine, but ere long became convinced that mercury was a more suitable article to be put in the tube; about the same time, finding Danzig a narrow field for his business, he removed to Amsterdam. There, about the year 1720, this patient, humble man completed the arrangement for a mercury-thermometer, very much as it has ever since been fashioned. His instruments were speedily spread throughout the world, everywhere carrying his name along with them. The basis of the plan of Fahrenheit's instrument, was to mark on the tube the two points at which, respectively, water is congealed and boiled, and to graduate the space between. Through a chain of circumstances, which it would here be tedious to explain, he put 180° between these two points, commencing, however, with 32°, because he found that the mercury descended 32° more, before coming to what he thought the *extreme* cold resulting from a mixture of ice, water, and sal-ammoniac. The Royal Society gladly received from Fahrenheit accounts of his experiments, the value of which it acknowledged by making him one of its members (a fact overlooked in all his biographies); and in 1724, he published a distinct treatise on the subject. Celsius, of Stockholm, soon after suggested the obviously more rational graduation of a hundred degrees between freezing and boiling points—the Centigrade Thermometer: the Frenchman, Reaumur, proposed another graduation, which has been accepted by his countrymen. But with by far the larger part of civilised mankind, Fahrenheit's scale is the only one in use, and probably will be so for a long time to come. To speak, accordingly, of 32° as freezing, of 55° as temperate, 96° as blood-heat, and 212° as the boiling-point, is part of the ordinary habits of Englishmen all over the world. Very true, that the zero of Fahrenheit's scale is a solecism, since it does *not* mark the extreme to which heat can be abstracted. This little blemish, however, seems never to have been found of any practical consequence. The arctic voyagers of the last forty years, have all persisted in describing certain low temperatures as below zero of Fahrenheit, the said degrees of temperature being such as the Amsterdam thermometer-maker never dreamed of, as being part of the existing system of things.

It is a pity that we know so little of the personal history of this remarkable man. There is even some doubt as to the year of his death; some authors placing it in 1740.

ORDERS OF A SCHOOL IN THE SIXTEENTH CENTURY.

The statutes which Dean Colet concocted for St Paul's School, at its founding in the early part of the sixteenth century, afford a picture of his mind, and in fact of the times in which he lived. 'The children,' he says, 'shall come into the school at seven of the clock, both winter and summer, and tarry there until eleven; and return against one of the clock, and depart at five. In the school, no time in the year, they shall use tallow candle in nowise, at the cost of their friends. Also, I will they bring no meat nor drink, nor bottle, nor use in the school no breakfasts, nor drinkings, in the time of learning, in nowise. I will they use no cock-fightings, nor riding about of victory, nor disputing at St Bartholomew, which is but foolish babbling and loss of time.' There were to be no holidays granted at desire, unless for the king, or a bishop. The studies for the youth were Erasmus's *Copia;* Lactantius, Prudentius, and a few such authors; no classic is mentioned; yet the learned dean professes his zeal for 'the true Latin speech;' adding: 'all barbary, all corruption, all Latin adulterate, which ignorant blind fools brought into this world, and with the same hath distained and poisoned the old Latin speech, and the *veray* Roman tongue which in the time of Sallust and Virgil was used—I say that filthiness and all such *abusion*, which the later blind world brought in, which more rather may be called *Bloterature* than Literature, I utterly banish and exclude out of this school.'*

* Extracted into Dibdin's *Bibliomania*, i. 15, from Knight's *Life of Colet.*

SEPTEMBER 17.

Saints Socrates and Stephen, martyrs, beginning of 4th century. St Rouin, Rodingus, or Chrodingus, abbot of Beaulieu, about 680. St Lambert, bishop of Maestricht, and patron of Liege, martyr, 709. St Columba, virgin and martyr, 853. St Hildegardis, virgin and abbess, 1179.

Born.—Jean Antoine, Marquis de Condorcet, distinguished mathematician, 1743, *Picardy;* Samuel Prout, painter in water-colours, 1783, *London.*

Died.—Henry Bullinger, Swiss Reformer, 1575, *Zurich;* Cardinal Robert Bellarmin, celebrated controversialist, 1621, *Rome;* Philip IV. of Spain, 1665; Dr John Kidd, mineralogical and medical writer, 1851, *Oxford.*

CONDORCET.

Than the Marquis de Condorcet the French Revolution had no more sincere and enthusiastic promoter. Writing to Franklin, in 1788, concerning American affairs, he observes: 'The very name of king is hateful, and in France words are more than things. I see with pain that the aristocratic spirit seeks to introduce itself among you in spite of so many wise precautions. At this moment it is throwing everything into confusion here. Priests, magistrates, nobles, all unite against the poor citizens.' When 'the poor citizens' came into power, and proscribed those who served them, Condorcet's faith in democracy remained unaffected. In the words of Lamartine, 'the hope of the philosopher survived the despair of the citizen. He knew that the passions are fleeting, and that reason is eternal. He confessed it, even as the astronomer confesses the star in its eclipse.'

Condorcet was born in Picardy in 1743. Early in life he distinguished himself as a mathematician, and his labours in the development of the differential and integral calculus, will preserve his name in the history of science. Associating with Voltaire, Helvetius, and D'Alembert, he became a sharer in their opinions, and a social reformer with an almost fanatical abhorrence of the present and the past, and with an invincible assurance in a glorious destiny for humanity in the future. The outbreak of the revolution was to him as the dawn of this new era when old wrongs should pass away and justice and goodness should rule the world. He wrote for the revolutionary newspapers, and was an indefatigable member of the Jacobin club, but he was less effective with his tongue than his pen. A cold and impassive exterior, a stoical Roman countenance, imperfectly expressed the fiery energy of his heart, and caused D'Alembert to describe him as 'a volcano covered with snow.' When the rough and bloody business of the revolution came on, he was unable, either from timidity or gentle breeding, to hold his own against the desperadoes who rose uppermost. During the violent struggle between the Girondist and Mountain party, he took a decided part with neither, provoking Madame Roland to write of him, 'the genius of Condorcet is equal to the comprehension of the greatest truths, but he has no other characteristic besides fear. It may be said of his understanding combined with his person, that he is a fine spirit absorbed in cotton. Thus, after having deduced a principle or demonstrated a fact in the Assembly, he would give a vote decidedly opposite, overawed by the thunder of the tribunes, armed with insults and lavish of menaces. Such men should be employed to write, but never permitted to act.' This mingling of courage with gentleness and irresolution caused him, says Carlyle, 'to be styled, in irreverent language, *mouton enragé*—peaceablest of creatures bitten rabid.'

Robespierre, in July 1793, issued a decree of accusation against Condorcet. At the entreaty of his wife he hid himself in an attic in an obscure quarter of Paris, and there remained for eight months without once venturing abroad. He relieved the weariness of his confinement by writing a treatise on his favourite idea, *The Perfectibility of the Human Race;* and had he been able to endure restraint for a few months longer, he would have been saved; but he grew anxious for the safety of the good woman who risked her life in giving him shelter, and the first verdure of the trees of the Luxembourg, of which he had a glimpse from his window, brought on an overpowering desire for fresh air and exercise. He escaped into the streets, passed the barriers, and wandered among thickets and stone-quarries in the outskirts of Paris. Wounded with a fall, and half-dead with hunger and fatigue, he entered a cabaret in the village of Clamart, and asked for an omelet. 'How many eggs will you have in it?' inquired the waiter. 'A dozen,' replied the starving philosopher, ignorant of the proper dimensions of a working-man's breakfast. The extraordinary omelet excited suspicion. Some present requested to know his trade. He said, a carpenter, but his delicate hands belied him. He was searched, and a Latin *Horace* and an elegant pocket-book furnished unquestionable evidence that he was a skulking aristocrat. He was forthwith arrested, and marched off to prison at Bourg-la-Reine. On the way, he fainted with exhaustion, and was set on a peasant's horse. Flung into a damp cell, he was found dead on the floor next morning, 24th March 1794. He had saved his neck from the guillotine by a dose of poison he always carried about with him in case of such an emergency.

Condorcet's works have been collected and published in twenty-one volumes. The Marquise de Condorcet long survived her husband. She was one of the most beautiful and accomplished women of her day, and distinguished herself by an elegant and correct translation into French of Adam Smith's *Theory of the Moral Sentiments.*

CURIOUS TESTAMENTARY DIRECTIONS ABOUT THE BODY.

Sir Lewis Clifford, a member of the senior branch of this ancient and distinguished family, who lived in the reign of Henry IV., became a Protestant, or, to use the language of an ancient writer, was 'seduced by those zealots of that time, called Lollards (amongst which he was one of the chief); but being at length sensible of those schismatical tenets, he confessed his error to Thomas Arundel, archbishop of Canterbury, and did cordially repent.' By way of atoning for his error, he left the following directions respecting his burial, in his last will, which begins thus:—'In nomine Patris et Filii et Spiritus Sancti, Amen. The sevententhe day of September, the yer of our Lord Jesu Christ, a

thousand four hundred and four, I Lowys Clyfforth, fals and traytor to my Lord God, and to alle the blessed company of Hevene, and unworthi to be clepyd Cristen man, make and ordeyn my testament and my last wille in this manere.—At the begynnynge, I most unworthi and Goddys traytour, recommaund my wretchid and synfule sowle hooly to the grace and to the mercy of the blessful Trynytie ; and my wretchid careyne to be beryed in the ferthest corner of the chirche-zerd, in which pariche my wretchid soule departeth fro my body. And I prey and charge my survivors and myne executors, as they wollen answere to fore God, and as all myne hoole trest in this matere is in them, that on my stinking careyne be neyther leyd clothe of gold ne of silke, but a black clothe, and a taper at myne hed, and another at my fete ; ne stone ne other thinge, whereby eny man may witte where my stinking careyne liggeth. And to that chirche do myne executors all thingis, which owen duly in such caas to be don, without eny more cost saaf to pore men. And also, I prey my survivors and myne executors, that eny dette that eny man kan axe me by true title, that hit be payd. And yf eny man can trewly say, that I have don hym eny harme in body or in good, that ye make largely his gree whyles the goodys wole stretche. And I wole alsoe, that none of myne executors meddle or mynystre eny thinge of my goodys withoutyn avyse and consent of my survivors or of sum of hem.'

The rest of the will is in Latin, and contains Sir Lewis's directions for the disposal of his property.

THE GERMAN PRINCESS.

Two hundred years ago, all London interested itself in the sayings and doings of a sharp-witted adventuress, known as 'the German Princess.' Mary Moders was the daughter of a Canterbury fiddler. After serving as waiting-woman to a lady travelling on the continent, and acquiring a smattering of foreign languages, she returned to England with a determination to turn her talents to account in the metropolis, where, on arriving, she took up her quarters at 'the Exchange Tavern, next the Stocks,' kept by a Mr King. Taking her hostess into confidence, she confessed that she was Henrietta Maria de Wolway, the only daughter and heiress of John de Wolway, Earl of Roscia, in Colonia, Germany, and had fled from home to avoid a marriage with an old count. If Mr King and his wife had any doubts as to the truth of her story, they were reassured by the receipt of a letter from the earl's steward, thanking them for the kindness they had shewn to his young mistress.

Mrs King had a brother, John Carleton, of the Middle Temple, whom she soon introduced to her interesting guest as a young nobleman. He played his part well, plied the mock-princess with presents, took her in his coach to Holloway and Islington, and vowed himself the victim of disinterested love. On Easter-Day, he proposed to take her to St Paul's, 'to hear the organs and very excellent anthems performed by rare voices;' but, instead of going there, he persuaded the lady to accompany him to Great St Bartholomew's Church, where he had a clergyman ready, and Miss Moders became Mrs Carleton, to the great rejoicing of his relatives. After the wedding, the happy couple went to Barnet for a couple of days, after which they returned, and to make assurance doubly sure, were re-married by licence, and went home to Durham Yard.

For a time all went smoothly enough, although the newly-made Benedict found his wife's notions of economy more befitting a princess than the spouse of a younger brother. As weeks, however, passed by without the Carletons deriving any of the expected benefits from the great match, they grew suspicious ; good-natured friends, taken into the secret, expressed their doubts of the genuineness of Mrs John Carleton, and set inquiries on foot. Before long, old Carleton received a letter from Dover, in which his daughter-in-law was stigmatised as the greatest cheat in the world, having already two husbands living in that town, where she had been tried for bigamy, and only escaped conviction by preventing her real husband from putting in an appearance at the trial. Great was the indignation of the family at having their ambitious dream dispelled so rudely. Carleton père, at the head of a posse of male and female friends, marched to Durham Yard, and, as soon as they gained admittance, set upon the offender, knocked her down, despoiled her of all her counterfeit rings, false pearls, and gilded brass-wire worked bracelets, and left her almost as bare as Mother Eve ere the invention of the apron. She strenuously denied her identity with the Dover damsel, but was taken before the magistrates, and committed to the Gatehouse, at Westminster, to await her trial for bigamy. Here for six weeks she held her levees, and exercised her wit in wordy warfare with her visitors. When one complimented her upon her breeding and education, she replied : 'I have left that in the city amongst my kindred, because they want it;' and upon a gentleman observing that 'marrying and hanging went by destiny,' told him, she had received marriage from the destinies, and probably he might receive hanging. Among her visitors were Pepys and his friend Creed.

Upon the 4th of June 1663, our heroine was brought up at the Old Bailey, before the Lord Chief-Justice of Common Pleas, the lord mayor, and aldermen. If the account of the trial contained in *The Great Tryal and Arraignment of the late Distressed Lady, otherwise called the late German Princess*, be correct, the result was a foregone conclusion. She was indicted in the name of Mary Moders, for marrying John Carleton, having two husbands, Ford and Stedman, alive at the time. The prosecution failed to prove either of the marriages, and one incident occurred which must have told greatly in her favour. 'There came in a bricklayer with a pretended interest that she was his wife; but Providence or policy ordered it another way. There was a fair gentlewoman, standing at the bar by her, much like unto her, to whom he addressed himself, saying: "This is my wife;" to which the judge said: "Are you sure she is yours?" and the old man, taking his spectacles out of his pocket, looked her in the face again, and said: "Yes ; she is my wife, for I saw her in the street the other day." Then said the lady: "Good, my lord, observe this doting fellow's words, and mark his mistake, for he doth not know me here with his four eyes; how then is it possible that he should now know me with his two!" At which expression all the bench smiled. Again said she: "My lord, and all you grave senators, if you rightly behold my face, that I should match with such a simple piece of mortality!" Then the old fellow drew back, and said no more.'

The accused bore herself bravely at the bar, bewitching all auditors as she played with her fan, and defended herself in broken English. She insisted on her German birth, saying she came to England to better her fortunes—and if there was any fraud in the business, it lay on the other side ; 'for they thought by marrying of me, to dignify themselves, and advance all their relations, and upon that account, were there any cheat, they cheated themselves.' She divided the witnesses against her into two classes—

those who came against her for want of wit, and those who appeared for want of money. The jury acquitted her, and when she applied for an order for the restoration of her jewelry, the judge told her she had a husband to see after them. The verdict seems to have pleased the public, and we find lady-loving Pepys recording, 'after church to Sir W. Batten's; where my Lady Batten inveighed mightily against the German Princess, and I as high in defence of her wit and spirit, and glad that she is cleared at the sessions.' The author of *An Encomiastick Poem*, after comparing his subject to divers famous ladies, proceeds to tell us that—

'Her most illustrious worth
Through all impediments of hate brake forth;
Which her detracters sought within a prison,
T' eclipse, whereby her fame 's the higher risen.
As gems i' th' dark do cast a brighter ray
Than when obstructed by the rival day;
So did the lustre of her mind appear
Through this obscure condition, more clear.
And when they thought by bringing to the bar
To gain her public shame, they raised her far
More noble trophies—she being cleared quite
Both by her innocence and excellent wit.'

Mr Carleton, however, refused to acknowledge his wife, and published his *Ultima Vale*, in which, after abusing her to his heart's content, he grows sentimental, and indites a poetical farewell to his 'perjured Maria;' whose next appearance before the public was as an actress in a play founded upon her own adventures. Mr Pepys records: '15 April 1664.—To the Duke's House, and there saw *The German Princess* acted by the woman herself; but never was anything so well done in earnest, worse performed in jest upon the stage.' The theatre failing her, Mary Carleton took to thieving, was detected, tried, and sentenced to transportation to Jamaica. By discovering a plot against the life of the captain of the convict-ship, she obtained her liberty upon arriving at Port Royal, but becoming tired of West-Indian life, she contrived to find her way back to England, and resumed her old life. For some time she appears to have done so with impunity, in one case succeeding in getting clear off with £600 worth of property belonging to a watchmaker. The manner of her arrest was curious. A brewer, named Freeman, having been robbed, employed Lowman, a keeper of the Marshalsea, to trace out the thieves. With this object in view, Lowman called at a house in New Spring Gardens, and there spied a gentlewoman walking in one of the rooms, two pair of stairs high, in her night-gown, with her maid waiting upon her. He presently enters the room, and spies three letters lying upon the table, casts his eye upon the superscription of one of them, directed to a prisoner of his; upon which the lady began to abuse him in no measured terms, and so drew him to look at her more closely than he had done, and thereby recognise her as Mrs Carleton. He at once took her into custody for the watch-robbery; she was tried at the Old Bailey, found guilty, and sentenced to death.

She was executed at Tyburn on the 22d of January 1672–3, with five young men, 'who could not, among them all, complete the number of 120 years.' She made a short exhortation to the people, sent some words of good advice to her husband, whose portrait she placed in her bosom at the last moment. Her body was given up to her friends, by whom it was interred in the churchyard of St Martin's, and 'thus,' says her biographer, 'exit German Princess, in the thirty-eighth year of her age, and the same month she was born in.'

In Luttrell's *Collection of Eulogies and Elegies*, there is preserved an 'Elegie on the famous and renowned Lady,' Madame Mary Carleton, which concludes with

HER EPITAPH.

Here lieth one was hurried hence,
To make the world a recompense
For actions wrought by wit and lust,
Whose closet now is in the dust.
Then let her sleep, for she hath wit
Will give disturbers hit for hit.

SEPTEMBER 18.

St Ferreol, martyr, about 304. St Methodius, bishop of Tyre, martyr, 4th century. St Thomas of Villanova, confessor, archbishop of Valentia, 1555. St Joseph of Cupertino, confessor, 1663.

Born.—Trajan, Roman Emperor, 56 A.D.; Gilbert, Bishop Burnet, historian, 1643, *Edinburgh;* William Collins, artist, 1787, *London.*

Died.—Domitian, Roman emperor, slain 96 A.D.; Louis VII. of France, 1180, *Paris;* Hugo Vander Goes, Flemish painter, 1684; Matthew Prior, poet, 1721, *Wimpole, Cambridgeshire;* André Dacier, classic commentator, 1722, *Paris;* Olaf Swartz, eminent botanist, 1817, *Stockholm;* William Hazlitt, miscellaneous writer, 1830; Joseph Locke, eminent engineer, 1860, *Moffat.*

THE EMPEROR DOMITIAN.

The obituary for this day includes the name of one of those monsters, who disgrace so frequently the annals of the ancient Roman empire. On 18th September, 96 A.D., the Emperor Domitian was assassinated by a band of conspirators, after having rendered himself for many years the terror and detestation of his subjects. The son of Vespasian, and the brother and successor of Titus, he exhibited in the commencement of his reign a great show of righteous severity, and came forward as a reformer of public morals. Several persons who had transgressed the laws of conjugal fidelity, as well as some vestal virgins who had violated their vows, were punished with death. It was not long, however, before his real character shewed itself, and he became a disgrace to humanity by his acts of cruelty and avarice. Cowardice and falsehood entered largely into his disposition, which, if we are to credit all the accounts that have descended to us, seems to have scarcely had a redeeming point. Multitudes of persons were put to death, either because the emperor desired their wealth, or from his having become apprehensive of their popularity or influence. Secret informers were encouraged, but philosophers and literary men were slaughtered or banished, though Martial and Silius Italicus could so far degrade poetry, as make it the vehicle for flattery of the imperial monster. A favourite amusement of his, it is said, was killing flies, in which he would spend whole hours, and nothing seemed to give him greater pleasure than to witness the effects of terror on his fellow-creatures. On one occasion, he invited formally the members of the senate to a grand feast, and caused them on their arrival to be ushered into a large hall, hung with black and lighted with funeral torches, such as only served to exhibit to the awe-struck guests an array of coffins, on which each read his own name. Whilst they contemplated this ghastly

spectacle, a troop of horrid forms, habited like furies, burst into the apartment, each with a lighted torch in one hand, and a poniard in the other. After having terrified for some time the members of Rome's legislative body, these demon-masqueraders opened the door of the hall, through which the senators were only too happy to make a speedy exit. Who can doubt that the character of Domitian had as much of the madman as the wretch in its composition?

At length human patience was exhausted, and a conspiracy was formed for his destruction, in which his wife and some of his nearest friends were concerned. For a long time, the emperor had entertained a presentiment of his approaching end, and even of the hour and manner of his death. Becoming every day more and more fearful, he caused the galleries in which he walked to be lined with polished stones, so that he might see, as in a mirror, all that passed behind him. He never conversed with prisoners but alone and in secret, and it was his practice whilst he talked with them, to hold their chains in his hands. To inculcate on his servants a dread of compassing the death of their master, even with his own consent, he caused Epaphroditus to be put to death, because he had assisted Nero to commit suicide.

The evening before his death, some truffles were brought, which he directed to be laid aside till the next day, adding, '*If I am there;*' and then turning to his courtiers said, that the next day the moon would be made bloody in the sign of Aquarius, and an event would take place of which all the world should speak. In the middle of the night, he awoke in an agony of fear, and started from his bed. The following morning, he had a consultation with a soothsayer from Germany, regarding a flash of lightning; the seer predicted a revolution in the empire, and was forthwith ordered off to execution. In scratching a pimple on his forehead, Domitian drew a little blood, and exclaimed: 'Too happy should I be were this to compensate for all the blood that I cause to be shed!' He asked what o'clock it was, and as he had a dread of the fifth hour, his attendants informed him that the sixth had arrived. On hearing this he appeared reassured, as if all danger were past, and he was preparing to go to the bath, when he was stopped by Parthenius, the principal chamberlain, who informed him that a person demanded to speak with him on momentous business of state. He caused every one to retire, and entered his private closet. Here he found the person in question waiting for him, and whilst he listened with terror to the pretended revelation of some secret plot against himself, he was stabbed by this individual, and fell wounded to the ground. A band of conspirators, including the distinguished veteran Clodianus, Maximus a freedman, and Saturius the decurion of the palace, rushed in and despatched him with seven blows of a dagger. He was in the forty-fifth year of his age, and fifteenth of his reign. On receiving intelligence of his death, the senate elected Nerva as his successor.

LANDING OF GEORGE I. IN ENGLAND.

The death of Queen Anne on the 1st of August 1714 had ended the dynasty of the Stuarts. Although she left a Tory ministry, understood to be well affected to the restoration of her brother James, the 'Pretender,' yet the parliamentary enactments for the succession of the House of Hanover, in accordance with the Protestant predilections of the people, were quietly carried out; and, on the 16th of September, the Elector of Hanover, now styled George I. of Great Britain, embarked for England, and landing at Greenwich two days after, in the evening, was there duly received by the lords of the Regency, who had been conducting the government since the queen's death. Next day, there was a great court held in the palace of Greenwich, at which the Lord Treasurer Oxford was barely permitted to kiss the king's hand, the Lord Chancellor Harcourt was turned out of office, and the Duke of Ormond was not even admitted to the royal presence. It was evident there was to be a complete change of administration under the new sovereign. What made the treatment experienced by Ormond the more galling, was that he had come in a style of uncommon splendour and parade as captain-general, to pay his respects to the king.

Although George I., as a man of fifty-four years of age and a foreigner, was not calculated to awaken much popular enthusiasm, he was received next day in London with all external demonstrations of honour. Two hundred coaches of nobles and great officials preceded his own. The city authorities met him at St Margaret's Hill, Southwark, in all their paraphernalia, to congratulate him on his taking possession of his kingdoms. There can be no doubt, that of those present, with loyalty on their lips, there were many ill affected to the new house; and of this the zealous friends of the Protestant succession must have been well aware. At the court held that day in St James's, the Whig Colonel Chudleigh, branded with the name of Jacobite Mr Charles Aldworth, M.P. for New Windsor; and a duel ensued in Marylebone Fields, where Mr Aldworth was killed.

So began a series of two reigns which were on the whole happy for England. The two monarchs were certainly men of a mediocre stamp, who had little power of engaging the affections of their subjects; but they had the good sense to leave the ministers who enjoyed the confidence of parliament to rule, contenting themselves with a quiet life amongst the mere routine matters of a court.

Walpole relates that on one of George I.'s journeys to Hanover, his coach broke down. At a distance in view was the château of a considerable German nobleman. The king sent to borrow assistance. The possessor came, conveyed the king to his house, and begged the honour of his majesty accepting a dinner while his carriage was repairing; and, while the dinner was preparing, begged leave to amuse his majesty with a collection of pictures, which he had formed in several tours to Italy. But what did the king see in one of the rooms, but an unknown portrait of a person in the robe and with the regalia of the sovereigns of Great Britain? George asked whom it represented. The nobleman replied, with much diffident but decent respect, that in various journeys to Rome, he had been acquainted with the Chevalier de St George, who had done him the honour of sending him that picture. 'Upon my word,' said the king, instantly, 'it is very like to the family.' It was impossible to remove the embarrassment of the proprietor with more good-breeding.

FIRST DISMEMBERMENT OF POLAND.

The iniquitous partition of this country between the three powers of Russia, Prussia, and Austria, was first accomplished on the 18th September 1772. For many years previous, the distracted condition of the kingdom had rendered it but too easy and tempting a prey to such ambitious and active neighbours as the Empress Catherine and Frederick the Great.

A war was on the point of breaking out between Russia and Austria, and Prussia would have been unable to avoid being drawn into the conflict. It was the interest of Frederick at the time to preserve peace, and he accordingly sent his brother, Prince Henry of Prussia, to St Petersburg, to endeavour to bring about an adjustment of matters. Some overtures made to Frederick by the Prince of Kaunitz at the conference of Neustadt, and some expressions which escaped from Catherine, had induced Prince Henry to form the idea that a dismemberment of Poland might satisfy the ambitious aspirations of all the potentates, and prevent the contingency of war.

Austria, on her part, demanded that Russia should restore to the Turks the conquests which she had made from them during the late war, and insisted more especially on the reddition of Moldavia and Wallachia. Russia, on the other hand, far from shewing a disposition to be dictated to, claimed the right herself of exercising this privilege; and hostilities were about to commence, when Prince Henry of Prussia suggested to Catherine the project of dismembering Poland. The empress was at first astonished, and probably chagrined, at being expected to share with others what she already regarded as her own property. She condescended, nevertheless, after some reflection, to entertain the subject which had been mooted to her by the prince. It was agreed between them that Austria should be invited to accede to the arrangement; and in case of her refusing to do so, the king of Prussia engaged to furnish Russia with assistance against Austria.

This last-mentioned power was at that moment in alliance with Turkey, and by acceding to the proposed partition, laid herself open to the resentment of France; but, finding herself obliged to choose between partition and war, deemed it most advisable to adopt the former alternative. The plenipotentiaries of the three courts signed at St Petersburg, on 5th August 1772, the formal stipulations of the Partition Treaty. In this document, the boundaries of the territories which should be assigned in the division to each of the three powers were settled and reciprocally guaranteed. The actual execution of the dismemberment was deferred to September, on the 18th of which month it was completed. The Empress of Russia, by the same convention, bound herself to restore Moldavia and Wallachia to Turkey.

Since the previous year, the governments of Vienna and Berlin had been advancing their troops to the frontiers of Poland. The king of Prussia had carried off from Great Poland more than twelve thousand families, and sent them to people the barren sands of his hereditary territories. Austria had laid hold of the salt-mines, which supplied one of the most valuable sources of revenue to the Polish crown. Soon a manifesto was handed to King Stanislaus and the senate by the Austrian and Prussian ministers, declaring that their respective sovereigns had come to the resolution to make available certain ancient rights which they possessed over a portion of the Polish territory. Some days afterwards the envoy of the Empress Catherine made a similar declaration on the part of his mistress. The three powers specified subsequently in individual notes the provinces which they desired to appropriate in virtue of their pretended rights, and in pursuance of this announcement proceeded forthwith to take possession.

The king of Poland and his ministers protested in vain against this act of spoliation, and sought, but ineffectually, the assistance of those powers by whom the integrity of their territories had been assured. The leading powers of Western Europe, Great Britain and France, remained shamefully passive, and permitted a flagrant breach of the law of nations to be perpetrated almost without remonstrance. Too feeble, then, to offer any effectual resistance, and finding no help in any quarter, the unfortunate Stanislaus was compelled to accede to any terms which the trio of crowned robbers chose to impose. A diet summoned at Warsaw appointed a commission to conclude with the plenipotentiaries of the three sovereigns the necessary treaty of dismemberment. The convention was signed at Warsaw, and afterwards ratified in the Polish diet. Of the territory thus seized and distributed, Austria received as her share about 1300 German square miles (15 to the degree), and a population of 700,000; Russia, 4157 square miles, and a population of 3,050,000; and Prussia, 1060 square miles, and a population of 1,150,000. It included about a third of the whole kingdom, and some of its richest provinces. The three plunderers—Catherine, Frederick, and Joseph—bound themselves in the most solemn manner to refrain from asserting any further claims on the provinces retained by Stanislaus. It is well known, however, how shamefully this compact was violated, and how, by a second partition in 1793, and a third in 1795, the remaining territories of Poland were divided between the three powers, her king deposed, and herself obliterated from the map of Europe.

SEPTEMBER 19.

St Januarius, bishop of Benevento, and his companions, martyrs, 305. Saints Peleus, Pa-Termuthes, and companions, martyrs, beginning of 4th century. St Eustochius, bishop of Tours, 461. St Sequanus or Seine, abbot, about 580. St Theodore, archbishop of Canterbury, confessor, 690. St Lucy, virgin, 1090.

Born.—Henry III. of France, 1551, *Fontainebleau;* Robert Sanderson, bishop of Lincoln, and high-church divine, 1587, *Rotherham, Yorkshire;* Rev. William Kirby, entomologist, 1759, *Witnesham Hall, Suffolk;* Henry, Lord Brougham and Vaux, 1779, *Edinburgh.*

Died.—Charles Edward Poulett Thomson, Lord Sydenham, governor of Canada, 1841; Professor John P. Nichol, author of *The Architecture of the Heavens*, &c., 1859, *Rothesay.*

THE BATTLE OF POITIERS.

On 19th September 1356, the second great battle fought by the English on French soil, in assertion of their chimerical claim to the crown of that country, was won by the Black Prince, in the face, as at Crécy, of an overwhelming superiority of numbers. Whilst the army of the French king mustered sixty thousand horse alone, besides foot soldiers, the whole force of Edward, horse and foot together, did not exceed ten thousand men. The engagement was not of his own seeking, but forced upon him, in consequence of his having come unexpectedly on the rear of the French army in the neighbourhood of Poitiers, to which town he had advanced in the course of a devastating expedition from Guienne, without being aware of the proximity of the French monarch. Finding that the whole of the surrounding country swarmed with the enemy, and that his retreat was effectually cut off, his first feeling seems to have been one of consternation. 'God help us!' he exclaimed; and then added undauntedly: 'We must consider how we can best fight them.' A strong position amid hedges and vineyards was taken up by him, and as night was then approaching, the English troops prepared themselves for repose in expectation of to-morrow's battle. In the morning, King John marshalled his forces for the combat, but just as the engagement was about to commence, Cardinal Talleyrand, the pope's legate, arrived at the French camp, and obtained a reluctant permission to employ his offices, as mediator, to prevent bloodshed. The whole of that day (Sunday) was spent by him in trotting between the two armies, but to no effect. The English leader made the very liberal offer to John, to restore all the towns and castles which he had taken in the course of his campaign, to give up, unransomed, all his prisoners, and to bind himself by oath to refrain for seven years from bearing arms against the king of France. But the latter, confiding in his superiority of numbers, insisted on the Black Prince and a hundred of his best knights surrendering themselves prisoners, a proposition which Edward and his army indignantly rejected. Next morning at early dawn, the trumpets sounded for battle, and even then the indefatigable cardinal made another attempt to stay hostilities; but on riding over to the French camp for that purpose, he was cavalierly told to go back to where he came from, with the significant addition, that he had better bring no more treaties or pacifications, or it would be the worse for himself. Thus repulsed, the worthy prelate made his way to the English army, and told the Black Prince that he must do his best, as he had found it impossible to move the French king from his resolution. 'Then God defend the right!' replied Edward, and prepared at once for action. The attack was commenced by the French, a body of whose cavalry came charging down a narrow lane with the view of dislodging the English from their position; but they encountered such a galling fire from the archers posted behind the hedges, that they turned and fled in dismay. It was now Edward's turn to assail, and six hundred of his bowmen suddenly appeared on the flank and rear of John's second division, which was thrown into irretrievable confusion by the discharge of arrows. The English knights, with the prince at their head, next charged across the open plain upon the main body of the French army. A division of cavalry, under the Constable of France, for a time stood firm, but ere long was broken and dispersed, their leader and most of his knights being slain. A body of reserve, under the Duke of Orleans, fled shamefully without striking a blow. King John did his best to turn the fortune of the day, and, accompanied by his youngest son, Philip, a boy of sixteen, who fought by his side, he led upon foot a division of troops to the encounter. After having received two wounds in the face, and been thrown to the ground, he rose, and for a time defended himself manfully with his battle-axe against the crowd of assailants by whom he was surrounded. The brave monarch would certainly have been slain had not a French knight, named Sir Denis, who had been banished for killing a man in a fray, and in consequence joined the English service, burst through the press of combatants, and exclaimed to John in French: 'Sire, surrender.' The king, who now felt that his position was desperate, replied: 'To whom shall I surrender? Where is my cousin, the Prince of Wales?' 'He is not here,' answered Sir Denis; 'but surrender to me, and I will conduct you to him.' 'But who are you?' rejoined the king. 'Denis de Morbecque,' was the reply; 'a knight of Artois; but I serve the king of England because I cannot belong to France, having forfeited all I had there.' 'I surrender to you,' said John, extending his right-hand glove; but this submission was almost too late to save his life, for the English were disputing with Sir Denis and the Gascons the honour of his capture, and the French king was in the utmost danger from their violence. At last, Earl Warwick and Lord Cobham came up, and with every demonstration of respect conducted John and his son Philip to the Black Prince, who received them with the utmost courtesy. He invited them to supper, waited himself at table on John, as his superior in age and rank, praised his valour and endeavoured by every means in his power to diminish the humiliation of the royal captive.

The day after the victory of Poitiers, the Black Prince set out on his march to Bordeaux, which he reached without meeting any resistance. He remained during the ensuing winter in that city; concluded a truce with the Dauphin, Charles, John's eldest son; and, in the spring of 1357, crossed over to England with the king and Prince Philip as the trophies of his prowess. A magnificent entrance was made into London, John being mounted on a cream-coloured charger, whilst the Prince of Wales rode by his side on a little black palfrey as his page. Doubtless the French king would have willingly dispensed with this ostentatious mode of respect. He was lodged as a prisoner in the Savoy Palace, and continued there till 1360, when, in consequence of the treaty of Bretigny, he was enabled to return to France. The stipulations of this compact having been broken by John's sons and nobles, he conceived himself bound in honour to surrender himself again a prisoner to England, and actually returned thither, when Edward III. received him with great affection, and assigned him again his old quarters in the Savoy. His motives in displaying so nice a sense of honour, a proceeding so unusual in those times, when oaths

and treaties seemed made only to be broken, have been variously construed. In charity, however, and as affording a pleasing exception to the general maxims of the age, we may, in default of any positive evidence to the contrary, assume that John was really actuated by what most persons deemed then a gratuitous and romantic scruple. He did not long survive his second transference to the Savoy, and died there in April 1364.

THE GREAT PLAGUE OF LONDON.

The week ending the 19th of September 1665, was that in which this memorable calamity reached its greatest destructiveness. It was on the 26th of the previous April that the first official notice announcing that the plague had established itself in the parish of St Giles-in-the-Fields, appeared in the form of an order of council, directing the precautions to be taken to arrest its progress. The evil had at this time been gradually gaining head during several weeks. Vague suspicions of danger had existed during the latter part of the previous year, and serious alarm was felt, which however gradually abated. But the suspicions proved to be too true; the infection, believed to have been brought over from Holland, had established itself in the parish of St Giles, remained concealed during the winter, and began to shew itself in that and the adjoining parishes at the approach of spring, by the increase in their usual bills of mortality. At the date of the order of council just alluded to, there could be no longer any doubt that the parishes of St Giles, St Andrews, Holborn, and one or two others adjoining, were infected by the plague.

During the months of May and June, the infection spread in spite of all the precautions to arrest its progress, but, towards the end of the latter month, the general alarm was increased by the certainty that it had not only spread into the other parishes outside the walls, but that several fatal cases had occurred in the city. People now began to hurry out of town in great numbers, while it was yet easy to escape, for as soon as the infection had become general, the strictest measures were enforced to prevent any of the inhabitants leaving London, lest they might communicate the dreadful pestilence to the towns and villages in the country. One of the most interesting episodes in the thrilling narrative of Defoe is the story of the adventures of three men of Wapping, and the difficulties they encountered in seeking a place of refuge in the country to the north-east of London, during the period while the plague was at its height in the metropolis. The alarm in London was increased when, in July, the king with the court also fled, and took refuge in Salisbury, leaving the care of the capital to the Duke of Albemarle. The circumstance of the summer being unusually hot and calm, nourished and increased the disease. An extract or two from Defoe's narrative will give the best notion of the internal state of London at this melancholy period. Speaking of the month in which the court departed for Salisbury, he tells us that already 'the face of London was strangely altered—I mean the whole mass of buildings, city, liberties, suburbs, Westminster, Southwark, and altogether; for, as to the particular part called the City, or within the walls, that was not yet much infected; but, in the whole, the face of things, I say, was much altered; sorrow and sadness sat upon every face, and though some part were not yet overwhelmed, yet all looked deeply concerned, and as we saw it apparently coming on, so every one looked on himself and his family as in the utmost danger: were it possible to represent those times exactly, to those that did not see them, and give the reader due ideas of the horror that everywhere presented itself, it must make just impressions upon their minds, and fill them with surprise. London might well be said to be all in tears; the mourners did not go about the streets indeed, for nobody put on black, or made a formal dress of mourning for their nearest friends; but the voice of mourning was truly heard in the streets; the shrieks of women and children at the windows and doors of their houses, where their nearest relations were perhaps dying, or just dead, were so frequent to be heard, as we passed the streets, that it was enough to pierce the stoutest heart in the world to hear them. Tears and lamentations were seen almost in every house, especially in the first part of the visitation; for towards the latter end, men's hearts were hardened, and death was so always before their eyes, that they did not so much concern themselves for the loss of their friends, expecting that themselves should be summoned the next hour.'

As the infection spread, and families under the slightest suspicion were shut up in their houses, the streets became deserted and overgrown with grass, trade and commerce ceased almost wholly, and, although many had succeeded in laying up stores in time, the town soon began to suffer from scarcity of provisions. This was felt the more as the stoppage of trade had thrown workmen and shopmen out of employment, and families reduced their numbers by dismissing many of their servants, so that a great mass of the population was thrown into a state of absolute destitution. 'This necessity of going out of our houses to buy provisions, was, in a great measure, the ruin of the whole city, for the people catched the distemper, on these occasions, one of another, and even the provisions themselves were often tainted, at least I have great reason to believe so; and, therefore, I cannot say with satisfaction, what I know is repeated with great assurance, that the market-people, and such as brought provisions to town, were never infected. I am certain the butchers of Whitechapel, where the greatest part of the flesh-meat was killed, were dreadfully visited, and that at last to such a degree, that few of their shops were kept open, and those that remained of them killed their meat at Mile-end and that way, and brought it to market upon horses. . . . . It is true people used all possible precautions; when any one bought a joint of meat in the market, they would not take it out of the butcher's hand, but took it off the hooks themselves. On the other hand, the butcher would not touch the money, but have it put into a pot full of vinegar, which he kept for that purpose. The buyer carried always small money to make up any odd sum, that they might take no change. They carried bottles for scents and perfumes in their hands, and all the means that could be used were employed; but then the poor could not do even these things, and they went at all hazards. Innumerable dismal stories we heard every day on this very account. Sometimes a man or woman

dropped down dead in the very markets; for many people that had the plague upon them knew nothing of it till the inward gangrene had affected their vitals, and they died in a few moments; this caused that many died frequently in that manner in the street suddenly, without any warning; others, perhaps, had time to go to the next bulk or stall, or to any door or porch, and just sit down and die, as I have said before. These objects were so frequent in the streets, that when the plague came

PEST-HOUSE IN TOTHILL FIELDS, WESTMINSTER—FROM A PRINT BY HOLLAR.

to be very raging on one side, there was scarce any passing by the streets, but that several dead bodies would be lying here and there upon the ground; on the other hand, it is observable that though at first, the people would stop as they went along and call to the neighbours to come out on such an occasion, yet, afterwards, no notice was taken of them; but that if at any time we found a corpse lying, go across the way and not come near it; or if in a narrow lane or passage, go back again, and seek some other way to go on the business we were upon; and in those cases the corpse was always left, till the officers had notice to come and take them away; or till night, when the bearers attending the dead-cart would take them up, and carry them away. Nor did those undaunted creatures, who performed these offices, fail to search their pockets, and sometimes strip off their clothes if they were well dressed, as sometimes they were, and carry off what they could get.'

As the plague increased in intensity, the markets themselves were abandoned, and the country-people brought their provisions to places appointed in the fields outside the town, where the citizens went to purchase them with extraordinary precautions. There were stations of this kind in Spitalfields, at St George's Fields in Southwark, in Bunhill-fields, and especially at Islington. The appearance of the town became still more frightful as the summer advanced. 'It is scarcely credible,' continues the remarkable writer we are quoting, 'what dreadful cases happened in particular families every day; people, in the rage of the distemper, or in the torment of their rackings, which was indeed intolerable, running out of their own government, raving and distracted, and oftentimes laying violent hands upon themselves, throwing themselves out of their windows, shooting themselves, &c. Mothers murdering their own children, in their lunacy; some dying of mere grief, as a passion; some of mere fright and surprise, without any infection at all; others frightened into idiotism and foolish distractions; some into despair and lunacy; others into melancholy madness. The pain of the swelling was in particular very violent, and to some intolerable; the physicians and surgeons may be said to have tortured many poor creatures even to death. The swellings in some grew hard, and they applied violent drawing plasters or poultices to break them; and, if these did not do, they cut and scarified them in a terrible manner. In some, those swellings were made hard, partly by the force of the distemper, and partly by their being too violently drawn, and were so hard, that no instrument could cut them, and then they burned them with caustics, so that many died raving mad with the torment, and some in the very operation. In these distresses, some, for want of help to hold them down in their beds, or to look to them, laid hands upon themselves, as above; some broke out into the streets, perhaps naked, and would run directly down to the river, if they were not stopped by the watchmen, or other officers, and plunge themselves into the water, wherever they found it. It often pierced my very soul to hear the groans and cries of those who were thus tormented.' 'This running of distempered people about the streets,' Defoe adds, 'was very dismal,

and the magistrates did their utmost to prevent it; but, as it was generally in the night, and always sudden, when such attempts were made, the officers could not be at hand to prevent it; and, even when any got out in the day, the officers appointed did not care to meddle with them, because, as they were all grievously infected, to be sure, when they were come to that height, so they were more than ordinarily infectious, and it was one of the most dangerous things that could be to touch them; on the other hand, they generally ran on, not knowing what they did, till they dropped down stark dead, or till they had exhausted their spirits so, as that they would fall and then die in perhaps half an hour or an hour; and, which was most piteous to hear, they were sure to come to themselves entirely in that half hour or hour, and then to make most grievous and piercing cries and lamentations, in the deep afflicting sense of the condition they were in.' 'After a while, the fury of the infection appeared to be so increased that, in short, they shut up no houses at all; it seemed enough that all the remedies of that kind had been used till they were found fruitless, and that the plague spread itself with an irresistible fury, so that it came at last to such violence, that the people sat still looking at one another, and seemed quite abandoned to despair. Whole streets seemed to be desolated, and not to be shut up only, but to be emptied of their inhabitants; doors were left open, windows stood shattering with the wind in empty houses, for want of people to shut them; in a word, people began to give up themselves to their fears, and to think that all regulations and methods were in vain, and that there was nothing to be hoped for but an universal desolation.'

In spite of this horrible state of things, the town was filled with men desperate in their wickedness; robbers and murderers prowled about in search of plunder, and riotous people, as if in despair, indulged more than ever in their vices. One house, in special, the Pye Tavern, at the end of Houndsditch, was the haunt of men who openly mocked at religion and death. In the middle of these scenes, two incidents occurred of an almost ludicrous character. Such is the story of the piper, which Defoe appears to have heard from one of the men who carted the dead to the burial-places, whose name was John Hayward, and in whose cart the accident happened. 'It was under this John Hayward's care,' he says, 'and within his bounds, that the story of the piper, with which people have made themselves so merry, happened, and he assured me that it was true. It is said that it was a blind piper; but, as John told me, the fellow was not blind, but an ignorant, weak, poor man, and usually went his rounds about ten o'clock at night, and went piping along from door to door, and the people usually took him in at public-houses where they knew him, and would give him drink and victuals, and sometimes farthings; and he in return would pipe and sing, and talk simply, which diverted the people, and thus he lived. It was but a very bad time for this diversion, while things were as I have told, yet the poor fellow went about as usual, but was almost starved; and when anybody asked how he did, he would answer, the dead cart had not taken him yet, but that they had promised to call for him next week. It happened one night that this poor fellow, whether somebody had given him too much drink or no (John Hayward said he had not drink in his house, but that they had given him a little more victuals than ordinary at a public-house in Colman Street), and the poor fellow having not usually had a bellyfull, or, perhaps, not a good while, was laid all along upon the top of a bulk or stall, and fast asleep, at a door in the street near London-wall, towards Cripplegate, and that, upon the same bulk or stall, the people of some house in the alley, of which the house was a corner, hearing a bell, which they always rung before the cart came, had laid a body really dead of the plague just by him, thinking, too, that this poor fellow had been a dead body as the other was, and laid there by some of the neighbours. Accordingly, when John Hayward with his bell and the cart came along, finding two dead bodies lie upon the stall, they took them up with the instrument they used, and threw them into the cart; and all this while the piper slept soundly. From hence they passed along, and took in other dead bodies, till, as honest John Hayward told me, they almost buried him alive in the cart, yet all this while he slept soundly; at length the cart came to the place where the bodies were to be thrown into the ground, which, as I do remember, was at Mountmill; and, as the cart usually stopped some time before they were ready to shoot out the melancholy load they had in it, as soon as the cart stopped, the fellow awaked, and struggled a little to get his head out from among the dead bodies, when, raising himself up in the cart, he called out, "Hey, where am I?" This frighted the fellow that attended about the work, but, after some pause, John Hayward recovering himself, said: "Lord bless us! there's somebody in the cart not quite dead!" So another called to him, and said: "Who are you?" The fellow answered: "I am the poor piper: where am I?" "Where are you!" says Hayward: "why, you are in the dead cart, and we are going to bury you." "But I an't dead, though, am I?" says the piper; which made them laugh a little, though, as John said, they were heartily frightened at first; so they helped the poor fellow down, and he went about his business.'

The number of deaths in the week ending the 19th September, was upwards of ten thousand. The weather then began to change, and the air became cooled and purified by the equinoctial winds. It took a good part of the winter, however, to allay the infection entirely, and it was only late in December that the people who had fled began to crowd back to the metropolis. The king and court only returned at the beginning of the following February. It has been calculated that considerably above a hundred thousand persons perished by this terrible visitation.

SEPTEMBER 20.

St Eustachius and companions, martyrs, 2d century. St Agapetus, pope and confessor, 536.

Born.—Alexander the Great, Macedonian conqueror, 356 B.C., *Pella;* Emperor Antoninus Pius, 86 A.D.; Prince Arthur, elder brother of Henry VIII., 1486, *Winchester;* Maria Paulina Bonaparte, sister of Napoleon, 1780, *Ajaccio.*

Died.—Lucius Crassus, orator, 91 B.C., *Rome;* Owen Glendower, Welsh patriot, 1415, *Monnington;* John Gruter, eminent scholar and critic, 1527, *Heidelberg;* Jerome Cardan, physician, 1576; Lucius Carey, Lord Falkland, royalist statesman, killed at Newbury, 1643; John Gauden, bishop of Worcester, supposed author of the *Eikon Basiliké*, 1662; Charles VI., emperor of Germany, 1740, *Vienna;* William Hutton, self-taught man, and miscellaneous writer, 1815, *Birmingham;* Dr José Gaspar Rodriguez Francia, dictator of Paraguay, 1840; William Finden, engraver, 1852.

OWEN GLENDOWER.

This celebrated chieftain, the Paladin of Welsh nationality, forms a prominent character during the reign of Henry IV., and has been immortalised by Shakspeare, in his play of that name. The injury inflicted on him by Lord Grey de Ruthyn, who treacherously maligned him to the king, and afterwards, under pretext of forfeiture, took possession of his lands, first prompted Glendower to seek, by force of arms, the redress denied him by the English government. Claiming to be the representative of the ancient Welsh kings, through his mother, who was lineally descended from Llewelyn, the last of these princes, he asserted his right to the crown of the principality, and, about 1400, raised the standard of insurrection. Among his own countrymen he enjoyed an unbounded influence, both from his enterprising and energetic character, and the reputation of possessing supernatural powers. This latter attribute our readers will remember is forcibly made use of by Shakspeare, in the discussion which he represents as taking place between Glendower and Hotspur.

Glend. I can call spirits from the vasty deep.
Hots. Why, so can I, or so can any man;
But will they come, when you do call for them?
Glend. Why, I can teach thee, cousin, to command the devil.
Hots. And I can teach thee, coz, to shame the devil,
By telling truth; tell truth, and shame the devil.

For some years, fortune favoured Glendower's arms, and having taken prisoner his enemy Lord Grey, he compelled him to ransom himself by the payment of a large sum of money, and give one of his daughters in marriage to his captor. A complaint was made by the English House of Commons, that the Welsh scholars had left the universities, and Welsh labourers, their masters, to join in the rebellion at home. With Sir Edmund Mortimer and the Northumbrian Percies, Glendower formed a close alliance, and so sanguine were the expectations of the confederacy, that they formally partitioned among themselves the whole dominions of Henry IV., the country to the west of the Severn being assigned as the share of the Welsh champion. After the battle of Shrewsbury, however, in which his allies, the Percies, were overthrown, his star of success appears to have waned, and having sustained two signal defeats in 1405, he was compelled for a time to wander up and down the country, with a few faithful followers, concealing himself in remote and untravelled districts. One of his places of refuge, a cave in Merionethshire, is known to this day, by the name of Ogof Owain or Owen's Cave. From this retreat he emerged to appear again at the head of an army, and being joined by a large body of French troops, whose king had formed an alliance with the Welsh insurgents, he made a devastating march through Glamorganshire, and advanced as far as the environs of Worcester. Here, he took up a strong position, and maintained for three days a succession of skirmishes with the royal troops, but was at last obliged, from want of supplies, to retire with his allies into Wales. No further enterprise of any importance was from this time attempted by him, but to the close of his life, he continued to harass the English by predatory incursions from the mountain-fastnesses. In the reign of Henry V., an offer of pardon was made by the king to Glendower and his followers, and negotiations were accordingly entered into, to be interrupted by the death of the aged chief; he expired peacefully on 20th September 1415, at the house of one of his daughters. A tombstone, but without any inscription, in the churchyard of Monnington-on-Wye, is said to mark his place of sepulture.

The very name of Glendower has a romantic interest attached to it, and we would gladly attribute to its owner all the shining qualities of a hero and patriot. Yet truth compels us to state, that, though brave, active, and vigilant, Glendower is charged with both cruelty and rapacity. The portrait of him, engraved in the *Archæologia* from his great seal, represents a man of majestic and intellectual mien, such as is generally attributed to those destined by nature to the leadership of their fellows.

JEROME CARDAN.

One of the most voluminous authors that ever wrote, perhaps the ablest physician of his day, and certainly a man of the most decided and versatile genius, Jerome Cardan, or to designate him more properly by his Italian name, Girolamo Cardano, presents, in his singular history, a curious epitome of the sixteenth century, its eccentricities, energies, and modes of thought. The natural son of an eminent jurisconsult of Milan, he found himself thrown on the world as a waif and vagabond, and for many long and weary years had to battle with it in that character, though he ultimately succeeded in winning for himself a place amid the most favoured of its children. Few men who have risen to eminence and distinction, have had so protracted a period of probation as Cardan, or exhibited such perseverance and tenacity of purpose in prosecution of the fame to which they believed themselves destined. Though regularly educated at the universities of Pavia and Padua, his stain of illegitimacy prevented his admission as a member of the Milanese College of Physicians; and it was not till after he had gained, by his literary and medical abilities, some powerful friends, that he was enabled by their aid to force his entrance into that learned body. The appointment of professor of medicine at the university of Pavia, with a salary of two hundred and forty, afterwards raised to four hundred gold crowns, followed shortly after this victory, and from this time fortune may be said to have smiled on Cardan. His fame as a physician diffused itself not only over Italy, but throughout Europe. Pope Paul III. offered him a handsome pension if he would enter his service, and a proffer of an annual stipend of eight hundred crowns, with the maintenance of his household, was forwarded to

him by the king of Denmark; but with neither of these invitations would he accord compliance, the uncertainty of the papal tenure of office, and the cold and moist climate of Scandinavia, being both insuperable objections. To another offer, however, which he received, he lent a more ready ear, and the journey which he undertook in consequence forms, to a Briton, more especially, one of the most curious episodes in the life of the Italian physician.

In the middle of the sixteenth century, the regency of the kingdom of Scotland was held by James Hamilton, Earl of Arran, whose weak and vacillating disposition was very markedly controlled by his more decided and energetic brother John, abbot of Paisley, and afterwards archbishop of St Andrews. The health of the latter, whose course of life was by no means consonant to his ecclesiastical character, had for some years been in a declining condition, and he laboured under a 'periodic asthma.' Benefiting apparently little by the ministration of his own physician, William Cassanate, a Frenchman, of Spanish extraction, settled in Edinburgh, Hamilton was recommended to consult the famous Cardan, who had now quitted Pavia for Milan. The suggestion was readily accepted by the archbishop, and a flattering letter was forthwith despatched by Cassanate to Italy, in which he besought Cardan to travel to Paris or at least to Lyon, where he would be met by Archbishop Hamilton, who had resolved to make this journey for the sake of his health. Such an invitation happened to fall in with Jerome's humour at the time, and he returned a favourable reply. The sum of two hundred crowns was paid him, in name of travelling expenses, by the archbishop's messenger, and on 23d February 1552, he started on his journey across the Alps, taking the Simplon Pass into Switzerland, and proceeding from thence through Geneva to Lyon. At the latter town, he expected to meet either the archbishop or his physician, but neither made appearance, and he remained upwards of a month in the place, where he reaped a golden harvest from the exercise of his profession of the healing art, nobles and distinguished persons eagerly pressing to him to avail themselves of his services. At last Cassanate arrived, bearing a letter from Archbishop Hamilton, in which that prelate, after apologising for his inability from cares of church and state to visit France at present, besought the learned Cardanus to give him the benefit of his professional skill, by extending his journey to Scotland. He further intimated that Cassanate would provide him with a safe-conduct, and also give him the security of any banker in Milan, for such suitable remuneration as might be agreed on.

It was not without considerable difficulty that Cardan was prevailed on to enter on this new undertaking, as he entertained the perfectly natural belief that the archbishop had inveigled him so far on the way, knowing well that he would have absolutely refused to visit Scotland had he been invited to do so at Milan. However, a reluctant consent was at last given, and after receiving an additional guerdon of three hundred crowns, Cardan and Cassanate set out together on their journey northward. Having arrived at Paris, the travellers made a stay of a few weeks, during which the most flattering attentions were paid to Cardan, including a request from Henry II. that he would take up his abode with him as court-physician, but the Milanese professor declined thus to expatriate himself. In like manner as he had practised at Lyon, however, he held numerous and crowded levees of patients, and realised large sums of money in shape of fees. Towards the end of May, he and Cassanate quitted Paris, a place of which Cardan seems to have carried away no exalted opinion in point of cleanliness and salubrity. He suggests sarcastically, indeed, that its ancient name, *Lutetia*, may have been derived from the dirt (*lutum*) which formed, in his opinion, one of the leading characteristics of the place. They then proceeded down the Seine to Rouen, of which our physician speaks in the most eulogistic terms, and from thence journeyed to Boulogne and Calais, where they took ship for London, and arrived there on 3d June. After a rest in the English metropolis of three days, they set out on their overland journey to Edinburgh, which they reached at the end of twenty-three days.

From the end of June to the middle of September, Cardan remained in Edinburgh in attendance on Archbishop Hamilton, who seems to have benefited greatly by the prescriptions of his Italian doctor. A full account has been left us by the latter of the remedies employed and the regimen prescribed for his distinguished patient, much of which seems sufficiently absurd at the present day, but is, nevertheless, accompanied by numerous sensible and judicious injunctions. Among these were recommendations to use frequently the cold bath (the water to be poured from a pail or pitcher over the archiepiscopal head and shoulders), feather-beds and pillows to be avoided, a sufficient amount of sleep to be taken, moderation and regularity to be observed as regards meals, and the mind to be kept free from harassing cares. So sensible was Hamilton of the benefits which he had received from this treatment, that he would gladly have detained Cardan for a much longer period; but the latter was inexorable, being both impatient to return to his country and family, and unwilling to face the inclement skies of a Scottish winter. He, accordingly, quitted Edinburgh for London, after receiving from the archbishop the princely remuneration of eighteen hundred gold crowns, of which four hundred went to Cardan's attendants. The subsequent history of the prelate, to whom a renewed lease of life had thus been granted, is well known to all readers of Scottish history. After endeavouring ineffectually to avert the change in religion and ecclesiastical establishments which shortly afterwards took place in the country, he became, on the arrival of Queen Mary in Scotland, one of her most favoured counsellors; and on her deposition and subsequent confinement in Loch Leven, an active member of that party which sought to reinstate her on the throne. Doomed to see all his hopes disappointed, he took refuge in Dumbarton Castle, and on the capture of that fortress by the government forces in 1571, was tried and condemned on the charge, among others, of participating in the murder of the Regent Murray. In pursuance of this sentence, Hamilton was ignominiously hanged in his pontifical robes on the common gibbet at Stirling, being both the last Roman Catholic primate of Scotland, and the first of its prelates to suffer capital punishment.

In passing through London on his return home, Cardan was summoned to attend the young king, Edward VI., then in a declining state of health, and who fell a victim to consumption in the ensuing summer. He had several interviews and conversations with the youthful sovereign, whose generally received reputation for distinguished abilities and goodness of heart he amply confirms. Probably he foresaw that Edward's life must ere long come to a termination, but to have expressed any opinion to that effect would have been both perilous to himself and cruel towards the amiable prince. After a short stay in London, he proceeded to Dover, crossed over from thence into Belgium, and passing through the Low Countries, reached Cologne, from which he sailed up the Rhine to Strasburg and Basel. He then continued his journey through Switzerland, crossed the Alps, and re-entered Milan, on 3d January 1553, after an absence of nearly a year.

The sunshine of prosperity continued for several years to beam on Cardan, but his latter days were embittered by a terrible calamity. Gianbatista, his eldest son, had married a worthless girl, and thereby occasioned his father the most poignant sorrow; but the indignation which he expressed at the event gradually relented, and he allowed the disreputable couple a maintenance. Soon fearful quarrels arose between husband and wife, the latter of whom did not scruple to glory in her infidelities, and thereby roused the implacable resentment of Gianbatista, who conceived the design of poisoning her, and effected it through the medium of a cake. His wife died, and thereupon he and his brother Aldo were arrested as her murderers. As regarded the latter, the charge was abandoned, but the proofs of Gianbatista's criminality were strong, and notwithstanding all the efforts of his father to save him, he was condemned, and put to death in prison at the early age of twenty-six. Desolation and misery were now the portion of Cardan. The disgrace which had fallen on his house told even on his worldly fortunes, and, afflicted and depressed, he accepted a professorship in the university of Bologna; after residing in which town for several years, he was thrown into prison in 1570 on the charge of impiety, but was liberated after a detention of eighty-six days, the condition of his release being that he should publish no more books. At this time, he resigned his chair by the advice of his friends, who obtained for him a pension from Pope Pius V. On this arrangement being made, he left Bologna for Rome, where the remaining six years of his life were spent. He died on 20th September 1576, at the age of seventy-five, his birth having been on 24th September 1501.

Throughout life, Cardan never enjoyed robust health, but his literary activity was excessive, and it is said that he left behind him no less than one hundred and thirty-one printed works and one hundred and eleven in manuscript, besides having written a large amount of matter which he had committed to the flames. Among his productions may be mentioned *De Malo Recentiorum Medicorum Medendi usu* (On the Bad Practice of the Healing Art among Modern Physicians), which, as might be expected, occasioned a tremendous outcry from the profession against its author; his philosophical books on *Wisdom* and *Consolation;* his *Practice of Arithmetic;* and his *Algebra.* Of all his works, the last has tended most to perpetuate his fame, being the first in which the whole doctrine of cubic equations was given to the world, and which also made known for the first time some most important rules and principles. The value of his contributions to mathematical science is still recognised, but most of his disquisitions on medicine and philosophy, which excited such attention in his own day, have long ago been completely forgotten. Of his personal character, it is not possible to speak very favourably, as he seems to have been loose in morals, and to have been imbued to an ample extent with all the objectionable tendencies of his time. But he appears to have been a kind and affectionate husband and parent, and a genial and agreeable companion, though his manners, like his person, are said to have been unprepossessing. Considering the misfortune of his birth, the defects of his education, and the period in which he lived, we may fairly give our tribute of admiration to his undoubted genius; and while making the most of the good points, cast the mantle of charity over the defects in the character of Jerome Cardan.

A BLUE-COAT MARRIAGE.

Pepys, in a letter to Mrs Steward, dated September 20, 1695, notes that the extreme depression of the London public at that time, under a grievous war and heavy losses at sea, was enlivened by an extraordinary occurrence in connection with Christ's Hospital (the Blue-Coat School). Two wealthy citizens, lately deceased, had left their estates, the one to a Blue-coat boy, the other to a Blue-coat girl, and this had led some of the magistrates to bring about a match between these two young persons. The boy, in a habit of blue satin, led by two of the girls; the girl, in blue, with a green apron, and yellow petticoat, all of sarsenet, led by two of the boys; proceeded in procession along Cheapside to Guildhall, where (in the chapel) they were united in wedlock by the dean of St Paul's, the lord mayor giving away the bride. Then there was an entertainment in the hall of the hospital, Bow bells ringing out a merry peal all the time. The high patronage thus bestowed upon the union of two persons in nonage, gives a strange idea of the taste and morals of the age. It would be easy to shew that the incident was far from being unique.

SHOWERS OF ANIMALS.

On the 20th of September 1839, an English officer, residing in the neighbourhood of Calcutta, saw a quantity of live fish descend in a smart shower of rain. They were about three inches in length, and all of one kind. Some, falling on hard ground, were killed; some, which fell on soft grass, continued in life. 'The most strange thing that struck me in connection with this event,' said the officer, 'was that the fish did not fall helter-skelter, everywhere, or here and there: they fell in a straight line, not more than a cubit in breadth.' Shortly after this event, at a village near Allahabad, 3000 or 4000 fish were found on the ground, of a well-known species, and about a span in length, but all dead and dry.

The instances are more numerous than most observers would suppose, of animals falling to the ground in the manner of rain, sometimes accompanied by real rain. On the 14th of April 1828, Major Forbes Mackenzie, of Fodderty, in Ross-shire, while walking in a field on his farm, saw a great portion of

the ground covered with herring-fry, three to four inches in length, fresh and entire. The spot was three miles from the Firth of Dingwall. About two years afterwards, in the island of Islay, in Argyleshire, after a day of very heavy rain, the inhabitants were surprised to find a large number of small herrings strewed over the fields, perfectly fresh, and some of them alive. On another occasion, during a strong gale, herrings and other fish were carried from the Firth of Forth so far as Loch Leven, eight or ten miles distant. More recently, a Wick newspaper stated that, on a particular morning, a large quantity of herrings were found lying scattered in a garden about half a mile from the shore at that town. The peasants cooked and ate them—not without misgiving on the part of others as to the possibility of some Satanic agency having been concerned in the transfer of herrings to such a spot.

Hasted, in his *History of Kent*, narrates that about Easter, 1666, in the parish of Stanstead, which is at a considerable distance from the sea, and has no fish-ponds near it, a pasture-field was found strewed over with small fish.

Frogs and insects have similarly rained down upon the fields, but more rarely. Professor Pontus, of Cahors, communicated to the French Academy in 1804 the particulars of a shower of frogs near Toulouse. Pontus saw the young frogs on the cloaks of two gentlemen, who were caught in the storm on the road. When the diligence in which he was travelling arrived at the place where the storm burst, the road and fields were observed to be full of frogs, in some places three or four deep; the horses' hoofs killed thousands during the passage of the vehicle along this spot. Concerning showers of insects, we will simply notice one instance recorded in the *Journal de St Petersbourg*, 1827. A heavy snow-storm occurred on the 17th of October, at Pakroff, in the government of Tver. The snow was accompanied by a prodigious number of black insects about an inch and a quarter in length; they had flat shining heads, antennæ, a velvety kind of skin marked with rings or bands, and feet which enabled them to crawl rapidly over the snow. Such of them as were carried into a warm place, died presently; but the rest remained alive for a considerable time in a very severe temperature.

How are these phenomena to be accounted for? There seems little doubt that winds, whirlwinds, and waterspouts are the chief source of their production. Waterspouts are not unknown in that portion of Ross-shire where the shower of herrings took place in 1828. The herring fall at Islay occurred after a day of very heavy rain; and that at Loch Leven during a strong gale from the Firth of Forth. The occurrence at Wick was attributed by the more intelligent inhabitants to a waterspout. At Stanstead, a thunder-storm preceded the fall of fish. At Calcutta, the fish-shower was both preceded and accompanied by a smart shower of rain. At Allahabad, a blast of wind came on suddenly, so violently as to blow down several large trees; and it was after this wind that the fish were found on the ground. At Toulouse, the shower of frogs was preceded by the sudden appearance of a very thick cloud from the horizon, and the bursting out of a thunder-storm. In all these instances, the results were probably due, wholly or in part, to this fact (ascertained by modern science), that wind has a strong tendency to become circular or rotatory, sucking up from beneath any small light objects that may be in the way, carrying them to a distance, and depositing them when the force is allayed. If this occurs on land, we have a *whirlwind;* if on sea, a *waterspout.* There is one case on record, in Norway, of a colony of rats, while migrating in vast numbers from the high to the low countries, having been overtaken by a whirlwind; they were caught up, carried to a neighbouring valley, and there fell as a rat-shower.

SEPTEMBER 21.

St Matthew, apostle and evangelist. St Maura, virgin, 850. St Lo or Laudus, bishop of Coutances, 568.

Born.—John Loudon M'Adam, improver of roads, 1756; Louis Bonaparte, king of Holland, 1778, *Ajaccio, Corsica.*

Died.—Edward II. of England, murdered at Berkeley Castle, 1327; Sultan Selim I. 1520; Emperor Charles V., 1558, *Monastery of St Just, Spain;* Colonel James Gardiner, killed at Prestonpans, 1745; John Balguy, eminent divine and controversial writer, 1748, *Harrowgate.*

QUEEN ISABELLA: ENGLISH DOMESTIC LIFE OF FIVE HUNDRED YEARS SINCE.

One of the most interesting records of the domestic life of our ancestors that we remember to have read of late, consists of certain notices of the last days of Isabella, queen of Edward II., drawn from an account of the expenses of her household, in one of the Cottonian manuscripts in the British Museum, and lately communicated to the Society of Antiquaries by Mr E. A. Bond. No Court Circular ever recorded the movements of royalty more minutely than does this memorial of the domestic manners of the middle of the fourteenth century—*the private life of five hundred years since!*

It will be recollected that after the deposition and murder of King Edward II., we hear little of the history of the chief mover of these fearful events. The ambitious Mortimer expiates his crimes on the scaffold. Isabella, the instigator of sedition against her king, the betrayer of her husband, survives her accomplice; but from the moment that her career of guilt is arrested, she is no more spoken of. After mentioning the execution of Mortimer, Froissart tells us that 'the king, by the advice of his council, ordered his mother to be confined in a goodly castle, and gave her plenty of ladies to wait and attend on her, as well as knights and esquires of honour. He made her a handsome allowance to keep and maintain the state she had been used to, but forbade that she should ever go out, or drive herself abroad, except at certain times, when any shows were exhibited in the court of the castle; the queen thus passed her time there meekly, and the king, her son, visited her twice or thrice a year.' Castle Rising was the place of her confinement. After the first two years, the strictness of her seclusion was relaxed, and thence she was removed to Hertford Castle.

The account of the expenses of her household embraces, in distinct divisions, the queen's general daily expenses; sums given in alms; miscellaneous necessary expenses; disbursements for dress, purchases of plate and jewellery, gifts, payments to messengers, and imprests for various services. In the margin of the general daily expenses are entered the names of the visitors during the day, together with the movements of the household from place to place. From these entries we gain some insight into the degree of

personal freedom enjoyed by the queen and her connections; the consideration she obtained at the court of the great King Edward III., her son; and even into her personal disposition and occupations.

It appears, then, that at the beginning of October 1357, the queen was residing at her castle at Hertford, having not very long before been at Rising. The first visitor mentioned, and who supped with her, was Joan, her niece, who visited the queen constantly, and nursed her in her last illness.

About the middle of October, the queen set out from Hertford on a pilgrimage to Canterbury. She rested at Tottenham, London, Eltham, Dartford, and Rochester, in going or returning, visited Leeds Castle, and was again at Hertford at the beginning of November. She gave alms to the nuns-minoresses without Aldgate; to the rector of St Edmund's, London, in whose parish her hostel was situated—it was in Lombard Street; and to the prisoners in Newgate. On the 26th of October, she entertained the king and Prince of Wales at her house in Lombard Street; and we find recorded a gift of 13*s.* 4*d.* to four minstrels, who played in their presence.

After her return to Hertford Castle, the queen was visited by the renowned Gascon writer, the Captal de Buche, cousin of the Comte de Foix. He had recently come over to England with the Prince of Wales, having taken part, on the English side, in the great battle of Poitiers; and there are also entries of the visits of several noble captives, who were taken in the above engagement. On the 10th of February, messengers arrive from the king of Navarre, to announce, as it appears elsewhere, his escape from captivity; an indication that Isabella was still busy in the stirring events of her native country. On the 20th of March, the king comes to supper. On each day of the first half of the month of May, during the queen's stay in London, the entries shew her guests at dinner, her visitors after dinner, and at supper, as formally as in a Court Circular of our time.

On May 14, Isabella left London, and rested at Tottenham, on her way to Hertford; and there is entered a gift of 6*s.* 8*d.* to the nuns of Cheshunt, who met the queen at the cross, in the high-road, in front of their house.

On the 4th of June, the queen made another pilgrimage to Canterbury, where she entertained the abbot of St Augustine's; under 'Alms' are recorded the queen's oblations at the tomb of St Thomas; here, too, are entered a payment to minstrels, her oblations in the church of St Augustine, and her donations to various hospitals and religious houses in Canterbury.

The entries of 'alms' amount to the considerable sum of £298, equivalent to about £3000 of present money. They consist of chapel-offerings, donations to religious houses, to clergymen preaching in the queen's presence, to special applicants for charity, and to paupers. The most interesting entry, perhaps, is that of a donation of 40*s.* to the abbess and minoresses Without Aldgate, in London, to purchase for themselves two pittances on the anniversaries of Edward, late king of England, and Sir John, of Eltham (the queen's son), given on the 20th of November. And this is the sole instance of any mention of the unhappy Edward II.

Among these items is a payment to the nuns of Cheshunt, whenever the queen passed the priory, in going to or from Hertford. There is more than one entry of alms given to poor scholars of Oxford, who had come to ask aid of the queen. A distribution is made amongst a hundred or fifty poor persons on the principal festivals of the year, amongst which that of Queen Katherine is included; and doles are made among paupers daily and weekly throughout the year, amounting in one year and a month, to £102. On the 12th of September, after the queen's death, a payment of 20*s.* is made to William Ladde, of Shene, on account of the burning of his house by an accident while the queen was staying at Shene.

Under the head of 'Necessaries,' we find a payment of 50*s.* to carpenters, plasterers, and tilers, for works in the queen's chamber. Next are half-yearly payments of 25*s.* 2*d.* to the prioress of St Helen's, in London; and rent for the queen's house in Lombard Street. Next, is a purchase of two small 'catastre,' or cages for birds, in the queen's chamber, and of hemp-seed for the birds; and under the 'Gifts' are two small birds presented to Isabella by the king. Here, likewise, are payments for binding the black carpet in the queen's chamber; for repairs of the castle; lining of the queen's chariot with coloured cloth; repairs of the queen's bath, and gathering of herbs for it; for skins of vellum for writing the queen's books; and for writing a book of divers matters for the queen, 14*s.*, including cost of parchment. Also, to Richard Painter, for azure for illuminating the queen's books. Here payment is entered of the sum of £200, borrowed of Richard, Earl of Arundel. Here are entries of the purchase of an embroidered saddle, with gold fittings, and a black palfrey given to the queen of Scotland; and a payment to Louis de Rocan, merchant, of the Society of Malebaill, in London, for two mules, bought by him at Avignon, for the queen, £28, 13*s.*; the mules arrived after the queen's death, and they were delivered over to the king.

The entries relating to jewels shew that the serious events of Isabella's life, and her increasing years, had not overcome her natural passion for personal display. The total amount expended in jewels is no less than £1399, equivalent to about £16,000 of our present currency; 'and,' says Mr Bond, 'after ample allowance for the acknowledged general habit of indulgence in personal ornaments belonging to the period, we cannot but consider Isabella's outlay on her trinkets as extravagant, and as betraying a more than common weakness for these vain luxuries. The more costly of them were purchased of Italian merchants. Her principal English jewellers appear to have been John de Louthe and William de Berkinge, goldsmiths, of London.' In a general entry of a payment of £421, are included items of a chaplet of gold, set with 'bulays' (rubies), sapphires, emeralds, diamonds, and pearls, price £105; divers pearls, £87; a crown of gold, set with sapphires, rubies of Alexandria, and pearls, price £80; these ornaments being, there is no doubt, ordered for the occasion of Isabella's visit to Windsor, at the celebration of St George's Day. Among others, is a payment of £32 for several articles—namely, for a girdle of silk, studded with silver, 20*s.*; 300 doublets (rubies), at 20*d.* the hundred; 1800 pearls,

at 2*d.* each; and a circlet of gold, at the price of £60, bought for the marriage of Katherine Brouart; and another of a pair of tablets of gold, enamelled with divers histories, of the price of £9.

The division of 'Dona,' besides entries of simple presents and gratuities, contains records of gifts to messengers, from acquaintances and others, giving us further insight into the connections maintained by the queen. Notices of messengers bringing letters from the Countesses of Warren and Pembroke are very frequent. Under the head of 'Præstita,' is an entry of £230, given to Sir Thomas de la March, in money paid to him by the hands of Henry Pickard (doubtless, the magnificent lord mayor of that name, who so royally entertained King John of France, the king of Cyprus, and the Prince of Wales at this period), as a loan from Queen Isabella, on the obligatory letter of the said Sir Thomas; for he is known as the victor in a duel, fought at Windsor, in presence of Edward III., with Sir John Viscomte in 1350.

Several payments to couriers refer to the liberation of Charles, king of Navarre; and are important, as proving that the queen was connected with one who was playing a conspicuous part in the internal history of her native country—Charles of Navarre, perhaps the most unprincipled sovereign of his age, and known as 'the Wicked.' Among the remaining notices of messengers and letters, we have mention of the king's butler coming to the queen at Hertford, with letters of the king, and a present of three pipes of wine; a messenger from the king with three pipes of Gascon wine; another with a present of small birds; John of Paris, coming from the king of France to the queen at Hertford, and returning with two volumes of *Lancelot and the Sang Réal*, sent to the same king by Isabella; a messenger bringing a boar's head and breast from the Duke of Lancaster, Henry Plantagenet; Wilson Orloger, monk of St Albans, bringing to the queen several quadrants of copper; a messenger bringing a present of a falcon from the king; a present of a wild-boar from the king, and a cask of Gascon wine; a messenger bringing a present of twenty-four bream from the Countess of Clare; and payments to messengers bringing New-year's gifts from the king, Queen Philippa, the Countess of Pembroke, and Lady Wake.

Payments to minstrels playing in the queen's presence occur often enough, to shew that Isabella greatly delighted in this entertainment; and these are generally minstrels of the king, prince, or of noblemen. We find a curious entry of a payment of 13*s.* 4*d.* to Walter Hert, one of the queen's 'vigiles' (viol-players), going to London, and staying there, in order to learn minstrelsy at Lent time; and, again, of a further sum to the same, on his return from London, 'de scola minstralsie.'

Among the special presents by the queen are New-year's gifts to the ladies of her chamber, eight in number, of 100*s.* to each; and 20*s.* each to thirty-three clerks and squires; a girdle to Edward de Keilbergh, the queen's ward; a donation of 40*s.* to Master Lawrence, the surgeon, for attendance on the queen; a present of fur to the Countess of Warren; a small gift to Isabella Spicer, 'filiolæ reginæ,' her goddaughter; and a present of £66 to Isabella de St Rol, lady of the queen's chamber, on occasion of her marriage with Edward Brouart. Among the 'Messengers' payments we find a letter to the prior of Westminster, 'for a certain falcon of the Count of Tancarville lost, and found by the said prior.'

Respecting Isabella's death, she is stated by chroniclers to have sunk, in the course of a single day, under the effect of a too powerful medicine, administered at her own desire. From several entries, however, in this account, she appears to have received medical treatment for some time previous to her decease. She expired on the 23d of August; but, as early as February 15, a payment had been made to a messenger going on three several occasions to London, for divers medicines for the queen, and for the hire of a horse for Master Lawrence, the physician, and again, for another journey by night to London. On the same day, a second payment was made to the same messenger for two other journeys by night to London, and two to St Albans, to procure medicines for the queen. On the 1st of August, payment was made to Nicholas Thomasyer, apothecary, of London, for divers spices and ointments supplied for the queen's use. Among other entries, is a payment to Master Lawrence of 40*s.* for attendance on the queen and the queen of Scotland, at Hertford, for an entire month.

It is evident that the body of the queen remained in the chapel of the castle until the 23d of November, as a payment is made to fourteen poor persons for watching the queen's corpse there, day and night, from Saturday the 25th of August to the above date; each person receiving twopence daily, besides his food. The queen died at Hertford on August 22, 1358, and was buried in the church of the Grey Friars, within Newgate, the site of the present Christ Church. Large rewards, amounting together to £540, were given after Isabella's death, by the king's order, to her several servants, for their good service to the queen in her lifetime.

THE AUTUMNAL EQUINOX.

On or about the 21st of September and 21st of March, the ecliptic or great circle which the sun appears to describe in the heavens, in the course of the year crosses the terrestrial equator. The point of intersection is termed the *equinoctial point* or the *equinox*, because at that period, from its position in relation to the sun, the earth, as it revolves on its axis, has exactly one-half of its surface illuminated by the sun's rays, whilst the other half remains in darkness, producing the phenomenon of equal day and night all over the world. At these two periods, termed respectively, from the seasons in which they occur, the *autumnal* and the *vernal* equinox, the sun rises about six o'clock in the morning, and sets nearly at the same time in the evening. From the difference between the conventional and the actual or solar year, the former consisting only of 365 days, while the latter contains 365 days and nearly six hours (making the additional day in leap-year), the date at which the sun is actually on the equinox, varies in different years, from the 20th to the 23d of the month. In the autumnal equinox, the sun is passing from north to south, and consequently from this period the days in the northern hemisphere gradually shorten till, on 21st December, the winter solstice

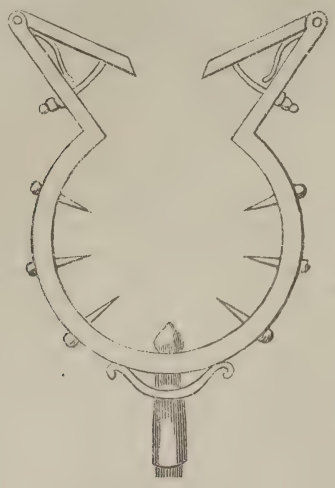
is reached, from which period they gradually lengthen to the spring or vernal equinox on 21st March, when day and night are again equal. The sun then crosses the equator from south to north, and the days continue to lengthen up to the 21st of June, or summer solstice, from which they diminish, and are again equal with the nights at the autumnal equinox or 21st of September.

Owing to the spheroidal form of the earth causing a protuberance of matter at the equator, on which the sun exercises a disturbing influence, the points at which the ecliptic cuts the equator, experience a constant change. They, that is the equinoxes, are always receding westwards in the heavens, to the amount annually of 50″·3, causing the sun to arrive at each intersection about 20′ earlier than he did on the preceding year. The effect of this movement is, that from the time the ecliptic was originally divided by the ancients into twelve arcs or signs, the constellations which at that date coincided with these divisions now no longer coincide. Every constellation having since then advanced 30° or a whole sign forwards, the constellation of Aries or the Ram, for example, occupies now the division of the ecliptic called Taurus, whilst the division known as Aries, is distinguished by the constellation Pisces. In about 24,000 years, or 26,000 from the first division of the ecliptic, the equinoctial point will have made a complete revolution round this great circle, and the signs and constellations as originally marked out will again exactly coincide. The movement which we have thus endeavoured to explain, forms the astronomical revolution called the *precession of the equinoxes*, for the proper ascertainment and demonstration of which, science is indebted to the great French mathematician, D'Alembert.

In connection with the ecliptic and equator, the mutual intersection of which marks the equinoctial point, an interesting question is suggested in reference to the seasons. It is well known that the obliquity of the ecliptic to the equator, at present about 23½°, is diminishing at the rate of about 50 seconds in a century. Were this to continue, the two circles would at last coincide, and the earth would enjoy in consequence a perpetual spring. There is, however, a limit to this decrease of obliquity, which it has been calculated has been going on from the year 2000 B. C., and will reach its maximum about 6600 A. D. From that period the process will be reversed, and the obliquity gradually increase till a point is reached at which it will again diminish. From this variation in the position of the ecliptic, with regard to the equator, some have endeavoured to explain a change of climate and temperature, which it is imagined the world has gradually experienced, occasioning a slighter contrast between the seasons than formerly, when the winters were much colder, and the summers much hotter than they are at present. It is believed, however, that, whatever truth there may be in the allegations regarding a more equable temperature, throughout the year in modern times, it is not to the variation of the obliquity of the ecliptic that we are to look for a solution of the question. The entire amount of this variation is very small, ranging only from 23° 53′ when the obliquity is greatest, to 22° 54′ when it is least, and it is therefore hardly capable of making any sensible alteration on the seasons.

As is well known, both the autumnal and vernal equinoxes are distinguished over the world by the storms which prevail at these seasons. The origin of such atmospheric commotions has never yet been very satisfactorily explained, but is supposed, as stated by Admiral Fitzroy, to arise from the united tidal action of the sun and moon upon the atmosphere; an action which at the time of the equinoxes is exerted with greater force than at any other period of the year.

THE CATCHPOLE.



Many appellations perfectly clear in the days of their origin, lose significance in course of time, and occasionally become grossly perverted, or absolutely caricatured. Thus a *villain* was originally a distinctive term, applied, with no evil significance, to a serf upon a feudal domain. A *cheater* has, like that, now become equally offensive, though it is simply derived from the officer of the king's exchequer, appointed to receive dues and taxes, and who was called the escheator. One of the best examples of grotesque change is the appellation *beef-eater*, applied to a yeoman of the guard, and which is a caricature of *buffetier*, the guardian of the buffet on occasions of state banqueting. The law-officer whose business was to apprehend criminals, was long popularly known as *the catchpole;* but few remembered that he obtained that designation, because he originally carried with him a pole fitted by a peculiar apparatus to catch a flying offender by the neck. Our cut, copied from a Dutch engraving dated 1626, represents an

CATCHPOLE NO. 1.

officer about to make such a capture. The pole was about six feet in length, and the steel implement at its summit was sufficiently flexible to allow the neck to slip past the V-shaped arms, and so into the collar; when the criminal was at the mercy of the officer to be pushed forward to prison, or dragged behind him. This was the simplest form of the catchpole, sometimes it was a much more formidable thing, as will be more readily understood from our second cut (see next page), copied from the antique instrument itself, obtained at Wurzburg, in Bavaria. The fork at the upper part is strengthened by double springs, allowing the neck to pass freely,

but acting as a check against its return; rows of sharp spikes are set round the collar, and would severely punish any violent struggler for liberty, whose neck it had once embraced. The criminal

CATCHPOLE NO. 2.

was, in fact, *garrotted* by the officer of the law, according to the most approved fashion of 'the good old times,' when justice was armed with terrors, and indulged in many cruelties now happily unknown.

SEPTEMBER 22.

St Maurice and his companions, martyrs, 286; St Emmeran, bishop of Poitiers, and patron of Ratisbon, martyr, 653.

Born.—Dr Richard Busby, celebrated head-master of Westminster School, 1606, *Lutton, Lincolnshire;* Philip Dormer Stanhope, Earl of Chesterfield, statesman, and author of *Letters to his Son*, 1694, *London;* John Home, author of *Douglas*, 1722, *Leith;* Peter Simon Pallas, traveller, 1741, *Berlin;* Theodore Edward Hook, novelist, 1788, *London.*

Died.—Mardonius, Persian commander, slain at Platæa, 479 B.C.; Virgil, epic poet, 19 B.C., *Brundusium;* John Biddle, 'father of English Unitarianism,' 1662, *Moorfields, London;* François Bernier, eastern traveller, 1688, *Paris;* Pope Clement XIV., 1774; Princess Augusta of England, 1840; Mrs Sherwood, author of numerous works for children, 1851, *Twickenham.*

VIRGIL THE NECROMANCER.

It is difficult to explain how the fame of the poet Virgil, in its passage through the opening period of the middle ages, became so extraordinarily enveloped in fable. Virgil, as we know, was born at Mantua, but he is said, among other places, to have studied at Naples; and it was with that city that, in the middle ages, the name of the poet was most intimately connected, and there, as early certainly as the twelfth century, numerous stories were told of his wonderful exploits. These, too, were believed by men of the highest rank in theology and science. Our great scholar, Alexander Neckam, has collected some of them in his work, *De Naturis Rerum*, which was published in the latter part of that century; and when, at the beginning of the century following, another of our scholars, Gervase of Tilbury, visited Naples, he listened to similar stories which were told to him by his host, the Archdeacon Pinatellus. Virgil was said to have founded the city of Naples upon eggs, as a magical charm for its protection, and this was the legendary derivation of the name of one of its principal castles, the Castel del' Uovo. On one of the gateways of Naples he set up two brazen statues, one with a merry, the other with a sad and deformed countenance, so enchanted, that if any one entered the town by the side of the gateway on which the merry statue stood, he was certain to prosper in all his affairs; while entering by the other side, produced a contrary effect. On another gate he set up a brazen fly, which remained there eight years, during which period no flies could enter the city; he relieved Naples in a somewhat similar manner from a plague of infectious leeches; he built baths, which cured all disorders; he surrounded his house and gardens with a stream of air, which served for a wall; he constructed a bridge of brass, which took him wherever he pleased. At length, in the fifteenth century, many of these marvellous stories were collected together, and formed into what was called a life of Virgil, which appears to have been first printed in France, but of which an English version was printed in England early in the sixteenth century. It is a curious production, full of very wild adventures, and curiously illustrates the state of intelligence in the middle ages.

After some very fabulous general history, the story tells us that Virgil was the son of a Campanian knight, who had married the daughter of a senator of Rome, and who was powerful and a great enemy to the emperor. Virgil's birth was painful, and was announced by an earthquake in Rome, and they gave him his name from the verb *vigilo*, to watch, 'for by cause that he was a great space of tyme watched so with men.' He was sent to school when a child, to Tolenten (probably meant for Toledo, where people were supposed to go to learn magic in the middle ages), and soon afterwards his father died, and his powerful kinsman dispossessed the widow and her child of their estates, while the emperor refused to give them redress. It was at this time that the event occurred by which Virgil became possessed of his supernatural powers, for, unlike other magicians, he obtained them without subjecting himself to any disagreeable terms.

'An Virgilius was at scole at Tolenten, where he stodyed dyligently, for he was of great understandynge. Upon a tyme the scholers hadde lycence to goo to play and sporte them in the fyldes after the usaunce of the olde tyme; and there was also Virgilius therby also walkynge amonge the hilles all about. It fortuned he spyed a great hole in the syde of a great hyll, wherin he went so depe, that he culde not see no more lyght, and than he went a lytell ferther therin, and than he sawe som lyght agayne, and than wente he fourth streyghte: and within a lytyll wyle after he harde a voice that called, "Virgilius, Virgilius!" and he loked aboute, and he colde nat see no bodye. Than Virgilius spake and

asked, "Who calleth me?" Than harde he the voyce agayne, but he sawe no body; then sayd he, "Virgilius, see ye not that lytyll borde lyinge bysyde you there marked with that word?" Than answered Virgilius, "I see that borde well enough." The voyce sayde, "Doo awaye that borde, and lette me oute theratte." Than answered Virgilius to the voyce that was under the lytell borde, and sayd, "Who art thou that talkest me so?" Than answered the devyll, "I am a devyll conjured out of the body of a certeyne man, and banysshed here tyll the day of jugement, without that I be delyvered by the handes of man. Thus, Virgilius, I pray the delyver me out of this payn, and I shall shewe unto the many bokes of nygromancy, and howe thou shalt cum by it lyghtly and knowe the practyse therein, that no man in the scyence of negromancye shall pass the. And moreover I shall showe and enforme you, so that thou shalt have all thy desyre, wherby methynke it is a great gyfte for so lytyll a doynge; for ye may also thus all your power frendys helpen, and make rythe your ennemyes unmyghty." Thorowh that great promyse was Virgilius tempted; he badde the fyend showe the bokes to hym, that he myght have and occupy them at his wyll. And so the fyend shewed hym, and than Virgilius pulled open a borde, and there was a lytell hole, and therat wrange the devyll out lyke a yeel, and cam and stode byfore Virgilius lyke a bygge man; therof Virgilius was astonied and merveyled greatly therof, that so great a man myght come out at so lytell a hole. Than sayd Virgilius, "Shulde ye well passe into the hole that ye cam out of?" "Yes I shall well," sayd the devyll. "I holde the best plegge (*gaze, wager*) that I have ye shall not do it." "Well," sayde the devyll, "thereto I consente." And than the devyll wrange hymselfe into the lytell hole agen, and as he was therein, Virgilius kyvered the hole ageyn with the borde close, and so was the devyll begyled, and myght not there come out agen, but there abydeth shytte styll therin. Than called the devyll dredefully to Virgilius, and sayd, "What have ye done?" Virgilius answered, "Abyde there styll to your day apoynted." And fro thensforth abydeth he there. And so Virgilius becam very connynge in the practyse of the blacke scyence.'

Of the 'cunning' of Virgilius there can be no doubt after this example—at all events, he had evidently more wit than his antagonist. Some time after this, his mother became old and deaf, and she sent for her son home from the school, that he might take steps to recover his inheritance, and to take his rightful place as a senator of Rome; and her messenger proceeded to Tolenten, and 'whan he cam there, he founde Virgilius teching and lernynge the greattest lordes of the lande, and other landes also; for I ensure ye, he was a fayr and a wyse yonge man, and conynge in the scyence of negromancy above all men than lyvynge.' Though Virgilius had now, we are told, made himself immensely rich, and had little need to care for his rights at Rome, yet he obeyed his mother's call, went to Rome, and met with a rebuff from the emperor, which led to a war between them, in which the imperial power was defeated and set at nought by the 'negromancye' of the scholar. The result was a reconciliation, and the restoration of Virgilius, who now became one of the principal men in the emperor's council, and he began to turn his eyes upon the fair ladies of Rome. The first of these to whom he made advances played him false, for, seeking only to mock him, she invited him to visit her one night in her chamber in a high tower, promising to let down a basket attached to a rope, and thus to draw him up. Virgilius came, was drawn half-way up the tower, and then the lady fastened the rope, and left him hanging there to be a spectacle to the populace all the next day. How Virgilius revenged himself is well known to all readers of the old popular literature, and can hardly be related here. Soon after this he took a wife and built himself a magnificent palace, which also possessed many wonders. The emperor now began to be troubled with rebellions in different parts of his empire, and he asked the counsel of Virgilius, who thereupon made in the Capitol a marvellous group of statues, one representing Rome, the others each allotted to a country or province, and each of these turned its back on the statue of Rome and rung a bell, when the province it represented was on the point of rebellion. Thus the emperor was informed of the revolt before it had time to get head, and the group in the Capitol received the name of *Salvatio Romæ*—the safeguard of Rome. It was at length destroyed by an ingenious contrivance of the men of Carthage. The manner in which this was effected will perhaps be best told in the quaint language of the original:

'Than thought they in there mynde to sende iij. men out, and gave them great multytude of golde and sylver; and these iij. men toke theyr leve of the lordes, and went towarde the cytie of Rome, and, when they were come to Rome, they reported themselfe sothesayers and trewe dremers. Upon a tyme wente these iij. men to a hyll that was within the cytie, and there they buryed a great potte of money very depe in the erthe, and when that was done and kyvered ageyne, they went to the brygge of Tyber, and let fall in a certayne place a great barell with golden pense; and when this was done, these thre men went to the seniatours of Rome, and sayd, "Worshypfull lordes, we have this nyghte dremed, that within the fote of a hyll here within Rome, is a great pot with money; wyll ye, lordes, graunte to us, and we shall do the coste to seke thereafter?" And the lordes consented, and than they toke laberours, and delved the money out of the erthe. And when it was done, they went another tyme to the lordes, and sayde, "Worshypfull lordes, we have also dremed, that in a certayne place of Tyber lyeth a barell full of golden pense; if that you will graunte to us that we shall go seke it." And the lordes of Rome, thynkynge no dyscepte (deceit), graunted to those sothesayers, and badde them do that they shulde do there best. And than they hyred shyppes and men, and went toward the place where it was; and when they were come, they sowght it in everye place thereabout, and at the laste founde the barelfull of golden pense, whereof they were glade; and than they gave to the lordes costely gyftes. And than to come to theyr purpose, they cam to the lordes ageyne, and sayde to them: "Worshypfull lordes, we have dremed ageyne that under the foundacyon of Capitolium, there where Salvatio Rome standeth, be xij. barelles full of gold; and pleasyeth you, lordes, that you wold graunte us lycense, it shall be to your great avauntage." And the lordes styrred with covytayse, graunted them, bycause ij. tymes afore they told trewe. Whereof they were glad, and gatte laberours, and began to dygge under the foundacyon of Salvatio Rome; and when they thought that they had dygged anoughe, they departed fro Rome, and the next daye folowynge fell that house downe, and all the worke that Virgilius had made, and so the lordes knewe that they were deseyved, and were sorowfull, and after that hade nat no fortune as they had afore tymes.'

Virgilius also gratified the emperor by a contrivance to clear the streets of Rome of night-runners and evil-doers, and by making a wonderful lamp, which stood on a great pillar, and gave light at night to every street in Rome. He also built himself a wonderful orchard attached to his palace, and this brings us to another phase in his adventures.

In a new amour, Virgilius was more successful than on a former occasion. Having heard of the extraordinary beauty of the Soldan's daughter, he resolved to possess himself of her. For this purpose, he 'by his connynge,' built a bridge through the air, and over this passed to the Soldan's court, and gained the lady's love. After some perilous adventures, which we will pass over, he brought the princess home with him, and kept her in his wonderful orchard, for he 'was sore enamoured of that lady.' After a time, he became desirous of finding a husband for the princess, and 'thoughte in his mynde to founde in the myddes of the see, a fayer towne with great landes belongyng to it; and so he dyd by his cunnynge, and called it Napells, and the fundacyon of it was of egges; and in that towne of Napells, he made a tower with iiij. corners, and in the toppe, he set an apell upon a yron yarde, and no man culd pull away that apell without he brake it; thorowghe that yron set he a botel, and on that botel set he a egge; and he henge the apell by the stauke upon a cheyne, and so hangyth it styll. And whenne the egges styrreth, so shulde the towne of Napels quake, and whan the egge brake, then shulde the towne synke.' Such is the legendary origin of the town of Naples! It was no sooner completed, than Virgilius gave it as a dower to the Soldan's daughter, and married her to a certain lord of Spain. But the new town was so fair, that the emperor 'had a great fantasy' to it, and he secretly assembled a great army to take it by force. Virgilius, however, protected Naples against all his designs, and he fortified it, and, leaving all his other houses, he made it his sole residence. Above all, he loved scholars, and endowed there a large school, so richly, that every scholar, while he remained at school, had land allotted to him sufficient for his keep. Thus, under his care, it became the greatest school of necromancy and magic in the world.

Virgilius was again reconciled to the emperor, and performed other marvellous things for his service. At length old age approached, but he was provided even against this. He had built for himself, outside Rome, a strong castle or palace, with only one entrance, which, was protected by images of men with iron flails, which, by his necromancy, he kept in continual motion, so that none but himself could approach the entrance without certain death. Here he came sometimes alone, to secure himself from the emperor's importunities. One day Virgilius took his most trusty servant with him into this palace, and when they were alone, he said to him:

'"My dere beloved frende, and he that I above all men truste, and knowe most of my secret;" and than led he the man into the seller, where he had made a fayer lampe at all seasons burnynge. And than sayd Virgilius to the man, "Se you the barell that standeth here?" and he sayde, "Ye there muste put me; fyrste, ye muste slee me, and hewe smalle to peces, and cut my head in iiij. peces, and salte the heade under in the bottum, and then the peces thereafter, and my hearte in the myddel, and then set the barell under the lampe that nyght and daye therein may droppe and leke; and ye shall ix. dayes longe, ones in the daye fyll the lampe, and fayle nat. And when this is all done, than shall I be renewed and made yonge ageyn, and lyve longe tyme and maney wynters mo, if that it fortune me nat to be taken of above and dye." And when the man harde his master Virgilius speke thus, he was sore abasshed, and sayd, "That wyll I never whyle I lyve, for in no manner wyl I slee you." And then sayd Virgilius, "Ye at this tyme must do it, for it shall be no grefe unto you." And at the last Virgilius entreated his man so muche, that he consented to hym. And then toke the servant Virgilius, and slewe hym, and when he was thus slayn, he hewe hym in peces and salted hym in the barell, and cut his head in iiij. peces as his master bad hym, and than put the herte in the myddell, and salted them wele; and when all this was done, he hynge the lampe ryght over the barell, that it myght at all tymes droppe in thereto. And when he had done all this, he went out of the castell, and turned the vyces [screws—Virgilius had taught him the secret how to stop the movement of the flails, and set them agoing again], and then wente the coper men smyghtynge with theyr flayles so strongly upon the yron anveldes as they dyd afore, and there durste no man enter; and he came every daye to the castell, and fylled the lampe, as Virgilius had bad hym.'

When Virgilius had disappeared from court seven days, the emperor became impatient, and sent for his confidential servant, whose answers were evasive, and made the emperor more resolute to solve the mystery. He therefore compelled the servant, by fear of death, to take him to the castle, and stop the flails, so that he might enter. And he and his courtiers wandered over Virgilius's palace, until he came to the cellar in which he found the remains of the great necromancer salted in a barrel. In his first anger, he slew the faithful servant, by which Virgilius's instructions were lost and could no longer be carried out. 'And when all this was done, than sawe the emperoure and all his folke a naked chylde iij. tymes rennynge aboute the barell, sayinge the wordes, "Cursed be the tyme that ye cam ever here!" and with those wordes vanyshed the chylde away, and was never sene ageyne. And thus abyd Virgilius in the barell dead.'

Such is the legend of the necromancer Virgil, which, there can be no doubt, was the character given by the middle ages to the Roman poet. It is one of the most curious examples of the strange growth of medieval legend, and at the same time shews us the peculiar estimate which people in the darker ages formed of science and learning. At the same time, when we refer this to the darker ages, we must not forget that, in ages considered to be much more enlightened, the Romish Church took advantage of these superstitions and prejudices to persecute science and its followers.

THE PRINCESS AUGUSTA.

This royal lady, second daughter of George III., combined great sweetness of nature with a propriety of behaviour which is not always accompanied by amiable qualities. There is an anecdote of her Royal Highness well worthy of permanent preservation. 'During the latter part of the reign

of George IV., when a certain lady held immense influence over him, the king one day asked the Princess Augusta to come and dine with him. Her Royal Highness asked if Lady —— was to be there, and, on receiving a reply in the affirmative, begged to decline. The king pressed the matter very much, when the princess said: "If you command my attendance as *king*, I will obey you; but if you ask me as a *brother* to come, nothing will induce me." His majesty said no more.' It may further be noted of this good woman, that she was benevolent upon a moderate income, and died so poor as to require no will.

MRS SHERWOOD.

The children of the present day enjoy immense advantages over their fathers and grandfathers as regards the supply of instructive and entertaining works suited to their tastes and capacities. Foremost among the pioneers of the improved order of things stand the names of Miss Edgeworth and Mrs Sherwood. Aiming both at the same object, these two distinguished writers pursue, nevertheless, a very dissimilar path. Whilst the former occupies herself with the moral, and more especially the reasoning, faculty of human nature, to the almost entire exclusion of the religious element, the latter adopts invariably the peculiar doctrines of Christianity, or what are commonly termed evangelical views, as the only sound basis on which any system of lasting improvement can be founded.

The maiden name of Mrs Sherwood was Butt, and she traced her descent from an ancestor who was said to have come over with William the Conqueror. Her family was certainly one of very old standing in the midland counties. Her grandfather, Dr Butt, resided in Lichfield, at a time when it was the centre of a brilliant literary coterie, including Miss Seward, Richard Lovell Edgeworth, Dr Darwin, and Mr Day, besides being visited occasionally by Dr Johnson and David Garrick from London. His son, George Butt, entered holy orders, and was presented to the rectory of Stanford, in Worcestershire, where his daughter, Mary Martha, the future authoress, was born in 1775. In her autobiography she has given a charming description of this place, where her girlhood's days were spent, and the remembrance of which we see vividly reproduced in her delightful pictures of English country-life in the *Fairchild Family*. Though a sincere affection seems to have subsisted between her and her parents, yet the discipline at Stanford Rectory was, according to her own account, of rather the strictest sort. She was never allowed to sit in the presence of her parents, to come near the fire, or take part in any conversation, and, according to the preposterous discipline of those days, had an iron collar round her neck, to which a back-board was strapped, and thus accoutred, would have to stand the greater part of the day in the stocks, in which position, moreover, she was obliged to learn and repeat her lessons. Yet she says she was a happy child, and such a picture of fresh rosy health that her father used to call her Hygeia. She informs us that at a very early age she began to write stories and plays, but she had the misfortune, shared in by other geniuses, of being originally regarded as a dull child. Little of incident marks her life till after her father's death, which took place when she was about twenty years of age. She then married her cousin, Captain Sherwood, of the 53d Regiment, and accompanied him to India. Here, with the co-operation of Henry Martyn and Mr Corrie, she exerted herself in the founding of schools for the Indian children, besides taking under her more especial care the children of the European soldiers, a labour of love in which she seems to have been eminently successful. Her husband entered cordially with her into all her pious and benevolent exertions. Many of her juvenile works, including the well-known *Henry and his Bearer*, which enjoyed such a diffusion as to be translated even into the Chinese and Cingalese languages, were composed in India. Captain and Mrs Sherwood, returning to England after a residence of many years, took up their abode in the neighbourhood of Worcester, and continued there till a short time before Captain Sherwood's death, when they removed to Twickenham, near London. In this place Mrs Sherwood closed her long and useful life, amid the affectionate ministrations of her daughters, on 22d September 1851. To the last she retained her cheerfulness, and up to within a year or two of her death, her vigour both of body and mind were almost unimpaired.

One distinguishing characteristic of Mrs Sherwood's works is the freshness with which English rural manners and scenes are portrayed. Her descriptions are redolent throughout of violets and wild-roses, green shady lanes, and pleasant walks through woods and fields. Her children, too, are really children—not philosophers in jackets and pinafores, as the young people of Miss Edgeworth are apt to appear to us. Mrs Sherwood must be admitted to possess the descriptive and dramatic, if not the imaginative faculty in a very high degree. Her style is the purest and simplest of English, and the true Christian lady, as well as genial-hearted woman, display themselves unmistakably from beginning to end.

AN EPISODE FROM ZUTPHEN.

The small army which Elizabeth sent in 1585 to aid the Protestant Netherlanders against their Spanish masters, contained other heroes besides Sir Philip Sidney. Of one of these—the Lord Willoughby—we find an interesting anecdote in the modern work, entitled *Five Generations of a Loyal House;* an anecdote, moreover, connected with that skirmish or battle of Zutphen in which Sidney received his mortal wound.

'On the 22d of September 1586, an affray took place, in which Lord Willoughby pre-eminently distinguished himself by valour and conduct, and many others with him upheld the glory of the English name. Sir John Norreis and Sir William Stanley were that day reconciled; the former coming forward to say, "Let us die together in her majesty's cause." The enemy were desirous of throwing supplies into Zutphen, a place of which they entertained some doubt; and a convoy, accordingly, by the orders of the Prince of Parma, brought in a store, though an insufficient one, of provisions. A second, commanded by George Cressiac, an Albanois, was despatched for the same purpose, the morning being foggy. Lord

Willoughby, Lord Audley, Sir John Norreis, and Sir Philip Sidney, encountering the convoy in a fog, an engagement began. The Spaniards had the advantage of position, and had it in their power to discharge two or three volleys of shot upon the English, who, nevertheless, stood their ground. Lord Willoughby himself, with his lance in rest, met with the leader, George Cressiac, engaged with, and, after a short combat, unhorsed him. He fell into a ditch, crying aloud to his victor: "I yield myself to you, for that you be a seemly knight," who, satisfied with the submission, and having other matters in hand, threw himself into the thickest of the combat, while the captive was conducted to the tent of the general, Lord Leicester. The engagement was hot, and cost the enemy many lives, but few of the English were missing. Willoughby was extremely forward in the combat; at one moment his basses, or mantle, was torn from him, but recaptured. When all was over, Captain Cressiac being still in his excellency's tent, refused to acknowledge himself prisoner to any but the knight to whom he had submitted on the field. There is something in this, and the like incidents of the period, which recall us very agreeably to recollections of earlier days of chivalry and romance. Cressiac added, that if he were to see again the knight to whom he had surrendered himself, in the armour he then wore, he should immediately recognise him, and that to him and him only would he yield. Accordingly, Lord Willoughby presenting himself before him, in complete armour, he immediately exclaimed: "I yield to you!" and was adjudged to him as his prisoner.

'It was in this skirmish that the gallant and lamented Sir Philip Sidney, the boast of his age, and the hope of many admiring friends, received the fatal wound which cut short the thread of a brief but brilliant existence. During the whole day he had been one of the foremost in action, and once rushed to the assistance of his friend, Lord Willoughby, on observing him "nearly surrounded by the enemy," and in imminent peril: after seeing him in safety, he continued the combat with great spirit, until he received a shot in the thigh, as he was remounting a second horse, the first having been killed under him.'

MAJOR BERNARDI.

On the 22d of September 1736, there died in the prison of Newgate, at the advanced age of eighty-two, and after a lengthened confinement of forty years, John Bernardi, whose name, as Mr Macaulay observes, has derived a melancholy celebrity from a punishment, so strangely prolonged, that it at length shocked a generation which could not remember his crime. Bernardi was an Englishman, though, as his name implies, of Italian extraction; his father and grandfather having been agents for the republic of Genoa at the court of England. In early life, he had served in the Dutch army under the Prince of Orange, and subsequently in that of James II., during the war of the revolution; in the latter he attained the rank of major, and fought at the battle of the Boyne, and siege of Limerick. In 1696, on the discovery of the plot to assassinate William III., Bernardi was arrested on suspicion of being one of the conspirators, and committed to Newgate. Eight persons were tried, condemned, and executed for their participation in the assassination-plot, as it was termed; but there not being sufficient evidence to ensure a conviction of Bernardi and five other suspected conspirators, the government, to avoid bringing them to a premature trial, and to afford time to procure condemnatory evidence, suspended the Habeas Corpus Act for nine months. At the expiration of that period, Bernardi and his fellow-prisoners applied to be either tried or admitted to bail, according to law; the judges adjourned the consideration of the case for a fortnight, thus affording time for the government to obtain an act of parliament, authorising the imprisonment of the unfortunate men for one year. At the expiration of the year, another act was passed authorising their confinement for another year; and at the end of the second year, a third act was passed authorising their confinement during his majesty's pleasure, parliament, evidently aware of the injustice of its proceedings, evasively throwing the responsibility upon the shoulders of King William.

There were no hopes now for the prisoners till the death of the king in 1702. When that event took place, they again demanded to be tried or admitted to bail; the answer was another act of parliament to confine them during the pleasure of Queen Anne. It happened to be the pleasure of this royal lady to release one of the prisoners, named Counter; so, at her death, there were but five to claim their right of trial or bail; but another act of parliament confined them during the pleasure of George I. When George II. succeeded to the throne, death having mercifully released two of the captives, named Meldrum and Chambers, there were only Bernardi and two fellow-sufferers to claim their legal rights. The counsel who moved their case in the court of King's Bench, stated that his clients had then been imprisoned without trial for thirty-one years; that they had been committed to Newgate, by a secretary of state's warrant, on suspicion of having been concerned in a conspiracy to assassinate King William; that they had never been brought before a magistrate; that there had not been the oath of even one witness sworn against them. It will scarcely be believed that the attorney-general, Sir Philip Yorke, afterwards Lord Hardwicke, opposed the miserable men's claim by a paltry technical quibble. He objected to the motion as irregular, the original commitment not having been produced, or proof given that the claimants were committed to Newgate in 1696. The judges overruled the objection, and there were hopes of justice being done at last; but another act of parliament condemned the unhappy men to imprisonment during the pleasure of George II. The prisoners petitioned parliament, the king and the queen, recounting their sufferings, age, and infirmities, further observing that several, who had been taken in arms against the government in 1714, had been pardoned and liberated, while they, who had never been charged with any crime, were still rotting in a noisome dungeon. The petitions were in vain; death, more compassionate than crowned heads, released two more of the prisoners, Cassels and Blackburne, leaving Bernardi the solitary survivor; and it was not till 1736 that he died in Newgate, after a cruel and unjust, if not exactly illegal,

confinement of forty years. He had one solace, however, in his long imprisonment. It appears that he married in 1712, and a writer of the day tells us that his wife, 'by her good management and industry, contributed much to his support and comfort, and to the keeping of his heart from breaking under the worst of his hardships, difficulties, and distresses.' Ten children were the result of this marriage in Newgate, and of them we are told that 'in respect of charge and expense under his strait and narrow circumstances, and under his immurement or being buried alive, they were no small burden to him, yet he esteemed them great blessings.'

A somewhat similar instance of suffering and injustice was perpetrated by the revolution government in Scotland. In 1690, an English gentleman, named Neville Payne, was arrested on suspicion of being implicated in the conspiracy to restore James II., commonly known as Montgomery's Plot. The Scotch privy-council, not, however, without instructions from London, put Payne to the torture, but though considered to be 'a cowardly fellow,' he did not make any disclosures. Severer means were employed to extract confession and the names of accomplices, the torture being applied to both thumbs and one leg, as severely as compatible with the preservation of life, but without success. Although there was nothing against the man, save mere suspicion, he was confined, with more or less severity, in various prisons in Scotland, for more than ten years, till at last the privy-council, apparently puzzled as to what they would do with the 'vain, talking fellow,' liberated him without bail or other security. From the *Domestic Annals of Scotland*, we learn that Payne was an inventor and projector of improvements in ship-building and river navigation; and in all probability he was the same Nevill Payne who figures in the dramatic history of England as the author of three clever plays.

GEORGE III., AN AUTHOR.

The 22d of September 1761 was the day of that often-described ceremony, the coronation of George III. It is scarcely at all known that this monarch was the author of at least one article, printed in a periodical publication. In the seventh volume of Young's *Annals of Agriculture*, there is a paper giving an account of a farm held by a Mr Ducket, at Petersham, in Surrey, and bearing the signature of Ralph Robinson. This paper, it is asserted on indubitable evidence, was written by George III. Mr Ducket was one of the first to apply machinery to agriculture, and as he was an able mechanician, as well as farmer, the paper was one of no small interest. Mr Ducket's farm, which had thus the honour of a royal description, was for some years held by Dr Ellis, the hydropathist.

During a part of his life, George III. made careful notes on the various persons and circumstances that came more immediately under his observation; illustrating his notes with very apposite quotations from Shakspeare, and other authors. One of these note-books for 1778 happened to fall under the inspection of Mr Willis, the well-known bookseller, who has recorded two instances of apt quotation by the king; both rather different from what might be expected. In allusion to Franklin, he quotes the following words from *Julius Cæsar:*

'O let us have him; for his silver hairs
Will purchase us a good opinion,
And buy men's voices to commend our deeds:
It shall be said his judgment rul'd our hands;
Our youths and wildness shall no whit appear,
But all be buried in his gravity.'

Dr Johnson does not fare so well in the king's estimation. In allusion to his name, the monarch thus quotes from *Love's Labour's Lost:*

'He draweth out the thread of his verbosity finer than the staple of his argument. I abhor such fanatical phantasms; such insociable and point-device companions; such rackers of orthography.'

George III. was accustomed to pay the minutest attention to details, and regulated everything in his own household and family. This habit is illustrated in a remarkable manner by the following arrangements, made by him for a journey to Portsmouth, and a note directing a change in his first plan, carefully copied from the original in his own handwriting. The king made few journeys, but this was on a memorable occasion, being to review the fleet, and present Lord Howe with a sword of honour, on his arrival at Portsmouth, after the glorious battle of the 1st of June. During the time the king stayed at Portsmouth, he resided in the house of Sir Charles Saxton, commissioner of the dock-yard.

'At the Commissioner's.

1. A bedchamber for the King and Queen. If with convenience, a small room for the Queen to dress; if not, can dress in the bedchamber.
2. A chamber for the Princess Royal and Princess Amelia.
3. A bedchamber for Princesses Augusta and Elizabeth.
4. A bedchamber for Princesses Mary and Sophia.

Mrs Clevely, Mrs Sands, Miss Mackenthun, Mrs Turner, Mrs Willis, and Miss Albert.

Brown, Clark, Gisewell, Albert, Dureau, Robinson, Colesham, and Cox.

2 Footmen of the King.
1 Ditto of the Queen.
2 Hobby Grooms,
& 12 Coach-horse servants.
20 Coach-horses.

Horses for three post-coaches, five post-chaises, and two saddle-horses, on the Monday; on the Tuesday, for two post-coaches and six saddle-horses.

Lady Courtown.
Lady Caroline Waldegrave.
Lady Frances Howard.
Lord Harrington.
Mr G. Goldsworthy.
Mr G. Gwynn.
Mr Price.
Prince Ernest—one gentleman and three servants.

'WINDSOR, *June* 16, 1794.

Since I have seen —— this evening, it is settled that Princess Royal will not go to Portsmouth, consequently not Miss Mackenthun, and the two next princesses will take but one servant between them, consequently Mrs Clevely, Mrs Sands, Mrs Willis, and Miss Albert will go in the post-coach, and one post-chaise will be wanting at every stage on Monday.'

SEPTEMBER 23.

St Linus, pope and martyr, 1st century. St Thecla, virgin and martyr, 1st century. St Adamnan, abbot, 705.

Born—Octavius Cæsar Augustus, first Roman emperor, 63 B.C., *Aricia;* Dr Jeremy Collier, celebrated author of *A View of the Stage*, &c., 1650, *Stow Qui, Cambridgeshire;* Karl Theodor Körner, German poet, 1791, *Dresden.*

Died.—Bishop Jewel, eminent prelate, 1571; Hermann Boerhaave, distinguished physician, 1738, *Leyden;* Dr Matthew Baillie, eminent physician, 1823; William Upcott, collector of historical manuscripts, 1845, *London;* Edward Wedlake Brayley, topographical and antiquarian writer, 1854.

KARL THEODOR KÖRNER.

The life-blood of Germany was never roused nor quickened with greater impetus, than when the old fatherland sprung to arms to assert its rights against the tyrannical sway of France, towards the close of the first Napoleon's career. For years she had groaned under the sway; but repeated defeats had taught her to succumb to the oppression which it seemed impossible to resist. Hope at last gleamed upon her from the lights of burning Moscow, and in 1813 she rose, determined to throw off the yoke. In thus vindicating her outraged rights, she was nobly supported by the intellect and genius, as well as military prowess of her sons. The stirring lectures of Fichte, and the martial lyrics of Körner, were no less effective towards the liberation of their country than the valour and strategical skill of Lützow and Blücher.

The father of Karl Theodor Körner held a distinguished position as member of the privy-council of Saxony, and numbered Goethe and Schiller among his personal friends. In his infantine days, Karl was a sickly delicate child, but as he advanced in years, he rapidly outgrew all these signs of weakness, and by the time he approached manhood, was noted for his adroitness in all manly exercises, more especially horsemanship and fencing, besides being renowned for his musical skill, and grace and agility as a dancer. To crown all these, nature had bestowed on him a fine military figure and handsome countenance, with large, full, and expressive eyes. The law was the profession to which his father's wishes would have destined him; but young Körner's tastes inclining more to natural science and engineering, he was sent, when a stripling, to Freiberg, to study mining in the school there presided over by the celebrated geologist, Werner. He pursued his studies in this place in theoretical and practical mining with much enthusiasm, but quitted it in 1810, to attend the university of Leipsic, from which, after remaining for a short time, he proceeded to that of Berlin. In the same year, he made his first appearance before the public, by the issue of a small volume of poems, entitled *Die Knospen*, or 'The Buds.' From Berlin he was sent by his father to Vienna, where he seems to have turned his attention chiefly to dramatic composition, and produced several pieces, one of which, more especially, a tragedy on the subject of Zriny, the Hungarian hero, was performed with immense success. Among his friends in Vienna were included Wilhelm von Humboldt, then ambassador from the Prussian court, and Frederick Schlegel, the celebrated historical commentator and poet. During his stay in Vienna, also, he formed an ardent attachment to a young lady, which met the entire approbation of his family, and arrangements were entered into for their speedy union.

But another bride now claimed the attentions of Körner. The cry to arms which in the spring of 1813 echoed from one end of Germany to the other, found an enthusiastic response in his bosom, and he felt himself impelled to take his place forthwith in the ranks of those patriots who were striving for the liberation of their country in Prussia and the northern states of the confederation. Writing to his father, he says: 'Germany is roused; the Prussian eagle flaps its wings and awakes in all true hearts the great hope of German freedom. My genius sighs for its fatherland; let me be its worthy son. Now that I know what happiness may be realised in this life, and when all the stars of my destiny look down on me with such genial rays, now does a righteous inspiration tell me that no sacrifice can be too great for that highest of all human blessings, the vindication of a nation's freedom.'

In pursuance of this resolve, Körner, in the month of March, quitted Vienna, and proceeded to Breslau, where he joined Lützow's celebrated company of volunteers, or the Black Huntsmen, as they were termed. A few days after his joining the corps, it was solemnly dedicated to the service of its country in the church of Rochau, the services concluding with Luther's noble hymn, *Ein' feste Burg ist unser Gott.* The powers of physical endurance which Körner had acquired in the course of his mining studies at Freiberg, proved of eminent service to him in the fatigues of a military life. His enthusiasm and aptitude for his new duties soon procured his elevation to the post of lieutenant, whilst the geniality and kindliness of his nature made him the idol of his comrades. Here, too, his martial muse was fairly called into action, and some of the noblest of those lyrics which have rendered him the Tyrtæus and Pindar of Germany, were composed beside the bivouac and watch-fires during the intervals of military duty. In the battle of Gorde, near the Elbe, where the French received a signal check, and in the subsequent victorious march of Lützow's volunteers by Halberstadt and Eisleben to Plauen, Körner took a prominent part, acting in the latter movement as adjutant to the commander. Whilst lying at Plauen, an intimation was treacherously conveyed to Lützow of an armistice having been concluded, and he accordingly proceeded to Kitzen, a village in the neighbourhood of Leipsic. Here he found himself surrounded and threatened by a large body of French, and Körner was despatched to demand an explanation from the officer in command, who, instead of replying, cut him down with his sword, and a general engagement ensued. The Black Huntsmen were forced to save themselves by flight; and Körner, who had only escaped death by his horse swerving aside, took shelter in a neighbouring wood, where he was nearly being discovered by a detachment of French, but contrived to scare them away by shouting in as stentorian tones as he could utter: 'The fourth squadron will advance!'

Faint with the loss of blood, and the stunning effects of a severe wound in the head, he at length fell in with some of his old comrades, who procured him surgical assistance, and he managed afterwards to get himself smuggled into Leipsic, then under the rigorous military rule of the French. From this he escaped to Karlsbad, and at last, after visiting various places, reached Berlin, where he succeeded in completely re-establishing his health. Anxious to join again his companions in arms, he now hurried back to the banks of the Elbe, where Marshal Davoust, with a strong reinforcement of Danish troops from Hamburg, was threatening Northern Germany. On 17th August, hostilities were renewed, and Lützow's troops, who guarded the outposts, were brought almost daily into contact with the enemy. On the 25th, the commander resolved to make an attack with a detachment of his cavalry on the rear of the French, but in the meantime received intelligence of an approaching convoy of provisions and military stores escorted by two companies of infantry. This transport had to pass a wood at a little distance from Rosenberg, and here Lützow posted his men, disposing them in two divisions, one of which, with himself at their head, should attack the enemy on the flank, whilst the other remained closed up to cover the rear. During their halt in the thicket, Körner, who acted as Lützow's adjutant, employed the interval of leisure in composing his celebrated *Sword-Song*, which was found in his pocket-book after his death, and has not inaptly been likened to the lay of the dying swan. On the enemy's detachment coming up, it proved stronger than had been anticipated, but it nevertheless broke and fled before the Prussian cavalry, who pursued them across the plain to a thicket of underwood. Here a number of their sharp-shooters ensconced themselves, and for a time galled Lützow's troops by a shower of bullets. One of these passed through the neck of Körner's horse, and afterwards the abdomen and backbone of his rider, who fell mortally wounded. He was conveyed at once by his comrades to a quiet spot in the wood, and assistance was procured, but he never regained consciousness after receiving the wound, and in a few minutes expired. He had met the death which of all others he had vaunted in his lyrics as the most to be desired—that of a soldier in the arms of victory, and in defence of the liberties of his country. This event took place in the gray dawn of an autumn morning, on the 26th August 1813. His body was interred, with all the honours of war, beneath an oak on the roadside near the village of Wobbelin. The tomb has since been surrounded by a wall and a monument erected to his memory, the Duke of Mecklenburg-Schwerin making a present of the ground to Körner's family. Here, a few years later, were deposited the remains of Theodor's beloved sister, Emma, and, at a subsequent period, those of his father.

Thus prematurely terminated, at the age of twenty-two, the career of this young hero whose patriotic lyrics, like those of Moritz Arndt, seem to have entwined themselves round the very heart-strings of the German people. Though somewhat inferior in sonorous majesty to Thomas Campbell's warlike odes, they possess a superiority over them in point of the earnestness with which every line of the German poet is animated. Young, brave, and generous, his effusions are literally the outbreathings of an unselfish and gallant spirit, which disregards every danger, and counts all other considerations as dross in the attainment of some grand and noble end. A collection of his martial poems, under the title of *Leier und Schwert* (Lyre and Sword), was published at Berlin the year following his death. Many of these, including 'My Fatherland,' 'Song of the Black Huntsmen,' 'Lützow's Wild Chase,' 'The Battle-prayer,' and 'The Sword Song' are well known to the English public through translations.

One of Körner's most popular songs is 'The Song of the Sword,' which he wrote only two hours before the engagement in which he was shot. He compares his sword to a bride, and represents it as pleading with him to consummate the wedding. This explains the allusion in the following poem by Mrs Hemans, which we quote as a graceful tribute from one of ourselves to the memory of a noble stranger.

FOR THE DEATH-DAY OF THEODOR KÖRNER.

A song for the death-day of the brave,
A song of pride!
The youth went down to a hero's grave,
With the sword, his bride!

He went with his noble heart unworn,
And pure, and high;
An eagle stooping from clouds of morn,
Only to die.

He went with the lyre, whose lofty tone,
Beneath his hand,
Had thrill'd to the name of his God alone,
And his fatherland.

And with all his glorious feelings yet
In their day-spring's glow,
Like a southern stream that no frost hath met
To chain its flow!

A song for the death-day of the brave,
A song of pride!
For him that went to a hero's grave
With the sword, his bride!

He has left a voice in his trumpet lays
To turn the fight;
And a spirit to shine through the after-days
As a watch-fire's light;

And a grief in his father's soul to rest
'Midst all high thought;
And a memory unto his mother's breast
With healing fraught.

And a name and fame above the blight
Of earthly breath;
Beautiful—beautiful and bright
In life and death!

A song for the death-day of the brave,
A song of pride!
For him that went to a hero's grave
With the sword, his bride!

UPCOTT, THE MANUSCRIPT-COLLECTOR.

In a work of this nature, it would be improper to omit reference to one so devoted to the collection and preservation of English historical curiosities as William Upcott, sometimes styled the *King of Autograph-collectors*. Ostensibly, he pursued a

modest career in life, as under-librarian of the London Institution: the life below the surface exhibited him as acting under the influence of a singular instinct for the acquisition of documents connected with English history—one of those aids to literature whose names are generally seen only in foot-notes or in sentences of prefaces, while the truth is that, but for them, the efforts and the powers of the most accomplished historians would be vain. Upcott was born in Oxfordshire in 1779, and was set up originally as a collector by his godfather, Ozias Humphrey, the eminent portrait-painter, who left him his correspondence. With this as a nucleus, he went on collecting for a long series of years, till, in 1836, his collection consisted of thirty-two thousand letters illustrated by three thousand portraits, the value of the whole being estimated by himself at £10,000. That this was not an extravagant appraisement may now be averred, when we know that, after large portions of the collection had been disposed of, a mere remnant, sold by auction after the collector's death, brought £412, 17*s.* 6*d.* It was to Upcott that the public was indebted for the preservation of the manuscript of the Diary of John Evelyn, a valuable store of matter regarding English familiar life in the seventeenth century. The Correspondence of Henry, Earl of Clarendon, and that of Ralph Thoresby, were also published from the originals in Mr Upcott's collection.

This singular enthusiast spent the last years of his useful and unpretending life in an old mansion in the Upper Street at Islington, which he quaintly denominated *Autograph Cottage*.

NAVAL ENGAGEMENT OFF FLAMBOROUGH HEAD, SEPTEMBER 23, 1779.

On 23d September 1779, a serious naval engagement took place on the coast of Yorkshire, H.M.S. *Serapis* and *Countess of Scarborough* being the ships on the one side, and a squadron under the command of the celebrated adventurer Paul Jones on the other. It was a time of embarrassment in England. Unexpected difficulties and disasters had been experienced in the attempt to enforce the loyalty of the American colonies. Several of England's continental neighbours were about to take advantage of her weakness to declare against her. In that crisis it was that Jones came and insulted the coasts of Britain. Driven out of the Firth of Forth by a strong westerly wind, he came southwards till he reached the neighbourhood of Flamborough Head, where he resolved to await the Baltic and merchant fleet, expected shortly to arrive there on its homeward voyage under the convoy of the two men-of-war above mentioned. About two o'clock in the afternoon of the 23d September, Jones, on board of his vessel the *Bon Homme Richard* (so called after his friend Benjamin Franklin), descried the fleet in question, with its escort, advancing north-north-east, and numbering forty-one sail. He at once hoisted the signal for a general chase, on perceiving which the two frigates bore out from the land in battle-array, whilst the merchant vessels crowded all sail towards shore, and succeeded in gaining shelter beneath the guns of Scarborough Castle. There was little wind, and, according to Jones's own account, it was nightfall before the *Bon Homme Richard* could come up with the *Serapis*, when an engagement within pistol-shot commenced, and continued at that distance for nearly an hour, the advantage both in point of manageableness and number of guns being on the side of the British ship; whilst the remaining vessels of Jones's squadron, from some inexplicable cause, kept at a distance, and he was obliged for a long time to maintain single-handed a contest with the *two* English frigates. The harvest-moon, in the meantime, rose calm and beautiful, casting its silver light over the waters of the German Ocean, the surface of which, smooth as a mirror, bore the squadrons engaged in deadly conflict. Suddenly, some old eighteen-pounders on board the *Bon Homme Richard* exploded at their first discharge, killing and wounding many of Jones's sailors; and as he had now only two pieces of cannon on the quarter-deck remaining unsilenced, and his vessel had been struck by several shots below the water-level, his position was becoming very critical. Just then, while he ran great danger of going to the bottom, the bowsprit of the *Serapis* came athwart the poop of the *Bon Homme Richard*, and Jones, with his own hands, made the two vessels fast in that position A dreadful scene at close-quarters then ensued, in which Captain Pearson, the British commander, inflicted signal damage by his artillery on the under part of his opponent's vessel, whilst his own decks were rendered almost untenable by the hand-grenades and volleys of musketry which, on their cannon becoming unserviceable, the combatants on board the *Bon Homme Richard* discharged with murderous effect. For a long time the latter seemed decidedly to have the worst of the contest, and on one occasion the master-gunner, believing that Jones and the lieutenant were killed, and himself left as the officer in command, rushed up to the poop to haul down the colours in the hopelessness of maintaining any longer the conflict. But the flagstaff had been shot away at the commencement of the engagement, and he could only make his intentions known by calling out over the ship's side for quarter. Captain Pearson then hailed to know if the *Bon Homme Richard* surrendered, an interrogation which Jones immediately answered in the negative, and the fight continued to rage. Meantime the *Countess of Scarborough* had been engaged by the *Pallas*, a vessel belonging to Jones's squadron, and after a short conflict had surrendered. The *Bon Homme Richard* was thus freed from the attacks of a double foe, but was at the same time nearly brought to destruction by the *Alliance*, one of its companion-vessels, which, after keeping for a long time at a distance, advanced to the scene of action, and poured in several broadsides, most of which took effect on her own ally instead of the British frigate. At last the galling fire from the shrouds of Jones's ship told markedly in the thinning of the crew of the *Serapis*, and silencing her fire; and a terrible explosion on board of her, occasioned by a young sailor, a Scotchman, it is alleged, who, taking his stand upon the extreme end of the yard of the *Bon Homme Richard*, dropped a grenade on a row of cartridges on the main-deck of the *Serapis*, spread such disaster and confusion that Captain Pearson shortly afterwards struck his colours and surrendered. This was at eleven o'clock at night, after the engagement had lasted for upwards of four hours. The accounts of the

losses on both sides are very contradictory, but seem to have been nearly equal, and may be estimated in all at about three hundred killed and wounded. The morning following the battle was extremely foggy, and on examining the *Bon Homme Richard*, she was found to have sustained such damage that it was impossible she

ENGAGEMENT OFF FLAMBOROUGH HEAD.
(From a contemporary print.)

could keep longer afloat. With all expedition her crew abandoned her, and went on board the *Serapis*, of which Paul Jones took the command. The *Bon Homme Richard* sank almost immediately, with a large sum of money belonging to Jones, and many valuable papers. The prize-ships were now conveyed by him to the Texel, a proceeding which led to a demand being made by the English ambassador at the Hague for the delivery of the captured vessels, and the surrender of Jones himself as a pirate. This application to the Dutch authorities was ineffectual, but it served as one of the predisposing causes of the war which not long afterwards ensued with England After remaining for a while at the Texel, the *Serapis* was taken to the port of L'Orient, in France, where she appears subsequently to have been disarmed and broken up, whilst the *Countess of Scarborough* was conveyed to Dunkirk. Meantime, Jones proceeded to France, with the view of arranging his future movements ; but before quitting the Texel, he returned to Captain Pearson his sword, in recognition, as he says, of the bravery which he had displayed on board the *Serapis*. Pearson's countrymen seem to have entertained the same estimate of his merits, as, on his subsequent return to England, he was received with great distinction, was knighted by George III., and presented with a service of plate and the freedom of their corporations, by those boroughs on the east coast which lay near the scene of the naval engagement. In France, honours no less flattering were bestowed on Paul Jones. At the opera and all public places, he received enthusiastic ovations, and Louis XVI. presented him with a gold-hilted sword, on which was engraved, '*Vindicati maris Ludovicus XVI. remunerator strenuo vindici*' (From Louis XVI., in recognition of the services of the brave maintainer of the privileges of the sea).

It may be noted that the true name of Paul Jones was *John Paul*, and that he made the change probably at the time when he entered the American service. His career was altogether a most singular one, presenting phases to the full as romantic as any of those undergone by a hero of fiction. The son of a small farmer near Dumfries, we find him manifesting from his boyhood a strong predilection for the sea, and at the age of twelve commencing life as a cabin-boy, on board the *Friendship* of Whitehaven, trading to Virginia. After completing his apprenticeship, he made several voyages in connection with the slave-trade to the West Indies, and rose to the position of master. He speedily, however, it is said, conceived a disgust to the traffic, and abandoned it. We find him, about 1775, accepting a commission in the American navy, then newly formed in opposition to that of Britain. What inspired Paul with such feelings of rancour against his native country, cannot now be ascertained ; but to the end of his life he seemed to retain undiminished the most implacable resentment towards the British nation. The cause of the colonies against the mother-country, now generally admitted to have been a just one, was adopted by him with the utmost enthusiasm, and certainly he contrived to inflict a considerable amount of damage on British shipping in the course of his cruises.

To the British nation, and to Scotchmen more especially, the name of Paul Jones has heretofore only been suggestive of a daring pirate or lawless adventurer. He appears, in reality, to have been a sincere and enthusiastic partisan of the cause of the colonists, many of whom were as much natives of Britain as himself, and yet have never been specially blamed for their partisanship. In personal respects, he was a gallant and resolute man, of romantically chivalrous feelings, and superior to everything like a mean or shabby action. It is particularly pleasant to remark his disinterestedness in restoring, in after-years, to the Countess of Selkirk, the family-plate which the necessity of satisfying his men had compelled him to deprive her of, on the occasion of his descent on the Scottish coast, and for which he paid them the value out of his own resources. The letters addressed by him on this subject to the countess and her husband, do great credit both to his generosity and abilities in point of literary composition. By the Americans, Admiral Paul Jones is regarded as one of their most distinguished naval celebrities.

MONEY THAT CAME IN THE DARK.

The following simply-told narrative, though not so very wonderful as to shock our credulity, contains a pleasing spice of mystery, from its want of a direct explanation. It was found, under the date of September 23, 1673, in an old memorandum-book, that had belonged to a certain Paul Bowes, Esq., of the Middle Temple. A little more than a hundred years later, in 1783, the book, and one of the mysteriously-found pieces of money, was in the possession of an Essex gentleman, a lineal descendant of the fortunate Mr Bowes.

'About the year 1658, after I had been some years settled in the Middle Temple, in a chamber in Elm Court, up three pair of stairs, one night as I came into the chamber, in the dark, I went into my study, in the dark, to lay down my gloves, upon the table in my study, for I then, being my own man, placed my things in their certain places, that I could go to them in the dark ; and as I laid my gloves down, I felt under my hand a piece of

money, which I then supposed, by feeling, to be a shilling; but when I had light, I found it a twenty-shilling piece of gold. I did a little reflect how it might come there, yet could not satisfy my own thoughts, for I had no client then, it being several years before I was called to the bar, and I had few visitors that could drop it there, and no friends in town that might designedly lay it there as a bait, to encourage me at my studies; and although I was the master of some gold, yet I had so few pieces, I well knew it was none of my number; but, however, this being the first time I found gold, I supposed it left there by some means I could not guess at. About three weeks after, coming again into my chamber in the dark, and laying down my gloves at the same place in my study, I felt under my hand a piece of money, which also proved a twenty-shilling piece of gold; this moved me to further consideration; but, after all my thoughtfulness, I could not imagine any probable way how the gold could come there, but I do not remember that I ever found any, when I went with those expectations and desires. About a month after the second time, coming into my chamber, in the dark, and laying down my gloves upon the same place, on the table in my study, I found two pieces of money under my hand, which, after I had lighted my candle, I found to be two twenty-shilling pieces; and, about the distance of six weeks after, in the same place, and in the dark, I found another piece of gold, and this about the distance of a month, or five or six weeks. I several times after, at the same place, and always in the dark, found twenty-shilling pieces of gold; at length, being with my cousin Langton, grandmother to my cousin Susan Skipwith, lately married to Sir John Williams, I told her this story, and I do not remember that I ever found any gold there after, although I kept that chamber above two years longer, before I sold it to Mr Anthony Weldon, who now hath it (this being 23d September 1673). Thus I have, to the best of my remembrance, truly stated this fact, but could never know, or have any probable conjecture, how that gold was laid there.'

The relationship that existed between cousin Langton and cousin Skipwith does not seem very clear, according to our modern method of reckoning kindred; but it must be recollected that, in former times, the title of cousin was given to any collateral relative more remote than a brother or sister. Probably, cousin Langton was Mr Bowes's grandmother as well as Miss Skipwith's, and, if she liked, could have solved the mystery. For the writer has known more than one instance of benevolent old ladies making presents of money to young relatives, in a similarly stealthy and eccentric manner.

SEPTEMBER 24.

St Rusticus or Rotiri, bishop of Auvergne, 5th century. St Chuniald or Conald, priest and missionary. St Germer or Geremar, abbot, 658. St Gerard, bishop of Chonad, martyr, 1046.

Born.—Sharon Turner, historian, 1768, *London.*

Died.—Pepin, king of France, 768; Michael III., Greek emperor, assassinated, 867; Pope Innocent II., 1143; William of Wykeham, founder of Winchester School, 1404, *South Waltham;* Samuel Butler, author of *Hudibras*, 1680, *London;* Henry, Viscount Hardinge, governor-general and commander in India, 1856, *South Park, near Tunbridge.*

The Feast of Ingathering.

Wherever, throughout the earth, there is such a thing as a formal harvest, there also appears an inclination to mark it with a festive celebration. The wonder, the gratitude, the piety felt towards the great Author of nature, when it is brought before us that, once more, as it has ever been, the ripening of a few varieties of grass has furnished food for earth's teeming millions, insure that there should everywhere be some sort of feast of ingathering. In England, this festival passes generally under the endeared name of *Harvest-Home.* In Scotland, where that term is unknown, the festival is hailed under the name of the *Kirn.* In the north of England, its ordinary designation is the *Mell-Supper.* And there are perhaps other local names. But everywhere there is a thankful joy, a feeling which pervades all ranks and conditions of the rural people, and for once in the year brings all upon a level. The servant sympathises with the success of his master in the great labours of the year. The employer looks kindly down upon his toiling servants, and feels it but due to them that they should have a banquet furnished out of the abundance which God has given him—one in which he and his family should join them, all conventional distinctions sinking under the overpowering gush of natural, and, it may be added, religious feeling, which so well befits the time.

Most of our old harvest-customs were connected with the ingathering of the crops, but some of them began with the commencement of harvest-work. Thus, in the southern counties, it was customary for the labourers to elect, from among themselves, a leader, whom they denominated their 'lord.' To him all the rest were required to give precedence, and to leave all transactions respecting their work. He made the terms with the farmers for mowing, for reaping, and for all the rest of the harvest-work; he took the lead with the scythe, with the sickle, and on the 'carrying days;' he was to be the first to eat, and the first to drink, at all their refreshments; his mandate was to be law to all the rest, who were bound to address him as 'My Lord,' and to shew him all due honour and respect. Disobedience in any of these particulars was punished by imposing fines according to a scale previously agreed on by 'the lord' and all his vassals. In some instances, if any of his men swore or told a lie in his presence, a fine was inflicted. In Buckinghamshire and other counties, 'a lady' was elected as well as 'a lord,' which often added much merriment to the harvest-season. For, while the lady was to receive all honours due to the lord from the rest of the labourers, he (for the lady was one of the workmen) was required to pass it on to the lord. For instance, at drinking-time, the vassals were to give the horn first to the lady, who passed it to the lord, and when he had drunk, *she* drank next, and then the others indiscriminately. Every departure from this rule incurred a fine. The blunders which led to fines, of course, were frequent, and produced great merriment.

In the old simple days of England, before the natural feelings of the people had been checked and chilled off by Puritanism in the first place, and what may be called gross Commercialism in the second, the harvest-home was such a scene as Horace's friends might have expected to see at his Sabine farm, or Theocritus described in his *Idylls*. Perhaps it really was the very same scene which was presented in ancient times. The grain last cut was brought home in its wagon—called the *Hock Cart*—surmounted by a figure formed of a sheaf with gay dressings—a presumable representation of the goddess Ceres—while a pipe and tabor went merrily sounding in front, and the reapers tripped around in a hand-in-hand ring, singing appropriate songs, or simply by shouts and cries giving vent to the excitement of the day.

'Harvest-home, harvest-home,
We have ploughed, we have sowed,
We have reaped, we have mowed,
We have brought home every load,
Hip, hip, hip, harvest-home!'

So they sang or shouted. In Lincolnshire and other districts, hand-bells were carried by those riding on the last load, and the following rhymes were sung:

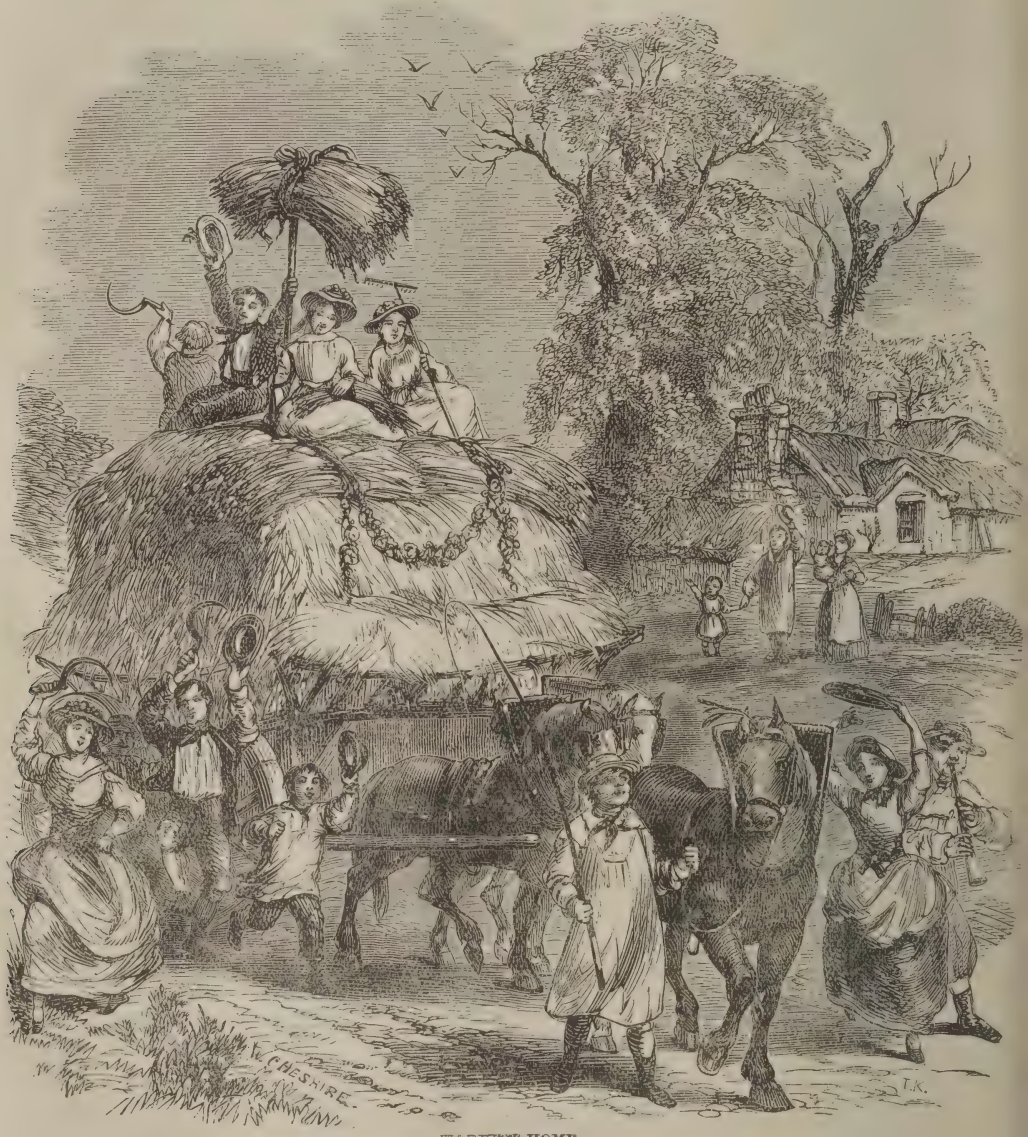
'The boughs do shake, and the bells do ring,
So merrily comes our harvest in,
Our harvest in, our harvest in,
So merrily comes our harvest in!
Hurrah!'

Troops of village children, who had contributed in various ways to the great labour, joined the throng, solaced with plum-cake in requital of their little services. Sometimes, the image on the cart, instead of being a mere dressed-up bundle of grain, was a pretty girl of the reaping-band, crowned with flowers, and hailed as *the Maiden*. Of this we have a description in a ballad of Bloomfield's:

'Home came the jovial Hockey load,
Last of the whole year's crop,
And Grace among the green boughs rode,
Right plump upon the top.

This way and that the wagon reeled,
And never queen rode higher;
Her cheeks were coloured in the field,
And ours before the fire.'

In some provinces—we may instance Buckinghamshire—it was a favourite practical joke to lay an ambuscade at some place where a high bank or a tree gave opportunity, and drench the hock-cart party with water. Great was the merriment, when this was cleverly and effectively done, the riders laughing, while they shook themselves, as merrily as the rest. Under all the rustic jocosities of the occasion, there seemed a basis of pagan custom; but it was such as not to exclude a Christian sympathy. Indeed, the harvest-home of Old England was obviously and beyond question a piece of natural religion, an ebullition of jocund gratitude to the divine source of all earthly blessings.



Herrick describes the harvest-home of his epoch (the earlier half of the seventeenth century) with his usual felicity of expression.

'Come, sons of summer, by whose toile
We are the Lords of wine and oile;
By whose tough labours, and rough hands,
We rip up first, then reap our lands,
Crown'd with the eares of corne, now come,
And, to the pipe, sing harvest-home.
Come forth, my Lord, and see the cart,
Drest up with all the country art.
See here a maukin, there a sheet
As spotlesse pure as it is sweet:
The horses, mares, and frisking fillies,
Clad, all, in linnen, white as lillies,
The harvest swaines and wenches bound
For joy, to see the hock-cart crown'd.
About the cart heare how the rout
Of rural younglings raise the shout;
Pressing before, some coming after,
Those with a shout, and these with laughter.
Some blesse the cart; some kisse the sheaves;
Some prank them up with oaken leaves:
Some crosse the fill-horse; some with great
Devotion stroak the home-borne wheat:
While other rusticks, lesse attent
To prayers than to merryment,
Run after with their breeches rent.
Well, on, brave boyes, to your Lord's hearth
Glitt'ring with fire, where, for your mirth,
You shall see first the large and cheefe
Foundation of your feast, fat beefe:
With upper stories, mutton, veale,
And bacon, which makes full the meale;
With sev'rall dishes standing by,
As here a custard, there a pie,
And here all-tempting frumentie.
And for to make the merrie cheere
If smirking wine be wanting here,
There's that which drowns all care, stout beere,
Which freely drink to your Lord's health,
Then to the plough, the commonwealth;
Next to your flailes, your fanes, your fatts,
Then to the maids with wheaten hats;
To the rough sickle, and the crookt sythe
Drink, frollick, boyes, till all be blythe.
Feed and grow fat, and as ye eat,
Be mindfull that the lab'ring neat,
As you, may have their full of meat;
And know, besides, ye must revoke
The patient oxe unto the yoke,
And all goe back unto the plough
And harrow, though they're hang'd up now.
And, you must know, your Lord's word's true,
Feed him ye must, whose food fils you.
And that this pleasure is like raine,
Not sent ye for to drowne your paine,
But for to make it spring againe.'

In the north, there seem to have been some differences in the observance. It was common there for the reapers, on the last day of their business, to have a contention for superiority in quickness of dispatch, groups of three or four taking each a ridge, and striving which should soonest get to its termination. In Scotland, this was called a *kemping*, which simply means a striving. In the north of England, it was a *mell*, which, I suspect, means the same thing (from Fr. *mêlée*). As the reapers went on during the last day, they took care to leave a good handful of the grain uncut, but laid down flat, and covered over; and, when the field was done, the 'bonniest lass' was allowed to cut this final handful, which was presently dressed up with various sewings, tyings, and trimmings, like a doll, and hailed as a *Corn Baby*. It was brought home in triumph, with music of fiddles and bagpipes, was set up conspicuously that night at supper, and was usually preserved in the farmer's parlour for the remainder of the year. The bonny lass who cut this handful

of grain, was deemed the *Har'st Queen*. In Hertfordshire, and probably other districts of England, there was the same custom of reserving a final handful; but it was tied up and erected, under the name of a *Mare*, and the reapers then, one after another, threw their sickles at it, to cut it down. The successful individual called out: 'I have her!' 'What have you?' cried the rest. 'A mare, a mare, a mare!' he replied. 'What will you do with her?' was then asked. 'We'll send her to John Snooks,' or whatever other name, referring to some neighbouring farmer who had not yet got all his grain cut down.

This piece of rustic pleasantry was called *Crying the Mare*. It is very curious to learn, that there used to be a similar practice in so remote a district

HARVEST-HOME.

as the Isle of Skye. A farmer having there got his harvest completed, the last cut handful was sent, under the name of *Goabbir Bhacagh* (the Cripple Goat), to the next farmer who was still at work upon his crops, it being of course necessary for the bearer to take some care that, on delivery, he should be able instantly to take to his heels, and escape the punishment otherwise sure to befall him.

The custom of *Crying the Mare* is more particularly described by the Rev. C. H. Hartshorne, in his *Salopia Antiqua* (p. 498). 'When a farmer has ended his reaping, and the wooden bottle is passing merrily round, the reapers form themselves into two bands, and commence the following dialogue in loud shouts, or rather in a kind of chant at the utmost pitch of their voice. First band: *I have*

her, I have her, I have her! (Every sentence is repeated three times.) Second: *What hast thee? What hast thee? What hast thee?* First: *A mare, a mare, a mare!* Second: *Whose is her? Whose is her? Whose is her?* First: A. B.'s (naming their master, whose corn is all cut. Second: *Where shall we send her?* &c. First: To C. D. (naming some neighbour whose corn is still standing). And the whole concludes with a joyous shout of both bands united.

'In the south-eastern part of Shropshire, the ceremony is performed with a slight variation. The last few stalks of the wheat are left standing; all the reapers throw their sickles, and he who cuts it off, cries: "*I have her, I have her, I have her!*" on which the rustic mirth begins; and it is practised in a manner very similar in Devonshire. The latest farmer in the neighbourhood, whose reapers therefore cannot send her to any other person, is said to *keep her all the winter*. This rural ceremony, which is fast wearing away, evidently refers to the time when, our county lying all open in common fields, and the corn consequently exposed to the depredations of the wild mares, the season at which it was secured from their ravages was a time of rejoicing, and of exulting over a tardier neighbour.'

Mr Bray describes the same custom as practised in Devonshire, and the chief peculiarity in that instance is, that the last handful of the standing grain is called the Nack. On this being cut, the reapers assemble round it, calling at the top of their voices, 'Arnack, arnack, arnack! we have'n, we have'n, we have'n,' and the firkin is then handed round; after which the party goes home dancing and shouting. Mr Bray considers it a relic of Druidism, but, as it appears to us, without any good reason. He also indulges in some needlessly profound speculations regarding the meaning of the words used. 'Arnack' appears to us as simply 'Our nag,' an idea very nearly corresponding to 'the Mare;' and 'we have'n' seems to be merely 'we have him.'

In the evening of harvest-home, the supper takes place in the barn, or some other suitable place, the master and mistress generally presiding. This feast is always composed of substantial viands, with an abundance of good ale, and human nature insures that it should be a scene of intense enjoyment. Some one, with better voice than his neighbours, leads off a song of thanks to the host and hostess, in something like the following strain:

Here 's a health to our master,
The lord of the feast;
God bless his endeavours,
And send him increase!

May prosper his crops, boys,
And we reap next year;
Here 's our master's good health, boys,
Come, drink off your beer!

Now harvest is ended,
And supper is past;
Here 's our mistress's health, boys,
Come, drink a full glass.

For she 's a good woman,
Provides us good cheer;
Here 's your mistress's good health, boys,
Come, drink off your beer!

One of the rustic assemblage, being chosen to act as 'lord,' goes out, puts on a sort of disguise, and comes in again, crying in a prolonged note, *Lar-gess!* He and some companions then go about with a plate among the company, and collect a little money with a view to further regalements at the village ale-house. With these, protracted usually to a late hour, the harvest-feast ends.

In Scotland, under the name of the *Kirn* or *Kirn Supper* (supposed to be from the churn of cream usually presented on the occasion), harvest-home ends in like manner. The description of the feast given by Grahame, in his *British Georgics*, includes all the characteristic features:

'The fields are swept, a tranquil silence reigns,
And pause of rural labour, far and near.
Deep is the morning's hush; from grange to grange
Responsive cock-crows, in the distance heard,
Distinct as if at hand, soothe the pleased ear;
And oft, at intervals, the flail, remote,
Sends faintly through the air its deafened sound.

Bright now the shortening day, and blithe its close,
When to the *Kirn* the neighbours, old and young,
Come dropping in to share the well-earned feast.
The smith aside his ponderous sledge has thrown,
Raked up his fire, and cooled the hissing brand.
His sluice the miller shuts; and from the barn
The threshers hie, to don their Sunday coats.
Simply adorned, with ribands, blue and pink,
Bound round their braided hair, the lasses trip
To grace the feast, which now is smoking ranged
On tables of all shape, and size, and height,
Joined awkwardly, yet to the crowded guests
A seemly joyous show, all loaded well:
But chief, at the board-head, the haggis round
Attracts all eyes, and even the goodman's grace
Prunes of its wonted length. With eager knife,
The quivering globe he then prepares to broach;
While for her gown some ancient matron quakes,
Her gown of silken woof, all figured thick
With roses white, far larger than the life,
On azure ground—her grannam's wedding-garb,
Old as that year when Sheriffmuir was fought.
Old tales are told, and well-known jests abound,
Which laughter meets half-way as ancient friends,
Nor, like the worldling, spurns because threadbare.

When ended the repast, and board and bench
Vanish like thought, by many hands removed,
Up strikes the fiddle; quick upon the floor
The youths lead out the half-reluctant maids,
Bashful at first, and darning through the reels
With timid steps, till, by the music cheered,
With free and airy step, they bound along,
Then deftly wheel, and to their partner's face,
Turning this side, now that, with varying step.
Sometimes two ancient couples o'er the floor,
Skim through a reel, and think of youthful years.

Meanwhile the frothing bickers,* soon as filled,
Are drained, and to the gauntrees† oft return,
Where gossips sit, unmindful of the dance.
Salubrious beverage! Were thy sterling worth
But duly prized, no more the alembic vast
Would, like some dire volcano, vomit forth
Its floods of liquid fire, and far and wide
Lay waste the land; no more the fruitful boon
Of twice ten shrievedoms, into poison turned,
Would taint the very life-blood of the poor,
Shrivelling their heart-strings like a burning scroll.

* Beakers.
† Wooden frames on which beer casks are set.

Such was formerly the method of conducting the harvest-feast; and in some instances it is still conducted much in the same manner, but there is a growing tendency in the present day to abolish this method and substitute in its place a general harvest-festival for the whole parish, to which all the farmers are expected to contribute, and which their labourers may freely attend. This festival is usually commenced with a special service in the church, followed by a dinner in a tent, or in some building sufficiently large, and continued with rural sports; and sometimes including a tea-drinking for the women. But this parochial gathering is destitute of one important element in the harvest-supper. It is of too general a character. It provides no particular means for attaching the labourers to their respective masters. If a labourer have any unpleasant feeling towards his master, or is conscious of neglecting his duty, or that his conduct has been offensive towards his master, he will feel ashamed of going to his house to partake of his hospitality, but he will attend without scruple a general feast provided by many contributors, because he will feel under no special obligation to his own master. But if the feast be solely provided by his master, if he receive an invitation from him, if he finds himself welcomed to his house, sits with him at his table, is encouraged to enjoy himself, is allowed to converse freely with him, and treated by him with kindness and cordiality, his prejudices and asperities will be dispelled, and mutual good-will and attachment established. The hospitality of the old-fashioned harvest-supper, and other similar agricultural feasts, was a bond of union between the farmer and his work-people of inestimable value. The only objection alleged against such a feast, is that it often leads to intemperance. So would the harvest-festival, were not regulations adopted to prevent it. If similar regulations were applied to the farmer's harvest-feast, the objection would be removed. Let the farmer invite the clergyman of his parish, and other sober-minded friends, and with their assistance to carry out good regulations, temperance will easily be preserved.

The modern harvest-festival, as a parochial thanksgiving for the bounties of Providence, is an excellent institution, in addition to the old harvest-feast, but it should not be considered as a substitute for it.

SEPTEMBER 25.

St Firmin, bishop of Amiens, martyr. St Barr or Finbarr, first bishop of Cork, confessor, 6th century. St Aunaire, bishop of Auxerre, about 605. St Colfrid, abbot, 716.

Born.—Christian Gottlob Heyne, classical editor, 1729, *Chemnitz, Saxony;* William Romaine, eminent divine, 1714, *Hartlepool;* Abraham Gottlieb Werner, geologist, 1750, *Wehrau, Upper Lusatia;* Felicia Dorothea Hemans, poetess, 1794, *Liverpool.*

Died.—Philip I. of Spain, 1506, *Burgos;* Lancelot Andrews, eminent prelate and writer, 1626; Ambrosio, Marquis of Spinola, great Spanish captain, 1630; Robert Dodsley, bookseller, and dramatist, 1764, *Durham;* Richard Pococke, bishop of Ossory, oriental traveller, 1765; John Henry Lambert, German philosopher, 1777, *Berlin;* Richard Porson, eminent Greek scholar and professor at Cambridge, 1808, *Old Jewry, London.*

RICHARD PORSON.

The character of Porson exhibits an extraordinary combination of the highest classical learning and critical acumen, with a strong propensity to coarse drollery and convivial excess. His aberrations were indeed in many respects more ludicrous than repulsive, and notwithstanding the additional disadvantage of a rough and unceremonious temper, we can scarcely find it in our hearts to regard him otherwise than as a very honest fellow, who was nobody's enemy but his own.

A brief sketch will suffice for his history. He was the son of the parish clerk of East Ruston, in Norfolk, and having displayed from childhood the most marked inclination for study, with a wonderfully tenacious memory, he came under the notice of Mr Hewitt, the clergyman of the place, who undertook his instruction along with that of his own sons. The weaver's boy, for such was the occupation of Porson's father on week-days, continued to manifest such indications of classical genius, that a subscription was entered into in the neighbourhood to defray the further expenses of his education. Through these means he was sent first to Eton, and afterwards to Trinity College, Cambridge, where he gained a fellowship, but was afterwards obliged to relinquish it, from a conscientious objection to enter holy orders and subscribe the Thirty-Nine Articles. He then wended his way, a penniless adventurer, to London. Here he is said to have subsisted for nearly six weeks on a guinea, but a number of gentlemen, literary men, and others, clubbed together at last to purchase him an annuity of £100, which placed him beyond the reach of want for the remainder of his days. Shortly afterwards, the Greek chair at Cambridge became vacant, and Porson was at once elected to the professorship, which required no declaration of adherence to any rule of faith. The salary was only £40 per annum. Though no lectures or other services were required of him, it would seem that Porson had fully determined on giving these, but never accomplished his intention, partly owing to his own indolence, partly to the failure of the college authorities in supplying him with proper rooms and accommodation. Most of his subsequent life seems to have been spent in London, where he occupied himself with editing the tragedies of Euripides, and contributing political squibs to the *Morning Chronicle*, relaxing himself by convivialities with his friends, and evenings at the 'Cider Cellars.' In 1806, he was chosen librarian of the London Institution, with a salary of £200 a year, and residence; but his health had now greatly declined, and in about two years after his appointment, he died from the effects of an apoplectic fit, at the age of forty-eight.

The circumstances connected with Porson's marriage are rather curious. He was very intimate with Mr Perry, the editor of the *Morning Chronicle*, for whom his sister, Mrs Lunan, a widow, kept house. One night the professor was seated in his favourite haunt, the Cider Cellars in Maiden Lane, smoking a pipe with a friend, when he suddenly turned to the latter and said: 'Friend George, do you not think the widow Lunan an agreeable sort of personage, as times go?' The party addressed replied that she might be so.

'In that case,' replied Porson, 'you must meet me at St Martin's-in-the-Fields at eight o'clock to-morrow morning,' and thereupon withdrew after having called for and paid his reckoning. His friend was somewhat puzzled, but knowing that Porson generally meant what he said, resolved to obey the summons, and accordingly next morning presented himself at the appointed hour at the church, where he found Porson, with Mrs Lunan and a female friend, and a parson in full canonicals for the solemnisation of matrimony. The service was quickly got through, and thereupon the party quitted the sacred building, the bride and bridegroom going each different ways with their respective friends. The oddity of the affair did not end here. Porson had proposed to Mrs Lunan some time before, but had insisted on her keeping it a secret from her brother; and now that the ceremony was completed, seemed as determined as ever that nothing should be said of the marriage, having apparently also made no preparations for taking his bride home. His friend, who had acted as groomsman, then insisted that Mr Perry should be informed of the occurrence; and Porson, after some opposition, consenting, the two walked together to the residence of the worthy editor, in Lancaster Court, where, after some explanation, an arrangement was effected, including the preparation of a wedding-dinner, and the securing of apartments for the newly-married couple. After dinner, Porson, instead of remaining to enjoy the society of his bride, sallied forth to the house of a friend, and after remaining there till a late hour, proceeded to the Cider Cellars, where he sat till eight o'clock next morning! Notwithstanding what may well be called this most unprecedented treatment of a wife on her wedding-day, it is said that during the year and a half that the marriage subsisted, Porson acted the part of a kind and attentive husband, and had his wife lived, there is great reason to believe that she might have weaned him in time from his objectionable habits.

The worst of these was his propensity to drinking, which seems to have been in a great measure a monomania with him, as he would quaff liquors of all kinds, and apparently with equal gusto. Horn Tooke used to say that Porson would drink ink rather than nothing at all. One day he was sitting with an acquaintance in the chambers of a mutual friend in the Temple, who was confined to bed in another room. His servant came into the room to get a bottle of embrocation for him, which had been left on the chimney-piece. The phial was empty—Porson having drunk up the contents! When dining out, he would not unfrequently return to the dining-room after the company had departed, collect all the driblets of wine which had been left at the bottoms of the glasses, and drink off the aggregate. On one occasion he unexpectedly arrived at the house of his friend Hoppner, the painter, in the vicinity of London. The latter regretted his inability to offer the professor dinner, as Mrs Hoppner had gone to town, and carried with her the key of the cupboard which contained the wine. Porson, however, declared that he could dine very well on a mutton-chop, and beer from the next public-house, and this repast was accordingly procured. Sometime afterwards, he remarked to his host that Mrs Hoppner must assuredly keep some bottle in her bedroom for her own private drinking, and that a search might be made for it. Hoppner protested as to his wife's strict temperance, and the impossibility of any such private mode of refreshing herself being resorted to. To quiet his guest, however, who was becoming obstreperous, an inquisition was made and a bottle discovered, which Porson drained with the utmost glee, declaring it was the best gin he had tasted for a long time. Hoppner, rather discomposed, informed his wife, on her return, that their friend had drank every drop of her hidden flask of cordial. 'Drunk every drop of it!' exclaimed the horrified woman. 'My God, it was spirits of wine for the lamp!'

The dirtiness of his personal attire was very conspicuous, more especially in the latter years of his life. So disreputable an appearance did he at times present, that he would be refused admittance by the servants at the houses of his friends. His favourite beverage at breakfast was porter, and the Cambridge professor of Greek was often seen making his morning-meal on a pot of porter and bread and cheese, with black patches on his nose, and as dirty as if he had been rolling in the kennel. He seemed highly flattered by the compliment paid him by one of his Cider-Cellar associates: 'Dick can beat us all, he can drink all night, and spout all day.'

The memory of this singular man was prodigious, extending not only to classical literature, but to the most opposite productions, such as novels and songs, many of which he would almost have repeated verbatim after having perused them once. In connection with his attainments in Greek, the well-known story has often been related of his encounter in a stage-coach with a Cambridge undergraduate, whom he confounded in a pretended quotation, by producing from his pocket one after the other nearly all the Greek classics, and requesting him to point out in any of them the passage to which he referred. Another anecdote, not so well known, is that of his having called on a friend who was reading *Thucydides*, and consulted him as to the meaning of a word. Porson at once quoted the passage in which it occurred. 'How did you know what passage I referred to?' inquired his friend. 'Oh,' was the reply, 'I know that the word in question occurs only twice in *Thucydides*—once on the right, and once on the left hand page in the edition which you are now reading. I saw you look at the left page, and therefore knew the passage at once.' He used indeed to say sometimes, that the tenacity of his memory was a great misery to him, as it made him remember, whether he would or not, and forced him to retain in his recollection many things which he would gladly have forgotten.

CIDER-MAKING.

Debarred by the adverse influences of climate from the profitable cultivation of the vine, the northern nations of Europe have endeavoured to supply this deficiency by the manufacture of exhilarating liquors from fruits and grains of various kinds, more congenial to their soil and skies. Of these rivals to the grape, with the exception of John Barleycorn and his sons, there is none which may more fairly claim to contest the

palm of agreeableness and popularity than the apple and her golden-haired daughter, the bright and sparkling cider, whom some ardent admirers have even exalted to a level with the regal vintage of Champagne. Hear how John Philips, in his poem of *Cider*, eulogises the red-streak apple and its genial produce :

'Let every tree in every garden own
The Red-streak as supreme, whose pulpous fruit
With gold irradiate, and vermilion shines
Tempting, not fatal, as the birth of that
Primeval interdicted plant that won
Fond Eve in hapless hour to taste, and die.
This, of more bounteous influence, inspires
Poetic raptures, and the lowly Muse
Kindles to loftier strains; even I perceive
Her sacred virtue. See! the numbers flow
Easy, whilst, cheer'd with her nectareous juice,
Hers and my country's praises I exalt.
Hail Herefordian plant, that dost disdain
All other fields! Heaven's sweetest blessing, hail!
Be thou the copious matter of my song,
And thy choice nectar; on which always wait
Laughter, and sport, and care-beguiling wit,
And friendship, chief delight of human life.
What should we wish for more? or why, in quest
Of foreign vintage, insincere, and mixt,
Traverse th' extremest world? why tempt the rage
Of the rough ocean? when our native glebe
Imparts, from bounteous womb, annual recruits
Of wine delectable, that far surmounts
Gallic, or Latin grapes, or those that see
The setting sun near Calpes' towering height.
Nor let the Rhodian, nor the Lesbian vines
Vaunt their rich Must, nor let Tokay contend
For sovereignty; Phanæus self must bow
To th' Ariconian vales.'

Like hop-picking in the east, the gathering of apples, for cider, forms one of the liveliest and most interesting of rural operations throughout the year in the western counties of England. These comprise mainly Hereford, Monmouth, and Gloucester shires, Somerset and Devon, the first and last counties more especially representing the two great cider districts of England, and also two separate qualities of the liquor, Herefordshire being noted *par excellence* for *sweet*, as Devonshire is for *rough* cider. Both descriptions, however, are made in the two counties. In the sweet cider, the object of the maker is to check the vinous fermentation as far as possible, so as to prevent the decomposition of the saccharine matter, which in the rough cider is more or less destroyed. The cider lauded by Philips in such encomiastic terms, is the sweet Herefordshire cider; but as a native of the west midland counties, a due allowance must be made for local predilection. It, nevertheless, enjoys a deservedly high reputation, and it is stated as a positive fact that an English peer, when ambassador in France, used frequently to palm it on the *noblesse* as a delicious wine.

In the manufacture of cider, those apples are preferred which are of a small size and have an acid or astringent taste. Red and yellow are the favourite colours, green being avoided as producing a very poor quality of liquor. Where cider is made in small quantities, or where it is desired to have it of a specially fine description, the apples are gathered by the hand when thoroughly ripe, carefully picked, and any rotten portions that may appear, cut away. For general purposes, the fruit is beaten from the trees by the aid of long poles, and collected in baskets beneath, by women and children. It is then spread out in heaps in the open air, and remains exposed to the weather till it becomes mellow. It is then conveyed to the cider-mill, a primitive apparatus, consisting of a stone wheel revolving in a circular trough of the same material, and driven by a horse. The apples are ground as nearly as possible to a uniform consistence, it being especially desirable that the rinds and kernels should be thoroughly pressed, as on the former the colour, and on the latter the flavour of the liquor essentially depend. The resulting pulp, or, as it is termed, *pomage*, is taken to the cider-press, a machine constructed on the principle of the packing-press, on the floor of which the crushed fruit is piled up, between layers of straw or hair-cloth, and subjected to a severe and protracted pressure. The heap thus formed is styled the *cheese*. Wooden tubs or troughs receive the expressed liquor, which is then placed in casks, and left to ferment. This operation being successfully completed, the cider, bright and clear, is racked off into other casks, which are allowed to stand in the open air till the ensuing spring with their bungs lightly fixed, but which are then tightly closed. The best time for bottling it is said to be when it is from eighteen months to two years old, or rather when it has acquired its highest brightness and flavour in the cask. If the proper time for doing this be seized, the liquor thus bottled may be kept for a very long period, but, as a general rule, cider is extremely difficult to preserve, from the readiness with which it turns sour, owing to the development of lactic acid.

As a summer drink, cider is a most palatable and refreshing one, though its extended use seems to be confined to the western counties of England, where it occupies the place in popular favour held, in other parts of the country, by beer. The percentage of alcohol which it contains, varies from 5½ to 9. We retain a most affectionate remembrance of the liquor in connection with the fairy nooks of Devon, and the rich pastures of Somerset, through which, some years ago, it was our fortune to ramble. Enchanted land of the west! how our fancies are entwined with thy sunny valleys, deep shady lanes, and the beauty and vigour of thy rustic inhabitants. Long may Pomona shed her choicest blessings on thy head, and her refreshing juices cheer the heart of the thirsty and way-worn traveller!

SEPTEMBER 26.

Saints Cyprian and Justina, martyrs, 304. St Eusebius, pope and confessor, 310. St Colman Elo, abbot and confessor, 610. St Nilus the Younger, abbot, 1005.

ST CYPRIAN THE MAGICIAN.

This saint, so surnamed from his having, previous to his conversion, practised the arts of a magician or diviner, has been coupled in the calendar with Justina, a young Syrian lady, regarding whom a young pagan nobleman applied to Cyprian to assist him with his arts in rendering her more favourable to his suit. Justina was a Christian, and opposed, we are told through the aid of the Virgin, such an

effectual resistance to the devices of Cyprian, that the latter was convinced of the weakness of the infernal spirits, and resolved to quit their service. He consulted a priest named Eusebius, who encouraged him in the work of conversion, which he ultimately consummated by burning all his magical books, giving his substance to the poor, and enrolling himself among the Christian catechumens. On the breaking out of the persecution under Dioclesian, Cyprian was apprehended and carried before the Roman governor at Tyre. Justina, who had been the original mover in his change of life, was, at the same time, brought before this judge and cruelly scourged, whilst Cyprian was torn with iron hooks. After this the two martyrs were sent to Nicomedia, to the Emperor Dioclesian, who forthwith commanded their heads to be struck off. The history of St Cyprian and St Justina was recorded in a Greek poem by the Empress Eudocia, wife of Theodosius the Younger, a work which is now lost.

Born.—Cuthbert, Admiral Lord Collingwood, 1750, *Newcastle-on-Tyne.*

Died.—Pope Clement VII. (Giulio de' Medici), 1534; Richard Colley, Marquis Wellesley, statesman, and eldest brother of the Duke of Wellington, 1842, *Kingston House, Brompton.*

JAM AND JELLY MAKING.

In Galt's *Annals of the Parish*, in which the Rev. Micah Balwhidder quaintly chronicles the occurrences of his district from 1760 downwards, the following entry occurs relative to an important epoch in the parochial history:

'I should not, in my notations, forget to mark a new luxury that got in among the commonalty at this time. By the opening of new roads, and the traffic thereon with carts and carriers, and by our young men that were sailors going to the Clyde, and sailing to Jamaica and the West Indies, heaps of sugar and coffee-beans were brought home, while many, among the kail-stocks and cabbages in their yards, had planted groset and berry bushes; which two things happening together, the fashion to make jam and jelly, which hitherto had been only known in the kitchens and confectionaries of the gentry, came to be introduced into the clachan [village]. All this, however, was not without a plausible pretext; for it was found that jelly was an excellent medicine for a sore throat, and jam a remedy as good as London candy for a cough or a cold, or a shortness of breath. I could not, however, say that this gave me so much concern as the smuggling trade; only it occasioned a great fasherie to Mrs Balwhidder; for in the berry-time, there was no end to the borrowing of her brass-pan to make jelly and jam, till Mrs Toddy of the Cross-Keys bought one, which in its turn came into request, and saved ours.'

This manufacture of jam and jelly may now be said to form an undertaking of some importance in every Scottish household occupying a position in the social scale above the humblest. In South Britain, the process is also extensively carried on, but not with the universality or earnestness of purpose observable in the north. To purchase their preserves at the confectioner's, or to present to their guests sweetmeats, stored in those mendacious pots, which belie so egregiously the expectations entertained of them at first sight, in regard to cubic contents, would in the eyes of the generality of Scottish ladies (those of the old school at least), be held to indicate a sad lack of good housewifeship. Even when the household store was exhausted, as very frequently happens about the months of May or June, we have seen the proposal to remedy the deficiency by purchasing a supply from a shop rejected with scorn.

The jelly-making season may be said to extend over three months—from the beginning of July to the end of September, beginning with strawberries and going out with apples and plums. Great care is exercised in the selection of a dry day for the operation, to insure the proper thickening of the boiled juice. As is well known, this last circumstance constitutes the most critical part of the process; and the obstinate syrup, resolutely refusing to coalesce, not unfrequently tries sadly the patience and temper. In such cases, there is no remedy but to boil the mixture over again with an additional supply of sugar, the grudging of which, by the way, is a fertile cause of the difficulties in getting the juice thoroughly inspissated. We have a vivid recollection of being once in a farmhouse, when the wife of a collier in the neighbourhood, whom the goodwife had endeavoured to initiate in the mysteries of jelly-making, made her appearance with a most woebegone countenance, and dolorous narrative of non-success. 'I can mak naething o' yon thing,' she said with an expression of perfect helplessness; 'it's just stannin' like dub-water!' Whether she was enabled to get this unsatisfactory state of matters remedied, we are unable to say.

Like washing-day, the manufacture of jam and jelly, whilst it lasts, entails a total disregard of the lords of the creation and their requirements, unless, indeed, as not frequently happens, the 'men-folk' of the family are pressed into the service as assistants. A huge pan of fruit and sugar is sometimes a difficult matter to convey to, and place properly on, the fire, and we have seen a great stalwart fellow, now an officer in her Majesty's army, summoned from the parlour to the kitchen, to give his aid in accomplishing this domestic operation. Should a student be spending the recess in the country, during the summer, he is very likely to be pounced on by the ladies of the family to assist them in gathering and sorting the fruit, or snipping off its noses and stalks with a pair of scissors. Of course, in general, the young man is only too happy to avail himself of so favourable an opportunity for flirtation, where the companions of his toils are young, good-looking, and blessed with a fair share of juvenile spirits.

The *Book of Days* is not a cookery-book, and, therefore, any directions or recipes in connection with jelly-making, would here be wholly out of place. Yet in connection with so familiar a custom of Scottish domestic life, we may allude to the difference of opinion prevalent among those versed in jam-lore, as to the proper time which should be allowed for the syrup remaining on the fire, after having reached the point of ebullition. Some recommend the space of twenty minutes, others half-an-hour, whilst a few, determined that the preserves shall be thoroughly subjected to the action of Vulcan, keep the pan bubbling away for three-quarters or even an entire hour. An esteemed

relative of our own always insisted on this last period being allowed, with the result, it must be stated, sometimes of the jam becoming a veritable decoction, in which the original shape of the fruit could scarcely be recognised, whilst the substance itself became, after having cooled, so indurated as to be almost impracticable for any other use than as a lollipop. As her old servant was wont to declare, 'she boiled the very judgment out o't!'

In country places, besides the ordinary fruits of the garden, many of the wild products of the woods and fields are made use of in the manufacture of preserves. The bilberry or blaeberry, the barberry, and above all the bramble, are largely employed for this purpose; while in the Highlands and moorland districts, the cranberry, the whortleberry, and even the harsh and unsavoury berries of the *rowan* or mountain-ash are made into jam. On the shores of the Argyleshire lochs, where, from their sheltered position, the fuchsia grows with remarkable luxuriance, its berries are sometimes made into a very palatable *compote*. Bramble-gathering forms a favourite *ploy* amid the juvenile members of a Scottish family, and we have a very distinct recollection in connection therewith, of wild brakes where the purple fruit grew luxuriantly, amid ferns, hazel-nuts, and wild-raspberry bushes, with the invigorating brightness of a September sun overhead, and the brilliant varieties of a September foliage. Faces stained with livid hues, hands scratched with thorns and briers, and shoes and stockings drenched with ditch-water, are among the reminiscences of the joyous days of bramble-gathering.

The inconvenient number of applications recorded by Mr Balwhidder, as having been made to his wife for the use of her brass jelly-pan, is quite consonant with the actual state of matters in a country town in Scotland in former times. These culinary conveniences being rare, the fortunate possessor of one was beset on all sides by her neighbours with requests for it, and if she were good-natured and unselfish, she ran a considerable risk of being entirely excluded herself from participation in its use. Now, however, that these utensils have become an appendage to every kitchen of the least pretension to gentility, such a state of matters has come to be ranked fairly among the legendary reminiscences of the past.

The institution of jelly and jam, as already observed, has experienced a much more extended development in North than in South Britain. In the former division of the island, the condiments in question are regarded as an indispensable appendage to every social tea-drinking, and are also invariably brought out on the occasion of any friend dropping in during the afternoon and remaining to partake of tea. To refrain from producing them, and allow the guest to make his evening repast on bread and butter, would be regarded as in the highest degree niggardly and inhospitable. When no stranger is present, these luxuries are rarely indulged in by the family—that is to say, during the week—but an exception always holds in the case of Sunday evening. On that occasion the children of a Scottish household expect to be regaled *ad libitum* with sweets, and the quantities of jelly then consumed in comparison with the rest of the week might form a curious question for statists. The Sunday-tea, too, is enjoyed with all the more relish that the previous dinner has been generally rather meagre, to avoid as much as possible the necessity of cooking on the Sabbath, and also somewhat hurried, being partaken of 'between sermons,' as the very short interval between the morning and afternoon services is termed in Scotland. Whatever may be said of the rigour of Sunday observance in the north, our recollections of the evening of that day are of the most pleasant description, and will doubtless be corroborated by the memories of many of our Scottish readers. In England, where the great meal of the day is dinner, tea is, for the most part, but a secondary consideration, and neither jams and jellies, nor condiments of any kind, beyond simple bread and butter, are in general to be seen. A young Englishman, studying at the university of Edinburgh, on one occasion rather astonished the lady of the house where he was drinking tea. He had been pressed to help himself to jelly, and having been only accustomed to its use as an accompaniment of the dessert, he very quietly emptied out on his plate the whole dish, causing considerable wonderment to the other guests at this unaccountable proceeding.

SEPTEMBER 27.

Saints Cosmas and Damian, martyrs, about 303. St Elzear, Count of Arian, and his wife, St Delphina, 14th century.

Died.—Marco Girolamo Vida, author of Latin poems, &c., 1566, *Alba;* St Vincent de Paul, eminent philanthropist, 1660; Pope Innocent XII., 1700; Dr Thomas Burnet, author of the *Sacred Theory of the Earth*, 1715, *Charterhouse, London;* Admiral René Duguay-Trouin, French naval commander, 1736, *Paris;* James Brindley, celebrated engineer, 1772, *Turnhurst, Staffordshire.*

ROBERT, DUKE OF NORMANDY.

By the battle of Tinchebrai, fought this day in 1106, was decided the destiny of the dukedom of Normandy, and of its unfortunate ruler Robert, the eldest son of William the Conqueror.

Carried away by the impetuosity of his character, and deceived by evil counsellors, Robert brought trouble into his dominions, and discord into the house of his father, who forgave him only on his dying bed. Leaving to his brother William the care of his Norman subjects, he yielded to the religious and chivalric spirit of the times, and with the choicest of the nobility set out to shew his valour on the plains of Syria, where he was one of the chiefs of the first Crusade.

We can only praise the courage and military exploits of Duke Robert in the east; they were so extraordinary as to obtain him the offer of the crown of Jerusalem, which, on his refusal, was given to Godfrey of Bouillon. A few flags which he had taken from the enemy, were all he brought back from his victories, and these he presented to the Abbey of the Holy Trinity at Caen. During his absence, his brother Henry had seized on the

vacant throne of England, and, though deep in debt, Robert was led into further expenses in the vain hope of recovering his lost inheritance. After this, reconciliation between the brothers became impossible, and want of order and economy were the ruin of Robert. He had recourse to arbitrary taxes, not only imposed upon the provinces, but upon the citizens, merchants, and rich people, thus causing general discontent. Numerous and powerful factions were formed; Henry I. was only too ready to obey their call, and arrived in Normandy at the head of his army. His gold bought many partizans; the towns of Bayeux and Caen alone remained faithful to Duke Robert; and after a long siege the first was carried by assault and burned, whilst a conspiracy broke out in Caen, scarcely leaving the unfortunate duke time to escape. A few gallant chevaliers, faithful to their oaths and the principles of legitimacy, rallied round him; but the battle of Tinchebrai was gained by the king, and the duke was taken prisoner.

Become master of his brother, Henry imprisoned him in the castle of Cardiff. For greater security, the eyes of the unhappy duke were put out. His detention lasted from 1106 to 1135, when he died, and it was during this long period that he endeavoured to soothe his weariness by becoming a poet. The songs of the Welsh bards were tried to alleviate his sorrows, and the deep distress he felt at being separated from his only child, whose prospects he had blighted. Forced to learn the language of his jailers, he made use of it to compose several pieces in Welsh, one of which remains, a sort of plaintive elegy. The prince looked on an old oak-tree rising above the forest, which covered the promontory of Penarth, on the Bristol Channel, and from the depths of his prison he thus mournfully addresses it, following the custom of the Welsh bards, who repeat the name of the person or thing they address in each stanza:

Oak, born on these heights, theatre of carnage, where blood has rolled in streams:
Misery to those who quarrel about words over wine.

Oak, nourished in the midst of meadows covered with blood and corpses:
Misery to the man who has become an object of hatred.

Oak, grown up on this green carpet, watered with the blood of those whose heart was pierced by the sword:
Misery to him who delights in discord.

Oak, in the midst of the trefoil and plants which whilst surrounding thee have stopped thy growth and hindered the thickening of thy trunk:
Misery to the man who is in the power of his enemies.

Oak, placed in the midst of woods which cover the promontory from whence thou see'st the waves of the Severn struggle against the sea:
Misery to him who sees that which is not death.

Oak, which has lived through storms and tempests in the midst of the tumult of war and the ravages of death:
Misery to the man who is not old enough to die.

He died at Cardiff, in 1135, in his eightieth year.

EXPENSE OF A DECENT LODGING IN LONDON IN 1710.

Swift thus writes from London to his friend Stella, 27th September 1710: 'I lodge in Bury Street [St James's], where I removed a week ago. I have the first floor, a dining-room, and bedchamber, at eight shillings per week; plaguy deep, but I spend nothing for eating, never go to a tavern, and very seldom in a coach; yet, after all, it will be expensive.'—*Works, Scott's edition*, ii. 28.

What seemed to Swift in Anne's days so 'plaguy deep,' would now be found considerably deeper; certainly it would not be less than forty-eight shillings a week.

SEPTEMBER 28.

St Eustochium, virgin, about 419. St Exuperius, bishop of Toulouse, beginning of 5th century. St Lioba, abbess, about 779. St Wenceslas, Duke of Bohemia, martyr, 938.

Born.—Sir William Jones, oriental scholar, 1746, *London.*

Died.—Emperor Lothaire I., 855; Henry VI., emperor of Germany, 1197; Jean Baptiste Massillon, celebrated French preacher, 1742; Thomas Day, author of *Sandford and Merton*, 1789, *Wargrave-upon-Thames;* Granville Penn, miscellaneous writer, 1844, *Stoke Park, Bucks;* Thomas Amyot, literary antiquary, 1850, *London;* Dr Karl Ritter, distinguished geographer, 1859, *Berlin.*

THOMAS DAY.

Rousseau's ideal of education was a cross between the Red Indian and the Spartan. The influence of his fervid advocacy was greatest in France, but he did not lack thorough-going disciples in England, who reduced some of his most questionable dogmas to practice. Mrs Gaskell, in her *Life of Charlotte Brontë*, relates that she had an aunt who, in her childhood, was adopted by a wealthy couple, with the purpose of training her on French and philosophic principles. Her food and clothing were of the simplest and rudest description; but for this she did not mind, being healthy and merry, and indifferent to dress and eating; her hardship lay in the fact, that she and a favourite dog were taken for an airing in the carriage on alternate days; the creature whose turn it was to be left at home being tossed in a blanket—an operation which the girl especially dreaded. Her aversion to the tossing was the reason why it was persevered in. She had grown indifferent to dressed-up ghosts, and so the blanket-exercise was selected as the next mode of hardening her nerves.

One of the most notable of Rousseau's English followers was Thomas Day, the author of *Sandford and Merton*, a book which several generations of children have heartily enjoyed for its stories, without a thought of its philosophy. Day was born in Wellclose Square, London, in 1748. His father held a place in the custom-house, and left him a fortune of £1200 a year. He was educated at the Charterhouse and Oxford, and spent some summers in France, where, with all the enthusiasm of youth, he received the new philosophy of education,

condemning old systems as wholly vicious, and believing that no perfection of character was unattainable under Rousseau's. Having resolved on marriage, he determined that his wife should be modelled in accordance with the new light. He therefore went to an orphan asylum at Shrewsbury, and picked out a flaxen-haired girl of twelve, whom he named Sabrina Sidney, after the Severn and Algernon Sidney; and then to the Foundling Hospital in London, where he selected a second, whom he called Lucretia. In taking these girls, he gave a written pledge, that within a year he would place one of them with a respectable tradesman, giving £100 to bind her apprentice, and that he should maintain her, if she should turn out well, until she married or commenced business, in either of which cases he would advance £500. With Sabrina and Lucretia he set off for France, in order that, in quiet, he might discover and discipline their characters. He, however, and the girls quarrelled; next they took small-pox, and he had to nurse them night and day; and by and by he was glad to return to London, and get Lucretia off his hands by apprenticing her to a milliner on Ludgate Hill. It is pleasant to know that she behaved well; and that on her marriage to a substantial linen-draper, Day cheerfully produced his promised dowry of £500. Poor Sabrina was reserved for further trial, but by no means could she qualify for Mrs Day; against the sense of pain and danger no discipline could fortify her. When Day dropped melting sealing-wax on her arms, she flinched; and when he fired pistols at her garments, she started and screamed. When he tried her fidelity by telling her pretended secrets, she divulged them in gossip with the servants. Finally, she exhausted his patience by wearing thin sleeves for ornament, instead of warmth, when out on a visit. He packed her off to an ordinary boarding-school, kept her there for three years, allowed her £50 a year, gave her £500 on her marriage to a barrister; and when she became a widow with two boys, he pensioned her with £30 a year. Failing to educate a wife, he was content to marry, in 1788, Miss Milnes of Wakefield, a lady whose opinions nearly coincided with his own, and who was willing to abjure all vanities in dress. Day was killed in 1789 by a kick from a young horse, which he was trying to train on a new method.

GHOST WITNESS-SHIP.

In the year 1749, the remote Highland district of Braemar, in Aberdeenshire, was the scene of a murder, which was subsequently alleged to have been discovered through the instrumentality of the ghost of the murdered person; to which effect evidence was given on the trial of two men before the High Court of Justiciary in Edinburgh. From the details of the trial, which have been printed in a separate volume by the Bannatyne Club, Sir Walter Scott framed a brief narrative, which may serve on the present occasion, with the help of a few additional particulars:

'Upon the 10th of June 1754, Duncan Terig *alias* Clark, and Alexander Bain Macdonald, two Highlanders, were tried before the Court of Justiciary, Edinburgh, for the murder of Arthur Davis, sergeant in Guise's Regiment, on the 28th of September 1749. The accident happened not long after the civil war [of 1745], the embers of which were still reeking, so there existed too many reasons on account of which an English soldier, straggling far from assistance, might be privately cut off by the inhabitants of these wilds [Davis had a fowling-piece, and money and rings upon his person, and some of his valuables were afterwards seen in possession of the accused. Robbery seems to have been the sole object of his murderers.] It appears that Sergeant Davis was amissing many years without any certainty as to his fate. At length an account of the murder appeared from the evidence of one Alexander Macpherson [or Macgillies], (a Highlander [a farm-servant at Inverey, and about twenty-six years of age], speaking no language but Gaelic, and sworn by an interpreter), who gave the following extraordinary account of his cause of knowledge: He was, he said, in bed in his cottage, when an apparition came to his bedside, and commanded him to rise and follow him out of doors. Believing his visitor to be one Farquharson, a neighbour and friend, the witness did as he was bid; and when they were without the cottage, the appearance told the witness he was the ghost of Sergeant Davis, and requested him to go and bury his mortal remains, which lay concealed in a place which he pointed out, in a moorland tract, called the hill of Christie. He desired him to take [Donald] Farquharson as an assistant. Next day the witness went to the place specified, and there found the bones of a human body, much decayed. The witness did not at the time bury the bones so found; in consequence of which the sergeant's ghost again appeared to him, upbraiding him with his breach of promise. On this occasion, the witness asked the ghost who were the murderers, and received for answer that he had been slain by the prisoners at the bar. The witness, after this second visitation, called the assistance of Farquharson, and buried the body.

'Farquharson was brought in evidence, to prove that the preceding witness, Macpherson, had called him to the burial of the bones, and told him the same story which he repeated in court. Isabel Machardie, a person who slept in one of the beds which run along the wall in an ordinary Highland hut, declared that upon the night when Macpherson said he saw the ghost, she saw a naked man enter the house, and go towards Macpherson's bed. [More in detail her evidence was this: 'She saw something naked come in at the door; which frighted her so much that she drew the clothes over her head: that when it appeared, it came in a bowing posture; that she cannot tell what it was; that next morning she asked Macpherson what it was that had troubled them the night before? and that he answered, she might be easy, for it would not trouble her any more.']

'Yet, though the supernatural incident was thus fortified, and although there were other strong presumptions against the prisoners, the story of the apparition threw an air of ridicule on the whole evidence for the prosecution. It was followed up by the counsel for the prisoners asking, in the cross-examination of Macpherson: "What language did the ghost speak in?" The witness, who was himself ignorant of the English language, replied: "As good Gaelic as I ever heard in Lochaber." "Pretty well for the ghost of an English sergeant," answered the counsel. The

inference was rather smart and plausible than sound, for the apparition of the ghost being admitted, we know too little of the other world to judge whether all languages may not be alike familiar to those who belong to it. It imposed, however, on the jury, who found the accused parties *Not guilty*, although their counsel and solicitor,* and most of the court, were satisfied of their having committed the murder.'

Scott's hypothesis for the explanation of the alleged apparition, is that giving information is unpopular in the Highlands, and Macpherson got up the ghost-story, 'knowing well that his superstitious countrymen would pardon his communicating the commission intrusted to him by a being of the other world.' This hypothesis (whatever other may be adopted) is not only without support in positive fact, but it assumes a degree of anxiety for the execution of justice wholly gratuitous, and certainly far from characteristic of the Braemar Highlander of that day. It also ignores the corroborative evidence of Isabel Machardie. What is even more important, it is out of harmony with the chronology of the story, for Macpherson related his ghostly visitation and buried the sergeant's bones three years before any measures for the vindication of justice were taken, and, for anything that appears, no such measures would ever have been taken, but for the active interference of a retired officer of the army, named Small. This gentleman seems to have been inspired with a strong feeling as a friend of the government and of the army, in contradistinction to the Jacobite sentiments which then largely prevailed. So vigorous were his efforts to make out evidence against the murderers of Davis, that it was taken notice of in the formal defences of the accused, and orally by their counsel, the eminent Mr Lockhart, who was notoriously a Jacobite. Small felt so much exasperated by the insinuations of the counsel, that he next day appeared in the Parliament Close, with his sword by his side, and made an assault upon Mr Lockhart, as the latter was walking to the court; for which offence he was put in prison by the Lords, and only liberated on his making an apology.† It seems to have been to this circumstance that Wedderburn alluded in his famous retort upon Lockhart, in the Court of Session in Edinburgh, when, stung by the overbearing manner of his senior, he reminded him of his having been *disgraced in his person* and dishonoured in his bed—a burst of sarcasm followed by his laying down his gown, and deserting the Scotch for the English bar. (See *Book of Days*, vol. i. p. 39.)

The case of Sergeant Davis, remarkable as it is, does not stand quite singular. A similar one, which occurred in the county of Durham in the year 1631, has been related in many books, and is the subject of a critical historical inquiry in Surtees's *History of Durham*. The circumstances can be made out with tolerable clearness as follows:

One Walker, a yeoman of good estate, and a widower, living at Chester-le-Street, had in his service a young female relative named Anne Walker. The results of an amour which took place between them, caused Walker to send away the poor girl under the care of one Mark Sharp, a collier, professedly that she might be taken care of as befitted her condition, but in reality that she might no more be troublesome to her lover in this world.

Nothing was heard of her till, one night in the ensuing winter, an honest fuller, named James Graham, who lived about six miles from Walker's house, coming down from the upper to the lower floor of his mill, found a woman standing there, with her hair hanging about her head, in which were five bloody wounds. According to the man's evidence, afterwards given,* he asked her who she was, and what she wanted; when she gave an account of her sad fate, having been killed by Sharp on the moor in their journey, and thrown into a coal-pit hard by, while the instrument of her death, a pick, had been hid under a bank, along with his clothes, which were stained with her blood. She demanded of Graham that he should undertake the business of exposing her murder, and having her murderers punished; a task he did not enter upon till she had twice reappeared to him, the last time with a threatening aspect.

The body, the pick, and the bloody clothes being found as Graham described, little doubt remained that Walker and Sharp were the guilty men. They were tried at Durham before Judge Davenport in August 1631. The mode of discovery could not fail in that age to make a great impression, and produce much excitement at the trial. Hence it is not very surprising to hear that one of the jury, named Fairbair, alleged that he saw a child sitting on Walker's shoulder. The men were found guilty, condemned, and executed.

SEPTEMBER 29.

St Michael and all the Holy Angels. St Theodota, martyr, 642.

Michaelmas Day.

Michaelmas Day, the 29th of September, properly named the day of St Michael and All Angels, is a great festival of the Church of Rome, and also observed as a feast by the Church of England. In England, it is one of the four quarterly terms, or quarter-days, on which rents are paid, and in that and other divisions of the United Kingdom, as well as perhaps in other countries, it is the day on which burghal magistracies and councils are re-elected. The only other remarkable thing connected with the day is a widely prevalent custom of marking it with a goose at dinner.

Michael is regarded in the Christian world as the chief of angels, or archangel. His history is obscure. In Scripture, he is mentioned five times, and always in a warlike character; namely, thrice by Daniel as fighting for the Jewish church against Persia; once by St Jude as fighting with the devil

* A brief account of the case is given in the *European Magazine* for May 1793, apparently from the recital of the agent for the prisoners, then surviving. The circumstance of the agent's being fully persuaded of the guilt of his clients is there stated.

† *Scots Magazine*, 1754.

* In Richardson's *Borderer's Table Book* (vi. 351), it is stated that Graham's original deposition is in the Bodleian Library, Oxford.

about the body of Moses; and once by St John as fighting at the head of his angelic troops against the dragon and his host. Probably, on the hint thus given by St John, the Romish church taught at an early period that Michael was employed, in command of the loyal angels of God, to overthrow and consign to the pit of perdition Lucifer and his rebellious associates—a legend which was at length embalmed in the sublimest poetry by Milton. Sometimes Michael is represented as the sole archangel, sometimes as only the head of a fraternity of archangels, which includes likewise Gabriel, Raphael, and some others. He is usually represented in coat-armour, with a glory round his head, and a dart in his hand, trampling on the fallen Lucifer. He has even been furnished, like the human warriors of the middle ages, with a heraldic ensign—namely, a banner hanging from a cross. We obtain a curious idea of the religious notions of those ages, when we learn that the red velvet-covered buckler worn by Michael in his war with Lucifer used to be shewn in a church in Normandy down to 1607, when the bishop of Avranches at length forbade its being any longer exhibited.

Angels are held by the Church of Rome as capable of interceding for men; wherefore it is that prayers are addressed to them and a festival appointed in their honour. Wheatley, an expositor of the Book of Common Prayer, probably expresses the limited view of the subject which is entertained in the Church of England, when he says, that 'the feast of St Michael and All Angels is observed that the people may know what blessings are derived from the ministry of angels.' Amongst Catholics, Michael, or, as he has been named, St Michael, is invoked as 'a most glorious and warlike prince,' 'chief officer of paradise,' 'captain of God's hosts,' 'receiver of souls,' 'the vanquisher of evil spirits,' and 'the admirable general.' It may also be remarked, that in the Sarum missal, there is a mass to St Raphael, as the protector of pilgrims and travellers, and a skilful worker with medicine; likewise an office for the continual intercession of St Gabriel and all the heavenly militia. Protestant writers trace a connection between the ancient notion of tutelar genii and the Catholic doctrine respecting angels, the one being, they say, ingrafted on the other. As to the soundness of this view we do not give any opinion, but it seems certain that in early ages there was a prevalent notion that the affairs of men were much under the direction of angels, good and bad, and men prayed to angels both to obtain good and to avoid evil. Every human being was supposed to have one of these spiritual existences watching over him, aiming at his good, and ready to hear his call when he was in affliction. And, however we may judge this to be a delusion, we must certainly own that, as establishing a connection between the children of earth and something above and beyond the earth, as leading men's minds away from the grossness of worldly pursuits and feelings into the regions of the beautiful and the infinite, it is one of by no means the worst tendency. We must be prepared, however, to find simplicity amidst all the more aspiring ideas of our forefathers.

In time, the sainted spirits of pious persons came to stand in the place of the generally nameless angels, and each place and person had one of these as a special guardian and protector. Not only had each country its particular patron or tutelar saint, but there was one for almost every town and church. Even trades and corporations had their special saints. And there was one more specially to be invoked for each particular ail that could afflict humanity. It will be curious here to descend a little into particulars. First, as to countries, England had St George; Scotland, St Andrew; Ireland, St Patrick; Wales, St David; France, St Dennis and (in a less degree) St Michael; Spain, St James (Jago); Portugal, St Sebastian; Italy, St Anthony; Sardinia, St Mary; Switzerland, St Gall and the Virgin Mary; Germany, St Martin, St Boniface, and St George Cataphractus; Hungary, St Mary of Aquisgrana and St Lewis; Bohemia, St Winceslaus; Austria, St Colman and St Leopold; Flanders, St Peter; Holland, St Mary; Denmark, St Anscharius and St Canute; Sweden, St Anscharius, St Eric, and St John; Norway, St Olaus and St Anscharius; Poland, St Stanislaus and St Hederiga; Prussia, St Andrew and St Albert; Russia, St Nicholas, St Mary, and St Andrew. Then as to cities, Edinburgh had St Giles, Aberdeen St Nicholas, and Glasgow St Mungo; Oxford had St Frideswide; Paris, St Genevieve; Rome, St Peter and St Paul; Venice, St Mark; Naples, St Januarius and St Thomas Aquinas; Lisbon, St Vincent; Brussels, St Mary and St Gudula; Vienna, St Stephen; Cologne, the three kings, with St Ursula and the eleven thousand virgins.

St Agatha presides over nurses. St Catherine and St Gregory are the patrons of literati and studious persons; St Catherine also presides over the arts. St Christopher and St Nicholas preside over mariners. St Cecilia is the patroness of musicians. St Cosmas and St Damian are the patrons of physicians and surgeons, also of philosophers. St Dismas and St Nicholas preside over thieves; St Eustace and St Hubert over hunters; St Felicitas over young children. St Julian is the patron of pilgrims. St Leonard and St Barbara protect captives. St Luke is the patron of painters. St Martin and St Urban preside over tipsy people, to save them from falling into the kennel. Fools have a tutelar saint in St Mathurin, archers in St Sebastian, divines in St Thomas, and lovers in St Valentine. St Thomas Becket presided over blind men, eunuchs, and sinners, St Winifred over virgins, and St Yves over lawyers and civilians. St Æthelbert and St Ælian were invoked *against* thieves.

Generally, the connection of these saints with the classes of persons enumerated took its rise in some incident of their lives, and in the manner of their deaths; for instance, St Nicholas was once in danger at sea, and St Sebastian was killed by arrows. Probably, for like reasons, St Agatha presided over valleys, St Anne over riches, St Barbara over hills, and St Florian over fire; while St Silvester protected wood, St Urban wine and vineyards, and St Osyth was invoked by women to guard their keys, and St Anne as the restorer of lost things. Generally, the patron-saints of trades were, on similar grounds, persons who had themselves exercised them, or were supposed to have done so. Thus, St Joseph naturally presided over carpenters, St Peter over fishmongers, and St Crispin over shoemakers. St Arnold was the

patron of millers, St Clement of tanners, St Eloy of smiths, St Goodman of tailors, St Florian of mercers, St John Port-Latin of booksellers, St Louis of periwig-makers, St Severus of fullers, St Wilfred of bakers, St William of hatters, and St Windeline of shepherds. The name of St Cloud obviously made him the patron-saint of nailsmiths; St Sebastian became that of pinmakers, from his having been stuck over with arrows; and St Anthony necessarily was adopted by swine-herds, in consequence of the legend about his pigs. It is not easy, however, to see how St Nicholas came to be the presiding genius of parish-clerks, or how the innocent and useful fraternity of potters obtained so alarming a saint as 'St Gore with a pot in his hand, and the devil on his shoulder.'

The medicating saints are enumerated in the following passage from a whimsical satire of the sixteenth century:—

To every saint they also do his office here assign,
And fourteen do they count, of whom thou may'st have aid divine;
Among the which *Our Lady* still doth hold the chiefest place,
And of her gentle nature helps in every kind of case.
St *Barbara* looks that none without the body of Christ doth die;
St *Cath'rine* favours learned men and gives them wisdom high,
And teacheth to resolve the doubts, and always giveth aid
Unto the scolding sophister, to make his reason staid.
St *Apolin* the rotten teeth doth help when sore they ache;
Otilia from the bleared eyes the cause and grief doth take;
Rooke healeth scabs and mangins, with pocks, and scurf, and scall,
And cooleth raging carbuncles, and boils, and botches all.
There is a saint, whose name in verse cannot declared be,*
He serves against the plague and each infective malady.
St *Valentine*, beside, to such as do his power despise
The falling-sickness sends, and helps the man that to him cries.
The raging mind of furious folk doth *Vitus* pacify,
And doth restore them to their wit, being called on speedily.
Erasmus heals the colic and the griping of the guts,
And *Laurence* from the back and from the shoulder sickness puts.
Blaise drives away the quinsy quite with water sanctified,
From every Christian creature here, and every beast beside.
But *Leonard* of the prisoners doth the bands asunder pull,
And breaks the prison-doors and chains, wherewith his church is full.
The quartan ague, and the rest doth *Pernel* take away,
And *John* preserves the worshippers from prison every day;
Which force to *Bennet* eke they give, that help enough may be,
By saints in every place. What dost thou omitted see?
From dreadful unprovided death doth *Mark* deliver his,
Who of more force than death himself, and more of value is.

* Probably St Roque.

St *Anne* gives wealth and living great to such as love her most,
And is a perfect finder out of things that have been lost;
Which virtue likewise they ascribe unto another man,
St *Vincent;* what he is I cannot tell, nor whence he came.
Against reproach and infamy on *Susan* do they call;
Romanus driveth sprites away and wicked devils all.
The bishop *Wolfgang* heals the gout, St *Wendlin* keeps the sheep,
With shepherds and the oxen fat, as he was wont to keep.
The bristled hogs doth *Anthony* preserve and cherish well,
Who in his lifetime always did in woods and forests dwell.
St *Gertrude* rids the house of mice, and killeth all the rats;
And like doth Bishop *Huldrick* with his two earth-passing cats.
St *Gregory* looks to little boys, to teach their *a*, *b*, *c*,
And makes them for to love their books, and scholars good to be.
St *Nicholas* keeps the mariners from dangers and disease,
That beaten are with boisterous waves, and toss'd in dreadful seas.
Great *Christopher* that painted is with body big and tall,
Doth even the same, who doth preserve and keep his servants all
From fearful terrors of the night, and makes them well to rest,
By whom they also all their life with diverse joys are blest.
St *Agatha* defends the house from fire and fearful flame,
But when it burns, in armour all doth *Florian* quench the same.'

It will be learned, with some surprise, that these notions of presiding angels and saints are what have led to the custom of choosing magistracies on the 29th of September. The history of the middle ages is full of curious illogical relations, and this is one of them. Local rulers were esteemed as in some respects analogous to tutelar angels, in as far as they presided over and protected the people. It was therefore thought proper to choose them on the day of St Michael and All Angels. The idea must have been extensively prevalent, for the custom of electing magistrates on this day is very extensive.

'September, when by custom (right divine)
Geese are ordained to bleed at Michael's shrine'—

says Churchill. This is also an ancient practice, and still generally kept up, as the appearance of the stage-coaches on their way to large towns at this season of the year amply testifies. In Blount's Tenures, it is noted in the tenth year of Edward IV., that John de la Hay was bound to pay to William Barnaby, Lord of Lastres, in the county of Hereford, for a parcel of the demesne lands, *one goose fit for the lord's dinner*, on the feast of St Michael the archangel. Queen Elizabeth is said to have been eating her Michaelmas goose when she received the joyful tidings of the defeat of the Spanish Armada. The custom appears to have originated in a practice among the rural tenantry of bringing a good stubble goose at Michaelmas to the landlord, when paying their rent, with a view

to making him lenient. In the poems of George Gascoigne, 1575, is the following passage:

'And when the tenants come to pay their quarter's rent,
They bring some fowl at Midsummer, a dish of fish in Lent,
At Christmas a capon, *at Michaelmas a goose,*
And somewhat else at New-year's tide, for fear their lease fly loose.'

We may suppose that the selection of a goose for a present to the landlord at Michaelmas would be ruled by the bird being then at its perfection, in consequence of the benefit derived from stubble-feeding. It is easy to see how a general custom of having a goose for dinner on Michaelmas Day might arise from the multitude of these presents, as landlords would of course, in most cases, have a few to spare for their friends. It seems at length to have become a superstition, that eating of goose at Michaelmas insured easy circumstances for the ensuing year. In the *British Apollo*, 1709, the following piece of dialogue occurs:

'*Q.*—Yet my wife would persuade me (as I am a sinner)
To have a fat goose on St Michael for dinner:
And then all the year round, I pray you would mind it,
I shall not want money—oh, grant I may find it!
Now several there are that believe this is true,
Yet the reason of this is desired from you.

A.—We think you're so far from the having of more,
That the price of the goose you have less than before:
The custom came up from the tenants presenting
Their landlords with geese, to incline their relenting
On following payments, &c.'

SIR HUGH MYDDELTON, AND THE WATER SUPPLY OF OLD LONDON.

Michaelmas Day, 1613, is remarkable in the annals of London, as the day when the citizens assembled to witness, and celebrate by a public pageant, the entrance of the New River waters to the metropolis.

There were present Sir John Swinnerton the lord mayor, Sir Henry Montague the recorder, and many of the aldermen and citizens; and a speech was written by Thomas Middleton the dramatist, who had before been employed by the citizens to design pageants and write speeches for their Lord Mayors' Shows, and other public celebrations. On this occasion, as we are told in the pamphlet descriptive of the day's proceedings, 'warlike music of drums and trumpets liberally beat the air' at the approach of the civic magnates; then 'a troop of labourers, to the number of threescore or upwards, all in green caps alike, bearing in their hands the symbols of their several employments in so great a business, with drums before them, marching twice or thrice about the cistern, orderly present themselves before the mount, and after their obeisance, the speech is pronounced.' It thus commences:

'Long have we labour'd, long desir'd, and pray'd
For this great work's perfection; and by the aid
Of heaven and good men's wishes, 'tis at length
Happily conquer'd, by cost, art, and strength:
After five years' dear expense in days,
Travail, and pains, beside the infinite ways
Of malice, envy, false suggestions,
Able to daunt the spirit of mighty ones
In wealth and courage, this, a work so rare,
Only by one man's industry, cost, and care,
Is brought to blest effect, so much withstood,
His only aim the city's general good.'

A similar series of mere rhymes details the construction of the works, and enumerates the labourers, concluding thus:

'Now for the fruits then: flow forth, precious spring,
So long and dearly sought for, and now bring
Comfort to all that love thee: loudly sing,
And with thy crystal murmur struck together,
Bid all thy true well-wishers welcome hither!'

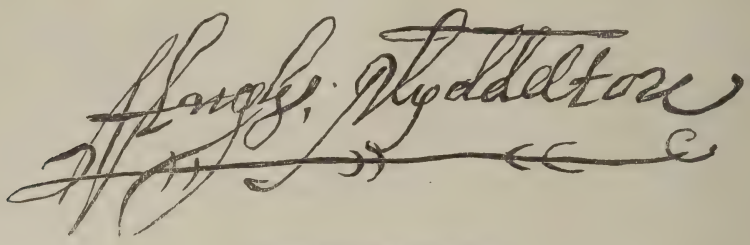
'At which words,' we are told, 'the flood-gate opens, the stream let into the cistern, drums and trumpets giving it triumphant welcomes,' a peal of small cannon concluding all.

This important work, of the utmost sanitary value to London, was commenced and completed by the indomitable energy of one individual, after it had been declined by the corporate body, and opposed by many upholders of 'good old usages,' the bane of all improvements. The bold man, who came prominently forward when all others had timidly retired, was a simple London tradesman, a goldsmith, dwelling in Basinghall Street, named Hugh Myddelton. He was of Welsh parentage, the sixth son of Richard Myddelton, who had been governor of Denbigh Castle during the reigns of Edward VI., Mary, and Elizabeth. He was born on his father's estate at Galch Hill, close to Denbigh, 'probably about 1555,' says his latest biographer, Mr Smiles,* for 'the precise date of his birth is unknown.' At the proper age, he was sent to London, where his elder brother, Thomas, was established as a grocer and merchant-adventurer, and under that brother's care he commenced his career as a citizen by being entered an apprentice of the Goldsmiths' Company. In due time he took to business on his own account, and, like his brother, joined the thriving merchant-adventurers. In 1597, he represented his native town of Denbigh in parliament, for which he obtained a charter of incorporation, desiring further to serve it by a scheme of mining for coal, which proved both unsuccessful and a great loss to himself. His losses were, however, well covered by his London business profits, to which he had now added cloth manufacturing. On the accession of James I., he was appointed one of the royal

* *Lives of the Engineers.* Until the publication of this work in 1862, there was no good memoir extant of Myddelton, all being overlaid by a mass of inaccuracy and downright fable.

jewellers, being thus one of the most prosperous and active of citizens.

The due supply of pure spring water to the metropolis, had often been canvassed by the corporation. At times it was inconveniently scanty; at all times it was scarcely adequate to the demand, which increased with London's increase. Many projects had been brought before the citizens to convey a stream toward London, but the expense and difficulty had deterred them from using the powers with which they had been invested by the legislature; when Myddelton declared himself ready to carry out the great work, and in May 1609 'the dauntless Welshman' began his work at Chadwell, near Ware. The engineering difficulties of the work and its great expense were by no means the chief cares of Myddelton; he had scarcely began his most patriotic and useful labours, ere he was assailed by an outcry on all sides from landowners, who declared that his river would cut up the country, bring water through arable land, that would consequently be overflowed in rainy weather, and converted into quagmires; that nothing short of ruin awaited land, cattle, and men, who might be in its course; and that the king's highway between London and Ware would be made impassable! All this mischief was to befall the countryfolks of Hertfordshire and Middlesex for Mr Myddelton's 'own private benefit,' as was boldly asserted, with a due disregard of its great public utility; and ultimately parliamentary opposition was strongly invoked. Worried by this senseless but powerful party, with a vast and expensive labour only half completed, and the probability of want of funds, most men would have broken down in despair and bankruptcy; Myddelton merely sought new strength, and found it effectually in the king. James I. joined the spirited contractor, agreed to pay one-half of the expenses in consideration of one-half share in its ultimate profits, and to repay Myddelton one-half of what he had already disbursed. This spirited act of the king silenced all opposition, the work went steadily forward, and in about fifteen months after this new contract, the assembly took place at the New River Head, in the fields between Islington and London, to witness the completion of the great work, as we have already described it.



THE NEW RIVER HEAD, 1665—AFTER HOLLAR.

The pencil of the honest and indefatigable Hollar has preserved to us the features of this interesting locality, and we copy his view above. Mr Smiles observes that 'the site of the New River Head had always been a pond, "an open idell poole," says Hawes, "commonly called the Ducking-pond; being now by the master of this work reduced into a comley pleasant shape, and many ways adorned with buildings." The house adjoining it, belonging to the company, was erected in 1613.' Hollar's view indicates the formal, solid, aspect of the place, and is further valuable for the curious view of Old London in the background; the eye passing over Spa-fields, and resting on the city beyond; the long roof of St Paul's Cathedral appearing just above the boundary-wall of the New River Head; and the steeple of Bow Church to the extreme left. This view was fortunately sketched the year before the great fire, and is consequently unique in topographical value.

Myddelton's autograph, written during the last year of his great labour, is here engraved (see the next page). To it was prefixed the title 'Sir,' by the king's award, at the completion of the undertaking. James I. seems to have been fully aware,

at all times, of Myddelton's merit, and anxious to help and honour it. Some years afterwards, when he had temporarily reclaimed Brading Harbour, Isle of Wight, from the sea, the king raised him to the dignity of baronet without the payment of the customary fees, amounting to £1095, a very large sum of money in those days.

A few words must suffice to narrate Myddelton's later career. He sold twenty-eight of his thirty-six shares in the New River soon after its completion. With the large amount of capital this gave him to command, he carried out the work at Brading, just alluded to. He then directed his attention to mining in North Wales, and continued to work the mines with profit for a period of about sixteen years. The lead of these mines contained

AUTOGRAPH OF MYDDELTON.

much silver, and a contemporary declares that he obtained of 'puer silver 100 poundes weekly,' and that his total profits amounted to at least £2000 a month. 'The popular and oft-repeated story of Sir Hugh having died in poverty and obscurity, is only one of the numerous fables which have accumulated about his memory,'* observes Mr Smiles. 'There is no doubt that Myddelton realised considerable profits by the working of his Welsh mines, and that toward the close of his life he was an eminently prosperous man.' He died at the advanced age of seventy-six, leaving large sums to his children, an ample provision for his widow, many bequests to friends and relatives, annuities to servants, and gifts to the poor. All of which it has been Mr Smiles's pleasant task to prove from documentary evidence of the most unimpeachable kind.

In order to fully comprehend the value of

THE LITTLE CONDUIT IN CHEAPSIDE.

Myddelton's New River to the men of London, we must take a retrospective glance at the older water supply. Two or three conduits in the principal streets, some others in the northern suburbs, and the springs in the neighbourhood of the Fleet River, were all they had at their service. The Cheapside conduits were the most used, as they were the largest and most decorative of these structures. The Great Conduit in the centre of this important thoroughfare, was an erection like a tower, surrounded by statuary; the Little Conduit stood in Westcheap, at the back of the church of St Michael, in the Querne, at the north-east end of Paternoster Row. Our cut exhibits its chief features, as delineated in 1585 by the surveyor R. Treswell. Leaden pipes ran all along Cheapside, to convey the water to various points; and the City Records tell of the punishment awarded one dishonest resident, who tapped the pipe where it passed his door, and secretly conveyed the water to his own well. Except where conveyed to some public building, water had to be fetched for domestic use from these ever-flowing reservoirs. Large tankards,

TANKARD-BEARER.

holding from two to three gallons, were constructed for this use; and may be seen ranged round the conduit in the cut above given. Many poor men

* The favourite fable is, that he was ruined by his connection with the New River, applied for relief to the citizens, and got little, lived in great indigence, and died disregarded. It was even asserted that he hid his decadence beneath the name of Raymond, in a Shropshire village, where he was occasionally employed as a pavior.

lived by supplying water to the householders; 'a tankard-bearer' was hence a well-known London character, and appears in a curious pictorial series of the cries of London, executed in the reign of James I., and preserved in the British Museum. It will be seen from our copy (see engraving on the previous page), that he presents some peculiar professional features. His dress is protected by coarse aprons hung from his neck, and the weight of his large tankard when empty, partially relieved from the left shoulder, by the aid of the staff in his right hand. He wears the 'city flat-cap,' his dress altogether of the old fashion, such as belonged to the time of 'bluff King Hal.' When water was required in smaller quantities, apprentices and servant-girls were sent to the conduits. Hence they were not only gossiping-places, but spots where quarrels constantly arose. A curious print in the British Museum—published about the time of Elizabeth—entitled *Tittle Tattle*, is a satire on these customs, and tells us in homely rhyme:

'At the conduit striving for their turn,
The quarrel it grows great,
That up in arms they are at last,
And one another beat.'

Oliver Cob, the water-bearer, is one of the characters in Ben Jonson's play, *Every Man in his Humour*, and the sort of coarse repartee he indulges in, may be taken as a fair sample of that used at the London conduits. It was not till a considerable time after the opening of the New River that their utility ceased. Much difficulty and expense awaited the conduct of water to London houses. The owners of the ground near the New River Head exacted heavy sums for permission to carry pipes through their land, and it was not till February 1626, that Bethlehem Hospital was thus supplied. The profits of the New River Company were seriously affected by these expenses, until they secured themselves from exaction by the purchase of the land. The pipes they used for the conveyance of their water were of the simplest construction, formed of the stems of small elm-trees, merely denuded of the bark, drilled through the centre, cut to lengths of about six feet; one end being tapered, so that it fitted into the orifice of the pipe laid down before it; and in this way wooden pipes passed through the streets to the extent of about 400 miles! The fields known as 'Spa-fields,' near the New River Head, were used as a depôt for these pipes; and were popularly termed 'the pipe-fields' by the inhabitants of Clerkenwell. As the conveyance of water by means of these pipes was expensive to the company, and charged highly in consequence, water-carriers still plied their trade. Lauron, an artist who has depicted the street-criers of the time of William III., has left us the figure of the water-carrier he saw about London, crying, 'Any New River water here!' A penny a pail-full was his charge for porterage, and he occasionally enforced the superiority of his mode of serving it by crying, 'Fresh and fair New River water! none of your pipe-sludge!' The wooden pipes leaked considerably, were liable to rapid decay, burst during frosts, and were always troublesome; cast-iron pipes have now entirely superseded them, but this is only within the last thirty-five years; and it may be worth noting here the curious fact, that the rude old elm-tree water-pipes were taken up and removed from before the houses in Piccadilly, extending from the Duke of

THE WATER-CARRIER.

Devonshire's to Clarges Street, several years ago; and that a similar series were recently exhumed from Pall Mall.

CEREMONIES FORMERLY CONNECTED WITH THE ELECTION OF THE MAYOR OF NOTTINGHAM.

On the day the new mayor assumed office (September 29), he, the old mayor, the aldermen, and councillors, all marched in procession to St Mary's Church, where divine service was said. After service the whole body went into the vestry, where the old mayor seated himself in an elbow-chair at a table covered with *black* cloth, in the middle of which lay the mace covered with rosemary and sprigs of bay. This was termed *the burying of the mace*, doubtless a symbolical act, denoting the official decease of its late holder. A form of electing the new mayor was then gone through, after which the one retiring from office took up the mace, kissed it, and delivered it into the hand of his successor with a suitable compliment. The new mayor then proposed two persons for sheriffs, and two for the office of chamberlains; and after these had also gone through the votes, the whole assemblage marched into the chancel, where the senior coroner administered the oath to the new mayor in the presence of the old one, and the town-clerk gave to the sheriffs and chamberlains their oath of office. These ceremonies being over, they marched in order to the New Hall, attended by such gentlemen and tradesmen as had been invited by the mayor and sheriffs, where the feasting took place. On their way, at the Weekday-Cross, overagainst the ancient Guild Hall, the town-clerk proclaimed the mayor and sheriffs; and at the next ensuing market-day they were again proclaimed in the face of the whole market at the Malt Cross.

The entertainment given as a banquet on these occasions will perhaps astonish some of their successors in office. 'The mayor and sheriffs

welcomed their guests with *bread and cheese*, fruit in season, and *pipes and tobacco*.' Imagine the present corporation and their friends sitting down to such a feast!

SEPTEMBER 30.

St Jerome, of Aquileia, doctor of the church, 420. St Gregory, apostle of Armenia, and bishop, beginning of 4th century. St Honorius, archbishop of Canterbury, confessor, 653.

Born.—Euripides, tragic dramatist, 480 B.C., *Salamis;* Cneius Pompeius, *Magnus* (Pompey the Great), 106 B.C.; Jacques Necker, financier to Louis XVI., 1734, *Geneva;* William Hutton, miscellaneous writer, 1723, *Derby.*

Died.—St Jerome of Aquileia, father of the church, 420; Emperor Rodolph I., 1291; Isabella of Bavaria, queen of Charles VI. of France, 1435, *Paris;* Sir Fulke Greville, Lord Brooke, poet, murdered, 1628; John Reinhold Patkul, Livonian statesman, broken on the wheel, 1707; John Dollond, optician, 1761; George Whitefield, celebrated preacher, 1770, *Newbury Port, New England;* Thomas Percy, bishop of Dromore, author of *Reliques of Ancient English Poetry*, 1811; Auguste Comte, philosophical writer, 1857, *Paris.*

WILLIAM HUTTON.

Biography records scarcely a finer instance of industry and economy leading their possessor out of the most unpropitious circumstances to affluence and honour, than the story of William Hutton, the Birmingham stationer. His father was a woolcomber, and a dissipated character. William was born in Derby in 1723, and, at the age of seven, was set to earn his living in the Derby silk-mill, and, being too small for his business, he had to move about on a pair of high pattens. In his fifteenth year, he went to Nottingham, and served a second apprenticeship at the stocking-frame, by which, on reaching manhood, he found he could not maintain himself. For amusement, he commenced to practise bookbinding, and, growing expert, resolved to make it his trade. He took a shop at Southwell, fourteen miles from Nottingham, at a rent of 20*s.* a year, and there resorted every Saturday, the market-day. He used to leave Nottingham at five in the morning, carrying a burden of three pounds' weight to thirty, opened shop at ten, dined on bread and cheese and half a pint of ale, took from 1*s.* to 6*s.*, shut up at four, and trudged home in the dark, arriving at Nottingham by nine. Southwell was a poor place, and in 1750 he determined to try Birmingham, and engaged half a shop in Bull Street at 1*s.* a week. In Birmingham, he found three booksellers, Aris, Warren, and Wollaston; but he 'judged from the number and intelligence of the inhabitants, that there might be room for a fourth, and hoped that, as an ant, he might escape the envy or notice of the three great men.' Five shillings a week covered all his expenses—food, lodging, washing, and dress, and at the end of the first year he had saved £20. He then ventured to move into a house at £8 a year, and business began to grow rapidly upon him. By and by he relinquished bookselling for stationery, and opened a paper-warehouse, the first ever seen in Birmingham. He made a good marriage; he speculated in lands and houses, sometimes gaining and sometimes losing; he built a country-house and set up a carriage, and was duly recognised as a substantial citizen. He was elected an overseer of the poor and to other civic offices, and as a Commissioner of the Court of Requests he was pre-eminently useful. The Court of Requests was a tribunal for the recovery of small debts, where equity was administered by the common-sense of an unpaid magistrate, and at the trifling cost of a summons. Hutton did his duty as judge with extraordinary assiduity. 'The Court of Requests,' he writes, 'soon became my favourite amusement. I paid a constant attendance, which engrossed nearly two days a week of my time. That my government was not arbitrary will appear from two facts: I never had a quarrel with a suitor, nor the least difference with a brother-commissioner. I attended the Court nineteen years. During that time more than a hundred thousand causes passed through my hands! a number possibly beyond what ever passed the decision of any other man. I have had 250 in one day.' Hutton published a collection of cases, with his decisions, in the Court of Requests, and they afford vivid evidence of high judicial faculty, and of a wide and shrewd knowledge of human nature.

In 1781, Hutton made his appearance as an author, in the publication of a *History of Birmingham.* 'I took up the pen,' he says, 'and that with fear and trembling, at the advanced age of fifty-six, a period at which most authors lay it down.' He spared no pains to make his book a good one: 'Pleased as a fond parent with this *History*, as my first literary offspring, I may be said, while in manuscript, to have had the whole by heart. Had a line been quoted, I could have followed it up through the chapter. Frequently, while awake in the night, I have repeated it in silence for two or three hours together without adding or missing a word.' His success with Birmingham tempted him on to other works, such as a *History of Derby, The Roman Wall, The Battle of Bosworth Field*, and some poetry. 'Having commenced,' he writes, 'I drove the quill thirty years, in which time I published fourteen books.'

Hutton suffered a severe affliction in 1791. The Church-and-King mob, who sacked and burned Priestley's house and chapel, served Hutton in the same style. His warehouse, his stock-in-trade, and country-house at Bennett's Hill, were all destroyed. Hutton was not, like Priestley, a keen politician; his words were always well considered and pacific; but he was a dissenter, he frequented the Unitarian meeting-house, and among the rabble there were probably not a few who bore him no good-will for his judgments in the Court of Requests. The sufferers from the riot had great difficulty in recovering their losses from the Hundred. Hutton laid his claim for £6736, and was awarded only £5390; and others fared even worse. This harsh usage somewhat soured his temper. He confesses, 'The cruel treatment I had met with totally altered my sentiments of man. I had considered him as designed to assist and comfort his species; to reduce the rough propensities of his nature, and to endeavour after perfection, though he could not reach it; but the experience convinced me that the nature of the human species, like that of the brute creation, is to destroy each other. I

therefore determined to withdraw from all public business, to spend the small remainder of existence with my little family, and amuse myself with the book and the pen.'

Hutton's nature was too vigorous to remain long under such morbid impressions, and though he continued to be suspected and distrusted as a Jacobin, neither his activity nor his enjoyment of life was seriously affected. He resigned his business as stationer to his son, but he could find little satisfaction away from the warehouse, and every morning, for many years, he walked from Bennett's Hill to town, and spent the day with the same assiduity as when making his fortune. He was a great pedestrian, and his feats, when an old man, were the surprise and alarm of his friends. In his seventy-seventh year, on the 4th July 1800, he set out on foot from Birmingham to make a survey of the Roman Wall. His daughter accompanied him as far as Penrith, riding on a pillion behind a servant, meeting her father in the evening at some appointed inn. He marched from the Solway along the line of the wall to Wallsend, and then back again from Newcastle to Carlisle, 'having,' he says, 'crossed the kingdom twice in one week and six hours, melted with a July sun, and without a drop of rain. By easy marches I arrived at Birmingham, 7th August, after a loss on my part of perhaps one stone weight by perspiration, a lapse of thirty-five days, and a walk of 601 miles.' His daughter describes his manner of walking as 'a steady saunter, by which he got over the ground at the rate of full two miles and a half in an hour. The pace he went did not even fatigue his shoes. He walked the whole 600 miles in one pair, and scarcely made a hole in his stockings.'

William Hutton closed his useful and, on the whole, happy life on the 20th September 1815, at the advanced age of ninety-two. He left an autobiography, giving minute particulars of his habits and career, and in many respects it is not unworthy of a place alongside Franklin's.

REV. GEORGE WHITEFIELD.

Whitefield was the most effective pulpit orator of last century, and perhaps of any century. He was thoroughly in earnest, and shrank from none of the toils and privations incident to what he thought his path of duty. His voice excelled both in melody and compass. He had a good figure and a fine countenance, and his gestures were always appropriate and full of grace. Franklin, who heard him frequently, learned to distinguish easily between his sermons newly composed, and those which he had often preached in the course of his travels. 'His delivery of the latter,' he says, 'was so improved by frequent repetition, that every accent, every emphasis, every modulation of the voice was so perfectly well turned and well placed, that, without being interested in the subject, one could not help being well pleased with the discourse; a pleasure of much the same kind which one receives from an excellent piece of music.'

Whitefield was born in 1714, at the Bell Inn, in the city of Gloucester. He gave his boyhood a very bad character after the common practice of eminent pietists. His mother was early left a widow, and as soon as George was able, he assisted her in the public-house, and in the end 'put on his blue apron and his snuffers [scoggers or sleeves], washed mops, cleaned rooms, and became a professed and common drawer.' This drudgery was a condition of necessity, not of choice. He had been at a grammar-school, his fine voice had been so praised that he had been tempted to try the stage, and his religious feelings impelled him to the service of the church. Hearing how cheaply a young man might live at Oxford as a servitor, he entered the university at the age of eighteen in that capacity. The students called Methodists, because they lived by rule and method, were then exciting great attention, and Whitefield's heart yearned towards them, and after a while he passed into their fellowship, and rivalled the most ardent in devotion and austerity. 'God only knows,' he writes, 'how many nights I have lain upon my bed groaning under what I felt. Whole days and weeks have I spent in lying prostrate on the ground in silent or vocal prayer.' He chose the worst food, and affected mean apparel; he made himself remarkable by leaving off powder in his hair, when every one else was powdered, because he thought it unbecoming a penitent; and he wore woollen gloves, a patched gown, and dirty shoes, as visible signs of humility. He would kneel under the trees in Christ's Church, walk in silent prayer, shivering the while with cold, till the great bell summoned him to his college for the night. He kept Lent so strictly that, except on Saturdays and Sundays, his only food was coarse bread and sage-tea, without sugar. The end was, that before the termination of the forty days, he had scarcely strength enough left to creep up stairs, and was under a physician for many weeks.

He was ordained deacon in 1736, and after several engagements as curate, sailed for Georgia at the invitation of Wesley. At the end of a year he returned to England, to solicit subscriptions for an orphan-house he had established in Savannah, and which continued to be one of the chief cares of his life. His eloquence was in nothing more apparent than in the ease with which he drew money from the unwilling and indifferent. From a London audience he once took a thousand pounds, then considered a prodigious subscription. Prudence in the person of Franklin could not resist his persuasive appeals. Franklin disapproved of the orphan-house at Savannah, thinking Philadelphia the proper place for its erection, and he says: 'I silently resolved he should get nothing from me. I had in my pocket a handful of copper money, three or four silver dollars, and five pistoles in gold. As he proceeded I began to soften, and concluded to give the copper; another stroke of his oratory made me ashamed of that, and determined me to give the silver; and he finished so admirably, that I emptied my pocket wholly into the collector's dish, gold and all.'

Whitefield's life was spent as a travelling-preacher. He generally made a yearly round through England and Scotland, and went several times to Ireland. He repeatedly visited America, and traversed the whole extent of the British possessions there. Wherever he appeared, crowds flocked to listen to him. In London, he sometimes preached early in the morning, and in the dark and cold of winter the streets near the chapel used to be thronged with eager listeners bearing lanterns in their hands. When he took his departure from a place, he was usually followed by a troop of

weeping disciples. In Bristol, especially, the fervour he awakened was extraordinary. There, the churches being closed against him, he commenced preaching in the fields to the savage colliers of Kingswood. His first open-air sermon was preached on the afternoon of Saturday, 17th February 1739, upon a mount, in a place called Rose Green, to an audience of about two hundred. He repeated the experiment, and enormous congregations grew around him. The deep silence of his rude auditors was the first proof that he had impressed them, and soon he saw white gutters made by the tears which plentifully fell down their black cheeks—black as they came out of their coal-pits. 'The open firmament above me,' says he, 'the prospect of the adjacent fields, with the sight of thousands and thousands, some in coaches, some on horseback, and some in the trees, and at times all affected and drenched in tears together; to which sometimes was added the solemnity of the approaching evening, was almost too much for, and quite overcame me.'

The triumphs of many popular preachers have been confined to the vulgar, but the cultivated, and even the sceptical, confessed Whitefield's power. Hume, Chesterfield, and Bolingbroke heard him with surprise and admiration; and the Countess of Huntingdon, who made him her chaplain, introduced him to the highest circles of rank and fashion. He cast his lot among the Methodists, but his aim was to preach the gospel, and not to build up a sect. With Wesley he differed on the question of freewill—Wesley being an Arminian, and Whitefield a Calvinist; but Whitefield, though steadfast in his opinions, was not disposed to waste his energy in wrangling with his able coadjutor. Whitefield by eminence was a preacher; Wesley was more than a preacher—he was a first-rate administrator, and the great religious organisation which bears his name is the attestation of his peculiar genius.

Like Wesley, Whitefield entertained some odd notions about marriage, which, as little in the one case as the other, contributed to happiness. While he was in America in the spring of 1740, he applied to two of his friends, a Mr D. and Mrs D., to ask if they would give him their daughter to wife, at the same time telling them, that they need not be afraid of sending him a refusal, 'for I bless God,' said he, 'if I know anything of my own heart, I am free from that foolish passion which the world calls love. I write, only because I believe it is the will of God, that I should alter my state; but your denial will fully convince me that your daughter is not the person appointed by God for me. But I have sometimes thought Miss E. would be my helpmate, for she has often been impressed upon my heart.' The proposal came to nothing, and the following year he was married in England to Mrs James of Abergavenny, a widow, who was between thirty and forty, and, by his own account, neither rich nor beautiful, but having once been gay, was now 'a despised follower of the Lamb.' They had one child, who died in infancy, and their union was not full of pleasantness. They did not live happily together, and 'her death in 1768 set his mind much at rest.'

Whitefield died in America, at Newbury Port, near Boston, on Sunday morning, 30th September 1770, at the age of fifty-six.

A CONTEST FOR PRECEDENCE.

Sir John Finett, master of ceremonies to the first two monarchs of the Stuart dynasty that sat on the throne of England, wrote a curious work, entitled *Choice Observations touching the Reception and Precedence of Foreign Ambassadors.* This book, though to us, at the present day, merely an amusing account of court squabbles and pretensions to precedence, was a very important treatise in the ideas of its author; who, if he had lived a little earlier, might have passed as the prototype of Polonius. One great difficulty, never settled in Finett's lifetime, was the placing of the French and Spanish ambassadors, each claiming precedence of the other. James I., on some public festivals, solved the problem by inviting neither of them; but this could not always be done, and so, for many years, the principal courts of Europe were disturbed by unseemly broils between the representatives of France and Spain. At last, the long struggle came to a crisis, formal complaints and courtly protocols being supplemented by swords and pistols; and the battle, which settled the much-disputed point, was fought in the streets of London.

In September 1661, an ambassador from Sweden was expected to arrive at the court of Whitehall. The etiquette and custom then used on the arrival of an ambassador, was for the king's barge to meet him at Gravesend, and convey him up the river to Tower-wharf. He was then received in the king's carriage, his own carriage following next in order, and after that the carriages of the other ambassadors, according to their national precedence. On this occasion, the Marquis d'Estrade, the French ambassador, determined that his carriage should follow next to the Swede's, and the Baron de Batteville, the Spanish ambassador, having made an exactly similar determination, preparations were made for a contest. And, as the populace of London might readily be expected to take part in the fray, the ambassadors applied to King Charles, who, very complaisantly, issued a proclamation, forbidding any Englishman, under penalty of death, from interfering with the quarrel; the ambassadors promising, on their parts, that firearms should not be used.

The 30th of September, the day appointed for the Swedish envoy's reception, having arrived, Tower-hill was crowded with an immense number of the lower classes, anxious to witness the fight; while a strong body of horse and foot guards were posted in the same locality, to prevent any action on the part of the spectators. The hour appointed for the ambassador to land was three o'clock in the afternoon; but the Spanish carriage, guarded by fifty men, armed with swords, was on the wharf five hours earlier, thus obtaining an advantageous position. The French carriage, arriving a little later than its Spanish rival, did not acquire so good a position; it was better guarded, however, being accompanied by one hundred men on foot, and fifty on horseback, most of the latter, in defiance of the arrangement made with the king, being armed with pistols and carabines. All was quiet, till the Swedish ambassador, having landed and been received in the king's carriage, was driven off, his own carriage following. A desperate struggle then commenced. The Spaniards forming across the road to bar the passage of the French, the latter fired a volley,

and charged their opponents, sword in hand, yet, in spite of their superior numbers, were bravely repulsed by the cool courage of the Spaniards. Three horses, the postilion, and coachman of the French carriage having been killed, the ambassador's son, who alone occupied it, alighted, and though then severely wounded, drew his sword, stimulating his followers to fresh exertions, but in vain; the Spanish carriage had by this time driven off, next in order to that of the Swede, and the point of precedency, so stoutly contended for, was won and lost. The fight, however, did not cease. For so far, it had been confined to Tower-wharf; now it was extended to Tower-hill. There an outlying detachment of the French were posted, who, rushing on the Spanish carriage, attempted to cut the traces; but were foiled through iron chains, covered with leather, having been prudently provided, instead of the usual traces, for this particular occasion. The Spaniards soon beat this party off, and proceeded on their way without further molestation. Half an hour afterwards, the crest-fallen French, having repaired damages, followed, with only two horses in their carriage.

As each party carried off its own killed and wounded, the amount of casualties could not be accurately ascertained. Rugge, in his curious manuscript, estimates the number of killed at twelve, the wounded at forty. Among the spectators, one Englishman, a poor plasterer, was killed by a shot through the head, and several others were wounded. The bystanders would willingly have taken an active part against the French, if they had not been prevented, by the proclamation and presence of the troops. Pepys did not see the fight, but, after it was over, being, as he says, 'in all things curious,' he 'ran through all the dirt, and the streets full of people, and saw the Spanish coach go by, with fifty drawn swords to guard it, and our soldiers a shouting for joy, strange to see how all the city did rejoice, and indeed we do all naturally love the Spaniards, and hate the French.' He then went to the French embassy to see how they bore their defeat, and tells us they all 'looked like dead men, and not a word among them but shake their heads.'

When tidings of the affray reached Paris, Louis XIV. became extremely indignant, publicly declaring that he would make war upon Spain, if his right of precedence were not conceded in every court of Europe. He at once dismissed the Spanish ambassador from France, and recalled his own ambassador from Madrid. After considerable diplomacy, Louis gained all that he demanded. In the March of the following year, the Marquis of Fuentes was sent from Spain to Paris, in the character of ambassador extraordinary, to formally renounce the long-contested point of precedency. At a grand reception, held at Versailles, Fuentes, in the presence of the Pope's Nuncio, and twenty-six envoys from the various courts of Europe, declared that his master, the king of Spain, had given orders to all his ambassadors to abstain from any kind of rivalry with those of France. Louis, then addressing the foreign ministers, desired them to communicate this declaration to their respective courts. On which the Dutch envoy drily remarked, that he had heard of embassies tendering obedience to the pope, but he had never before known of such from one crowned head to another.

Louis caused a medal to be struck in commemoration of the important event. One side bears the monarch's head, on the other, Louis is represented standing on the dais of his throne, before him is Fuentes, in the humble attitude of one who apologises, the Nuncio and other ambassadors standing round. The motto is 'JUS PRÆCEDENDI ASSERTUM, CONFITENTE HISPANORUM ORATORE,' which may be translated—The right of precedence confirmed by the avowal of Spain.

THE REVOLUTION OF 1399.

The 30th of September 1399, marks an epoch of some moment in English history—the transference of the crown from the House of Plantagenet to that of Lancaster. On the previous day, a deputation from the Lords and Commons had waited on King Richard II., then a prisoner in the Tower, and had obtained from him a formal renunciation of the throne, in favour of his cousin, Henry of Bolingbroke, who a few weeks before had landed from exile at Ravenspur, in Yorkshire, and in an astonishingly short time made himself master of the kingdom. At the time of Henry's landing, Richard was absent on an expedition to Ireland, and for some time remained in ignorance of what was transpiring at home. On receiving intelligence of Henry's alarming progress, he despatched at once the Earl of Salisbury with an army, but this nobleman after disembarking at Conway, soon found himself deserted by all his forces; and Richard, on landing a few days afterwards at Milford Haven, was soon placed in a similar predicament. Deserted on all hands, the unfortunate monarch was at last compelled to surrender himself to the Earl of Northumberland, and meet at the castle of Flint his cousin Henry. He was then conducted as a prisoner to Chester, from which he was afterwards transferred to the Tower; and then, on 29th September, he received the deputation from parliament already mentioned. The following day, his renunciation of the crown was formally ratified, and himself formally deposed. Whilst this procedure was going on, Henry of Bolingbroke, Duke of Hereford, remained seated in his usual place near the throne, which was empty, and covered with cloth of gold. As soon as eight commissioners had proclaimed the sentence of deposition, he rose, approached the throne, and having solemnly crossed himself, said: 'In the name of God the Father, Son, and Holy Ghost, I, Henry of Lancaster, challenge this realm of England, because I am descended by right line of blood from the good lord King Henry III., and through that right, that God of his grace hath sent me, with help of my kin and of my friends, to recover it; the which realm was in point to be undone for default of government and undoing of the good laws.' He then knelt for a few minutes in apparent devotion on the steps of the throne on which he subsequently took his seat, being conducted thither by the archbishops of Canterbury and York.

Though a manifest usurpation, the seizure of the crown by Henry IV. seems to have been fully in accordance with the will of the English nation, which was disgusted with the corrupt and imbecile administration of Richard II. The vigorous government of Henry and his son, the chivalrous Henry V., may almost appear a vindication of their wisdom in this change of dynasty. But the terrible wars of the Roses, and the miserable end of Bolingbroke's unhappy grandson, Henry VI., amply avenged the wrongs of the Plantagenet family. However we may reverence the ability of Henry IV., and excuse his usurpation of the crown, a dark cloud must ever rest on his memory in connection with the unfortunate Richard II., who was mysteriously murdered by Henry's orders in Pontefract Castle, a short time after his deposition.

Then came October full of merry glee;
For yet his noule was totty of the must,
Which he was treading in the wine-fat's see,
And of the joyous oyle, whose gentle gust
Made him so frolic and so full of lust:
Upon a dreadful Scorpion he did ride,
The same which by Dianæ's doom unjust
Slew great Orion; and eeke by his side
He had his ploughing-share and coulter ready tyde.

SPENSER.

(DESCRIPTIVE.)

OCTOBER

IT is now yellow autumn, no longer divided from summer by the plumy sheaf and lingering flowers, but with features of its own, marked with slow decay. There is a rich hectic red on its cheek, too beautiful to last long, and every wind that blows pales the crimson hue, or scatters its beauty on the empty air, for everywhere around us the leaves are falling. But through the openings autumn makes in the foliage, many new beauties are revealed—bits of landscape, which the long close-woven leaves had shut out, of far-away spots, that look like a new country, so strange do they appear when seen for the first time through the faded and torn curtains which have shaded summer. Hill and valley, spire and thatched grange, winding highways and brown bends, over the meadows—with stiles and hedges—shew fresh footpaths, which we have never walked along, and make us long to look at the unvisited places to which they lead. We see low clumps of evergreens, which the tall trees had hidden; nests in hedges, where we were before unable to find one;

and in the orchards a few hardy apples still hang, which only the frost can ripen. The fields seem to look larger, where we saw the grass mown and the corn reaped, for we can now see the bottoms of the hedges. The cherry-trees look as beautiful to the eye as they did when in blossom, such a rich scarlet dyes the leaves, mingled every here and there with golden touches. The elders are still covered with dark purple berries, especially the branches which overhang the water-courses, and are beyond the reach of the villagers. We see flags and rushes and water-plants rocking in the breeze, and reflected in the ripples which were hidden by the entangling grass that now lies matted together, and is beginning to decay. As evening approaches, the landscape seems to assume a sober hue, the colours of the foliage become subdued, and the low sighing of the wind, the call of the partridge, and the few notes uttered by the remaining birds, fall upon the ear with a sad sound at times, and produce a low feeling, which we are seldom sensible of at the change of any other season of the year.

There is still one out-of-door scene beautiful to look at and pleasant to walk through, and that is hop-picking—the last ingathering of autumn that finds employment for the poor; nor are there many prettier English pictures to be seen than a well-managed hop-plantation. The smell of the hop is very delightful, so different from that of new hay and hawthorn-buds, yet quite as refreshing. What a beautiful motion there is in the light and shadow when the breeze stirs the vine-shaped leaves, and the golden coloured hops swaying the bine to and fro, and sharp quiverings in the open net-work where they cross each other, and all pervaded with a soothing aroma, that makes the blood stir like the smell of the rising sap in a forest at spring-time! Merry people, too, are the hop-pickers, whether at their work, or when going or returning from the hop-plantations. The little huts they run up to sleep in, their places of cooking, washing, and other domestic contrivances, tell that they belong to the race who have heralded the way into many a wilderness, lived there, and founded colonies, that are now springing up into great nations. We see them travelling to the hop-grounds with baby on back, and leading children by the hand, carrying cradle and bed, saucepan and kettle, and no doubt nearly everything their humble home contained. We look on and wonder how those tiny bare feet will ever tramp so far, yet while turning the head and watching them, we see them go pit-pat over the ground, three or four steps to the one or two longer strides of their parents, caring no more for the gravel than if they were shod with iron, and we are astonished to see what a way they have gone while we have been watching. Sometimes, in the hop-grounds, we have seen a cradle with the baby asleep in it, swinging between the tall hop-bines, and thought what a pretty picture it would make, if well painted! Often, in the neighbourhood of Farnham, the hop attains the height of from fourteen to sixteen feet, and excepting between a clear hazel-copse, when the leaves are yellowed by autumn, we know nothing more beautiful to walk among than these tall swaying bines. It flowers in June, and in favourable seasons is ripe in September, though many hops remain to be picked in the early part of the present month. There are several varieties of hops grown, known as the red-bind, green-bind, and white-bind; the first of which, though producing small cones, is a hardy plant, and resists the attacks of insects; while the second is very productive in a good season, and will flourish better in a poor soil than the white bind, which is the most difficult of all to grow, and realises the highest price of all the hops. Good practised growers fix upon the time for hop-picking when the cones throw out a strong peculiar scent, which they know the moment the air is filled with it, and they pay more regard to this powerful aroma than they do to the looks of the hops. Nor is it at hop-picking-time only that this beautiful plant gives employment to the poor, though that is the chief season, for in spring the ground has to be well stirred and drawn up about the young shoots; then the poles must be placed in the ground about the end of April, when the shoots are generally five or six inches high. And after all this is done, the shoots must be tied to the poles as they grow higher, and this must be done very lightly and carefully, for if fastened too tight, the shoot would decay, come off, and send out fresh ones from below, which would attain no height, be dwindled, and not bear a bunch of cones worth the gathering. The wild-hop, which may be seen romping about our hedges, is indigenous, and pretty it looks amid the other climbing-plants, many of which bear beautiful berries, nor is there any record of its having been cultivated before the reign of Henry VIII. It was, however, imported from the Low Countries, and used for brewing in England, as early as 1428.

To an observant eye, many little changes are presented, which shew how rapidly autumn is advancing. The flocks are now driven to the fold of an evening, for the nights are becoming too cold and damp for them to remain in the fields, and they will soon be enclosed in ground set apart for their winter-feeding. It is a pleasant sight to see them rush out of the fold of a morning after their confinement, then hurry on and break their closed ranks to feed here and there on the unpalatable and scanty pasturage. Turn wherever we may, we see the face of Nature changing; nowhere does it now wear its old summer-look, the very sound of the falling leaves causes us to feel thoughtful, and many a solemn passage of the Holy Bible passes through the mind, telling us that the time will come when we also 'shall fade as a leaf the wind has taken away. And all thou hast shall fall down as the leaf falleth from the vine.' That we shall soon be 'as oaks when they cast their leaves,' and at no other season of the year do these solemn truths strike us so forcibly as in autumn. As the fallen leaves career before us—crumbling ruins of summer's beautiful halls—we cannot help thinking of those who have perished—who have gone before us, blown forward to the grave by the icy blasts of Death. The scenery of spring awakens no such emotions, there is no sign of decay there, for all seems as if fresh springing into life, after the long sleep of winter. But now, even the sun seems to be growing older, he rises later and sets earlier, as if requiring more rest, instead of increasing in heat and brightness, as he did when the butter-cups looked up at him and 'flashed back gold for gold.' Yet we know this natural decay is necessary to produce the life and beauty of a coming spring,

and it is some solace to know, that for every flower autumn rains and blows upon and buries, a hundred will rise up and occupy their places by the time summer returns again, for it is her work to beautify decay.

Nearly all our singing-birds have departed for sunnier lands far over the sea, and the swallows are now preparing to follow them, while, strange interchange, other birds visit us which have been away all spring and summer. Some days before the swallows leave us, they assemble together, at certain places—generally beside a river—where they wait fresh arrivals, until a flock of thousands is mustered; and were not the same gathering going on at other places beside, we might fancy that all the swallows that visit us were assembled in one spot. One place they frequented, which abounded in osier holts, in our younger days, and when up early angling, we have seen them rise in myriads from the willows about six in the morning, and dividing themselves into five or six companies, disperse in contrary directions, when they remained away all day, beginning to return about five, and continuing to come in until it was nearly dark. No doubt this separation took place on account of the scarcity of food, as sufficient could not be found, without flying many miles from the river-side, where they assembled. Every day the flock appeared to augment, and we have no doubt that every division, on its return to this great mustering-ground, brought in many stragglers. We have also often fancied that it was here the young swallows exercised themselves, strengthening their wings for the long journey that lay before them, by circling flights and graceful evolutions, as if trying at times which could come nearest the water at the greatest speed without touching a drop with either breast or pinions. We also came to the conclusion, that all the young ones did not accompany the divisions that went away every day in search of food, but only a portion—as thousands remained—and that those which went out one day rested the next, and had their turn on the second morning, or each alternate day. They seldom remained later than the middle of October, and when they left for good, went away all together, in the direction of the south. A few generally remained for a day or two, then went off in the same direction. Dead swallows were generally picked up among the willows after the flock had migrated. Earliest amongst the fresh arrivals is the wood-cock, who generally reaches the end of his journey in the night, and very weary and jaded he appears. Seldom is he ever seen to land, though he has been found hiding himself near the coast, in so exhausted a state as to be run down, and taken by hand. But he does not remain by the sea-side a day longer than he is compelled, where, having recruited himself a little, he sets off to visit his former haunts. The snipe also arrives about the same time, and is found in the haunts of the wood-cock, on high moors and hills, while the season is mild, and in low, warm, sheltered localities when the weather is severe. In October the redwing reaches us, and if the autumn is fine and warm, its song may often be heard. Its favourite haunts are parks, and secure places, abounding in clumps of trees, where it feeds on worms, and such like soft food, so long as it can be found; never feeding on berries unless they are forced by the frost, then they soon perish. The early arrival of the fieldfare is considered by country-people a sure sign of a hard winter, especially if there is a large crop of heps and haws, which they say, reverentially, Providence has stored up for them beforehand. We think it is a surer sign, that, in the country they have quitted, severe weather has set in earlier than usual. Some naturalists say, that although this bird obtains its food in the hedges, it roosts on the ground; the reason assigned for arriving at this conclusion is, that those who go out at night with nets to capture larks in the field, often find fieldfares amongst the birds thus taken. May not this have been in some neighbourhood where hedges were rare, and caused them to roost, like the rooks on Salisbury Plain, where there is plenty of food, but very few trees, compelling them either to fly miles away at night, or take up their lodgings 'on the cold ground?' Gilbert White is the great authority for this account of the fieldfares.

The woods never look more beautiful than from the close of last month to the middle of October, for by that time it seems as if nature had exhausted all her choicest colours on the foliage. We see the rich, burnished bronze of the oak; red of many hues, up to the gaudiest scarlet; every shade of yellow, from the wan gold of the primrose to the deep orange of the tiger-lily; purple, rising from the light lilac to the darkest velvet of the pansy streaked with jet; and all so blended and softened together in parts, that like the colours on a dove's neck, we cannot tell where one begins and the other ends. And amid this change, the graceful fir-trees seem now to step boldly out, and we are amazed at the quiet beauty we have so long overlooked as we gaze upon these stately and swarthy daughters of autumn, who have been hidden by their fairer sisters of summer. We often wish that a few more of our great landscape-painters had devoted their canvas to the endless tints of 'the fading and many-coloured woods,' as they are seen at no other time excepting this season of the year. Nothing can be grander than the autumnal foliage of the oak, with its variety of tints, which are more numerous than can be found on any other tree, where there are greens of every hue, and browns running into shades, that are almost numberless. The beech again—excepting only one or two of our shrubs—is covered with the richest of all autumn colours—an orange that seems almost to blaze again as you look at it in the sunset, recalling the burning bush before which Moses bowed. Nearly one of the first trees to shed its foliage is the walnut; next the ash, if covered with those keys that make such a rattling in the November wind—if these are wanting, the tree remains much longer in leaf. The ash is one of the most graceful of our forest-trees, with its leaves set in pairs as if made to match one another, while its smooth, tough branches have a gray hue, that seems to make a light through every portion of the tree. The horse-chestnut now wears its changing livery of shining gold, but can hardly be classed amongst our English forest-trees, as it was a stranger to our parks, ornamental-grounds, and copses less than two centuries ago. The lime or linden, though it soon loses its leaves, shews well in an autumn landscape; so does the tall poplar, seeming as if trying to touch the sky

with its high up-coned head. How beautiful the elm now looks, especially if its changing foliage is seen from some summit that overlooks a wood, for it is the tallest of our forest-trees, and its topmost boughs may then be seen high above all others! Even so near London as Dulwich, these stately trees may be seen in all their beauty, and some of them look old enough to have thrown their checkered shadows over Shakspeare, when he walked under them with Alleyn the player, in consultation, as they laid out plans for the old hospital which the latter built, and called by the solemn name of 'God's Gift.' And who can walk through our woods and forests without feeling as if in the presence of Shakspeare, moving side by side with him, and Orlando, and Rosalind, and that contented duke who found the woods

'More free from peril than the envious court;'

while the Forest of Arden seems to rise before us with its herd of dappled deer, and in the mind's eye we picture the melancholy Jacques reclining beneath some broad-branched oak, 'whose antique roots peep out upon the brook,' on which the falling leaves go gliding until lost by the overhanging boughs that shut out the receding stream. What a pattering there is now when the wind blows, as the pale golden acorns come rattling out of their beautifully-carved cups—the drinking-vessels of our old fairy-tales, and often forming the tea-service of our country children in the present day, when they play at giving a tea-party on the floor of some thatched cottage! And how grand is the piping of the great autumn winds, sounding like an organ through the forest, and causing us to feel that we are walking through a temple built by an Almighty hand, for there is no sign of the builder man around us! That trellised roof, where, through the openings made by the fallen leaves, we see only the sky, points to a greater Builder than imitative man.

Beautiful as many of our poetical images are, drawn from the fallen leaves, and sad as the sight is to see them lying around our walks, still the fall of the leaf is not its death, no more than that of one flower fading in a cluster is the death of the flower, as it only falls to make room for another blossom. A swelling bud will always be found in autumn above the leaf that is about to fall; and as this bud increases, it pushes down its predecessor, and causes it to break off, or to hang by so light a hold that the wind soon carries away the loosened leaf. This bud, which forces off the old leaf, forms the future stem or branches, which, during the following summer, will bear many leaves in place of the one it has displaced; and though it will cease to increase during the dead winter-months, will be among the foremost to shew itself in the spring. Evergreens retain their leaves throughout the winter, through the new buds not forcing off the old foliage until spring, instead of putting out above the old foliage in autumn as other trees do. This can be proved by transplanting almost any tree; if it lives, the new buds will come out and push off the old leaves, which soon begin to wither after its removal. But if the tree does not retain life, the leaves will still wither, and instead of falling off, remain on the branches, from whence they are not easily removed though dead. The dead leaf remains on the tree; the live leaf falls before it is dead, pressed down by the swelling bud above it, but still retaining a great portion of its leafy moisture. As for the colouring of autumn leaves, it is supposed that the trees absorb oxygen during the night, which, owing to the coldness of the weather, they have not strength enough to throw out again in the daytime, and that this gives an acidity to the juices of the tree, which changes the colour of the leaf, or, that otherwise, they would be pushed down by the new buds, in all their green summer array. Some admit that this may be the case with leaves that are red, but not with others that are brown and yellow. So the question remains open to many doubts, and as we look at the changing foliage in reverence, we feel satisfied in our own minds, that those beautiful touches have been put in by the wonder-working hand of the Creator.

(HISTORICAL.)

This month, so called from being the eighth in the year according to the old Alban or Latin calendar, was, by our Saxon ancestors, styled *Wyn moneth* (modern, *Weinmonat*), or the wine-month. In allusion to this epithet, an old writer remarks, 'and albeit they had not anciently wines made in Germany, yet in this season had they them from divers countries adjoining.' October was also called, by the ancient Germans, *Winter-fyllith*, from the approach of winter with the full moon of the month.

In some of the ancient Saxon calendars, this month is allegorised by the figure of a husbandman carrying a sack on his shoulders and sowing corn, in allusion to the practice of sowing the winter grain, which takes place in October. In other old almanacs, the sport of hawking has been adopted as emblematical of this, the last month of autumn.

CHARACTERISTICS OF OCTOBER.

On the 23d of the month, the sun enters the sign of *Scorpio*, an astronomical emblem said to typify, in the form of a destructive insect, the increasing power of cold over nature, in the same manner as the equal influence of cold and heat are represented by *Libra*, or the balance, the sign of the preceding month of September. The average temperature for the middle of the month, throughout the British Islands, is about 50°. On the 1st, the sun rises in the latitude of London at 6.11, and sets at 5.49.

Though a melancholy feeling is associated with October, from the general decay of nature by which it is characterised, there occurs, nevertheless, not infrequently in it, some of the finest and most exhilarating weather of the year. Frosts in the mornings and evenings are common, whilst the middle of the day is often enlivened by all the sunshine of July without its oppressiveness, and the clearness of a frosty day in December or January without its piercing cold.

First of October.

The Festival of the Rosary. St Piat, apostle of Tournay, martyr, about 286. St Remigius, confessor, archbishop of Rheims, 533. St Wasnulf or Wasnon, confessor, patron of Condé, about 651. St Bavo, anchoret, patron of Ghent, 7th century. St Fidharleus of Ireland, abbot, 762.

FESTIVAL OF THE ROSARY.

The rosary, as is well known, is, in the Roman Catholic Church, a series of prayers, consisting of fifteen *Pater Nosters* and a hundred and fifty *Ave Marias*, which, for the convenience of worshippers, are counted on a string of beads. Each rosary, or string of beads, consists of fifteen decades, each of which decades contains one *Pater Noster*, marked by a large bead, and ten *Ave Marias*, marked by ten smaller beads. The festival of the rosary was instituted to implore the divine mercy in favour of the church and all the faithful, and return thanks for the benefits conferred on them, more especially for the victory of Lepanto, in 1571, over the Turks. This success, believed to be obtained through the intercession of the Virgin, who is so specially invoked in the devotion of the rosary, was ordered by Pius V. to be annually commemorated under the title of St Mary de Victoria. This epithet was, however, changed by his successor, Gregory XIII., into the title of the Festival of the Rosary. The victory of Prince Eugene over the Turks at Belgrade, in 1716, was ordered by Clement XII. to be included in the benefits which this office specially commemorates.

Born.—Henry III. of England, 1206, *Winchester;* Henry St John, Viscount Bolingbroke, politician and philosophical writer, 1678, *Battersea;* Paul I., emperor of Russia, 1754.

Died.—Michael II., the Stammerer, Greek emperor, 829; Pierre Corneille, great tragic dramatist, 1684, *Paris.*

THE MUSICAL SMALL-COALMAN.

On 1st October 1714, was buried in Clerkenwell churchyard, Thomas Britton, a dealer in coal, whose life presents one of the most curious social anomalies that have ever been recorded. Whilst gaining his livelihood by the active exercise of a humble craft, occupying a habitation and wearing a garb corresponding in plainness to his trade, this singular man contrived by his various talents, and more especially his musical tastes, to assemble around him the most aristocratic company in London, and to be admitted into their society on equal terms, at a time when the principle of exclusion was far more rigidly maintained than it is now, between the upper and lower ranks of the community.

The house occupied by our small-coalman was situated in Aylesbury Street, Clerkenwell, and formed the corner-house of a passage leading by the Old Jerusalem Tavern into St John's Square. On the ground-floor were the coal-stores, and above them a long narrow room, very low in the ceiling, and approached by a break-neck stair from the outside. In this modest saloon, Britton held his musical reunions, which were attended by the great and fashionable, and at which, among other eminent performers, the celebrated Handel did not disdain to exhibit his unequalled skill for the entertainment of the company. The origin of these gatherings is ascribed to Sir Roger l'Estrange, a famous musical dilettante, who, along with other gentlemen, had been taken with the conversation and manners of Britton, so greatly beyond what might have been expected from his station in life. Nor were his guests confined to the male sex. Elegant ladies, from the most fashionable quarters of London, thronged to his humble mansion, and, in the pleasure which they experienced in listening to his concert, forgot the toils which they had undergone in ascending to the hall of performance. It has been said that Britton charged his guests with an annual subscription of ten shillings for the music, and a penny for each cup of coffee drunk. But this was certainly not the case at first, when the entertainment was entirely gratuitous, and no refreshments of any kind were given, though possibly some change may have been introduced at a later period.

In the Augustan age of Queen Anne, the passion for collecting old books and manuscripts began to develop itself among the nobility. Among the most noted bibliophilists of the aristocracy were the Duke of Devonshire, and the Earls of Oxford, Pembroke, Sunderland, and Winchelsea. A favourite Saturday pastime of these noblemen was to make their rounds through the various nooks of the city in which booksellers congregated, and then reassemble at noon at the shop of Christopher Bateman, a bookseller in Paternoster Row. About this time, Thomas Britton would make his appearance, having finished *his* round, and, depositing his sack of small-coal on the ledge of Mr Bateman's window, would go in and join the distinguished company. Here his skill in old books and manuscripts was no less conspicuous than the correctness of his musical taste, and rendered him a most useful acquisition.

As has happened with many greater men, Britton did not escape the shafts of slander and malice, and it was variously asserted that his musical assemblies were merely pretexts for seditious meetings or magical incantations, and that he himself was an atheist or a Jesuit in disguise. There seems, however, to have been really nothing objectionable either in his principles or mode of life, his character being that of a simple and inoffensive, though learned and intelligent man. His death was brought about in a singular manner.

A blacksmith, named Honeyman, who possessed the faculty of ventriloquism, and had almost frightened, by the exercise of it, the notorious Dr Sacheverell into fits, was induced, as a practical joke, to play off his art upon Thomas Britton. Being introduced to the latter, he announced, as if by a supernatural messenger, speaking from a distance, the death of Britton, intimating, moreover, that his only chance of escape was to fall down immediately upon his knees, and repeat the Lord's Prayer. The poor man, terrified out of his senses, did as he was told, and verified the prediction but too soon, as he took to his bed, and died in a few days.

Two pictures of Britton were painted by his friend Woolaston. One of these, which was deposited in the British Museum, represents him in his blue frock, with the small coal-measure in his hand, as he appeared when he went through the town crying his wares. He has also been fortunate enough to secure transmission to posterity in the following lines by Prior:

'Though doomed to small-coal, yet to arts allied,
Rich without wealth, and famous without pride,
Music's best patron, judge of books and men,
Beloved and honoured by Apollo's train.
In Greece or Rome sure never did appear
So bright a genius in so dark a sphere!
More of the man had probably been saved
Had Kneller painted, and had Vertue graved.'

RUMINATING MEN.

'I remember,' says Mrs Piozzi, in her *Tour in Italy*, 'Dr Johnson once said that nobody had ever seen a very strange thing, and challenged the company to produce a strange thing; but I had not then seen Avvocato B——, à la Wyerhere, at Milan, and a man respected in his profession, who actually chews the cud like an ox. He is apparently much like another tall stout man, but has many extraordinary properties, being eminent for strength, and possessing a set of ribs and sternum very surprising, and worthy the attention of anatomists. His body, upon the slightest touch, even through all his clothes, throws out electric sparks; he can reject his meals from his stomach at pleasure; and did absolutely, in the course of two hours, go through, to oblige me, the whole operation of eating, masticating, swallowing, and returning by the mouth a large piece of bread and a peach. With all this conviction, nothing more was wanting; but I obtained, besides, the confirmation of common friends, who were willing likewise to bear testimony of this strange accidental variety. What I hear of his character is, that he is a low-spirited nervous man; and I suppose his ruminating moments are spent in lamenting the peculiarities of his frame.'

This human chewer of the cud was not such a singular being as Mrs Piozzi imagined. Fabricius ab Aquapendente records two similar cases coming under his own observation. One was a monk, who rejoiced in another bovine characteristic, his forehead being adorned with a pair of horns. The other ruminant was not so ornamented himself, but was the son of a one-horned parent; he was a Paduan nobleman, and Fabricius had the satisfaction of dissecting him, and proving the falseness of Bartholin's theory, that human ruminants possessed double stomachs. Lynceus tells us of Anthony Recchi, who was obliged to retire from the dinner-table to ruminate undisturbed, and who declared that the second process of mastication 'was sweeter than honey, and accompanied with a delightful relish.' His son inherited the same faculty, but with him it was under better control, he being able to defer its exercise till a convenient opportunity. Sennert knew a man similarly qualified, and accounted for it by attributing it to the fact of his having been fed on milk warm from the cow, in consequence of the death of his mother at his birth. Pyer believed that two of his countrymen acquired the habit from learning to imitate the calves and sheep with which their vocation associated them. Blumenbach says he knew two men who ruminated their vegetable food, and found great enjoyment in the feat, while one of them had the power of doing so or not as he felt inclined.

In the *Philosophical Transactions* for 1691, there is an account by 'the experienced and learned Frederick Slare, M.D.' of a ruminating man living at Bristol, described as a person of mean parents but of tolerable sense and reason, who had followed the practice from his earliest years, and always found a temporary deprivation of the faculty the sure precursor of illness. He used to commence ruminating about a quarter of an hour after a meal, and the process usually occupied him for an hour and a half, and was attended with greater gratification than the first mastication, after which food always lay heavy in the lower part of the throat. Under the date of October 1, 1767, we find the following in the *Annual Register:* 'We have the following extraordinary account from Winbourne, in Dorsetshire. A few days ago died here Roger Gill, shoemaker, and one of our singing-men, aged about sixty-seven, remarkable for chewing his meat or cud twice over, as an ox, sheep, or cow. He seldom made any breakfast in his latter days; he generally dined about twelve or one o'clock, eat pretty heartily and quickly, without much chewing or mastication. He never drank with his dinner, but afterwards about a pint of such malt liquor as he could get; but no sort of spirituous liquor in any shape, except a little punch, but never cared for that. He usually began his second chewing about a quarter or half an hour, sometimes later, after dinner; when every morsel came up successively, sweeter and sweeter to the taste. Sometimes a morsel would prove offensive and crude, in which case he spat it out. The chewing continued usually about an hour or more, and sometimes would leave him a little while, in which case he would be sick at stomach, troubled with the heartburn, and foul breath. Smoking tobacco would sometimes stop his chewing, but was never attended with any ill consequences. But on the 10th of June last, the faculty entirely left him, and the poor man remained in great tortures till the time of his death.'

Similar cases have been recorded by Messrs Tarbes, Percy, Lawrent, Cullerier, Riche, and Copland. The latter published a full account of a case of rumination in *The London Medical and Physical Journal* (1819–20), and observes in his *Medical Dictionary*, published in 1858, 'since the publication of that case, two others, one of them in a medical man, have been treated by me, and

I have reason to believe that instances of partial or occasional rumination are not so rare in the human subject as is generally supposed.'

OCTOBER 2.

The Feast of the Holy Angel-Guardians. St Leodegarius or Leger, bishop and martyr, 678. St Thomas, bishop of Hereford, confessor, 1282.

Born.—Richard III. of England, 1452, *Fotheringay Castle;* Cardinal Charles Borromeo, editor of the *Noctes Vaticanæ*, 1538, *Arona;* The Chevalier d'Eon, celebrated adventurer and pretended female, 1728, *Tonnerre, Burgundy;* Joseph Ritson, antiquary, 1752, *Stockton.*

Died.—Aristotle, great Greek philosopher, 322 B. C., *Chalcis;* Major John André, hanged by Washington as a spy, 1780; Admiral Augustus Keppel, 1786; Dr W. E. Channing, Unitarian divine, 1842, *Bennington, Vermont, United States;* Miss Biffin, painter, without hands or arms, 1850, *Liverpool;* Thomas Thomson, legal and literary antiquary, 1852, *Edinburgh.*

SPAIN BEQUEATHED TO THE BOURBONS.

On 2d October 1700, Charles II. of Spain executed his last will and testament, by which he conveyed his dominions to Philip, Duke of Anjou, second son of the French dauphin, and grandson of Louis XIV. Perhaps no mortuary bequest has excited greater commotions than this celebrated document, occasioning, as it did, the celebrated War of Succession in Spain, and the no less famous campaigns of Marlborough and Prince Eugene in Germany and Italy, in connection with the same cause. The circumstances attending its execution possess both a curious and painful interest, and exemplify strikingly the extremes of priestly machination and political unscrupulousness on the one hand, and of regal misery and helplessness on the other.

Feeble alike in body and mind, wasted by disease, and a prey to the most depressing melancholy and superstition, the unfortunate Charles II. was evidently hastening to the end of his career. Throughout life he had been kept in a state of perpetual tutelage, and had scarcely ever been permitted to have a will of his own. He was the only child of the old age of Philip IV., by that monarch's marriage with his niece, and of two unions which Charles himself had successively contracted, there had never been any issue. The legal right to the Spanish crown now devolved on the descendants of his grandfather Philip III., one of whose daughters was the mother of Louis XIV., and another of the Emperor Leopold. The sympathies of Charles were all in favour of the House of Austria, but he was surrounded by a powerful and unscrupulous faction in the French interest, who left no means untried for the accomplishment of their ends. Working on the superstitious fears of the dying monarch, his ghostly advisers held up before him the terrors of eternal perdition if he failed to make a will in favour of France as the legitimate heir. 'I am partial to my own family,' said poor Charles, when thus badgered, 'but my salvation is dearer to me than the ties of blood.' To relieve in some degree his perplexity, he despatched one of the noblemen of his household to Pope Innocent XII., to request his advice relative to the disposal of the Spanish dominions. The aged pontiff, himself on the brink of the grave, was surrounded by cardinals devoted to the French interest, and he returned a reply that he had no doubt that the rightful heir to the Spanish monarchy was the dauphin; but that to prevent the union of the two crowns of France and Spain, the succession should be vested in his second son, Philip, Duke of Anjou. Yet Charles still clung to his Austrian relatives, and was supported in his predilections by his queen, a sister-in-law of Leopold, who is said sometime previously to have been ineffectually tempted by France to abandon the interests of her family, by the bait held out to her, of marrying the dauphin on Charles's death, and thus continuing to share the Spanish throne. The palace was converted into a bear-garden by the squabbles and uproars which resounded through every quarter, and the noise of which even reached the chamber of the dying king. Intrigues for the post of confessor to the miserable sovereign were eagerly carried on between the partizans of the respective claimants of the succession; and both, as they from time to time gained the ascendency, sought to influence, in opposite directions, the weak and vacillating mind of Charles. Can any condition be imagined more wretched than that of the latter, emaciated with disease and suffering, conscious of his approaching and inevitable end being made the subject of the most calculating and acrimonious discussion, and yet denied the boon, which every Spanish peasant enjoyed, of dying in peace, and even threatened with the vengeance of Heaven in another world if he refused to do violence to his own feelings by gratifying the aspirations of an ambitious court? The victory between the contending factions at last remained with the French, and under the superintendence of Cardinal Portocarrero, the whole armoury of priestly influence and supernatural terror was brought to bear successfully on the mind of the king. He had already been frightened by statements of his being bewitched, and requiring to be exorcised to have the cause of his illness removed. Then it was suggested that his health would be benefited, and the prayers of departed spirits stimulated on his behalf, were he to gaze on and touch the remains of his ancestors, mouldering in the funeral vaults of the Escurial. Urged by his spiritual directors, Charles descended with them to these abodes of the dead, and there witnessed the opening of the marble and jasper coffins which enclosed the relics of royalty. The first opened was that of his mother, for whom he had never entertained any great affection, and at the sight of whose remains he displayed no special emotion. It was different, however, when the tomb of his first queen, Louise of Orleans, was unclosed. The body presented scarcely any traces of dissolution, and the countenance seemed nearly as fresh and blooming as when in life. Charles gazed long and earnestly on the lifeless face, and at last exclaiming, 'I shall soon be with her in heaven!' rushed, in an agony of grief and horror, from the place. Another trial to which he was subjected arose from an insurrection of the Madrid mob, who had been persuaded by the French faction that a famine from which they were suffering had been brought

about by the Austrian ministers and their partizans. The rabble destroyed all the bakers' shops, and presenting themselves before the palace, demanded a sight of the king. 'His majesty is asleep,' said one of the courtiers. 'He has slept too long already, and must now awake,' was the angry response. It was judged prudent to gratify the populace in their demand, and the poor king, pale and trembling, and unable to stand on his feet from sickness and fear, was brought out to the balcony in the arms of his attendants. As a capstone to all his sufferings, the last will and testament, appointing Philip of Anjou as his successor, was presented to him for his signature by Cardinal Portocarrero. Coerced and importuned on every side, Charles, with great reluctance, appended his name to the document, and then, bursting into tears, exclaimed: 'I now am nothing!' Immediately on signing it he fainted, and remained for a long time in that condition, inducing the belief that he was dead. He recovered, however, from this fit, and survived for a month longer, expiring on 1st November. The contents of the will were carefully concealed from the queen, the Austrian party, and Europe in general. When the testament came to be read after the king's death, it is said that Blécourt, the French ambassador, aware of its being in favour of his court, advanced confidently towards the Duke of Abrantes, whose office it was to declare the successor to the crown. Rather to the astonishment of the former, the duke, after looking composedly at him, turned aside his head. Then all at once, as if he had not observed Count Harrach, the imperial ambassador, he joyously embraced the latter, saying: 'It is with great pleasure, my lord' (then pausing to give him a closer hug), 'yes, my lord, it is with an extreme joy, and the utmost degree of satisfaction, that I withdraw myself from you, and take leave of the most august House of Austria!'

The success thus attending French diplomacy may, after all, be regarded as of a very dubious kind. Though the grandson of Louis XIV. succeeded ultimately in establishing himself on the Spanish throne, which had been obtained for him by so questionable means, it was only after the expenditure of a vast amount of blood and treasure on the part of his native country, such as rendered the latter years of the reign of the *Grand Monarque* a period of the utmost weakness and misery. The whole circumstances connected with the celebrated will of Charles II. exhibit strikingly the notions then prevalent regarding the relations of sovereigns to their kingdoms, which were considered to be those of hereditary proprietors rather than of responsible first magistrates. Two Spanish nobles, during the discussion in council on the subject of a successor, did indeed suggest a reference of the question at issue to the decision of the national cortes, but such a proposition was at once superciliously negatived as dangerous and disloyal.

JOSEPH RITSON.

The peculiar tastes and pursuits of the antiquary frequently give him a strong individuality, which, with a little exaggeration, may produce caricature. He seldom appears in the pages of the novelist or dramatist in other than a ridiculous light, being depicted generally either as a foolish collector of despicable trifles, or a half-witted good-natured twaddler. That all this is unjust, will be readily conceded in the present day, when archæological studies have become 'fashionable,' and soirees are given in rooms filled with antiquities as an extra attraction. Among the numerous antiquaries, who, by their labours, have rendered important services to the literature of their country, none has surpassed Joseph Ritson, who was himself an excellent sample of the painstaking and enthusiastic scholar, but unfortunately disfigured by eccentricity and irritability, which 'point a moral' in his otherwise useful career.

Ritson was born October 2, 1752, at Stockton-upon-Tees, Durham, and was bred to the legal profession; he ultimately came to London, entered Gray's Inn, and was called to the bar by the society there in 1789. He appears to have restricted himself to chamber-practice, and to have neglected in a great degree that calling also, that he might indulge in the more congenial study of our older poets. In his readings at the Bodleian

JOSEPH RITSON.

Library and elsewhere, he quietly garnered a multitude of facts—a scrupulous accuracy regarding which was one of his distinguishing characteristics, and an absence of it in any work was deemed by him as little inferior to a moral delinquency. His first appearance in the literary arena, was an attack on Warton's *History of English Poetry*, in which he proved himself a most formidable antagonist. His 'observations' were printed in a quarto pamphlet in 1782, uniform with Warton's volumes, because, as he remarks with a grim jocularity, 'they are extremely proper to be bound up with that celebrated work.' The boldness of his invective, and the accuracy of his objections, at once stamped him as no contemptible critic. But he was unfortunately wanting in temper and charity—errors were crimes with him, and treated accordingly. No better illustration of his mode ot criticism could

be given than the passage on the death of Marlow, who died in a fray, from a wound given by his own dagger turned against him by his adversary. Warton, in describing the wound, says it was in his bosom. Ritson at once fires up because he finds no authority for the exact spot, and thus addresses Warton: 'Your propensity to corruption and falsehood seems so natural, that I have been sometimes tempted to believe you often substitute a lie in the place of a fact without knowing it. How else you came to tell us that Marlow was stabbed in the bosom I cannot conceive.' In other instances, Ritson had more justice on his side, and really combated serious error, for Warton by no means understood old English so well as he did; thus, where the sultan of Damascus is described as riding to attack Richard Cœur de Lion, the romance tells us:

'A faucon brode in hand he bare;'

which means, that he came equipped with a broad falchion or sabre. Warton, unfortunately, interprets the import of the passage to be that the sultan carried a falcon on his fist, to shew his contempt for Richard. Ritson, upon this, bursts forth into unmeasured invective: 'such unparalleled ignorance, such matchless effrontery, is not, Mr Warton, in my humble opinion, worthy of anything but castigation or contempt.' To Dr Percy and his *Reliques of Ancient English Poetry*, he is no whit more civil; and, in subsequent publications, he continued his attacks, until the good bishop heartily regretted ever having concocted a work that has given, and will continue to give, pleasure to thousands, and has aided in spreading a knowledge of the beauties of our old ballad-poetry, before comparatively unknown. Percy, unfortunately, worked from an ill-written and imperfect manuscript, and he did not scruple to draw upon his own invention to supply what was wanting. This was a crime not to be forgiven in the eyes of Ritson, who would have walked from London to Oxford to collate a manuscript, or correct an error. Percy desired to make his work popular, an object in which he certainly succeeded, but Ritson's attacks embittered his triumph; and were carried by the antiquary so far, as to needlessly annoy the worthy prelate, for he ultimately denied the existence of the manuscript from which Percy professed to obtain his originals. Ritson had no patience for looseness of diction or assertion; and an amusing anecdote of this is given by Sir Walter Scott, who was intimate with him. He had visited Sir Walter at his cottage near Lasswade, and, in the course of conversation, spoke of the remains of the Roman Wall in the border counties as not above a foot or two in height, on the authority of some friend at Hexham. Sir Walter assured him, that near Gilsland 'it was high enough for the fall to break a man's neck.' Ritson took a formal note, visited the spot afterwards, and then wrote to say he had tested the assertion, and thought it accurate. 'I immediately saw,' says Sir Walter, 'what a risk I had been in, for you may believe I had no idea of being taken quite so literally.'

Ritson's *Select Collection of English Songs* appeared in 1783, and in after-years he published a series of volumes on our Robin-Hood ballads, and ancient popular literature. These were far superior in character to anything of the kind that had before appeared in the literary world, being remarkable alike for their erudition and accuracy. His volumes are elegantly printed, and the few illustrations in them are among the most graceful productions of the pencil of Stothard. It is sad to remember that Ritson lost money by these admirable works. He was too painstaking and accurate for general appreciation, and the public could read easier the books of looser compilation. His last days were clouded by further pecuniary losses, arising from unfortunate speculations, and being obliged to sell his books, he naturally became more irritable than ever. His opinions underwent important changes, and from being a decided Jacobite, he became a liberal in the widest sense of the French Revolution, whose heroes he worshipped, and whose unfortunate religious ideas he also adopted.

Sir Walter Scott said of Ritson, 'he had an honesty of principle about him, which, if it went to ridiculous extremities, was still respectable from the soundness of the foundation. I don't believe the world could have made Ritson say the thing he did not think.' Surtees adds, 'that excessive aspiration after absolute and exact verity, I verily believe, was one cause of that unfortunate asperity with which he treated some most respectable contemporaries.' In Ritson, then, we may study the evil effects of a narrowed view of truth itself, when combined with an irritable temper. Hated as a critic, while respected as a scholar, he rendered himself unnecessarily an object of dislike and aversion, whilst with a little more suavity he might have fulfilled his mission equally well. To him we are undoubtedly indebted for a more exact rendering of our ancient authors, which has guarded them from that loose editorship which was Ritson's abomination. His name and works, therefore, take an important place in literary history. His personal errors, and their consequences, should also be a warning to such critics as needlessly turn their pens to poniards, and their ink to gall.

THE DUKE OF CUMBERLAND'S MARRIAGE.

On October 2, 1771, Henry Frederic, Duke of Cumberland, younger brother of George III., married the Honourable Mrs Horton, a daughter of Lord Irnham, and widow of Christopher Horton of Catton, a Derbyshire gentleman. She was also the sister of the famous Colonel Luttrel, whom the court-party put forward as the legal possessor of the seat for Middlesex in the House of Commons, in opposition to the claims of Wilkes. The match occasioned the utmost displeasure to George III., who was only informed of it about a month after the event by a letter which he received from his brother, saying that he was married to Mrs Horton, and had gone off with her to Calais. In conjunction with the *mésalliance* avowed shortly after by the Duke of Gloucester, another of the king's brothers, with the Dowager Countess of Waldegrave, this marriage of the Duke of Cumberland occasioned the passing in parliament, by the king's direction, of the well-known Royal Marriage Act, which subsequently rendered null the unions of George IV. and the Duke of Sussex. The bridegroom had, the previous year, made himself

unpleasantly conspicuous by figuring as co-respondent in a *crim. con.* trial, in which the wife of Earl Grosvenor was the principal party implicated. It is hinted, also, that he had only married Mrs Horton after having failed in endeavouring to win her on easier terms. The lady is described by Horace Walpole as a young widow of twenty-four, extremely pretty and well made, and remarkable for the great length of her eyelashes, which veiled a pair of most artful and coquettish eyes. In the opinion of that prince of letter-writers, she had no great reason to plume herself on having conquered a man so intellectually weak as the duke. The latter for many years was rigidly excluded from court, as was also his brother, the Duke of Gloucester. He died in 1790, without leaving issue of the marriage. It ought to be remarked that his wife is not to be confounded with a Mrs Anne, or Annabella Horton, better known by the name of Nancy Parsons, who at one period lived with the Duke of Grafton as his mistress, and ultimately became the wife of Lord Maynard.

STRANGE HISTORY OF THE CHEVALIER D'EON.

Of all the ambassadors or diplomatists who ever served a sovereign, the most extraordinary, perhaps, was the Chevalier d'Eon, who occupied a large space in the public mind at certain periods during the last century: extraordinary, not for his political abilities or services, but for his personal history.

D'Eon first became known in England in 1761, the year after George III. ascended the throne. England and France, after many years of war, had made and received overtures of conciliation; and the Duke de Nivernois was sent by Louis XV. as ambassador extraordinary to negotiate the terms of peace. The chevalier, who accompanied him as secretary, won general favour at court; he was of prepossessing appearance, managed the duties of his position with much ability, and displayed a wide range of accomplishments. When the duke had completed the terms of peace, D'Eon had the honour of communicating the fact from the one sovereign to the other. The court-journal of those days announced as follows, early in 1763: 'M. d'Eon de Beaumont, secretary to the embassy from France, returned this day to London, and was received by the Duke de Nivernois as Knight of the Royal Military Order of St Louis: his Most Christian Majesty having invested him with that order, when he presented to him the ratification of the definitive treaty of peace with England.' Madame de Pompadour, who held an equivocal but influential position at the court of Versailles, wrote about the same time to the Duke de Nivernois, noticing the chevalier in the following terms: 'This M. d'Eon is, I am told, a very good sort of man, who has served the king in more countries than one: and the English have been very polite in giving him the treaty to bring. This, I doubt not, will be of some advantage to him.' When the duke returned to France in 1763, on the completion of his mission, he strongly recommended D'Eon as the temporary representative of France in England, until a permanent ambassador could be appointed. So well had the chevalier conducted himself, that both monarchs assented to this; and soon afterwards we read of the three distinguished French *savans*, Lalande, La Condamine, and Camus, being introduced to George III. by the Chevalier d'Eon, as French envoy or representative.

These were the only three brilliant years of D'Eon's life passed in England; they were followed by a period of disgrace. Louis XV. appointed the Count de Guercy his permanent ambassador in England, and directed D'Eon to resume his former position as secretary of embassy, with additional honours as a reward for his services. D'Eon, disappointed in his ambition, or angered in some other way, refused to submit, and published letters exposing a number of diplomatic secrets relating to the court of France, including an accusation very damaging to the Count de Guercy. The French courtiers were very uneasy at this; and the count brought an action against him in the Court of King's Bench for libel. D'Eon made neither an appearance nor a defence, and a verdict was given against him. The French authorities were very anxious to get hold of him, and even sanctioned a forcible entry into a house in Scotland Yard, where he was supposed to be residing; but he remained for a time hidden. Towards the close of 1764, he applied for a bill of indictment against the Count de Guercy, for a conspiracy to murder or injure him; the count, instead of rebutting the charge, claimed his privileges as a foreign ambassador; and the public remained of opinion that the charge was not wholly without foundation.

Now ensued a strange portion of D'Eon's career. He remained in England several years, little known except by his frequent attendance at fencing-matches, in which art he was an adept. At length, in July 1777, an action was brought in the Court of King's Bench, the decision of which would depend on the *sex* of D'Eon. One man, on evidence which seemed to him conclusive, betted a wager that the chevalier was a woman, and brought an action to recover the amount of the bet. Without touching upon the evidence adduced, or the judge's comments, it will suffice to say that D'Eon from that time became regarded as *Madame* D'Eon, and assumed female attire. A memoir of her was published, from which it appeared that she was born at Tonnerre, in Burgundy, of parents who occupied a good station in society. For the purpose, as is stated, of advancing her prospects in life, she was, with her own consent, treated as a boy, and received the multifarious names of Charles-Genevieve-Louis-Auguste-André-Timothé d'Eon de Beaumont. She was sent to Paris, and educated at the College Mazarin, where she went through the same physical and mental exercises as the other pupils. She became a well-educated person. When past the age of schooling, she became successively doctor in civil law, doctor in canon law, and avocat before the tribunals of Paris; and wrote several books which attracted attention. She was introduced to the Prince de Conti, who introduced her to Louis XV. Louis at that time wished Russia to form a league with France instead of with Prussia; but as this could not be accomplished without a little preliminary intrigue, some secret agent was needed; and D'Eon was selected for this delicate position. The memoir implies, if not directly asserts, that Louis was made acquainted with the real sex of D'Eon. Be this as it may, D'Eon made two distinct visits to Russia, in or about the year 1755; the first time dressed as a woman, the second time as a man, and not known by any one

as the same person in the two capacities. So well did D'Eon succeed, that presents and rewards followed—rich gifts from the Empress Elizabeth; and a pension, together with a lieutenancy of dragoons, from Louis. D'Eon served in the campaigns of the Seven Years' War; and then occurred the events in England between 1761 and 1777, already noticed.

The end of D'Eon's life was as strange as the beginning. In woman's dress, D'Eon was in France for a time in 1779, but he resided mostly in England. It was supposed by many that he was largely interested in bets, amounting in various quarters to the enormous sum of £70,000, depending on the question of sex; but a positive denial was given to this insinuation. At length, in 1810, the newspapers announced that the 'celebrated Chevalier d'Eon,' died, on the 22d of May, in Millman Street, Foundling Hospital; and then, and not until then, was it decisively known that he was really and properly Chevalier d'Eon, who had so often, and for reasons so little to be comprehended, passed himself off as a woman.

THE STORY OF MAJOR ANDRE.

There are few monuments in Westminster Abbey which have attracted more attention than that which commemorates the sad fate of Major André. Perhaps no event of the American revolution made more aching hearts on both sides of the Atlantic. Great Britain lost two armies, and thousands of her brave soldiers were slain upon the field of battle, but it may be doubted if so many tears were shed for them all, as for this young soldier, who died upon the gallows.

John André was born in London, the son of a Genevese merchant, in 1751. He was sent to Geneva to be educated, but returned to London at the age of eighteen, and, his talents having introduced him to a literary coterie, he became enamoured of Miss Honora Sneyd, a young lady of singular beauty and accomplishments. As both were very young, the marriage was postponed, and André was induced to engage in trade; but he was ambitious, and, at the age of twenty, entered the army. At the outbreak of the American war he was sent to Canada, and taken prisoner at St John's; but being exchanged, he became the favourite of that gay and gallant officer, General Sir Henry Clinton, who appointed him his aid-de-camp, and soon after adjutant-general.

Young, handsome, clever, full of taste and gaiety, an artist and a poet, he was the life of the army, and the little vice-regal court that was assembled around its chief. The British occupied the American cities, and while the troops of Washington were naked and starving at Valley Forge, Sir Henry was holding a series of magnificent revels in Philadelphia, which were planned and presided over by the gallant Major André.

Philadelphia was evacuated; Sir Henry returned to New York; and Major André, who had known the wife of the American general, Arnold, in Philadelphia, entered into a correspondence with him, and was the agent through whom the British general bargained, under promise of a large reward, for the surrender of Westpoint, the key of the highlands of the river Hudson. André visited Arnold within the American lines, to carry out this treachery; he was captured on his return by three American farmers, who refused his bribes; the papers proclaiming Arnold's treason were found upon him, and, by his own frank confession, he was convicted as a spy, and sentenced to be hanged.

Arnold, by the blunder of an American officer, got warning, and escaped on board the *Vulture*. Sir Henry Clinton, by the most urgent representations to General Washington, tried to save his favourite adjutant, but in vain. There was but one way—the surrender of Arnold, to meet the fate decreed to André. That was impossible; and the young adjutant, then in his twenty-ninth year, after a vain appeal to Washington, that he might die a soldier's death, was hanged on the west bank of the Hudson, almost in sight of the city held by the British army, October 2, 1780. If his life had been undistinguished, he died with heroic firmness. The whole British army went into mourning, and, after the close of the war, his body was deposited near his monument in Westminster Abbey. Even in America, where the name of Arnold is a synonym of treason, the sad fate of Major André excited, and still excites, universal commiseration.

OCTOBER 3.

St Dionysius the Areopagite, bishop of Athens, martyr, 1st century. The Two Ewalds, martyrs, about 695. St Gerard, abbot, 959.

Born.—Richard Boyle, the great Earl of Cork, 1566, *Canterbury;* Giovanni Baptista Beccaria, natural philosopher, 1716, *Mondovi.*

Died.—Robert Barclay, celebrated Scottish Quaker, author of the *Apology* for Quaker tenets, 1690, *Ury, Kincardineshire;* Victor, French dramatic writer, 1846; A. E. Chalon, artist, 1860, *London.*

WATCHING AND LIGHTING OLD LONDON.

Civilisation, in its slowest progress, may be well illustrated by a glance at the past modes of guarding and lighting the tortuous and dangerous streets of old cities. From the year 1253, when Henry III. established night-watchmen, until 1830, when Sir Robert Peel's police act established a new kind of guardian, the watchman was little better than a person who

'Disturbed your rest to tell you what 's o'clock.'

He had been gradually getting less useful from the days of Elizabeth; thus Dogberry and his troop were unmistakable pictures of the tribe, as much relished for the satirical truth of their delineation in the reign of Anne, as in that of her virgin predecessor. Little improvement took place until the Westminster act was passed in 1762, a measure forced on the attention of the legislature by the impunity with which robbery and murder were committed after dark. Before that year, a few wretched oil lamps only served to make darkness visible in the streets, and confuse the wayfarer by partial glimmerings across his ill-paved path. Before the great civil wars, the streets may be said to have been only lighted by chance; by the lights from windows, from lanterns grudgingly hung out

by householders, or by the watchmen during their rounds; for by a wonderful stretch of parochial wisdom, and penny-wise economy, the watching and lighting were performed at the same time. The watchman of the olden time carried a fire-pot, called a cresset, on the top of a long pole, and thus marched on, giving light as he bawled the hour, and at the same time, notification of his approach to all thieves, who had thus timeous warning to escape.

THE CRESSET-BEARER.

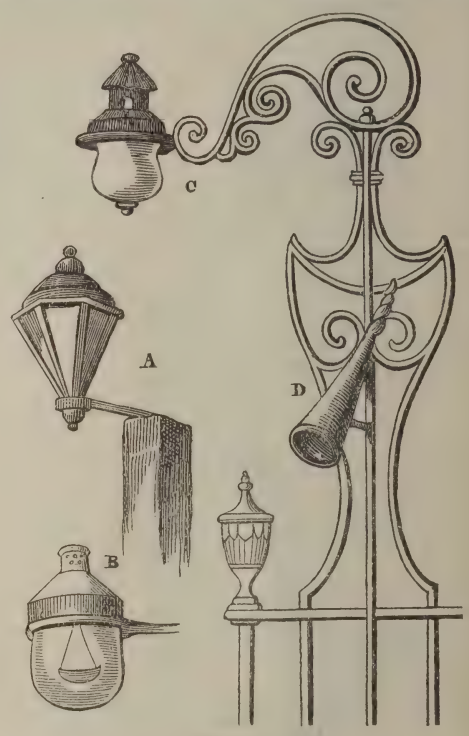
The appearance of this functionary in the sixteenth century will be best understood from the engraving here copied from one in Sharp's curious dissertation on the Coventry Mysteries. A similar cresset is still preserved in the armoury of the Tower of London. It is an open-barred pot, hanging by swivels fastened to the forked staff; in the centre of the pot is a spike, around which was coiled a rope soaked in pitch and rosin, which sputtered and burned with a lurid light, and stinking smoke, as the watchman went his rounds. The watch was established as a stern necessity; and that necessity had become stern, indeed, before his advent. Roger Hoveden has left a vivid picture of London at night in the year 1175, when it was a common practice for gangs of a 'hundred or more in a company' to besiege wealthy houses for plunder, and unscrupulously murder any one who happened to come in their way. Their 'vocation' was so flourishing, that when one of their number was convicted, he had the surpassing assurance to offer the king five hundred pounds of silver for his life. The gallows, however, claimed its due, and made short work with the fraternity; who continued, however, to be troublesome from time to time until Henry III., as already stated, established regular watchmen in all cities and borough-towns, and gave the person plundered by a thief the right of recovering an equivalent for his loss from the legal guardians of the district in which it occurred; a wholesome mode of inflicting a fine for the non-performance of a parish duty.

The London watchman of the time of James I., as here depicted, differed in no essential point from

WATCHMAN—TEMP. JAMES I.

his predecessors in that of Elizabeth. He carried a halbert and a horn-lantern, was well secured in a frieze gabardine, leathern-girdled; and wore a serviceable hat, like a pent-house, to guard against weather. The worthy here depicted has a most venerable face and beard, shewing how ancient was the habit for parish officers to select the poor and feeble for the office of watchman, in order to keep them out of the poorhouse. Such 'ancient and most quiet watchmen' would naturally prefer being out of harm's way, and warn thieves to depart in peace by ringing the bell, that the wether of their flock carried; 'then presently call the rest of the watch together, and thank God you are rid of a knave,' as honest Dogberry advises. Above the head of the man, in the original engraving from which our cut is copied, is inscribed the cry he uttered as he walked the round of his parish. It is this: 'Lanthorne and a whole candell light, hange out your lights heare!' This was in accordance with the old local rule of London, as established by the mayor in 1416, that all householders of the better class, rated above a low rate in the books of their respective parishes, should hang a lantern, lighted with a fresh and whole candle, nightly outside their houses for the accommodation of foot-passengers, from Allhallows evening to Candlemas day. There is another picture of a Jacobean bellman in the collection of prints in the British Museum, giving a more poetic form to the cry. It runs thus:

> 'A light here, maids, hang out your light,
> And see your horns be clear and bright,
> That so your candle clear may shine,
> Continuing from six till nine;
> That honest men that walk along
> May see to pass safe without wrong.'



The honest men had, however, need to be abed betimes, for total darkness fell early on the streets when the rush-candle burned in its socket; and

was dispelled only by the occasional appearance of the watchman with his horn lantern; or that more important and noisier official, the bellman. One of these was appointed to each ward, and acted as a sort of inspector to the watchmen and the parish, going round, says Stow, 'all night with a bell, and at every lane's end, and at the ward's end, gave warning of fire and candle, and to help the poor, and pray for the dead.' Our readers have already* been presented with a picture of the Holborn bellman, and a specimen of his verse. He was a regular parish official, visible by day also, advertising sales, crying losses, or summoning to weddings or funerals by ringing his bell. It was the duty of the bellman of St Sepulchre's parish, near Newgate, to rouse the unfortunates condemned to death in that prison, the night before their execution, and solemnly exhort them to repentance with good words in bad rhyme, ending with:

'When Sepulchre's bell to-morrow tolls,
The Lord above have mercy on your souls!'

The watchman was a more prosaic individual, never attempting a rhyme; he restricted himself to news of the weather, such as: 'Past eleven, and a starlight night;' or 'Past one o'clock, and a windy morning.' Horace Walpole amusingly narrates the parody uttered by some jesters who returned late from the tavern on the night when frightened Londoners expected the fulfilment of a prophecy, that their city should be engulfed by an earthquake, and had, in consequence, as many of them as could accomplish it, betaken themselves to country lodgings. These revellers, as they passed through the streets, imitated the voice of the watchmen, calling, 'Past twelve o'clock, and a dreadful earthquake!'

The miserable inefficiency of the watchmen, and the darkness and danger of the streets, continued until the reign of Anne. The apathy engendered by long usage, at last was roused by the boldness of rascaldom. Robberies occurred on all sides, and night-prowlers scarcely waited for darkness to come, ere they began to plunder. It was not safe to be out after dark, the suburbs were then cut off from the town, and a return from London to Kensington or Highgate was a risk to the purse, and probably to the life of the rash adventurer. There was even a plot concocted to rob Queen Anne as she returned to Kensington in her coach. Still the police continued ineffectual, and as long after as 1744, the mayor and aldermen addressed the king, declaring the streets more unsafe than ever, 'even at such times as were heretofore deemed hours of security;' in consequence of 'confederacies of great numbers of evil-disposed persons armed with bludgeons, pistols, cutlasses, and other dangerous weapons,' who were guilty of the most daring outrages. The prison and the gallows now did their work in clearing the streets, the watch was put on a better footing, and a parish tax for lighting led to the establishment of oil-lamps in the streets. The rude character of these illuminations may be seen in Hogarth's view of St James's Street, where the best would naturally be placed. Fig. A of the following group is copied from this view, forming the background of the fourth plate of the 'Rake's Progress' (1735). A rough wooden post, about eight feet high, is stuck in the ground; from this stretches an iron rod and ring, forming a socket for the angular lamp, dimly lighted by a cotton-wick floating in a small pan of oil. Globular lamps were the invention of one Michael Cole, who obtained a patent for them in 1708, and first exhibited one of them the year following at the door of the St James's Coffee-house. He described it as 'a new kind of light, composed of one entire glass of a globular

OLD STREET LAMPS.

shape, with a lamp, which will give a clearer and more certain light from all parts thereof, without any dark shadows, or what else may be confounding or troublesome to the sight, than any other lamps that have hitherto been in use.' Cole was an Irish gentleman, and his lamp seems to have won favour; it slowly, but surely, came into general use, and is shewn in our Figure B.

It was customary, in the Hogarthian era, and until the close of the last century, to bestow much cost on the iron-work about aristocratic houses. The lamp-irons at the doors were often of highly-enriched design in wrought metal; many old and curious specimens still remain in the older streets and squares at the west-end of our metropolis. Fig. C depicts one of these in Manchester Square, and the reader will observe the trumpet-shaped implement D attached midway. This is an extinguisher, and its use was to put out the flambeau carried lighted by the footman at the back of the carriage, during a night-progress in the streets. Johnson notices the cowardly bullies of London, who

'Their prudent insults to the poor confine;
Afar they mark the flambeau's bright approach,
And shun the shining train, and golden coach.'

* Vol. i. p. 496.

We give a second, and more ornate example, of a doorway lamp and extinguisher from Grosvenor Square, and it may be remarked as a curious instance of aristocratic self-sufficiency, that this spot, and a few others inhabited by the nobility,

ARISTOCRATIC EXTINGUISHERS.

were the last to adopt the use of the gas-lamp.* This last great improvement was due to a German named Winser, who first publicly exhibited lamps thus lighted on the colonnade in front of Carlton House. Pall Mall followed the example in 1807. The citizens, some time afterwards, lighted Bishopsgate Street in the same manner. Awful consequences were predicted by antiquated alarmists from the extensive use of gas in London: it was to poison the air and blow up the inhabitants! In 1736, one thousand dim oil-lamps supplied with light the whole of the city of London, and there was probably a less number outside; now, there are several thousands of miles of gas-piping laid under the streets for the supply of our lamps; and their light makes an atmospheric change over London, visible at twenty miles' distance, as if from the reflection of one vast furnace.

A KING ARRESTED BY HIS VASSAL.

The crafty and unscrupulous character of Louis XI. is well known. The great object of his policy, as subsequently with Henry VII. of England, was the reduction of the power of the nobles and great vassals of the crown, so as to strengthen and render paramount the royal prerogative. But the means which he adopted for the accomplishment of this end were of a much darker and more subtle description than those employed by the English monarch. One feudal prince, against whom his machinations were especially directed, was the celebrated Charles the Bold, Duke of Burgundy, than whom, with his ardent impetuous nature, there can scarcely be imagined a greater contrast than the still and wily Louis, whose line of conduct has earned for him the cognomen of the Tiberius of France. Yet on one occasion, the duplicity of the latter found itself at fault, and nearly entailed upon its possessor the most serious consequences.

The burghers of Liège had revolted from their liege lord, the Duke of Burgundy, and been secretly encouraged in their rebellion by the king of France. Louis believed it possible to conceal this circumstance from Charles, but one of his own ministers, the Cardinal Balue, maintained a correspondence with the duke, and kept him informed of everything that transpired at the French court. Through the instigation of this treacherous courtier, Louis was induced to pay his vassal a visit at the town of Peronne, in the territories of the latter. By this mark of confidence, the French king hoped to hoodwink and cajole Charles. The duke received his sovereign with all marks of respect, and lodged him with great splendour in the castle of Peronne. Conferences on state matters were entered into between the two potentates, but in the midst of them Charles received intelligence of Louis's underhand-dealings with the people of Liège, and his rage on learning this was ungovernable. On the 3d October 1468, he laid the French king under arrest, subjected him to close confinement, and was even on the point of proceeding to further extremities. But he ultimately satisfied himself by dictating to Louis a very humiliating treaty, and causing him to accompany him on an expedition against those very citizens of Liège with whom he had been intriguing, and assist in the burning of their town. It is said that so bitter was the mortification which Louis endured in consequence of having thus imprudently placed himself in the power of Charles, that on his return home, he ordered to be killed a number of tame jays and magpies, who had been taught to cry 'Peronne!' The treachery of Cardinal Balue was also punished by the confinement, for many years, of that churchman in an iron cage of his own invention.

ROBERT BARCLAY.

Though not the founder of the Society of Friends, Robert Barclay was one of its earliest and most energetic champions, and did more than any other in vindicating and explaining its principles to the world. The great apologist of the Quakers was the eldest son of Colonel David Barclay of Ury, in Kincardineshire, a Scottish gentleman of ancient family, who had served with distinction in the wars of the great Gustavus Adolphus. Robert received his first religious training in the strict school of Scottish Calvinism, but having been sent to Paris to study in the Scots College there, under the

* It was not till 1842 that gas was permitted to shed its rays over the genteel gloom of this locality; it seems difficult to believe that this prejudice was recently existing in such full force.

rectorship of his uncle, he was led to become a convert to the Roman Catholic faith. Returning, in his fifteenth year, to his native country, he found that his father had joined himself to the new sect of the Quakers, which had only a few years previously sprung into existence under the leadership of George Fox. Robert's faith in the Romish church does not appear to have been very lasting, as, in the course of a few years, we find him following the example of his parent, and adopting enthusiastically the same tenets. Father and son had alike to experience the effects of the aversion with which, in its early days, the Society of Friends was regarded both by Cavalier and Puritan, by Presbyterian and Prelatist. The imprisonment which they underwent is said to have been owing to the agency of the celebrated Archbishop Sharp of St Andrews. It was not, however, of long duration, and through the interposition of the Princess Elizabeth, Princess Palatine, and cousin of Charles II., Robert Barclay was not only liberated from confinement, but seems afterwards to have so far established himself in the favour of the king, that in 1679 he obtained a royal charter erecting his lands of Ury into a free barony, with all the privileges of jurisdiction and otherwise belonging to such an investiture. The remainder of his life was spent in furthering the diffusion of Quakerism, travelling up and down the country in the promulgation of its tenets, and employing his interest with the state authorities in shielding his brethren from persecution. He enjoyed, like Penn, the friendship of James II., and had frequent interviews with him during his visits to London, the last being in 1688, a short time previous to the Revolution. Barclay's own career came to a termination not long afterwards, and he expired prematurely at Ury, after a short illness, on 3d October 1690, at the age of forty-one. He left, however, a family of seven children, all of whom were living fifty years after his death. One of them, Mr David Barclay, who became an eminent mercer in Cheapside, is said, as lord mayor, to have entertained three successive English monarchs —George I., II., and III. The celebrated pedestrian and athlete, Captain Barclay, was a descendant of the great Quaker-champion and the last of the name who possessed the estate of Ury. The old mansion-house having passed, in 1854, into the hands of strangers, was pulled down, and with it 'the Apologist's Study,' which had remained nearly in the same condition as when used by Barclay, and had formed for generations a favourite object of pilgrimage to the Society of Friends.

Barclay's great work, *An Apology for the true Christian Divinity, as the same is held forth and practised by the People called, in scorn, Quakers*, was first published in Latin and afterwards translated by the author into English. It comprises an exposition and defence of fifteen religious propositions maintained by the Quakers, and forms the ablest and most scholarly defence of their principles that has ever been written. The leading doctrine pervading the book is that of the internal light revealing to man divine truth, which it is contended cannot be attained by any logical process of investigation or reasoning. Among other works of the great Quaker were: *A Catechism and Confession of Faith*, and *A Treatise on Universal Love*, the latter being a remonstrance on the criminality of war, and published whilst its author was enduring with his father imprisonment at Aberdeen for conscience' sake. Though so far led away by enthusiasm, on one occasion, as to walk through the streets of Aberdeen, clothed in sackcloth and ashes, as a call on the inhabitants to repentance, Barclay was far from displaying in his ordinary deportment any of that rigour or sourness by which members of his sect have been often supposed to be characterised. He was exemplary in all the relations of life, and was no less distinguished by the gentleness and amiability of his character, than by range and vigour of intellect.

TREATY OF LIMERICK.

On 3d October 1691, was signed the famous treaty of Limerick, by which the resistance of the Irish to the government of William III. was terminated, and the latter established as undisputed sovereign of the three kingdoms. On the part of the besieged the defence had been conducted by General Sarsfield, one of the bravest and ablest of King James's commanders, who had conducted thither the remains of the army which had continued undispersed after the disastrous engagement of Aghrim, in the preceding month of July. Within the walls of Limerick were contained the whole strength and hope of the Jacobite cause. On the 26th of August, the town was invested by William's Dutch commander, Ginckel, but the garrison made a brave resistance, and it was not till after some terrible encounters that the attacking force was enabled to open its trenches on both sides of the Shannon. On this advantage being gained, Sarsfield, despairing of successfully holding the place, proposed a surrender upon conditions, an offer which was favourably entertained, and by the treaty signed two days subsequently, the war in Ireland was concluded, and tranquillity restored to the country, after a long series of devastating hostilities.

The articles of the treaty of Limerick were highly creditable both to the wisdom and moderation of King William, and also to the valour of the Irish garrison, who had succeeded in obtaining such favourable terms. The troops were allowed to march out of the town with all the honours of war, and had permission, at their option, to embark for France, or enter the service of the English king. The majority, numbering about 10,000, preferred the former alternative, and passing over to the continent, enrolled themselves under the standard of Louis XIV., and became that renowned corps so celebrated in the French service, as 'The Irish Brigade.' The most important stipulation of the treaty, however, in a national point of view, was the clause by which the Roman Catholics were secured in the free exercise of their religion. This stipulation was shamefully violated afterwards by the superimposition of oppressive penal laws, by which was fostered a spirit of hatred and hostility to the English government, who ought rather to have sought to conciliate the inhabitants, and the evil results of whose policy towards Ireland, throughout the eighteenth century, are observable even to the present day.

OCTOBER 4.

Saints Marcus and Marcian, and their companions, martyrs, beginning of 4th century. The Martyrs of Triers, 4th century. St Ammon, hermit, founder of the Hermitages of Nitria, 4th century. St Petronius, bishop of Bologna, confessor, 5th century. St Edwin, king of Northumberland, martyr, 633. St Aurea, virgin and abbess, 666. St Francis of Assisi, confessor, founder of the Friar Minors, 1226.

ST FRANCIS.

The memory of no saint is held in affection so mingled with reverence by the Roman Catholic Church as St Francis, 'the gentle and the holy.' He was born in 1182, in the romantic town of Assisi, in Umbria. His father was a merchant, and a hard money-making man. Francis he took into partnership, but he wasted his money in gay living, splendid dress, and banqueting, and made the streets of Assisi ring at night with song and frolic. When about twenty-five, he was seized with a violent illness, and when he rose from his bed, nature looked dreary, and his soul was filled with loathing for his past life and habits. He resolved to be religious, and of course religious after the fashion of his generation. He determined never to refuse alms to a poor person. He met a troop of beggars, and exchanged his dress for the rags of the filthiest. He mortified himself with such severity, that Assisi thought he had gone distracted. His father had been distressed by his luxury, but now he thought he should be ruined by his alms-giving. To bring him, as he thought, to his senses, he beat him unmercifully, put him in fetters, and locked him up. Finding him, however, incorrigible, he carried him before the bishop; and there and then he renounced all his rights of ownership and inheritance, and stripped off his clothes in token of his rejection of the world, and his perpetual choice of poverty.

Francis, thus relieved from all entanglement, pursued his way with a simple energy which nothing could withstand. The fervour of his devotion diffused itself like an epidemic, and crowds parted with their possessions, and followed him into poverty and beggary. He went to Rome, and offered himself and his comrades to the service of the pope. Innocent III., in 1210, incorporated the order, which grew into the mighty and wide-spread fraternity of Franciscans, Grey Friars, or Minor Friars. The first name they had from their founder, the second from their gray clothing, and the third from their humility. Their habit was a loose garment, of a gray colour reaching to the ankles, with a cowl of the same, and a cloak over it when they went abroad. They girded themselves with cords, and went barefooted.

The austerities related of Francis are very much of a piece with those told of other saints. He scarcely allowed his body what was necessary to sustain life. If any part of his rough habit seemed too soft, he darned it with packthread, and was wont to say to his brethren, that the devils easily tempted those who wore soft garments. His bed was usually the ground, or he slept sitting, and for his bolster he had a piece of wood or stone. Unless when sick, he rarely ate any food that was cooked with fire, and when he did, he sprinkled it with ashes. Yet it is said, that with indiscreet or excessive austerity he was always displeased. When a brother, by long fasting, was unable to sleep, Francis brought him some bread, and persuaded him to eat by eating with him. In treating with women, he kept so strict a watch over his eyes, that he hardly knew any woman by sight. He used to say: 'To converse with women, and not be hurt by it, is as difficult as to take fire into one's bosom and not be burned. He that thinks himself secure, is undone; the devil finding somewhat to take hold on, though it be but a hair, raises a dreadful war.'

He was endowed, say his biographers, with an extraordinary gift of tears; his eyes were as fountains which flowed continuously, and by much weeping he almost lost his sight. In his ecstatic raptures, he often poured forth his soul in verse, and Francis is among the oldest vernacular poets of Italy. His sympathy with nature was very keen. He spoke of birds and beasts with all the tenderness due to children, and Dean Milman says the only malediction he can find which proceeded from his lips, was against a fierce swine which had killed a lamb. He had an especial fondness for lambs and larks, as emblems of the Redeemer and the Cherubim. When his surgeon was about to cauterise him for an issue, he said: 'Fire, my brother, be thou discreet and gentle to me.' In one of his hymns, he speaks of his brother the Sun, his sister the Moon, his brother the Wind, his sister the Water. When dying, he said: 'Welcome, Sister Death.' While in prayer it is said that he often floated in the air. Leo, his secretary and confessor, testified that he had seen him, when absorbed in devotion, raised above the ground so high that he could only touch his feet, which he held, and watered with his tears; and that sometimes he saw him raised much higher!

In his ardour for the conversion of souls, he set out to preach to the Mohammedans. A Christian army was encamped before Damietta, in Egypt. He passed beyond its lines, and was seized and carried before the sultan, and at once broke forth in exposition of the mysteries of faith. The sultan is reported to have listened with attention, probably with the Mohammedan reverence for the insane. Francis offered to enter a great fire with the priests of Islam, and to test the truth of their creeds by the result. The offer was declined. 'I will then enter alone,' said Francis. 'If I should be burned, you will impute it to my sins; should I come forth alive, you will embrace the gospel.' This also the sultan refused, but with every mark of honour convoyed the bold apostle to the camp at Damietta.

The crowning glory of the life of Francis is reputed to have occurred in the solitude of Mount Alverno, whither he had retired to hold a solemn fast in honour of the archangel Michael. One morning, when he was praying, he saw in vision a seraph with six wings, and in the midst of the wings the crucified Saviour. As the vision disappeared, and left on his mind an unutterable sense of delight and awe, he found on his hands and feet black excrescences like nails, and in his side a wound, from which blood frequently oozed, and stained his garment. These marks, in his humility, he hid with jealous care, but they became known, and by their means were wrought

many miracles. Pope Alexander IV. publicly declared that, with his own eyes, he had seen the stigmata.

These are a few instances out of the mass of legends which made the name of Francis a great power in Europe in the middle ages. He died at Assisi, in 1226, on the 4th of October, which day was appointed as his festival.

Born.—Cardinal Robert Bellarmin, eminent controversialist, *Monte Pulciano, Tuscany;* Richard Cromwell, eldest surviving son of the Protector, 1626, *Huntingdon;* Edmond Malone, editor of Shakspeare, 1741, *Dublin.*

Died.—Edwin the Great, king of Northumberland, slain at Hatfield, 633; St Francis, founder of the Franciscans or Gray Friars, 1226, *Assisi;* John, Duke of Argyll, statesman and general, 1743; Henry Carey, musician, 1743, *London;* Samuel Horsley, bishop of St Asaph's, divine and controversialist, 1806, *Brighton;* John Vandenhoff, tragedian, 1861, *London.*

HENRY CAREY.

Carey was a musician and a music-composer of great merit, but not fortunate in his life or affairs. After a long struggle with poverty, he died suddenly, and it has been alleged by his own hand (but this is doubtful), leaving a widow and four small children totally unprovided for. One feels it to have been a sad fate for the man who gave us the charming simple ballad of *Sally in our Alley*, a strain which has been the delight of an infinity of people, and will probably continue so while the English language lasts.

Carey, however, would appear to have conferred a greater musical obligation upon his country than even *Sally in our Alley*. There is now pretty good reason to conclude that he was the author of the Royal Anthem. This noble composition has indeed been attributed to Dr Richard Bull, who lived in the reign of James I., and another history would represent it as originating in honour of James II., at the time when he was threatened with the invasion of the Prince of Orange; but there is in reality no evidence for the words or air having existed before the year 1740. In 1794, a gentleman, named Townsend, was able to report that his father had dined with a party which met in a tavern in Cornhill, in 1740, to celebrate the capture of Portobello, when he heard Henry Carey sing the song as his own composition, with great applause from the company. About the same time, Dr Harington, the celebrated physician and amateur-musician of Bath, took down from the lips of John Christopher Smith, who had composed an opera for which Carey gave the *libretto*, a statement, which Dr Harington had often heard from the old gentleman before—that Henry Carey came to him with the words and music of *God Save the King*, 'desiring him to correct the base, which was not proper'—a request which Mr Smith complied with by writing another base in correct harmony.

The anthem does not seem to have come into notoriety till the first successes of Prince Charles Edward Stuart in the autumn of 1745, called forth a burst of loyal—that is, anti-popish feeling, in the population of London. To gratify this sentiment, the song was brought upon the stage in both Covent Garden and Drury Lane theatres. The *Daily Advertiser* of Monday, September 30, 1745, contains this statement: 'On Saturday night last, the audience at the Theatre-Royal, Drury Lane, were agreeably surprised by the gentlemen belonging to that house performing the anthem of *God Save our Noble King* The universal applause it met with—being encored with repeated huzzas—sufficiently denoted in how just abhorrence they hold the arbitrary schemes of our insidious enemies, and detest the despotic attempts of papal power.' The song and air (the latter with some slight inaccuracies) were printed in the *Gentleman's Magazine* for October of that year; but Mr William Chappell believes that it had seen the light previously, in a collection, entitled *Harmonia Anglicana.**

OCTOBER 5.

St Placidus, abbot, and companions, martyrs, 546. St Galla, widow, about 550.

Born.—Jonathan Edwards, eminent Calvinistic divine, 1703, *Windsor, Connecticut;* Horace Walpole, Earl of Orford, celebrated virtuoso and man of letters, 1717, *Wareham, Dorsetshire;* Dr William Wilkie, author of the *Epigoniad*, 1721, *Dalmeny, Linlithgowshire;* Lloyd, Lord Kenyon, distinguished lawyer, 1732, *Greddington, Flintshire.*

Died.—Justin, Roman emperor, 578; Henry III., emperor of Germany, 1056; Philip III., the Bold, king of France, 1285; Edward Bruce, brother of King Robert, killed at Fagher, Ireland, 1318; Augustus III., king of Poland, 1763, *Dresden;* Charles, Marquis Cornwallis, governor-general of India, 1805, *Ghazepore, Benares;* Bernard, Comte de Lacépède, eminent naturalist, 1825.

HEART-BEQUESTS.

Some curious notions and practices respecting the human heart came into vogue about the time of the first Crusade, and were by many believed to have originated among those who died in that expedition. As the supposed seat of the affections, the heart was magnified into undue importance, and, after the death of a beloved or distinguished person, became the object of more solicitude than all the rest of his body. Thus the heart was considered the most valuable of all legacies, and it became the habit for a person to bequeath it to his dearest friend, or to his most favourite church, abbey, or locality, as a token of his supreme regard. And when no such bequest was made, the friends or admirers of deceased persons would cause their hearts to be carefully embalmed, and then, enclosing them in some costly casket, would preserve them as precious treasure, or entomb them with special honour. This remarkable practice, which has been continued more or less down to the present century, was most prevalent during the medieval ages—numerous instances of which are still on record, and many of them are curious and interesting. Our space will only permit us to give a few specimens:

Robert, the famous Earl of Mellent and Leicester, died in 1118, in the abbey of Preaux, where his body was buried, but his heart, by his own order, was conveyed to the hospital at Brackley, to be

* See Mr Chappell's learned work, *Popular Music in the Olden Time*, ii. 691–707.

there preserved in salt.* He had been among the early Crusaders in the Holy Land, and was, says Henry of Huntingdon, 'the most sagacious in political affairs of all who lived between this and Jerusalem. His mind was enlightened, his eloquence persuasive, his shrewdness acute.' But he was rapacious, wily, and unscrupulous, and acquired much of his vast possessions, which were very extensive, both in England and Normandy, by unjust manœuvres, and acts of cruelty and violence. When he perceived death approaching, he assumed the monastic habit, the usual act of atonement in such characters at that period, and died *a penitent* in the abbey of Praeux, but, while he founded the hospital at Brackley, where his heart was preserved, he stoutly refused to restore any of the possessions which he had unjustly acquired.†

Isabella, daughter of William the Marshal, Earl of Pembroke, and wife of Richard, brother of Henry III., died at Berkhamstead in 1239, and ordered her heart to be sent in a silver cup to her brother, then abbot of Tewkesbury, to be there buried before the high-altar. Her body was buried at Beaulieu, in Hampshire.‡ 'The noble Isabella, Countess of Gloucester and Cornwall,' says Matthew Paris, 'was taken dangerously ill of the yellow jaundice, and brought to the point of death. She became senseless, and after having had the ample tresses of her flaxen hair cut off, and made a full confession of her sins, she departed to the Lord, together with a boy to whom she had given birth. When Earl Richard, who had gone into Cornwall, heard of this event, he broke out into the most sorrowful lamentations, and mourned inconsolably.' Henry, their son, while attending mass in the church of St Lawrence, at Viterbo, in Tuscany, was cruelly murdered by Simon and Guy de Montfort, in revenge for the death of their father at the battle of Evesham, in which, however, he appears to have had no part. His heart was sent in a golden vase to Westminster Abbey, where it was deposited in the tomb of Edward the Confessor. On his monument was a gilt statue holding his heart, labelled with these words: 'I bequeath to my father my heart pierced with the dagger.'§ His father, Richard, king of the Romans, having been thrice married, died in 1272, from grief at his son's murder. His body was buried at the abbey of Hayles, his own foundation, and his heart was deposited in the church of the Minorite Brethren, at Oxford, under a costly pyramid erected by his widow.‖

The heart of John Baliol, Lord of Barnard Castle, who died in 1269, was, by his widow's desire, embalmed and enclosed in an ivory casket richly enamelled with silver. His affectionate widow, Devorgilla, used to have this casket placed on the table every day when she ate her meals, and ordered it to be laid on her own heart, when she was herself placed in her tomb. She was buried, according to her own direction, near the altar in New Abbey, which she herself had founded in Galloway, and the casket containing her husband's heart placed on her bosom. From this touching incident, the abbey received the name of Dolce Cor, or Sweetheart Abbey, and for its arms bore in chief a heart over two pastoral staffs, and in base three mullets of five points.

Hearts were not only bequeathed by Crusaders, who died in the Holy Land, to their friends at home, in testimony of unaltered affection, but were sometimes sent there in fulfilment of an unaccomplished vow. Thus Edward I., after he ascended the throne, again took the cross, promising to return to Jerusalem, and give his best support to the crusade, which was then in a depressed condition. But, being detained by his wars with Scotland, unexpected death, in 1307, prevented the fulfilment of his engagement. He therefore, on his death-bed, charged his son to send his heart to Palestine, accompanied with a hundred and forty knights and their retinues, in discharge of his vow. Having provided two thousand pounds of silver for the support of this expedition, and 'his heart being so conveyed thither, he trusted that God would accept this fulfilment of his vow, and grant his blessing on the undertaking.' He also imprecated 'eternal damnation on any who should expend the money for any other purpose. But the disobedient son little regarded the commandment of his father.'*

It is remarkable that the two sworn foes, Edward I. of England, and Robert Bruce, king of Scotland, should have alike decided to send their hearts to be buried in the Holy Land. Each gave the order on his death-bed; each had the same motive for giving it; and the injunction of each was destined to be unperformed; but had their wishes been realised, the hearts of these two inveterate enemies would have met to rest quietly together for ever, in the same sepulchre.

The account of Bruce's heart is very interesting. As he lay on his death-bed, in 1329, he entreated Sir James Douglas, his dear and trusty friend, to carry his heart to Jerusalem, because he had not, on account of his war with England, been able to fulfil a vow which he had made to assist in the crusade. Sir James, weeping exceedingly, vowed, on the honour of a knight, faithfully to discharge the trust reposed in him. After the king's death, his heart was taken from his body, embalmed, and enclosed in a silver case which, by a chain, Douglas suspended to his neck; and then, having provided a suitable retinue to attend him, he departed for the Holy Land. On reaching Spain, he found the king of Castile hotly engaged in war with the Moors, and thinking any contest with Saracens consistent with his vow, he joined the Spaniards in a battle against the Moors, but, ignorant of their mode of fighting, was soon surrounded by horsemen, so that escape was impossible. In desperation, he took the precious heart from his neck, and threw it before him, shouting aloud: 'Pass on as thou wert wont; I will follow or die!' He followed, and was immediately struck to the earth. His dead body was found after the battle, lying over the heart of Bruce. His body was carried away by his friends, and honourably buried in his own church of St Bride, at Douglas. Bruce's heart was intrusted to the charge of Sir Simon Locard of Lee, who bore it back to Scotland, and deposited it beneath the altar in Melrose Abbey, where, perhaps, it still remains. From this incident, Sir Simon changed

* *Magna Britannia;* published in 1724.

his name from Locard to Lockheart (as it used to be spelled), and bore in his arms a heart within a fetterlock, with the motto, 'Corda serrata pando.' From the same incident, the Douglases bear a human heart, imperially crowned, and have in their possession an ancient sword, emblazoned with two hands holding a heart, and dated 1329, the year in which Bruce died. An old ballad, quoted in the notes to Scott's *Marmion*, has this stanza—

'I will ye charge, efter yat I depart,
To holy grave, and thair bury my hart;
Let it remaine ever bothe tyme and howr,
To ye last day I see my Saviour.'

Mrs Hemans has some beautiful lines on Bruce's heart, in Melrose Abbey, of which the following is the first stanza:

'Heart! that didst press forward still,
Where the trumpet's note rang shrill,
Where the knightly swords were crossing,
And the plumes like sea-foam tossing;
Leader of the charging spear,
Fiery heart!—and liest thou here?
May this narrow spot inurn
Aught that so could beat and burn?'

Sir Robert Peckham, who died abroad, caused his heart to be sent into England, and buried in his family vault at Denham, in Buckinghamshire. He died in 1569, but his heart appears to have remained for many years unburied, as we gather from the following entry in the parish-register of burials: 'Edmundus Peckham, Esq^r., sonne of Sir George Peckham, July 18, 1586. On the same day was the harte of S^r Robert Peckham, knight, buried in the vault under the chappell.' The heart is enclosed in a leaden case thus inscribed: 'I. H. S. Robertus Peckham Eques Auratus Anglus

Cor suum Dulciss. patrie major. Monumentis commendari. Obiit 1 Septembris MD. XIX.'

Edward Lord Windsor, of Bradenham, Bucks, who died at Spa, January 24, 1574,* bequeathed his body to be buried in the 'cathedral church of the noble city of Liege, with a convenient tomb to his memory, but his heart to be enclosed in lead, and sent into England, there to be buried in the chapel at Bradenham, under his father's tomb, in token of a true Englishman.'† The case containing this heart, which has on it a long inscription, is still in the vault at Bradenham, and was seen in 1848, when Isaac d'Israeli was buried in the same vault.

The circumstances respecting the heart of Lord Edward Bruce, who was killed in a duel in 1613, are interesting. His body was interred at Bergen, in Holland, where he died, and a monument was

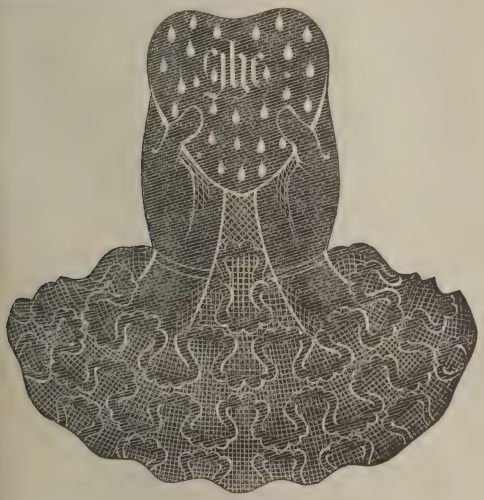
SILVER HEART IN CULROSS ABBEY-CHURCH.

there erected to his memory. But a tradition remained in his family, that his heart had been conveyed to Scotland, and deposited in the burial-ground adjoining the old Abbey-Church of Culross, in Perthshire. The tradition had become to many a discredited tale, when, to put it to the test, a search was made in 1806 for the precious relic. Two flat stones, strongly clasped together with iron, were discovered about two feet below the level of the pavement, and partly under an old projection in the wall. These stones had on them no inscription, but the singularity of their being thus braced together, induced the searchers to separate them, when a silver case, shaped like a heart, was found in a cavity between the stones. The case, which was engraved with the arms and name of Lord Edward Bruce, had hinges and clasps, and on being opened, was found to contain a heart carefully embalmed in a brownish-coloured liquid. After drawings of it were taken, it was carefully replaced in its former situation. In another cavity in the stones was a small leaden box, which had probably contained the bowels, but if so, they had then become dust.*

FIGURE OF A HEART DELINEATED ON TOMB IN ST JOHN'S CHURCH, MARGATE.

It may be just noticed in passing, as another proof of the undue importance attributed to the

* *Archæologia*, vol. xx., as cited by Bloxam's *Monumental Architecture*, p. 64. See also Chambers's *Domestic Annals of Scotland*, vol. i. p. 450.



heart, that formerly the executioner of a traitor was required to remove the body from the gallows before life was extinct, and plucking out the heart, to hold it up in his hands, and exclaim aloud, 'Here is the heart of a traitor!' 'It was currently reported,' says Anthony Wood, 'that when the executioner held up the heart of Sir Everard Digby, and said, "Here is the heart of a traitor!" Sir Everard made answer and said, "Thou liest!"' This story, which rests solely on A. Wood's authority, is generally discredited, though Lord Bacon affirms there are instances of persons saying two or three words in similar cases.

From attaching such importance to the human heart, doubtless arose the practice, which is exemplified in many of our churches, of representing it so freely in sepulchral commemoration. And this occurs, not only where a heart alone is buried, but often the figure of a heart with an inscription is adopted as the sole memorial over the remains of the whole body. An example may be seen in St John's Church, Margate, Kent (see engraving on the previous page). A plate of brass, cut into the shape and size of a human heart, is sunk into the slab which covers the remains of a former vicar of the church. The heart is inscribed with the words 'Credo q^{a},' which begin each inscription on three scrolls that issue from the heart, thus:

Credo q^{a} { Redemptor meus vivit / De terra surrecturus sum / In carne mea videbo deum Salvatorem meum.

Beneath the heart is a Latin inscription, which shews that the whole body of the deceased was interred below. In English it is as follows: 'Here lies Master John Smyth, formerly vicar of this church. He died the thirtieth day of October, A.D. 1433. Amen.'

Sometimes hearts are represented as bleeding, or sprinkled with drops of blood, which was probably

REPRESENTATION OF A HEART IN CHURCH OF LILLINGSTONE DAYRELL.

to symbolise extreme penitence, or special devotedness to a religious life. An example occurs on a brass in the church of Lillingstone Dayrell, Bucks, and is represented in the accompanying wood-cut. The heart is inscribed with the letters J. H. C., and is held in two hands cut off at the wrists, which are clothed in richly-worked ruffles. This heart commemorates the interment of John Merston, rector, who died in 1446. A heart is sometimes placed on the breast, or held in the hands of an effigy representing the person commemorated. The latter case is probably in allusion to Lamentations iii. 41. In such instances, sepulchral hearts are to be regarded as merely emblematic, or, being the chief organ of life, as representatives of the whole body. But in many instances they mark the burial of hearts alone. Thus, in Chichester Cathedral is a slab of Purbeck marble, on which is chiseled a trefoil enclosing hands holding a heart, and surrounded by this inscription:

ICI GIST LE COUER MAUDE DE

The rest of the inscription has been obliterated. Another interesting memorial of the burial of a heart formerly existed in Gaxley Church, Huntingdonshire. This consisted of a small trefoil-headed recess, sculptured in stone, and containing a pair of hands holding a heart. Behind this recess was found a round box, about four inches in diameter, which probably had contained a heart that had perished, as it was empty when discovered.

The burial of hearts appears to have been often attended with some funereal ceremony. The most remarkable instance on record occurred so recently as the 16th of August 1775.

This was the burial, as it was called, of Whitehead's heart. Paul Whitehead was the son of a London tradesman, and was himself apprenticed to a woollen-draper, but having received a superior education, and imbibed a literary bias, he relinquished business as soon as the terms of his apprenticeship were completed. He entered into various literary projects, and published several pieces, both in prose and verse, chiefly of a satirical character. In his poetical satires, he adopted Pope as his model, but, to use his own expression, 'he found that their powers were differently appreciated.' His effusions, however, were not unsuccessful, especially those of a political character, which he supported by the active and zealous part he took at a contested election for Westminster. His talent and services were so far appreciated by his party, that Sir Francis Dashwood, afterwards Lord le Despencer, procured for him an appointment worth about £800 per annum. This, together with his wife's fortune of £10,000, placed him in affluent circumstances, and he passed the remainder of his life in comparative retirement at Twickenham. His compositions were of temporary interest, and he appears to have rightly estimated them himself, for he positively refused to collect them for a standard edition. His moral character, in early life, may be conceived from his being not only a member, but the secretary of the notorious Medmenham Club, or the mock Monks of St Francis. In later life, his habits were respectable, and he possessed a benevolent and hospitable disposition. He died on the 30th of December 1774, aged sixty-four, and among many other legacies, he bequeathed 'his HEART to his noble friend and patron, Lord le Despencer, to be deposited in his mausoleum at West Wycombe, a village two miles from the town of High Wycombe and adjoining Wycombe Park, his lordship's place of residence.'

This mausoleum, which was built with funds bequeathed by George Bubb Dodington, Lord Melcombe Regis, is a large hexagonal roofless building, with recesses in the walls for the reception of busts, urns, or other sepulchral monuments. It stands within the churchyard near the east end of the church, which is also a very singular edifice, built by Lord le Despencer on a remarkably lofty hill, and about half a mile from the village. Whitehead's heart, by order of Lord le Despencer, was wrapped in lead, and enshrined in a marble urn, which cost £50, and on the 16th of August 1775, eight months after Whitehead's death, was conveyed from London to be solemnly deposited within the mausoleum. At twelve o'clock, the precious relic, having arrived within a short distance of Wycombe, was carried forward, accompanied by the following procession :

A grenadier officer in his uniform ;
Nine grenadiers, rank and file, two deep,
the odd one last ;
Two German-flute players ;
Two choristers in surplices, with notes pinned to
their backs ;
Two German-flute players ;
Eleven singing-men in surplices, two and two,
the odd one last ;
Two French-horn players ;
Two bassoon players ;
Six fifers, two and two ;
Four muffled drums, two and two ;
The urn containing the Heart,
resting on a bier ornamented with
black crape, and borne by six soldiers,
with three others on each side to relieve them ;
Lord le Despencer,
as chief mourner, in his regimentals
as colonel of the Bucks Militia, with crape
round his arm ;
Major Skottowe, Captain Lloyd ;
Seven other militia officers in uniform ;
Two fifers ;
Two drummers ;
Twenty soldiers, two and two,
with firelocks reversed.

Dr Arnold, Mr Atterbury, and another walked on the side of the procession all the way, with scrolls of paper in their hands, beating time. The 'Dead March' in *Saul* was played the whole way by the flutes, horns, and bassoons, successively with the fifes and drums. The church-bell continued tolling, and great guns were discharged every three minutes and a half. The hill on which the church stands was crowded with spectators, while the procession, moving very slowly up, was an hour in reaching the mausoleum, and another hour was spent in marching round it, and performing funereal glees. The urn was then borne with much ceremony into the mausoleum, and placed on a pedestal in one of the niches, with this inscription underneath :

Paul Whitehead of Twickenham, Esqr.
Ob. 1775.

Unhallowed hands, this urn forbear,
No gems, nor orient spoil
Lie here concealed ; but what 's more rare,
A heart that knew no guile.

The ceremony was concluded by the soldiers firing three volleys, and then marching off with the drums and fifes playing a merry tune. On the next day, a new oratorio, called *Goliah*, composed by Mr Atterbury, was performed in the church.

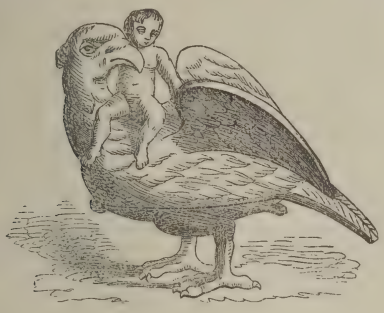
The heart used to be often taken out of the urn, to be shewn to visitors, and in 1829, notwithstanding the warning epitaph, was stolen, and has never been recovered.*

OCTOBER 6.

St Faith or Fides, virgin, and her companions, martyrs, 4th century. St Bruno, confessor, founder of the Carthusian monks, 1101.

Born.—Dr John Key (Caius), founder of Caius College, Cambridge, 1510, *Norwich ;* Dr Nevil Maskelyne, astronomer, 1732, *London ;* Madame Campan, biographer of Marie Antoinette, 1752, *Paris ;* Louis Philippe, king of France, 1377, *Paris ;* Madame Jenny Lind Goldschmidt, vocalist, 1821, *Stockholm.*

Died.—Charles the Bald, king of France, 877 ; Sir John Young, Baron Lisgar, in 1868 Governor-general of Canada, 1876.

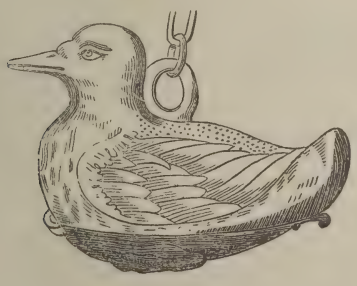


ANCIENT WATCHES.

Many inventions of the greatest value, and ultimately of the commonest use, are sometimes the most difficult to trace to their origin. It is so with clocks and watches. Neither the precise year of their invention, nor the names of their inventors, can be confidently stated. Till the close of the tenth century, no other mode of measuring time than by the sun-dial, or the hour-glass, appears to have existed ; and then we first hear of a graduated mechanism adapted to the purpose, this invention being usually ascribed to the monk Gerbert, who was raised to the tiara in 999, under the name of Sylvester II. These clocks were cumbrous machines ; and it is not till the fourteenth century that we hear of portable clocks. In the succeeding century, they were much more common, and were part of the necessary furniture of a better-class house. They were hung to the walls, and their movements regulated by weights and lines, like the cheap kitchen-clocks of the present day. The invention of the spiral spring as the motive power, in place of the weight and line, gave, about the middle of the fifteenth century, the first great impetus to improvement, which now went on rapidly, and resulted in the invention of the watch —a time-measurer that might be carried about the person.

Southern Germany appears to have been the place from whence these welcome novelties chiefly issued ; and the earliest watches were known as 'Nuremberg Eggs,' a sobriquet obtained as well from the city from whence they emanated, as from their appearance. The works were enclosed in circular metal cases, and as they hung from the girdle, suggested the idea of an egg. Before the invention, or general adoption of the fusee—that is, from about 1500 to 1540—the movements were entirely of steel ; then brass was adopted for the

* In further reference to the subject of this article, we beg to direct the reader to a very elegant and interesting work, recently published, from the pen of Miss Hartshorne, and entitled *Enshrined Hearts of Warriors and Illustrious People.*



plates and pillars, the wheels and pinions only being fabricated of steel; and ultimately the pinions only were of steel. The fusee being universally adopted about 1540, no great change occurred for fifty years, during which time the silversmith seems to have assisted the watchmaker in the production of quaint cases for his works, so that they might become ornamental adjuncts to a lady's waist. Our first example (formerly in the

WATCH NO. 1.

Bernal Collection, and now in that of Lady O. Fitzgerald) tells, after an odd fashion, the classic tale of Jupiter and Ganymede. The works are contained in the body of the eagle, which opens across the centre, and displays the dial-plate, richly engraved with scrolls and flowers on a ground of niello. It will be perceived that this watch is so constructed, that when not suspended to the girdle by the ring in the centre of the bird's back, it can stand on the claws wherever its owner may choose to place it.

Watches were now made of all imaginable shapes and sizes, and the cases of all forms and materials; crystal was very commonly used, through which the mechanism of the watch might be observed. Sometimes stones of a more precious character were cut and adapted to the purpose. The Earl of Stamford possesses one small egg-shaped watch, the cases cut out of jacinths, the cover set round with diamonds on an enamelled border. Mr O. Morgan has in his curious collection of watches one in form of a golden acorn, which discharged a diminutive wheel-lock pistol at a certain hour; another was enclosed in silver cases, taking the form of cockle-shells. We engrave a specimen of

WATCH NO. 2.

a watch in form of a duck (also in Lady O. Fitzgerald's collection); the feathers are chased on the silver. The lower part opens, and the dial-plate, which is likewise of silver, is encircled with a gilt ornamented design of floriated scrolls and angels' heads. The wheels work on small rubies. It is believed to be of the time of Queen Elizabeth.

When the famous Diana of Poitiers became the mistress of Henry II., she was a widow, and the complaisant court not only made her mourning-colours the favourite fashion, but adopted the most lugubrious fancies for personal decoration. Rings in the form of skeletons clasped the finger; other mementos of an equally ghastly description were used as jewels; small coffins of gold contained chased and enamelled figures of death; and watches were made in the form of skulls, of which we

WATCH NO. 3.

engrave an example. All these quaint and *bizarre* forms passed out of fashion at the early part of the seventeenth century, when watchmakers seem to have devoted their attention chiefly to the compact character of their work. About 1620, they assumed a flattened oval form, such as we have seen used to a comparatively recent period; they were sometimes furnished with astronomical dials, and perpetual moving calendars, and often struck the hour; the inner case acting as a silver bell. In Ben Jonson's *Staple of News*, the opening scene exhibits a dissolute junior anxiously awaiting his majority, who 'draws forth his watch, and sets it on the table;' immediately afterwards exclaiming:

'It strikes!—one, two,
Three, four, five, six. Enough, enough, dear watch,
Thy pulse hath beat enough. Now sleep and rest;
Would thou couldst make the time to do so too:
I 'll wind thee up no more!'

It appears, then, that until 1670, when the pendulum-spring was invented, the mechanism of the watch had made no advance since the days of Elizabeth. The French makers were among the first to introduce judicious improvements, particularly such as effected weight and size. Lady Fitzgerald possesses a gold enamelled watch manufactured by order of Louis XIII., as a present to our Charles I., which may rival a modern work in its smallness. It is oval; measuring about 2 inches by 1⅛ across the face, and is an inch in thickness. The back is chased in high-relief with the figure of St George conquering the dragon; the motto of the Garter surrounds the case, which is enriched with enamel colours. Grotesque forms for watch-cases seem to have quite gone out of fashion in the seventeenth century, with one exception; they were occasionally made in the form of a cross to hang at the girdle; and are consequently, but erroneously, sometimes

called 'Abbess's watches.' The example here engraved is also from the collection just alluded to. It is covered with elaborate engraving of a very delicate character; the centre of the dial-plate represents Christ's agony in the Garden of Olives,

WATCH NO. 4.

the outer compartments being occupied by the emblems of his passion; a figure of Faith occupying the lowermost. The style of engraving is very like that of the famous Theodore de Bry, who worked largely for the French silversmiths at the commencement of the seventeenth century.

OCTOBER 7.

St Justina of Padua, virgin and martyr. Saints Marcellus and Apuleius, martyrs at Rome. Saints Sergius and Bacchus, martyrs, 4th century. St Mark, pope and confessor, 336. St Osith, virgin, about 870.

THE MAID OF NORWAY.

The fate of this child-sovereign, who only reached her hereditary dominions to die, and through whose decease so protracted a series of disasters was entailed on Scotland, forms one of the interesting events in the history of a nation so noted for the misfortunes of its queens. What we really know of the 'fair maid of Norroway' is very little, however liberally we may draw on imagination to supply the deficiencies, and fill in the lights and shadows to a picture of which the chroniclers of the times have furnished us with nothing but the most meagre outlines. It is not to the brief and sententious records of the thirteenth century, that we are to look for narratives of domestic events, or the personal history of a little girl of seven years old, even though that little girl were a queen in her own right.

Margaret, Princess of Norway, was the only child of Eric, king of that country, by his marriage with the daughter of Alexander III., of Scotland. Her mother died in giving her birth, and on the death of her maternal grandfather in 1285, by a fall from an unruly horse over the cliff at Kinghorn, she became sole inheritrix of the Scottish crown, being already, moreover, heiress-presumptive to that of Norway. Alexander III. had indeed been most unfortunate in his domestic relations, having seen one member of his family after another, including two promising sons, descend into the grave before him, whilst his second marriage, a short time before his death, with the beautiful French princess Joleta, had been unproductive of issue. Feeling sensibly his loneliness, and solicitous also for the careful upbringing of his little granddaughter, in whom all his prospects of a successor rested, he sent over to Norway, shortly after her mother's death, an embassy of Scottish nobles, requesting from his son-in-law the delivery of Margaret to these gallant knights, for the purpose of being brought over to, and educated in, Scotland. Eric refused his consent, and the deputation had to quit the Norwegian court with their master's behest unaccomplished. None of them, however, were destined to set foot again in their native country, the ship in which they were conveyed foundering in sight of the Scottish coast. Margaret may thus be deemed fortunate in having had so narrow an escape of her life, though it was only to lengthen its duration by a very few years.

On the melancholy death of Alexander III., the kingdom was thrown into a most distracted condition; but a great assembly of nobles and dignitaries was held, in which fealty was sworn to Margaret of Norway, as the sovereign of Scotland, and great anxiety expressed to have the young queen brought over to dwell among her subjects. The present conjuncture of affairs presented a strong temptation to the able and ambitious Edward I. of England, to form an advantageous connection with Scotland. A matrimonial alliance was proposed by him, between the young Scottish queen and his own son Edward, Prince of Wales. The offer was favourably entertained both by the Scottish nobles and Margaret's father, King Eric, and negotiations were forthwith instituted for arranging the terms of the match. These were at length settled to the satisfaction of all parties, the principal conditions being that, notwithstanding this union with England, Scotland should retain all the rights and privileges of an independent kingdom, and that its sovereignty in the event of Edward and Margaret having no children, should revert to the young queen's nearest lawful heir. With the view of hastening an adjustment of matters, it is said that money was freely distributed by Edward, in the shape of bribes and pensions among the leading-men of Eric's court.

It may not be a very profitable, but it is certainly a curious speculation, to ponder over the consequences of this marriage to Scotland, had the course of events permitted it to be carried into effect. The union of England and Scotland might thus have been accomplished on most honourable terms to the latter country, which would further have been spared the almost continuous series of wars and devastations, by which she was afflicted during upwards of three hundred years that intervened between Margaret's death and the accession of James VI. to the English throne. The peaceful arts of commerce and agriculture might have been allowed full scope to develop themselves, and the national industry might have raised the country at a much earlier date to that state of prosperity and wealth, which she has only attained in later and more tranquil times. But in that case the purifying influences of adversity would have been unfelt, less occasion would have arisen for the display of manly heroism and independence, the national spirit would have languished, and a Scotchman at the present day would have been unable to quote the deeds of Wallace and Bruce.

In addition to the stipulations regarding the succession to the crown, it had been agreed in the matrimonial treaty, that the young queen should be forthwith sent to Scotland, and be brought up either there or at Edward's court, as might be found most suitable. When the time for her departure arrived, however, her father displayed a great reluctance to part with her; a reluctance which many will regard as a presentiment of the untoward occurrence, by which he was destined so soon to be deprived of her altogether. Both Edward and the Scottish council urged on Eric the fulfilment of his engagement, by sending over his daughter to her future husband and dominions. Two distinguished Scottish knights—Sir David Wemyss, and the famous Sir Michael Scott, of Balwearie, so renowned for his reputed necromantic lore—were despatched to Norway to fetch the young queen, and Eric now gave his consent that she should depart. We can imagine the little girl of seven, wholly unconscious of the important interests which centered in her, sorry to part with a loving and indulgent father, and carried down to the beach, to be intrusted to the care of some weather-beaten Norse admiral, who might possibly, in his youth, have taken part in King Haco's expedition to Scotland, and the battle of Largs. A tender and delicate child, ill fitted, it would seem, for enduring the fatigues of a sea-voyage, she quitted, in September 1290, her father and her native land, never to see either of them again.

Meantime the Scottish nation was expecting the arrival of its young sovereign with all the loyal enthusiasm for which it has ever been distinguished, and a great council was being convened at Perth for deliberating on the affairs of the realm. Suddenly, this august assembly was electrified by a rumour, which reached it from the north, that the young Queen Margaret was no more. The dismal news was soon confirmed, and the country learned with dismay that her father's forebodings regarding her had proved but too true, and that her delicate frame had been unable to support the effects of sickness and exhaustion. Prostrated by illness shortly after commencing her voyage, she gradually sunk, and when at length the vessel reached Orkney, poor Margaret was carried ashore only to breathe her last. At the intelligence of her death, to use the words of an old chronicler, 'the kingdom was troubled, and its inhabitants sunk into despair.' The disastrous interregnum that followed, and the disputes between the descendants of the Earl of Huntingdon, brother of William the Lion, as claimants of the throne, resulting in the attempt of Edward I. to annex Scotland to his dominions, are well known to all readers of history. It may be remarked that a claim to the Scottish crown was also put in by King Eric, as representing his daughter; but no active steps were taken to assert this alleged right. He died a few years afterwards, while only a young man of thirty, having been married to Margaret's mother at an age little above fourteen.

No particulars are known as to the precise spot where the Maid of Norway died, and even her place of burial has never been satisfactorily ascertained. Doubtless, however, she was interred in the venerable cathedral of St Magnus, at Kirkwall, in Orkney; but nothing definite as to this circumstance can be stated, and no known monument or sepulchral stone marks the site of her grave. Amid a number of tombs, however, within that ancient church, bearing no name or inscription, one was discovered, which, on being opened and examined, gave indications of its being the grave of a young person, whilst one or two other circumstances combined to favour the idea of its having been the resting-place of the remains of Margaret of Norway.

EDGAR ALLAN POE.

Edgar Allan Poe, an eccentric American poet, was born at Boston, January 19, 1809. It may seem absurd to say that he belonged by birth to the aristocracy, in a country where no aristocracy is recognised. Still, it is a fact that Poe was an aristocrat, and it is also true, that no people are more proud of the advantages of birth and breeding, than citizens of the United States, especially those who belong to the southern division of those states. Poe was a Southerner in manners and feelings, as well as by birth; and there is little doubt, that the greater part of the infamy which was heaped upon him after his death, was owing to the fact that as a man of taste he despised, and as an aristocrat, treated with contempt, a tradesman in literature, who lived by making books of biographies, generally laudatory of living literary persons. This man took his revenge when the opportunity came, as any one may kick a dead lion with impunity. Many have echoed, no doubt honestly, the evil fame which was made for the poor poet by this man, whom he had despised and insulted during his life.

Poe's grandfather was a soldier in the war of the American revolution, and a friend of Lafayette. His father was a student at law. He fell in love with an English actress, named Arnold, and married her. They both died young, and at nearly the same time, leaving three orphan children. Edgar was adopted and educated by John Allan, a wealthy merchant of Virginia. At the early age of five years he was brought to England, and was sent to school near London, till he was ten years old.

Poe's life was a series of eccentric adventures. The reason of this is to be found in his temperament, or physical constitution. He lived, from the cradle to the grave, on the verge of madness, when he was not absolutely mad. A half-glass of wine intoxicated him to insanity. His brain was large, almost to deformity, in the region where phrenologists place the imaginative faculties. Under the influence of slight stimulus, such as would have been inappreciable by a person otherwise constituted, Poe was led on to commit acts, the consequences of which were often distressing, and might at any moment have been fatal, as was finally the case.

At an early age he entered college at Charlottesville, Virginia, but he was expelled for dissipation. He also entered the military school at West Point, New York, but he left in a year. During the excitement in favour of the independence of Greece, he started for that country; but he was next found at St Petersburg, where he fell into distress, as was his fortune almost everywhere, and some friends sent him home.

Soon after his return, he published a volume of poems, entitled *Al Aaraaf, Tamerlane, and Minor Poems.* These were written from the age of sixteen to eighteen years.

At one time he enlisted as a soldier, but he soon deserted. He had much partiality for active exercise, and very little for discipline, though he was exceedingly methodical and orderly in all the details of life. He was remarkable for aquatic and gymnastic performances. He was able to leap further than most men, and he once swam seven miles and a half against the tide.

In 1835, Poe was employed to write for the *Southern Literary Messenger*, and about this time he married his cousin, Virginia Clemm, who, at the time of their union, was about fourteen years old. After this, we find him engaged on Benton's *Gentleman's Magazine*, at two pounds a week. This engagement was of brief continuance, and he next was connected with Graham's *Magazine*, and wrote *Some Strange Stories*, nearly all of which seem tinged with a sort of semi-insanity. We next find him engaged with Mr Briggs, in establishing the *Broadway Journal.* This was soon discontinued. In 1845, he published *The Raven*, which has enjoyed a more extended reputation than any other production of his pen.

After the appearance of the *Raven* in transatlantic periodicals, Elizabeth Barrett Browning wrote to Poe, that '*The Raven* had excited a *fit horror* in England.' He was delighted with the compliment. Indeed this sort of impression appeared to be an object of ambition with him. Poe always seemed to consider *The Raven* as his master-piece, and he was fond of reciting it in company, in a sort of sing-song tone, which was very unpleasant to some.

It would be difficult to calculate the amount of fame that Poe might have earned, if he could have lived, and written one year in undisturbed sanity. After the fame of *The Raven* had brought his name upon every lip, he was invited to lecture before the Boston Atheneum—the highest honour the Athens of America could bestow on the poet. He went before an elegant and most intellectual Boston audience, and instead of giving a lecture, he repeated a juvenile poem that had been published! His friends had no doubt of the cause, or occasion of this strange proceeding, but the audience were indignant. Poe declared that 'it was an intentional insult to the genius of the frog-pond, a small pond on Boston Common'—a further evidence of the madness that he often induced, by taking stimulants, though he knew his fearful liability. After this, his irregularities became so much the rule of his life, that Mrs Clemm, who acted the part of a good genius to the poet and his young wife, her daughter, took a cottage at Fordham, near New York. Here she devoted herself to the care of both with tender and unceasing assiduity. Mrs Poe was dying of consumption. Poe was plunged in a deep melancholy, which did not admit of his writing anything. They were in a state of almost utter destitution, and the malady of the poet was constantly aggravated by witnessing the suffering of his fading, lily-like wife, to whom he was tenderly attached. Friends came to their help the moment their condition was known, and it was subsequently brought against Poe, that he took a bribe at this time for a favourable review, which he afterwards wrote of a miserable book of poems. In speaking of this violation of his literary conscience, after he had somewhat recovered the tone of his mind, he said, 'The author gave me a hundred dollars, when my poor Virginia was dying, and we were starving, and *required* me to write a review of that book. What could I do?'

Let those who have judged him harshly for this, and other sins of his life, place themselves in his condition. When sober and sane, Poe was a gentleman of pure taste and elegant manners, whose conversation was always interesting, and often instructive. He had great personal beauty, and the aristocratic manner and bearing of a southern gentleman, and a descendant of the Cavaliers. In 1848, Poe published *Eureka*, which he first gave as a lecture. It is impossible to give a characteristic description of this and other literary performances by Poe. The same sort of extravagance pervades all, and those who knew him most intimately, and were best qualified to judge, believed that he lived and wrote with a shade of madness in all that he did—and yet few men were more methodical and orderly in their habits than Poe. His handwriting was delicately beautiful, and at the same time clear and plain. His study was the perfection of order and neatness. But his fearful proclivities might change all this in a moment. The world cannot believe that half a glass of wine could make a man lose all self-control, and hurry him on to madness, and its fearful consequences. But there is abundant proof that this was true of Poe.

After the death of his wife, Poe gradually recovered from the deep melancholy which had palsied all his mental power during the last portion of her life, and engaged again in literary occupation. Subsequently, he entered into correspondence with a lady of fine genius and high position, with a view to marriage. But here, again, his destiny was against him. The marriage was broken off, and soon after Poe died of delirium tremens, at the age of forty; that critical period at which it seems natural for an irregular life, combined with excessive brain-work, to bring its victims to an end.

Dannecker, German sculptor, 1841, *Stuttgardt.*

RIENZI.

Lord Lytton's noble romance of *Rienzi* has painted in the most attractive and glowing manner the life and actions of the renowned tribune of Rome. It must be admitted, also, that unlike many so-called historical novelists, the author has little, if at all, overstepped the limits of fact and reality in the portraiture of his hero, and presents, both in the delineation of Rienzi's character and the general picture of the political and social condition of Rome at the period, an account which, making due allowance for poetical embellishment, may, on the whole, be relied on as strikingly just and accurate.

It is well known that Rome, in the fourteenth century, was in the most anarchical and deplorable condition. A set of factious and tyrannical nobles had established, in their lawlessness, a perfect reign of terror over the unhappy citizens, and had driven the representatives of St Peter from their seat in the Eternal City, to establish a new pontifical residence at Avignon, in the south of France. Here, during seventy years of the fourteenth century, the papal court maintained itself, and, freed from the restraints by which it was hemmed in and overawed at home by its own subjects, asserted the privileges of the sacred college and the authority of ecclesiastical sway. In the meantime, the general body of Roman citizens groaned under the oppressions of the nobles, which were every day becoming more frequent and intolerable. This scene of violence was unexpectedly changed by one of the most remarkable revolutions that have ever taken place in any state, and which, if carried out with the same success that inaugurated its commencement, might have exercised a lasting and beneficial influence not only on Rome, but the whole of Italy.

Nicolo Gabrini, commonly called Nicolo, or Cola di Rienzi, from an abbreviation of his father's name of *Lorenzo,* was the son of an innkeeper and washerwoman of Rome, who, however, conscious of the natural abilities of their son, bestowed on him a good education, which the young man improved to the best advantage. His enthusiasm was especially excited by the history of the ancient glories of his native city, and he revolved with generous ardour many schemes for raising her from her present degradation to the summit of her primitive greatness. Chosen as one of the thirteen deputies from the Roman commons to the papal government at Avignon, he acquitted himself with great credit in an oration addressed to Pope Clement VI., and received the appointment of apostolic notary, with the daily salary of five gold florins. Stimulated by the success thus achieved, he commenced in earnest, on his return to Rome, his self-imposed task of rousing the citizens to the assertion of their rights and liberties. The death of a much-loved brother, whose assassins, from their aristocratic influence and position, escaped unpunished, added the impulse of revenge to that of patriotism. In animated declamations to the people in the streets and public places of Rome, Rienzi descanted on the greatness of their ancestors, the right and enjoyment of liberty, and the derivation of all law and authority from the will of the governed. The nobles were either too ignorant to comprehend, or too confident in their might, to dread the effect of such addresses, and the designs of the orator were still further veiled by his adopting, like Brutus, the guise of a buffoon or jester, and condescending, in this capacity, to raise a laugh in the palaces of the Roman princes. But, in the month of May 1347, a nocturnal assembly of a hundred citizens was congregated by him on Mount Aventine, and a formal compact was entered into for the re-establishment of *the good estate,* as Rienzi styled his scheme of popular freedom. A proclamation was then made by sound of trumpet, that on the evening of the following day, all persons should assemble unarmed before the church of St Angelo. After a night spent in devotional exercises, Rienzi, accompanied by his band of a hundred followers, issued from the church, and marched in a solemn procession to the Capitol, from the balcony of which he harangued the people, and received, in their acclamations, a ratification of his assumption of supreme power. Stephen Colonna, the most formidable of the nobles, was at this time absent from Rome, and on his return to crush out at once and for ever, as he imagined, the spark of rebellion, he only narrowly saved himself by flight, from falling a victim to the fury of the populace, who supported with the most determined zeal the cause and authority of their champion. A general order was then issued to the great nobles, that they should peaceably retire from the city to their estates; a command which was obeyed with the most surprising unanimity. The title of tribune of Rome, in remembrance of ancient days, was assumed by Rienzi, who forthwith set himself with active earnestness to the task of administrative reformation. In this, for a time, his endeavours were crowned with the most gratifying and signal success. The defences which the nobles had erected around their palaces, and within which, as in robbers' dens, they ensconced themselves to the defiance of all law and order, were levelled to the ground, and the garrisons of troops by which the citizens were overawed, expelled and suppressed. Law and order were everywhere re-established, an impartial execution of justice insured with respect to all ranks of society, and a rigorous and economical management introduced into the departments of revenue and finance. In these days, according to the glowing account of a historian of the times, quoted by Gibbon, the woods began to rejoice that they were no longer infested with robbers; the oxen began to plough; the pilgrims visited the sanctuaries; the roads and inns were replenished with travellers; trade, plenty, and good faith were restored in the markets; and a purse of gold might

be exposed without danger in the midst of the highway.

The city and territory of Rome were not the only places comprehended in the patriotic aspirations of Rienzi, who aimed at uniting the whole of Italy into a grand federal republic. In such a scheme, he was five hundred years in advance of his age, and the same difficulties which retarded its accomplishment in modern times, were instrumental in causing its failure in the fourteenth century. The republics and free cities were indeed disposed to look favourably on the projects of the Roman tribune, but the rulers of Lombardy and Naples both despised and hated the plebeian chief. Yet the advice and arbitration of Rienzi were sought by more than one European sovereign, and, as in the case of Cromwell, the aptitude with which he conformed himself to the dignity and general requirements of his high station, formed the theme of universal wonder and applause.

But the judgment and solidity which constituted such essential elements in the character of the English Protector, proved deficient with Nicolo di Rienzi. An injudicious and puerile assumption of regal state, some acts of over-severity in the execution of justice, and a tendency to convivial excess, had all their influence, in conjunction with the proverbial fickleness of popular esteem, in bringing about the overthrow of the tribune. On one occasion, when he caused himself to be created a knight with all the ceremonies of chivalry, he excited prodigious scandal by bathing in the sacred porphyry-vase of Constantine, whilst at the same time the breaking down of the state-bed on which he reposed within the baptistery, the night previous to the performance of the ceremony of investiture, was interpreted as an omen of his approaching downfall. After one or two unsuccessful attempts of the two great factions of the exiled nobles, the Colonna and the Ursini or Orsini, who laid aside their mutual animosities to unite against a common foe, the dethronement of Rienzi was suddenly accomplished by the Count of Minorbino, who introduced himself into Rome at the head of one hundred and fifty soldiers. The tribune, thus surprised, shewed little of the resolution by which his conduct had been hitherto distinguished, and with a lachrymose denunciation of popular ingratitude, he pusillanimously abdicated the government, and was confined for a time in the castle of St Angelo, from which, in the disguise of a pilgrim, he afterwards contrived to escape.

For seven years, Rienzi remained an exile from his native city, wandering about from the court of one sovereign to another, and was at last made a prisoner by the Emperor Charles IV., who sent him as a captive to the papal court at Avignon. The champion of popular rights was for a time treated as a malefactor, and four cardinals were appointed to investigate the charges laid against him of heresy and rebellion. But the magnanimity displayed by him before the pope, seems to have made an impression on the mind of Clement VI., who relaxed the rigours of his confinement by allowing him the use of books, the study of which, more especially of the Holy Scriptures and Titus Livius, served to console the ex-tribune under his misfortunes.

On the accession of Innocent VI. to the pontificate, a new line of policy was adopted by the court of Avignon, who believed that by sending Rienzi to Rome as its accredited representative, with the title of senator, the anarchy and violence which since his deposition had become more rampant than ever, might be suppressed or diminished. The citizens had, indeed, experienced ample cause for regretting the order and impartiality of Rienzi's sway in the tyranny of his successors. His return was celebrated with every appearance of triumph and rejoicing, and for a short period, the benefits which had attended his former government marked his resumption of power. But his relations with the court of Avignon rendered him an object of suspicion to the people, whilst a spirit of jealousy and apprehension led him to the perpetration of several acts of cruelty. To crown his unpopularity, the exigencies of government compelled him to impose a tax, and a fatal commotion was the result. In the closing scene of his career, he displayed a strange combination of intrepidity and cowardice, appearing on the balcony of the Capitol, when it was surrounded by a furious multitude, and endeavouring by his eloquence to calm the passions of the mob. A storm of abuse and more effectual missiles interrupted his address, and after being wounded in the hand with an arrow, he seemed to lose all manly resolution, and fled lamenting to an inner apartment. The populace continued to surround the Capitol till the evening, then burst in the doors, and dragged Rienzi, as he was attempting to escape in disguise, to the platform in front of the palace. Here for an hour he stood motionless before the immense multitude, who for a time stood hushed as if by some spell before the man who had undoubtedly in many respects been well deserving of their gratitude. This feeling of affection and remorse might have shielded the tribune, when a man from the crowd suddenly plunged a dagger in his breast. He fell senseless to the ground, and a revulsion taking place in the feelings of the mob, they rushed upon and despatched him with numerous wounds. His body was ignominiously exposed to the dogs, and the mutilated remains committed to the flames.

Thus perished the celebrated Rienzi, who in after-times has been regarded as the last of the Roman patriots, and celebrated in such glowing language by Lord Byron, with whose lines from *Childe Harold's Pilgrimage* the present notice may not inappropriately close—

> 'Then turn we to her latest tribune's name,
> From her ten thousand tyrants turn to thee,
> Redeemer of dark centuries of shame—
> The friend of Petrarch—hope of Italy—
> Rienzi! last of Romans! While the tree
> Of freedom's wither'd trunk puts forth a leaf,
> Even for thy tomb a garland let it be—
> The Forum's champion, and the people's chief—
> Her new-born Numa thou—with reign, alas! too brief.'

JUDICIAL COMBAT BETWEEN A MAN AND A DOG.

On 8th October 1361, there took place on the Ile Notre Dame, Paris, a combat, which both illustrates strikingly the maxims and ideas prevalent in that age, and is perhaps the most singular instance on record of the appeals to 'the judgment of God' in criminal cases.

M. Aubry de Montdidier, a French gentleman, when travelling through the forest of Bondy, was murdered and buried at the foot of a tree. His dog remained for several days beside his grave, and only left the spot when urged by hunger. The faithful animal proceeded to Paris, and presented himself at the house of an intimate friend of his master's, making the most piteous howlings to announce the loss which he had sustained. After being supplied with food, he renewed his lamentations, moved towards the door, looking round to see whether he was followed, and returning to his master's friend, laid hold of him by the coat, as if to signify that he should come along with him. The singularity of all these movements on the part of the dog, coupled with the non-appearance of his master, from whom he was generally inseparable, induced the person in question to follow the animal. Leading the way, the dog arrived in time at the foot of a tree in the forest of Bondy, where he commenced scratching and tearing up the ground, at the same time recommencing the most piteous lamentations. On digging at the spot thus indicated, the body of the murdered Aubry was exposed to view.

No trace of the assassin could for a time be discovered, but after a while, the dog happening to be confronted with an individual, named the Chevalier Macaire, he flew at the man's throat, and could only with the utmost difficulty be forced to let go his hold. A similar fury was manifested by the dog on every subsequent occasion that he met this person. Such an extraordinary hostility on the part of the animal, who was otherwise remarkably gentle and good-tempered, attracted universal attention. It was remembered that he had been always devotedly attached to his master, against whom Macaire had cherished the bitterest enmity. Other circumstances combined to strengthen the suspicions now aroused.

The king of France, informed of all the rumours in circulation on this subject, ordered the dog to be brought before him. The animal remained perfectly quiet till it recognised Macaire amid a crowd of courtiers, and then rushed forward to seize him with a tremendous bay. In these days the practice of the judicial combat was in full vigour, that mode of settling doubtful cases being frequently resorted to, as an appeal to the 'judgment of God,' who it was believed would interpose specially to shield and vindicate injured innocence. It was decided by his majesty, that this arbitrament should determine the point at issue, and he accordingly ordered that a duel should take place between Macaire and the dog of the murdered Aubry.

We have already explained* that the lower animals were frequently, during the middle ages, subjected to trial, and the process conducted against them with all the parade of legal ceremonial employed in the case of their betters. Such an encounter, therefore, between the human and the canine creation, would not, in the fourteenth century, appear either specially extraordinary or unprecedented.

The ground for the combat was marked off in the Ile Notre Dame, then an open space. Macaire made his appearance armed with a large stick, whilst the dog had an empty cask, into which he could retreat and make his springs from. On being let loose, he immediately ran up to his adversary, attacked him first on one side and then on the other, avoiding as he did so the blows from Macaire's cudgel, and at last with a bound seized the latter by the throat. The murderer was thrown down, and then and there obliged to make confession of his crime, in the presence of the king and the whole court. This memorable combat was depicted over a chimney in the great hall of the château of Montargis. The story has been made the subject of a popular melodrama.

* Vol. i. p. 126–129.

ELIZABETH CROMWELL:
THE LADY-PROTECTRESS.

Elizabeth Cromwell, widow of the Protector, after surviving her illustrious husband fourteen years, died in the house of her son-in-law, Mr Claypole, at Norborough, in Northamptonshire, on 8th of October 1672. She was the daughter of Sir James Bourchier, a wealthy London merchant, who possessed a country-house and considerable landed estates at Felsted, in Essex. Granger, who would by no means be inclined to flatter Elizabeth, admits that she was a woman of enlarged understanding and elevated spirit. 'She was an excellent housewife,' he continues, 'as capable of descending to the kitchen with propriety, as she was of acting in her exalted station with dignity; certain it is, she acted a much more prudent part as Protectress than Henrietta did as queen. She educated her children with ability, and governed her family with address.' A glimpse of the Protectorate household is afforded by the Dutch ambassadors, who were entertained at Whitehall in 1654. After dinner, Cromwell led his guests to another room, then the Lady-Protectress, with other ladies, came to them, and they had 'music, and voices and a psalm.' Heath, in his *Flagellum*, 'the little, brown, lying book' stigmatised by Carlyle, acknowledges that Cromwell was a great lover of music, and entertained those that were most skilled in it, as well as the proficients in every other science. But this admission is modified by the royalist writer taking care to remind his readers that 'Saul also loved music.'

At a period when the vilest scurrility passed for loyalty and wit, we hear no evil report of Elizabeth Cromwell. No doubt her conduct was most carefully watched by her husband's enemies, and the slightest impropriety on her part would have speedily been blazoned abroad; yet no writer of the least authority throws reproach on her fair fame. It may be concluded, then, that though probably plain in person, and penurious in disposition, she was a virtuous, good wife and mother. In Cowley's play, *The Cutter of Coleman Street*, there is an allusion to her frugal character and want of beauty, where the Cutter, sneeringly describing his friend Worm, says: 'He would have been my Lady-Protectress' poet; he writ once a copy in praise of her beauty; but her highness gave nothing for it, but an old half-crown piece in gold, which she had hoarded up before these troubles, and that discouraged him from any further applications to court.'

It is a curious though unexplained fact, that we find none of her relatives taking part in the great civil war, nor even any of them employed under

the Protectorate administration of public affairs. Nor has any indisputably genuine portrait of Elizabeth been handed down to us, so that the only representation of her features that we have, though universally considered to be a likeness, is found as the frontispiece of one of the most rare and curious of cookery-books, published in 1664, and entitled *The Court and the Kitchen of Elizabeth, commonly called Joan Cromwell, the Wife of the late Usurper, truly Described and Represented.* The accompanying illustration is a copy of this singular

THE LADY-PROTECTRESS.

frontispiece. The reader will notice a monkey depicted at one side of the engraving, and probably may wonder why it was placed there. In explanation, it must be said that the old engravers sometimes indulged in a dry kind of humour, of which this is an example. There is an old vulgar proverb that cannot well be literally repeated at the present day, but its signification is, that on the ground a monkey is passable enough, but the higher it climbs, the more its extreme ugliness becomes apparent. The animal, then, emblematises an ignorant upstart; and as the work is a satire as well as a cookery-book, the monkey is an apposite emblem of one who, according to the author's opinion, 'was a hundred times fitter for a barn than a palace.'

From the peculiar style and matter of this book, one is inclined to think that its author had been a master-cook under the royal *régime*, and lost both his office and perquisites by the altered state of affairs. Or he may have been a discarded servant of Elizabeth herself, for his various observations and anecdotes evince a thorough knowledge of the Protectorate household. Indeed this is the only value the book now possesses, and it must not be forgotten that the only fault or blame implied against Elizabeth by this angry satirist, is her 'sordid frugality and thrifty baseness.'

When the Protectress took possession of the palace of Whitehall, our culinary author tells us that: 'She employed a surveyor to make her some little labyrinths and trap-stairs, by which she might, at all times, unseen, pass to and fro, and come unawares upon her servants, and keep them vigilant in their places and honest in the discharge thereof. Several repairs were likewise made in her own apartments, and many small partitions up and down, as well above stairs as in the cellars and kitchens, her highness-ship not being yet accustomed to that roomy and august dwelling, and perhaps afraid of the vastness and silentness thereof. She could never endure any whispering, or be alone by herself in any of the chambers. Much ado she had, at first, to raise her mind and deportment to this sovereign grandeur, and very difficult it was for her to lay aside those impertinent meannesses of her private fortune; like the Bride Cat, metamorphosed into a comely virgin, that could not forbear catching at mice, she could not comport with her present condition, nor forget the common converse and affairs of life. She very providently kept cows in St James's Park, erected a dairy in Whitehall, with dairy-maids, and fell to the old trade of churning butter and making butter-milk. Next to this covey of milk-maids, she had another of spinsters and sewers, to the number of six, who sat most part of the day in "her privy-chamber sewing and stitching: they were all of them ministers' daughters."'

The dishes used at Cromwell's table, of which our author gives the receipts, sufficiently prove that the magnates of the Commonwealth were not insensible to the charms of good living. *Scotch collops of veal* was a very favourite dish, and *marrow puddings* were usually in demand at breakfast. The remains, after the household had dined, were alternately given to the poor of St Margaret's, Westminster, and St Martin's in the Fields, 'in a very orderly manner without babble or noise.' On great feast-days, Cromwell would call in the soldiers on guard, to eat the relics of his victuals. We are also told, but surely it must be a scullery scandal, that the time-honoured perquisite of kitchen-stuff was endangered, under the rule of the Protectress, she wishing to have it exchanged for candles. Nor was she less penurious with her husband's comforts; we are informed that: 'Upon Oliver's rupture with the Spaniards, the commodities of that country grew very scarce, and oranges and lemons were very rare and dear. One day, as the Protector was private at dinner, he called for an orange to a loin of veal, to which he used no other sauce, and urging the same command, was answered by his wife that oranges were oranges now, that crab [Seville] oranges would cost a groat, and, for her part, she never intended to give it.'

The reason assigned by the Protectress for 'her frugal inspection and parsimony, was the small allowance and mean pittance she had to defray the household expenses. Yet, she was continually receiving presents from the sectaries; such as Westphalia hams, neats' tongues, puncheons of French wines, runlets of sack, and all manner of preserves and comfits.'

It could not be expected that any cook of eminence would serve in such an establishment, and so this chronicler of the backstairs lets us know, that Cromwell's cook was a person of no

note, named Starkey, who deservedly came to grief in a very simple manner. One day, when the lord mayor was closeted with the Protector on business of importance, this Starkey, forgetting his high office and professional dignity, took the lord mayor's sword-bearer into the cellar, treacherously intending to make that important official drunk and incapable. But Starkey overrated his own prowess, while underrating that of his guest; for the well-trained bacchanal of the city was little affected by the peculiar atmosphere of the cellar, while Starkey, becoming drunk and disorderly, was overheard by the Protector, and ignominiously discharged upon the spot.

The only state or expense indulged by the Protectress was: 'the keeping of a coach, the driver of which served her for caterer, for butler, for serving-man, and for gentleman-usher, when she was to appear in any public place.' And our author adds, that she had 'horses out of the army, and their stabling and livery in her husband's allotment out of the Mews, at the charge of the state; so that it was the most thrifty and unexpensive pleasure and divertisement, besides the finery and honour of it, that could be imagined. For it saved many a meal at home, when, upon pretence of business, her ladyship went abroad; and carrying some dainty provant for her own and her daughters' own repast, she spent whole days in short visits, and long walks in the air; so that she seemed to affect the Scythian fashion, who dwell in carts and wagons, and have no other habitations.'

The more we read of this scurrilous attack on a prudent mistress, a good wife, and mother, the more we are inclined to admire her true and simple character. It is pleasant to contemplate the Lady-Protectress leaving her palace and banquets of state, to take a long country drive, and a sort of picnic dinner with her daughters. Nor does our author fail, in some instances, to give her credit for good management; he says that: 'Her order of eating and meal-times was designed well to the decency and convenience of her service. For, first of all, at the ringing of a bell, dined the halberdiers, or men of the guard, with the inferior officers. Then the bell rung again, and the steward's table was set for the better sort of those that waited on their highnesses. Ten of whom were appointed to a table or a mess, one of which was chosen by themselves every week for a steward, and he gave the clerk of the kitchen a bill of fare, as was agreed generally every morning. To these ten men, and what friends should casually come to visit them, the value of ten shillings, in what flesh or fish soever they would have, with a bottle of sack, and two of claret was appointed. But, to prevent after-comers from expecting anything in the kitchen, there was a general rule that if any man thought his business would detain him beyond dinner-time, he was to give notice to the steward of his mess, who would set aside for him as much as his share came to, and leave it in the buttery.'

The utmost malignity of the royalists, then, could say no more against the Lady-Protectress, than that she was a thrifty housewife, giving her the appellation of Joan, the vulgar phrase for a female servant. And there is every reason to conclude that Elizabeth Cromwell was a wife well worthy of her illustrious partner.

OCTOBER 9.

St Dionysius, or Denis, bishop of Paris, and his Companions, martyrs, 272. St Domninus, martyr, 304. St Guislain, abbot, 681. St Lewis Bertrand, confessor, 1581.

ST DENIS.

This saint, properly named St Dionysius, has been sometimes stated as the first who introduced Christianity into France, but this is certainly erroneous, as the martyrdoms at Lyon and Vienne in the second century prove. St Denis was, however, of all the Roman missionaries in Gaul, the individual who, in preaching the doctrines of the Cross, penetrated furthest into the country, and fixed his seat at Paris, of which he became the first bishop. He is said to have been put to death during the persecution of Valerian, and a well-known legend is related regarding him, that, after suffering decapitation, he miraculously took up his head, carried it in his hand for the space of two miles, and then lay down and expired. The *bon mot* uttered regarding this ecclesiastical fable by a witty French lady of the last century, has become proverbial: 'La distance ne vaut rien; c'est le premier pas qui coûte.'

The bodies of St Denis and his companions are recorded to have been interred by a Christian lady named Catalla, not far from the place where they had been beheaded. A chapel was thereafter erected over their tomb, and in the fifth century a church, which was greatly resorted to by pilgrims. In the seventh century, King Dagobert founded on the same spot the famous abbey of St Denis, in which he himself and his successors on the French throne were interred. At the Revolution, this receptacle of the remains of royalty was sacrilegiously violated, and the contents of its tombs ignominiously scattered abroad, whilst the building itself was unroofed, and used for a time as a cattle-market. It was, however, restored with great splendour after the accession of the first Napoleon, and now attracts visitors as one of the most interesting monuments of ancient times, near the French capital.

The French have adopted St Denis as their patron saint, in the same manner as the English have chosen St George. The guardianship of the two countries is thus expressed in the chorus to the old ballad:

> 'St George he was for England,
> St Denis was for France.
> Singing, *Honi soit qui mal y pense.*'

Born.—Michael Cervantes de Saavedra, author of *Don Quixote*, 1547, *Alcala de Henares;* Jacob Augustus Thuanus (De Thou), historical writer, 1553, *Paris;* Bishop George Tomline, author of *Refutation of Calvinism*, 1753; Charles Comte d'Artois, afterwards Charles X., 1757, *Versailles.*

MARRIAGE OF LOUIS XII. AND THE PRINCESS MARY.

During the reign of Henry VII. of England, that able and crafty monarch had forced the Archduke Philip of Austria, on the occasion of the latter being driven by a storm on the English coast, to consent to a treaty of marriage between his son Charles, afterwards the celebrated Emperor Charles V., but then a child of six years old, and Henry's daughter, the Princess Mary. Such contracts were extremely common in ancient times, though they seem very frequently to have been entered upon merely for the purpose of securing some present advantage, or evading some present difficulty, and were eventually more generally broken than fulfilled. Henry VIII., several years afterwards, was nevertheless very indignant on ascertaining that Charles, so far from contemplating the completion of the engagement into which his father had entered for him, was on terms with Louis XII. of France for the hand of his second daughter, Renée. The wrath of the English king, however, was quite inoperative, and just at this conjuncture a match was suggested for his sister that soothed his offended dignity whilst it gratified his vanity. Louis XII. of France had, a few months before, lost his wife, Anne of Brittany, who had died without leaving any sons; and in the hope of obtaining male issue, the aged widower of fifty-three sought the hand of the beautiful young English princess of sixteen. Mary had formed an ardent attachment to Charles Brandon, Viscount Lisle, afterwards created Duke of Suffolk, one of the handsomest and most accomplished noblemen of his day; but the indulgence of such private feelings was quite out of the question, and it is not probable that even a murmur was ever uttered by her on the subject to her imperious brother. On 7th August 1514, a marriage-ceremony, by proxy, was celebrated at Greenwich between the princess and Louis XII., the Duke of Longueville representing his master. The French king became very impatient for the arrival of his bride, and wrote pressing letters to hurry her departure. At last the young queen with her attendants, among whom were the Duke of Suffolk and Anne Boleyn, afterwards so famous as the consort of her brother Henry, embarked at Dover, and landed safely in France in the beginning of October. On the 8th of that month, Mary made her public entrance into the town of Abbeville, where she was received with the greatest joy by her impatient husband, King Louis. The following day the marriage was duly solemnised between the parties themselves, and Mary was subsequently crowned with great pomp at the abbey of St Denis, and made her entry into Paris with great splendour. Her married life was by no means a period of unruffled felicity, as the king very ungallantly dismissed all his young wife's English friends and attendants almost immediately after the celebration of the ceremony. Fortunately for Mary, however, her season of probation was but short. Louis was sinking under a complication of infirmities, and at the rejoicings which accompanied his queen's triumphal entry into the capital, was so weak as to be obliged to be carried in a litter. Doubtless the prospect of his speedy demise, which took place on the ensuing New-Year's Day, had its influence in rendering Mary and the Duke of Suffolk, who remained in France as English ambassador, very discreet and circumspect in their conduct. But the former displayed little delicacy in availing herself of the recovery of her liberty, and in less than two months from Louis's death, Mary and the duke were privately wedded at Paris. In thus contracting a union without obtaining the permission of Henry VIII., both parties exposed themselves to the risk of his serious displeasure, which to Suffolk, as his own subject, might have proved fatal. But the dowager French queen and her English husband having crossed the Channel, and taken up their abode in their manor in Suffolk without venturing near the court, a reconciliation was in a short time effected; a consummation the accomplishment of which was greatly owing to the good offices of Cardinal Wolsey, who appears to have been a stanch friend of the young couple.

CERVANTES.

The age which gave Shakspeare to England gave Cervantes to Spain. Cervantes was Shakspeare's senior by seventeen years, but their lives were otherwise contemporaneous; and nominally, though not actually,* on one day, the 23d of April 1616, both died.

The life of Miguel de Cervantes Saavedra was one of almost continuous hardship and privation. He was born in 1547 at Alcala de Henares, about twenty miles from Madrid. His parents had noble relations, but were poor, and concerning his youth little is positively known beyond what he incidentally tells us in his writings, as that he took great pleasure in attending the theatrical representations of Lope de Rueda, that he wrote verses when very young, and that he read everything within his reach, even as it would seem the torn scraps of paper he picked up in the streets. At Salamanca, he completed his education, and at the age of twenty-three he accompanied Monsignor Aquaviva to Rome, in the capacity of chamberlain. At Rome, in 1571, he entered the papal army as a common soldier, to serve against the Turks. Perhaps with oblique reference to himself, he observes, 'I have always noticed that none make better soldiers than those who are transplanted from the region of letters to the fields of war, and that never scholar became soldier, that was not a good and a brave one.' He was present at the great sea-fight of Lepanto, on the 7th October 1571, when the combined fleets of Spain, Venice, Genoa, Malta, and the pope, in 206 galleys, met the Turks in 250 galleys, and utterly defeated them, checking decisively Turkish intrusion into the west of Europe. Cervantes was in the thickest of the fight, and besides two wounds, received one which deprived him of the use of his left hand and arm during the rest of his life. In 1576, he received a command in a regiment for the Low Countries, but on his voyage thither, he was captured by an Algerine squadron, and he and his comrades were carried to Algiers, and sold as slaves. He served successively three cruel masters—a Greek and a Venetian, both renegadoes, and the dey himself. Many were his plots to escape, and severely did he suffer when detected. He had a grand project for

* See *Book of Days*, vol. i. p. 544.

the insurrection of all the Christian slaves in Algiers, who numbered full 25,000; and the dey declared that 'if he could but keep that lame Spaniard well guarded, he should consider his capital, his galleys, and his slaves safe.' Four times he expected death by impalement or at the stake, and once the hangman's rope was round his neck. After five years of cruel bondage, he was ransomed for the enormous sum of 500 gold ducats, which had been scraped together by friends and relatives in Spain.

Without means, Cervantes resumed the profession of soldier, and served in three expeditions against the Azores. In 1584, at the age of thirty-seven, he married a lady of good family, but with trifling or no fortune. To earn a livelihood, he commenced writing for the stage, and produced, he informs us, thirty dramas, which were all acted with considerable applause. It would appear, however, that the theatre did not pay, for, in 1588, we find him at Seville, then the great market for the vast wealth coming in from America, and as he calls it, 'the shelter for the poor and a refuge for the unfortunate.' At Seville, he acted as agent and money-collector, but did not thrive. In 1590, he made an ineffectual application to the king for an appointment in America, setting forth his adventures, services, and sufferings while a soldier in the Levant, and all the miseries of his life while a slave in Algiers. From Seville he moved to Valladolid, and tradition runs, that he was imprisoned there as a debtor or defaulter, and that, whilst in prison, he commenced writing *Don Quixote*. The tradition may be true, but it is based on no certain evidence. At anyrate, in poverty, at Valladolid, the first part of the immortal romance was written, and at Madrid it was printed and published in 1605.

The book at once attracted attention, and before a year was out a second edition was called for in Madrid, and two editions elsewhere. Successful authorship, however, did little to mend Cervantes's fortune. The Duke of Lerma, minister of Philip III., engaged him to write an account of the festivities and bull-fights with which Lord Howard, ambassador of James I., was received at Valladolid in 1605! Meanwhile, Cervantes went on writing, and produced a number of tales, *Novelas Exemplares*, and *A Journey to Parnassus*, a satire on the bad poets of his time, which made him many enemies, but which, next to *Don Quixote*, is thought his finest production. The second part of *Don Quixote* did not make its appearance till 1615. The author's end was then near. Some years before, he had joined the brotherhood of the Holy Sacrament, one of those religious associations which were then fashionable, and which included among its members Quevedo, Lope de Vega, and other men of letters. Subsequently, he assumed the habit of a Franciscan, and three weeks before his death, he formally entered the sacred order—

> 'Who, to be sure of Paradise,
> Dying put on the weeds of Dominic,
> Or in Franciscan think to pass disguised.'

He was buried in the convent of the nuns of the Trinity, Madrid, but, a few years afterwards, this convent was removed to another part of the city, and what became of his ashes is quite unknown. No monument was raised to his memory till 1835, when a bronze statue of him, larger than life, was cast at Rome and set up in Madrid. It may seem incredible, but it is nevertheless the fact, that this statue of Cervantes was the first ever erected in Spain to the honour of a man of letters.

Though Cervantes led a poor life, we shall err if we think of him as miserable. If any inference may be drawn from the tenor of his writings, his was that happy temper, which out of adversity derives not bitterness, but matter for reflection and humorous enjoyment. What to the majority of men would be simple affliction, would, we conceive, to the author of *Don Quixote* be softened in a halo of humorous suggestions. Humour is a rare sweetener of life, and, as Carlyle remarks: 'Cervantes is indeed the purest of all humorists; so gentle and genial, so full, yet so ethereal is his humour, and in such accordance with itself and his whole noble nature.' The world dealt hardly by him, but we shall search in vain for a sour or malignant passage from his pen.

OCTOBER 10.

St Paulinus, archbishop of York, confessor, 644. St John of Bridlington, confessor, 1379. St Francis Borgia, confessor, 1572.

Born.—Pierre Nicole, logician, of Port Royal, 1625, *Chartres;* John, Duke of Argyll, statesman and commander, 1680; Henry Cavendish, eminent chemist, 1731, *Nice;* Benjamin West, painter, 1738, *Springfield, Pennsylvania;* Rev. Theobald Mathew, Irish apostle of temperance, 1790, *Thomastown, Tipperary.*

Died.—Dr John Blow, composer, 1708; Archbishop John Potter, author of *Grecian Antiquities*, 1747, *Croydon;* Dr William Wilkie, author of the *Epigoniad*, 1772, *St Andrews;* Henry Brooke, novelist, 1783, *Dublin;* Jeremiah James Oberlin, philologer, and archæological writer, 1806, *Strasburg;* Varnhagen Von Ense, eminent German writer, 1858, *Berlin.*

TESTAMENT OF MASTER WILLIAM TRACIE.

'The x daye of October, in the xxii yere of the rayne of King Henry the VIII.' is the date of an interesting document connected with the Reformation in England, 'The Testament of Master Wylliam Tracie, Esquier.'

In the time that immediately preceded the Reformation, many intelligent persons imbibed the opinions of Wycliffe, without making any prominent exhibition of them. This latent degeneracy usually crept out in their last wills, or on their death-beds. The omission of a wish to have masses performed for their souls after death was considered a strong proof of heresy, and dealt with severely. As an instance of this, it is recorded, that the body of William Tracie was taken up in Henry's VIII.'s reign, and publicly burned, by order of the chancellor of Worcester, because the following passage was found in his will: 'And towchyn the wealth of my soule the fayth that I have taken and rehersed, is suffycient (as I suppose) without any other man's worke or workis. My grounde and my beliefe is, that ther is but one god and one mediatour betwene god and man, whych is Jesus Chryste. So that I do not except none in

heaven or erthe to be my mediatour between me and god, but only Jesus Chryst, al other be but petitioners in receivinge of grace, but one able to give influence of grace. And therfore wyll I bestowe no part of my goodes for that intent that any man shoulde saye, or do, to healpe my soule, for therein I trust onely to the promyse of God, he that beleveth and is baptized shal be saved, and he that beleveth not shal be damned.'

HENRY CAVENDISH.

Cavendish has been called the Newton of chemistry, but we must allow that the title is somewhat hyperbolical. Cavendish did not write much; a few papers in the *Philosophical Transactions*, between 1766 and 1809, comprise his publications, but these were composed with such exquisite care, that it has been said each sentence might endure microscopic examination. Sir Humphry Davy, in a lecture delivered shortly after the death of Cavendish, observes, 'his processes were all of a finished nature, perfected by the hand of a master; they required no correction; and though many of them were performed in the very infancy of chemical science, yet their accuracy and beauty have remained unimpaired amidst the progress of discovery.' When Cavendish began his researches, pneumatic chemistry hardly existed. Different gases were recognised, but they were considered to be mere modifications or admixtures of the common air. One by one, cautiously and firmly, he fixed truth after truth beyond dispute. His most notable achievement was his demonstration, in 1781, of the composition of water. Over this discovery there has been considerable controversy, some claiming priority for James Watt; but the fact seems to be, that both Cavendish and Watt reached the same conclusion about the same time by different routes.

The Honourable Henry Cavendish was born in 1731, at Nice, whither his mother, Lady Anne Cavendish, had repaired for the sake of her health, and she died ere her son was two years old. Cavendish was educated at a private school at Hackney, whence he proceeded to Cambridge. In early life his tastes were directed to scientific pursuits, to the ultimate exclusion of politics, and all else in which ordinary men take interest. He became an excellent mathematician, electrician, astronomer, meteorologist, geologist, and as a chemist shot far ahead of his contemporaries. Up to his fortieth year, his income was moderate, perhaps not more than £500 a year, but in 1773 an uncle died and left him an enormous fortune.

This accession of wealth did little to change his habits, which had become irrevocably established as those of a methodic recluse. His shyness, his love of solitude, and aversion to society, bordered on disease. To be looked at or addressed by a stranger seemed to give him positive pain, and when approached abruptly, he would dart away with a cry or ejaculation as if scared or hurt. At Sir Joseph Banks's soirees he would stand for a long time on the landing, afraid to open the door and face the company, nor would he open it till he heard some one ascending the stairs, and then to escape the terror behind faced that in front. At one of these parties Dr Ingenhousz recited the titles and qualifications of Cavendish in a pompous and formal manner, and introduced to him an Austrian gentleman. The Austrian thereon launched out into compliments, saying his chief reason for coming to London was to see and converse with one of the greatest ornaments of the age, and one of the most illustrious philosophers that ever existed. To this high-flown verbiage Cavendish answered not a word, but stood with his eyes cast down, abashed and in misery. At last spying an opening in the crowd, he flew to the door, nor did he stop till he reached his carriage, and drove directly home. Any attempt to draw him into conversation was almost certain to fail, and Dr Wollaston's recipe for treating with him usually answered best: 'The way to talk to Cavendish is never to look at him, but to talk as if it were into vacancy, and then it is not unlikely you may set him going.' Professor Playfair, who visited London in 1782, and was frequently at the meetings of the Royal Society Club, remarks: 'Mr Cavendish is a member of this meeting. He is of an awkward appearance, and has not much of the look of a man of rank. He speaks likewise with great difficulty and hesitation, and very seldom. But the gleams of genius break often through this unpromising exterior. He never speaks at all, but it is exceedingly to the purpose, and either brings some excellent information, or draws some important conclusion.'

Cavendish's town-house was near the British Museum, at the corner of Gower Street and Montague Place. Few visitors were admitted, and some who were permitted to cross its threshold reported that books and apparatus were its chief furniture. He collected a large library of scientific literature, and willing to have it made useful, but not to be troubled with readers and borrowers, he hired a house for its reception in Dean Street, Soho, and kept a librarian. When he wanted one of his own books, he went there as to a circulating library, and left a formal receipt for whatever he took away. His favourite residence was a beautiful villa at Clapham, nearly the whole of which was occupied as workshops. The upper rooms were an observatory; the drawing-room was a laboratory; and in an ante-room was a forge. On the lawn was a wooden stage, from which access could be had to a large tree, to the top of which Cavendish, in the course of his astronomical, meteorological, and electrical experiments, occasionally ascended. For beauty he seemed quite indifferent. His apparatus, always exact and accurate so far as essential, was constructed of the cheapest material, and without any regard for symmetry.

His few guests were treated on all occasions to the same fare—a leg of mutton, and nothing else. Four scientific men were to dine with him one day, and when his housekeeper came to ask him what was to be got for dinner, he said a leg of mutton. 'Sir,' said she, 'that will not be enough for five.' 'Well, then, get two,' was his reply. His heir, Lord George Cavendish, visited him once a year, and was allowed an audience of but half-an-hour. His great income was allowed to accumulate without attention. The bankers where he kept his account found they had a balance of £80,000 on hand, and sent a messenger to confer with him regarding it. The messenger was announced, and

Cavendish, in great agitation, desired him to be sent up, and as he entered the room, cried: 'What do you come here for? What do you want with me?'

'Sir, I thought it proper to wait upon you, as we have a very large balance in hand of yours, and we wish your orders respecting it.'

'If it is any trouble to you, I will take it out of your hands. Do not come here to plague me!'

'Not the least trouble to us, sir, not the least; but we thought you might like some of it to be invested.'

'Well, well. What do you want to do?'

'Perhaps you would like £40,000 invested.'

'Do so, do so! and don't come here to trouble me, or I'll remove it.'

If men were a trouble to him, women were his abhorrence. With his housekeeper he generally communicated by notes deposited on the hall-table. He would never see a female servant, and if an unlucky maid shewed herself, she was instantly dismissed. To prevent inevitable encounters, it is said he had a second staircase erected in his Clapham villa. In all his habits he was punctiliously regular, even to hanging his hat on one peg. From an unvarying walk he was, however, driven by being gazed at. Two ladies led a gentleman on his track, in order that he might obtain a sight of the philosopher. As he was getting over a stile, he saw to his horror that he was watched, and he never appeared in that path again. That he was not quite merciless to the sex, was proved by his saving a lady from the pursuit of a mad cow. The fashion of his dress he never changed, and his appearance was consequently odd and antique, and provoked the attention he so much disliked. The villagers beheld him with awe, and thought him a wizard. His complexion was fair, his temperament nervous, and his voice squeaking. Of course, he would never allow his portrait to be taken, and the only memorial we have of his appearance is a hasty and surreptitious sketch. He died on the 24th of February 1810, aged upwards of seventy-eight. At the time of his death, he was the largest holder of bank-stock in England. He owned £1,157,000 in different public funds, the value of which was estimated at £700,000, and had besides freehold property of £8000 a year, and canal and other personal property. £50,000 lay to his credit at the bankers.

Dr George Wilson, the biographer of Cavendish, sums up his character in saying: 'There was nothing earnest, enthusiastic, heroic, or chivalrous in the nature of Cavendish, and as little was there anything mean, grovelling, or ignoble. He was almost passionless. All that needed for its apprehension more than pure intellect, or required the exercise of fancy, imagination, affection, or faith, was distasteful to Cavendish. An intellectual head thinking, a pair of wonderful acute eyes observing, and a pair of very skilful hands experimenting or recording, are all that I realise in reading his memorials.'

FATHER MATHEW.

Like Scotland, the island of Ireland has been frequently twitted with the propensity of her children to an over-indulgence in strong liquors, and it cannot be denied that the vice of intoxication has, in past times at least, formed a repulsive characteristic of both countries. With such material to work upon, it will be readily admitted that any one endeavouring to act the part of a reformer of morals, would find an endeavour to convert the masses to sobriety a truly Herculean task. Yet in Ireland such an attempt was made, and the energy and devotedness of one man accomplished what was, temporarily at least, a great moral revolution.

The Rev. Theobald Mathew, who thus proved so successful an apostle of the temperance cause, was related to the family of the Earls of Llandaff, of which his father was an illegitimate scion. Having been ordained a priest in 1814, he was appointed to a missionary charge in Cork, where his zeal and earnestness quickly secured him an immense influence both among rich and poor. Through his means, a benevolent association for visiting the sick and destitute was established in that city, on the model of the societies of St Vincent de Paul. While thus engaged in an active career of usefulness, a temperance society was formed in Cork about 1838, and Father Mathew became its president. The heroic missionary threw himself with all the ardour of his nature into the new movement, and so successful were his efforts, that in a few months he obtained 150,000 converts in Cork alone to temperance principles. Determined to diffuse the benefits of the good cause still further, he commenced a progress through the west of Ireland, in which he was everywhere followed by crowds, who pressed forward to take the vow of total abstinence. The greater part of the island was thus traversed by Father Mathew, and he also visited London and other towns in England. Much of the success that attended his peregrinations is doubtless to be ascribed to that mysterious sympathetic influence by which whole communities have often been swayed. Such was the preaching of Peter the Hermit in the middle ages, and similar effects have recently been witnessed in the 'revival' movement in Britain and America. It is, however, greatly to Father Mathew's credit, that the habitually impulsive temperament of the Irish was thus acted upon for the purest and most beneficial of purposes—their reclamation from a vice which had hitherto constituted with them a national opprobrium. It must also not be forgotten that the good priest was himself a serious sufferer by the results of his philanthropic exertions. A distillery in the south of Ireland, belonging to his family, and from which he himself derived a large income, was shut up in consequence of the disuse of whisky among the lower orders, occasioned by his preaching. His services to the cause of religion and morality were at last recognised by the state, and a pension of £300 a year granted him from the civil list. Notwithstanding this, the expenses attending his benevolent exertions kept him always poor, and even burdened him with a debt, to relieve him from which a subscription was raised. For some years previous to his death, which took place on December 8, 1856, he was incapacitated by ill health from continuing his labours. As a true benefactor of humanity, Father Mathew must ever be regarded as one of the most shining ornaments of the Roman Catholic Church.

OCTOBER 11.

Saints Tarachus, Probus, and Andronicus, martyrs, 304. St Canicus or Kenny, abbot in Ireland, 599. St Ethelburge or Edilburge, virgin and abbess, about 664. St Gummar or Gomer, confessor, 774.

Born.—Erasmus Reinhold, astronomer, 1511, *Salfeldt, Thuringia;* Dr Samuel Clarke, theological writer (*The Being and Attributes of God*), 1675, *Norwich;* James Barry, historical painter, 1741, *Cork;* Philip Astley, founder of Astley's amphitheatre, 1742, *Newcastle-under-Lyne.*

Died.—Louis V. emperor of Germany, 1347; Ulrich Zwingli, Swiss reformer, killed at Cappel, 1531; Sir Thomas Wyatt, the Elder, poet and statesman, 1542, *Sherborne;* Thomas Stackhouse, biblical writer, 1752, *Penham, Berkshire;* Anne, Countess of Macclesfield, mother of the poet Savage, 1753, *London;* Samuel Wesley, musician, 1837.

DEATH OF ZWINGLI.

Inferior to Luther and Calvin in point of genius and mental vigour, Ulrich Zwingli, or as his name is Latinised, Zuinglius, the great Swiss reformer, is better fitted as a man to command our love and esteem. The purity and amiableness of his character are universally admitted, whilst the honour unquestionably belongs to him of being the earliest of the ecclesiastical reformers of the sixteenth century. In his death, too, he may be regarded as a martyr to his principles, having accompanied, at the desire of the council of Zurich, a body of troops, sent during a civil war between the Catholic and Protestant cantons, to the relief of their countrymen at Cappel, where an action ensued, and the devoted pastor was struck down in the act of encouraging the soldiers. The victory turned against the Protestants, and Zwingli, left dying on the battle-field, was run through by the sword of a Catholic soldier, who was ignorant of his quality, but discovered him to be a heretic from his declining, by signs, to avail himself of the offer of a confessor, and recommend his soul to the Virgin. On his body being found and recognised next day, a group of spectators assembled to gaze on the remains of the renowned pastor of Zurich. One of these who had been his colleague in his days of Catholicism, looked long and earnestly on the lifeless face, and then exclaimed: 'Whatever may have been thy faith, I am sure thou wast always sincere, and that thou lovedst thy country. May God take thy soul to his mercy!' The fanatical fury of a bigoted mob was, however, incapable of any such generous appreciation, and a proposal to burn the heretical corpse was received with acclamations, and forthwith carried into execution.

When Zwingli thus met an untimely death, he had only attained the age of forty-seven. As an ecclesiastic of the Roman Catholic Church, he had manifested from the first a decided tendency to the Reformed religion, by inculcating the doctrines of primitive Christianity rather than medieval dogmas, and by referring to the Scriptures as the only authoritative tribunal in religious matters. While a preacher also in the celebrated abbey of Einsiedeln, he discountenanced greatly the superstitious notions which attracted so large a concourse of pilgrims to that celebrated shrine, and procured an erasure of the inscription over the abbey-gate, 'Here plenary remission of all sins is obtained.' His convictions as to the errors of the established faith gained daily ground, and made rapid progress after his transference from Einsiedeln to the post of preacher in the cathedral of Zurich. Here he felt himself called upon, like Luther in a similar position, to denounce the shameless traffic in indulgences, which Samson, a Franciscan friar, was endeavouring to carry on in Zurich, under the authority of Pope Leo X. The papal emissary was obliged to quit the city, and a rebellion against the authority of the holy see having thus been inaugurated, Zwingli was not long in proceeding to shake off its authority altogether. In a work which he published, *On the Observation of Lent*, he disputed with great freedom the obligation of observing particular days, and found himself arraigned in consequence, at the instance of the Bishop of Constance, before the great council of Zurich, to answer the charges of heresy and innovation. Converted, however, already by the preaching of Zwingli to a participation in his sentiments, the decision of the council was a triumphant vindication of the accused, and what may be regarded as the first sanction by state authority of the principles of the Reformation in Switzerland. Shortly afterwards the images were removed from the churches, the celebration of mass abolished, and the practice of marriage introduced among the clergy, Zwingli himself setting an example by wedding, at the age of forty, the widow of an eminent magistrate, by whom he had one son.

As a reformer, Zwingli is certainly entitled to the credit of originality as well as precedence. His views seem to have been matured without any assistance from and co-operation with others, though on after-comparison his formula of faith agreed in all essentials with that of Luther, and was nearly identical with that of Calvin. With the first of these reformers, he maintained a strenuous contest on the subject of consubstantiation, or the presence of the body and blood of Christ in the sacramental elements; but on the occasion of a discussion between them at Marburg, in 1529, the proceedings terminated by the two champions signing their mutual assent to fourteen articles of faith, and expressing a hope that their difference regarding the real presence would not interrupt their harmony as coadjutors in the same cause. With regard to Calvin, it ought to be observed that his influence has, in reality, been very slight in Switzerland, where the reformed Helvetic church was founded by Zwingli several years before the doctrines of Calvin had been heard of. There is, nevertheless, as already remarked, a close similarity between their tenets, though the characteristic doctrine of predestination is less decidedly expressed by Zwingli.

The amiability of Zwingli's character was no less conspicuous than its intrepidity and uprightness. In many points, he seems to have been in advance of his age, as we find him remonstrating in the assembly of the canton of Schweitz, against that practice which, down to the present day, has formed so unfavourable a trait of the Swiss people—their readiness to hire themselves as mercenary troops to the service of any foreign despot. In this object he so far succeeded, that a law was passed by the assembly of the canton forbidding all foreign alliances and subsidies for the space of twenty-five

years. The liberality and large-heartedness of his religious views were remarkable for the sixteenth century. He maintained that no person ought to be molested for his opinions, and ventured even to express a belief in relation to the salvation of heathens, that 'all good men who have fulfilled the laws engraven on their consciences, whatever age or country they may have lived in, will partake of eternal felicity.' One special position that the ecclesiastical must in all respects be subordinated to the secular power, has been made an object of reproach to him, both by Catholics and Protestants. This sentiment contributed perhaps indirectly to his fate, as it was in obedience to the orders of the Zurich magistrates, that he met death on the field of battle, a circumstance with which several of his enemies have thought fit to stigmatise his memory.

SPECTRE-DOGS.

Neither Brand in his *Popular Antiquities*, nor Sir Walter Scott in his *Witchcraft and Demonology*, mentions spectre-dogs as a peculiar class of apparitions, yet they seem to occupy a distinct branch of English mythology. They are supposed to exist in one form or another in almost every county, and few kinds of superstition have more strongly influenced the credulous mind. To have the 'black dog on the back' has become a general phrase, though perhaps few who use it have an idea of its origin. The following anecdotes about spectre-dogs will illustrate this phrase, and shew how generally this branch of superstition is received.

According to popular psychology, the subject may be divided into three parts: 1. Black dogs, which are really fiends that have assumed the form of dogs; 2. The spirits of evil persons, who, as part of their punishment, have been transformed into the appearance of dogs; 3. Evil spirits, that to mimic the sports of men, or to hunt their souls, have assumed the form and habits of hounds. We will begin with the black-dog apparition.

In almost every county there is a popular belief in a spectral dog, which, although slightly varying in appearance in different parts, always bears the same general characteristics. It is described as large, shaggy, and black, with long ears and tail. It does not belong to any species of living dogs, but is severally said to resemble a hound, a setter, a terrier, or a shepherd-dog, though often larger than a Newfoundland. It bears different names, but is always alike supposed to be an evil spirit, haunting places where evil deeds have been done, or where some calamity may be expected. In the Isle of Man, it is called the *Mauthe Doog*, and, according to tradition, was accustomed to haunt Peel Castle, where it was seen in every room, but especially in the guard-chamber. Here, as soon as candles were lighted, it used to go and lie down before the fire, in presence of the soldiers, who became so accustomed to its appearance, that they lost much of the awe which they first felt at its presence. But knowing its malicious character, they never ventured to molest it, till one of them, in a drunken fit, swore that 'he would try whether it were dog or devil!' He made his trial, and was instantly sobered, but rendered speechless. He lived only three days afterwards, and then 'died in agonies more than is common in a natural death.' 'I heard this attested,' says Mr Waldron, 'by several, but especially by an old soldier, who assured me he had seen it oftener than he had then hairs on his head.' Sir Walter Scott, in his *Lay of the Last Minstrel*, thus alludes to this tradition:

> 'For he was speechless, ghastly, wan,
> Like him, of whom the story ran,
> Who spoke the spectre-hound in Man.'

A similar story is related of a man who lived at a village near Aylesbury, in Buckinghamshire. This man was accustomed to go every morning and night to milk his cows in a field, which was some distance from the village. To shorten his walk, he often crossed over a neighbour's field, and passed through a gap in the hedge; but one night, on approaching the gap, he found it occupied by a large, black, fierce-looking dog. He paused to examine the animal, and as he looked at him, his fiery eyes grew larger and fiercer, and he had altogether such a fiend-like and 'unkid' appearance, that he doubted whether he were 'a dog or the bad spirit.' Whichever he was, he thought he would be no pleasant antagonist to encounter. So he turned aside, and passed through a gate at the end of the field. Night after night, he found the same dog in the gap, and turned aside in the same manner. One night, having fallen in with a companion, he returned homeward with him across his neighbour's field, being determined, if he found the dog in the gap, to make an attack upon him, and drive him away. On reaching the gap, there stood the dog looking even fiercer and bigger than ever. But the milkman, wishing to appear valiant before his companion, put down his milk-pails, which were suspended from a yoke across his shoulders, and attempting to speak very bravely, though trembling all over, he exclaimed: 'Now, you black fiend, I'll try what ye're made of!' He raised his yoke in both his hands, and struck at the dog with all his might. The dog vanished, and the milkman fell senseless to the ground. He was carried home alive, but remained speechless and paralytic to the end of his days.

A certain spot near the writer's residence is said to be haunted at midnight by 'the black dog.' Once, at the awful hour of midnight, he happened to pass the dreaded spot, and, sure enough, he met the black-dog apparition. It was a light summer's night, and as he approached the awful apparition, he soon saw it was far too substantial 'to try what it was made of.' He knew it to be a fine black dog, half Newfoundland and retriever, belonging to a gamekeeper, who, doubtless, was near at hand watching his master's preserves. It is no uncommon manœuvre for poachers and such characters to give certain spots the reputation of being haunted.

In the adjoining county of Hertford, the same superstition prevails, and the black-dog apparition is still a dreaded bogie. Within the parish of Tring, but about three miles from the town, a poor old woman was, in 1751, drowned for suspected witchcraft. A chimney-sweep, who was the principal perpetrator of this atrocious deed, was hanged and gibbeted near the place where the murder was effected. While the gibbet stood, and long after it had disappeared, the spot was haunted by a black dog. The writer was told by the village schoolmaster, who had been 'abroad,' that he himself

had seen this diabolical dog. 'I was returning home,' said he, 'late at night in a gig with the person who was driving. When we came near the spot, where a portion of the gibbet had lately stood, we saw on the bank of the roadside, along which a ditch or narrow brook runs, a flame of fire as large as a man's hat. 'What's that?' I exclaimed. 'Hush!' said my companion all in a tremble; and suddenly pulling in his horse, made a dead stop. I then saw an immense black dog lying on the road just in front of our horse, which also appeared trembling with fright. The dog was the strangest looking creature I ever beheld. He was as big as a Newfoundland, but very gaunt, shaggy, with long ears and tail, eyes like balls of fire, and large long teeth, for he opened his mouth and seemed to grin at us. He looked more like a fiend than a dog, and I trembled as much as my companion. In a few minutes the dog disappeared, seeming to vanish like a shadow, or to sink into the earth, and we drove on over the spot where he had lain.' The same canine apparition is occasionally still witnessed at the same place or near it.

In Norfolk, and in some parts of Cambridgeshire, the same kind of apparition is well-known to the peasantry by the name of 'Shuck,' the provincial word for shag. Here he is said chiefly to haunt churchyards, but other lonesome places are not secure from his visitations. Thus a dreary lane, in the parish of Overstrand, is called, from his frequent visits there, Shuck's Lane. The spot on which he has been seen, if examined soon after his disappearance, is found to be scorched, and strongly impregnated with the smell of brimstone!

In some districts of the county of Lancaster, this spectre-dog bears the names of 'Trash' and 'Skriker.' Its general appearance is the same as in other parts, but its habits, and the object of its visits, seem somewhat different. It does not haunt particular spots, but appears to certain persons to warn them of the speedy death of some relation or intimate friend. Occasionally, however, it gives its warning, not by its appearance, but only by uttering a peculiar screech, from whence it is called, in the local dialect, Skriker. Its name, Trash, is applied to it, because the noise made by its feet is supposed to resemble that of a person walking with heavy shoes along a miry, sloppy road. If followed, it retreats, but always with its eyes fronting the pursuer, and either sinks into the earth with a frightful shriek, or, if the pursuer averts his eyes from it for a moment, it disappears he knows not how. If struck at with a stick or weapon, it keeps its ground, but, to the horror of the striker, his weapon passes as harmlessly through it as if it were a mere shadow.*

Lyme-Regis, in Dorsetshire, has a famous story about one of these canine apparitions. About a mile from the town stands a farmhouse, which once formed part of an old mansion that was demolished in the parliamentary wars, except the small portion still existing. The sitting-room now used by the farmer, and also by his predecessors for a century or two, retains the large old-fashioned fireplace, with a fixed seat on each side under the capacious chimney. Many years ago, when the then master of the house, as his custom was after the daily toils were over, used to settle himself on one of these snug seats in the chimney-corner, a large black dog as regularly took possession of the opposite one. This dog in all essentials resembled the spectre-dog already described. For many nights, weeks, and months, this mysterious visitor, sitting *vis à vis* to the farmer, cast a gloom over his evening enjoyment. At length, as he received no harm from his companion, and became accustomed to his appearance, he began to look on him as one of the family circle. His neighbours, however, often advised him to drive away the fiend-like intruder; but the farmer, not relishing a contest with him, jestingly replied: 'Why should I? He costs me nothing—he eats nothing, he drinks nothing, he interferes with no one. He is the quietest and frugalest creature in the house.'

One night, however, the farmer, having been drinking too freely with a neighbour, and excited by his taunts about the black dog to an unusual degree of irritation, was determined his courage should no more be called in question. Returning home in a rage, he no sooner saw the dog on his usual seat, than, seizing the poker, he rushed with it towards his mysterious companion. The dog, perceiving his intention, sprang from its seat, and ran up stairs, followed by the infuriated farmer. The dog fled into an attic at the top of the house, and just as the farmer entered the same room, he saw it spring from the floor, and disappear through the ceiling. Enraged at being thus foiled, he struck with the poker the ceiling where the dog had passed through, and down fell a small old-fashioned box, which, on being opened, was found to contain a large sum in gold and silver coins of Charles I.'s reign. The dog was never more seen within doors, but to the present day continues at midnight to haunt a lane which leads to this house, and which has long borne the name of 'Dog Lane,' while a small inn by the roadside still invites the passing stranger by the ominous sign of 'the Black Dog,' portrayed in all his spectral frightfulness. So late as the year 1856, a respectable intelligent woman told the writer that she herself had seen the dog-ghost. 'As I was returning to Lyme,' said she, 'one night with my husband down Dog Lane, as we reached about the middle of it, I saw an animal about the size of a dog meeting us. "What's that?" I said to my husband. "What?" said he, "I see nothing." I was so frightened I could say no more then, for the animal was within two or three yards of us, and had become as large as a young calf, but had the appearance of a black shaggy dog with fiery eyes, just like the description I had heard of the "black dog." He passed close by me, and made the air cold and dank as he passed along. Though I was afraid to speak, I could not help turning round to look after him, and I saw him growing bigger and bigger as he went along, till he was as high as the trees by the roadside, and then seeming to swell into a large cloud, he vanished in the air. As soon as I could speak, I asked my husband to look at his watch, and it was then five minutes past twelve. My husband said he saw nothing but a vapour or fog coming up from the sea.' A case of this kind shews how even a sensible person may become the victim of self-delusion; for in all practical matters this woman was remarkably sober-minded, intelligent, and judicious; and well educated for a person of her calling—that of sick-nurse, the duties of which she discharged in the

* *Notes and Queries.*

writer's house for several weeks to his fullest satisfaction, shewing no symptoms of nervousness or timidity.

The foregoing examples belong to the class of fiends who have assumed the appearance of dogs. We will now give a few instances of human spirits that, as a punishment, have been transformed into similar apparitions.

Lady Howard, a Devonshire notable of the time of James I., was remarkable for her beauty, her wealth, her talents, and accomplishments. But she had many bad qualities. Amongst others, she was unnaturally cruel to her only daughter, and had a sad knack of getting rid of her husbands, having been married no less than four times. At last she died herself, and, for her misdemeanours while living, her spirit was transformed into a hound, and compelled to run every night, between midnight and cock-crowing, from the gateway of Fitz-ford, her former residence, to Oakhampton Park, and bring back to the place from whence she started, a single blade of grass in her mouth; and this penance she is doomed to continue till every blade of grass is removed from the park, which she will not be able to effect till the end of the world. How these particulars were communicated to our living fellow-mortals we are not informed, and we dare not venture a conjecture. Our rustic psychologists have been rather more explicit in the following story:

There once lived in the hamlet of Dean Combe, Devon, a weaver of great fame and skill. After long prosperity he died and was buried. But the next day he appeared sitting at the loom in his chamber, working as diligently as when he was alive. His sons applied to the vicar, who accordingly went to the foot of the stairs, and heard the noise of the weaver's shuttle in the room above. 'Knowles,' he cried, 'come down; this is no place for thee.' 'I will,' replied the weaver, 'as soon as I have worked out my quill' (the quill is the shuttle full of wool). 'Nay,' said the vicar, 'thou hast been long enough at thy work; come down at once.' So when the spirit came down, the vicar took a handful of earth from the churchyard, and threw it in its face. And in a moment it became a black hound. 'Follow me,' said the vicar, and it followed him to the gate of the wood. And when they came there, 'it seemed as if all the trees in the wood were coming together, so great was the wind.' Then the vicar took a nutshell with a hole in it, and led the hound to the pool below the water-fall. 'Take this shell,' said he, 'and when thou shalt have dipped out the pool with it, thou mayest rest—not before!' And at mid-day and at midnight, the hound may still be seen at its work.* It is difficult to understand why the industrious weaver was consigned to such a hopeless doom. Many spectral dogs, believed to be the souls of wicked persons, are said to haunt the sides of rivers and pools, and sometimes their yelping is so dreadful, that all who hear them lose their senses.†

Besides such apparitions of solitary dogs, whole packs of spectral hounds are said to be occasionally heard and seen in full cry in various parts of England and Wales, but chiefly in mountainous districts. They are everywhere described much in the same way, but with different names. In the north, they are called 'Gabriel's Hounds;' in Devon, the 'Wisk,' 'Yesk,' or 'Heath Hounds;' in Wales, 'Cron Annwn,' or 'Cwn Wybir;' and in Cornwall, the 'Devil and his Dandy-dogs.' But few have ever imagined that they have seen these hounds, though popular superstition has described them as black, with fiery eyes and teeth, and sprinkled all over with blood. Generally, they are only heard, and seem to be passing swiftly along in the air, as if in hot pursuit of their prey; and, though not very high up, yet they cannot be seen, because they generally choose cloudy nights. Their yelping is said to be sometimes as loud as the note of a blood-hound, but sharper and more terrific. Why they have anywhere received the name of Gabriel's hounds, appears unaccountable, for they are always supposed to be evil spirits hunting the souls of the dead, or, by their diabolical yelping, to betoken the speedy death of some person. Thus, Mr Holland, of Sheffield, describes in the following sonnet the superstition as held in Yorkshire—

'Oft have I heard my honoured mother say
How she hath listened to the Gabriel Hounds;
Those strange unearthly and mysterious sounds
Which on the ear through murkiest darkness fell;
And how, entranced by superstitious spell,
The trembling villager not seldom heard,
In the quaint notes of the nocturnal bird
Of death premonished, some sick neighbour's knell.
I, too, remember once, at midnight dark,
How these sky-yelpers startled me, and stirred
My fancy so, I could have then averred
A mimic pack of beagles low did bark!
Nor wondered I that rustic fear should trace
A spectral huntsman doomed to that long moonless chase.'

Wordsworth, alluding to another form of this superstition, similar to the German story of the Wild Huntsman, thus writes:

'He oftentimes will start,
For, overhead, are sweeping Gabriel's Hounds,
Doomed, with their impious lord, the flying hart
To chase for ever through aërial grounds.'

Many wild and amusing stories are told respecting these aërial hounds; especially in the secluded districts of Devon and Cornwall. The following is a specimen. A herdsman was journeying homeward across the moors of Cornwall one windy night, when he heard at a distance the baying of hounds, which he was not long in recognising to be the dismal yelp of the Devil's Dandy-dogs. He was three or four miles distant from his home; and, much terrified, he hurried onward as fast as the treacherous nature of the soil and uncertainty of the path would allow; but the melancholy yelping of the hounds and the fiendish shout of the hunter came nearer and nearer. After a long run, they appeared so close upon him, that he could not help turning round to look at them. He was horror-struck, for he could distinctly see the hunter and his dogs. The huntsman was terrible to behold. He was black, had large fiery eyes, horns, a tail, and carried in his clawy-hand a long hunting-pole. The dogs, a numerous pack, blackened the ground as far as it could be seen; each snorting fire, and yelping in the most frightful tone. What was the poor rustic to do? No

* *Notes and Queries*, vol. ii. 515.
† Ibid. vol. i. 295.

cottage was near; no rock, no tree to shelter him —nothing remained but to abandon himself to the fury of these hell-hounds. Suddenly, a happy thought flashed into his mind. He had been told that no evil spirit can resist the power of prayer. He fell on his knees, and at the first holy words he uttered, the hounds stood still, but yelped more dismally than ever; and the huntsman shouted, 'Bo Shrove!' which 'means,' says the narrator, 'in the old language, *The boy prays!*' The black huntsman then drew off his dandy-dogs, and the poor herdsman hastened home as fast as his trembling frame permitted.*

This, and similar stories, strikingly illustrate the creative power of the imagination when excited by fear. The herdsman's vision existed only in his own mind, induced by the terrifying sound, which, although adapted by his imagination to his previous conceptions of the dandy-dogs, was a reality. For it has been fully and satisfactorily ascertained that the goblin-hounds, which have originated such fanciful legends in almost every county, are merely flocks of wild-geese, or other large migratory birds.†

HARRY ROWE.

In the earlier half of October 1800, there died in the poor-house of York one Harry Rowe, a well-known character in his locality, who made a good deal of noise in the world while he lived, and caused considerable speculation among Shakspearian commentators after his death. For Harry had

HARRY ROWE.

many years held the distinguished post of trumpet-major to the high-sheriffs of Yorkshire, and was also the reputed author of an ably-commentated edition of *Macbeth*, and a musical farce, entitled *No Cure, no Pay*, a trenchant satire on quack-doctors, and the shameful facility with which medical diplomas and degrees were then obtained by illiterate adventurers. Rowe was born at York in 1726. He served as trumpeter, in the Duke of Kingston's regiment of light horse, at the battle of Culloden; and, after he retired from the army, attended, in the same capacity, the sheriffs and judges at York assizes for nearly half a century. Rowe was also the master of a puppet-show, and, for many successive years, he opened his little theatre at York during the winter months, making a regular circuit to various parts of the country in the summer season. By these means he long supported his poor and aged parents, never allowing them to receive any other aid than that amply provided for them by his own exertions. In his own case he was less fortunate. When overtaken by age and poverty, Rowe was forced to seek an asylum in the poor-house, where he died.

The puppet-showman had a rough, ready, caustic wit, with which he interlarded the speeches of his wooden comedians, to the great delight of the audience. And so, many actually thought that the edition of *Macbeth*, bearing Rowe's name on the title-page, was really written by him, to the great mystification of later commentators. In the preface, Harry is made to say: 'I am the master of a puppet-show, and as, from the nature of my employment, I am obliged to have a few stock-plays ready for representation whenever I am accidentally visited by a select party of ladies and gentlemen, I have added the tragedy of *Macbeth* to my green-room collection. The alterations that I have made in this play are warranted, from a careful perusal of a very old manuscript in the possession of my prompter, one of whose ancestors, by the mother's side, was rush-spreader and candle-snuffer at the Globe playhouse, as appears from the following memorandum on a blank-page of the manuscript: "This day, March the fourth, received the sum of seven shillings and fourpence, for six bundles of rushes, and two pair of candle-snuffers."'

The work cleverly satirises Johnson's, Steevens's, and Malone's editions of Shakspeare, and was written, as well as *No Cure, no Pay*, by Dr Andrew Hunter of York, a skilful physician and able man of letters. The profits were given to Rowe, to support him in a long and painful illness; and, when unable to manage his wooden company, the old trumpet-major sold the works of the charitable but satirical physician, in all parts of the city of York, as his own composition.

DISCOVERY OF AMERICA.

On 12th October 1492, Columbus with his followers landed at last on Watling's Island, one of the Bahama Isles, and planted there the cross in token of gratitude to the Divine mercy, which, after guiding him safely through a perilous voyage, had at last, in the discovery of a western world, crowned with success the darling aspiration of his life. Land had already been descried on the previous evening, but it was not till the ensuing morning that the intrepid admiral beheld the flat and densely-wooded shores gleaming beneath the rays of an autumn sun, and by actually setting his foot on them, realised the fulfilment of his hopes.

It is now well known that although Columbus was unquestionably the first to proclaim to the world at large the existence of a new and vast region in the direction of the setting sun, he cannot literally be said to have been the first European discoverer of America. The ancient Scandinavians or Norsemen, so renowned for their maritime enterprise, had, at the commencement of the 11th century, not only settled colonies in Greenland, but explored the whole east coast of America as far south as lat. 41° 30′ N., and there, near New Bedford, in the state of Massachusetts, they planted a colony. An intercourse by way of Greenland and Iceland subsisted between this settlement and Norway down to the fourteenth century. There is also satisfactory evidence for believing, that in the twelfth century the celebrated Welsh prince, Madoc, having sailed from his native country with a small fleet, landed and founded a colony on the coast of Virginia. But to Columbus still belongs the merit of having philosophically reasoned out the existence of a New World, and by practically ascertaining the truth of his propositions, of inaugurating that connection between the Eastern and Western Hemispheres which has effected so remarkable a revolution in the world's history. It is a little curious, indeed, that the belief which Columbus entertained, at first, as to the land discovered by him being part of India or China, was adhered to by him to the last, and he died in the idea that Cuba formed a portion of the mainland of India. This notion so pertinaciously clung to, both by the great Genoese and Europe in general, was dispelled by Balboa's expedition, in 1513, across the Isthmus of Darien, and discovery of the Pacific Ocean; whilst a few years later, the real position of these countries with respect to America was demonstrated by the expedition of Fernando Magalhaens, whose untimely death, in the Philippine Islands, deprived him of the honour of being the first circumnavigator of the globe.

Much obloquy has been thrown on Amerigo Vespucci, the Florentine navigator, for depriving Columbus of the honour of giving his name to the New World. How the denomination of America arose from Vespucci's Christian name, has never been satisfactorily explained, but it appears to be sufficiently ascertained that he himself is in nowise responsible for the circumstance. Vespucci, who was a man of considerable attainments, wrote an account of his American voyages, which was translated into German, and obtained an immense popularity with that nation. It has been conjectured that the name of America was first applied in Germany to the New World, and from thence was adopted by the other countries of Europe.

THE 'CURIOSITIES' OF MANCHESTER COLLEGE.

On 12th October 1653, died at Clayton Hall, near Manchester, Humphrey Chetham, who bequeathed the large fortune which, though a gentleman by birth, he had made in trade, for the purpose of establishing a school for the education of forty poor children of Manchester, and also of founding a public library, which till recently was almost the only institution of the kind in Britain. The 'college' as the scholastic establishment and library are termed, was originally a religious foundation, but the buildings were in the sixteenth century sold to the Derby family, from whom they were purchased shortly after the death of Mr Chetham, by the trustees of the latter. The boys are boarded, clothed, and educated from about the age of six to fourteen, after which they are bound apprentices to some trade. Both in a philanthropic and antiquarian point of view, the college forms one of the most interesting public buildings in Manchester, contrasting so markedly, as it does, in its traditions of ancient times, with the bustle of factory-life and the din of mills and machinery. No part of the structure strikes the visitor more forcibly in this respect than the library, which is open daily to the public, with an unlimited right to every one, whether a resident in the town or a stranger, of reading, within a room set apart for the purpose, any book in the collection. The only condition demanded is, that the reader shall enter in a book his name and address. The reading-room is an antique apartment, wainscoted with oak, and adorned with portraits of Humphrey Chetham, the founder, Luther, and other celebrities, and presenting altogether such a quaint and secluded appearance, that it is difficult for the visitor to realise the fact of his being near the centre of such a busy nineteenth-century city as Manchester.

It is a well-known fact that in recent years an odd collection of what were termed 'curiosities' used to be exhibited in the library gallery attached to the college. The visitors were, for the most part, people from the country, who flocked thither to see the wonders of the place. A small fee for admission was charged, the duties of exhibitor being assumed by the college-boys in rotation, and certainly to a stranger the show-boy was the greatest curiosity there. With a loud, shrill voice, in the broad Lancashire dialect, and a tone of wearisome monotony, the boy, with or without a long wand, thus directed attention to the objects exhibited: 'That 's th' skeleton of a mon; that 's a globe; that 's a talliscope; that 's a snake; over th' snake's back 's two watch-bills; them 's four ancient swooards; that wi' a whoite haft onst belonged to General Wolfe; that 's th' whip that th' snake was kilt wi'; that topmost 's a crocodoile; that bottomost 's a halligator; that boot wonst belonged to Queen Elizabeth; that 's a Hindian pouch; that 's a ancient stiletto; that 's part o' Humphrey Cheetham's armour; that wi' th' white feeace is a munkey; under th' munkey 's a green lizard; side o' th' munkey 's a porpus's skull; under the porpus's skull 's a halligator; under th' halligator 's a turtle; them bows an' arrows belonged to th' Injyans; that 's a porpus's head; them there 's various kinds o'

adders, worums, snakes, fishes, and vemenous creeturs; that albine piece was takken from th' deead body of a Frenchmon, that was killed at th' battle o' Waterloo, that was fowt i' th' year eyteen hundert an' fifteen; them's a pair o' eagle's claws; that arrow belonged to one o' th' legions that fowt under th' Duke o' Richmunt at th' battle o' Bosworth Field, i' th' year 1485, when King Richurt th' Third, king of Englund, was slain; them arrows wonst belonged to Robin Hood; that's a sea-hen; that's a sea-weed; that's a unicorn fish; that's part of a Hindian's skull; that's th' top on it; that's Oliver Crummell's stone and tankard; that's part on a loadstone; them two pieces o' wood was almanecks afoare printin' was fun' out; that's a hairy mon; under th' hairy mon's a spaking-trumpet; side o' th' spaking-trumpet's a shark's jaw-bone; that that's leaning against th' spaking-trumpet's Oliver Crummell's swooard; that's a leather-bag; side o' th' leather-bag's two cokey-nut shells; side o' th' cokey-nut shell's a porpus's skull; side o' th' porpus's head's a pumpkin; over th' pumpkin's a turtle; side o' th' turtle's a sea-weed; that top 'un's a crocodile; under th' crocodile's a halligator; under th' halligator's a woman's clog that was split by a thunner-bolt, an' hoo wasn't hurt; side o' th' crocodile's tail's a sea-hen; side o' sea-hen's a Laplander's snow-shoe; that in a box is th' skeleton of a nightingale.'

This brought the show-boy and his gaping auditors to the door of the reading-room, the door of which being thrown open, the company entered to the great annoyance of the readers, and the lad would point out in the same loud, piercing voice, the various curiosities which the apartment contained, including the portrait of Chetham the founder, and finally pointing to the brilliantly painted and gilded cock on a bracket, would exclaim, by way of peroration, 'That's th' cock as crows when he smells roast-beef!' The country-folk at this would stare more and gape wider, as if in momentary expectation of hearing Chanticleer, and then turn away, half disappointed, but consoling themselves with the supposition that just then there was no roast-beef within smelling distance. This ludicrous exhibition is, however, no longer one of the sights of Manchester College. The feoffees, feeling that it was scarcely in accordance with the cloistral quiet, solemn aspect, and studious silence of the place, at length closed the show, and the curiosities have been removed to the Salford Royal Museum, Peel Park.

ROBERT STEPHENSON.

The lives of George and Robert Stephenson are interwoven, and it is not unlikely that some do not sufficiently recognise the genius of the son in the original glory of the father. 'It was my father's thorough training,' said Robert, 'his example, and his character, which made me the man I am.' And on another occasion, he observed: 'It is my great pride to remember, that whatever may have been done, and however extensive may have been my own connection with railway development, all I know and all I have done is primarily due to the parent whose memory I cherish and revere.' It is pleasant to read these modest and grateful words, yet we must remember that character is as much as education, and in Robert Stephenson it was easy to discern a repetition of those qualities of will and intellect which raised his father from a labourer's cottage to wealth and honours which might satiate any ambition. If Robert rejoiced in his father, George might rejoice in his son. The world will always read their lives together, and behold in the son the crown and perfection of the foundation laid in the father.

Robert Stephenson was born towards the end of 1803, while his father was working as brakesman at Willington Quay, on the north bank of the Tyne, about six miles below Newcastle. George having felt the pinch of ignorance, resolved that his son—his only son—should not suffer in the same way. To cite his own words: 'When Robert was a little boy, I saw how deficient I was in education, and I made up my mind that he should not labour under the same defect, but that I should put him to a good school, and give him a liberal training. I was, however, a poor man; and how do you think I managed? I betook myself to mending my neighbours' clocks and watches at nights, after my daily labour was done, and thus I procured the means of educating my son.' Thus when Robert was twelve, he sent him to a good school in Newcastle, to which he rode daily on a donkey. There are some still living who remember the little boy, dressed in his suit of homely gray stuff, cut out by his father, cantering along to school upon the 'cuddy,' with his wallet of provisions for the day and his bag of books slung over his shoulder.

At the age of fifteen, he was apprenticed to a coal-viewer, and during three years in which he served in that capacity, he spent his evenings with his father in reading, and study, and eager discussions concerning the locomotive-engine, and its growing powers and possible uses. In order that Robert should be well qualified to deal with the world, George took him from business and sent him for six months to Edinburgh University. To what excellent purpose he turned this brief sojourn is proved by an anecdote related by Mr Smiles. One evening, long years afterwards, Mr Robert Stephenson was conversing with a friend in his house in London, and rising from his seat he took down a volume from the shelves. 'What have we here?' was asked, as a book of neatly written manuscript was spread before him. Mr Stephenson's answer was: 'When I went to college, I knew the difficulty my father had in collecting the funds to send me there. Before going I studied shorthand; while at Edinburgh, I took down, verbatim, every lecture; and in the evenings, before I went to bed, I transcribed those lectures word for word. You see the result in that range of books.' One reason for undertaking this great labour was, that his father should share in the instruction he received.

On his return from Edinburgh, Robert assisted his father in the survey of the Stockton and Darlington Railway, entering the figures while his father took the sights. Then he was engaged on the more difficult task of scheming out the line between Liverpool and Manchester over Chat Moss. In 1824, he went to South America, to superintend some mining operations in Columbia; but finding life there dull and unsatisfactory, and his father writing that his help was urgently required at home, he returned to England after an absence of three years, and assumed the management of a locomotive-factory which had been set up in

Newcastle. There he constructed the *Rocket*, that celebrated engine which won the prize of £500 at the competition at Rainhill in 1829, and established the efficiency of the locomotive for working the Liverpool and Manchester Railway, and indeed all future railways. His next great undertaking was the formation of the railway between London and Birmingham, a work of prodigious difficulty and anxiety. In examining the country to ascertain the best line, he walked the whole distance between London and Birmingham upwards of twenty times. Long tunnels and miles of deep excavation had to be driven through unknown strata. The business of railway-making was new, and those who contracted for its execution seldom came to any good. Speaking of the difficulties encountered during the construction of this line, Robert Stephenson observed: 'After the works were let, wages rose, the prices of materials of all kinds rose, and the contractors, many of whom were men of comparatively small capital, were thrown on their beam-ends. Their calculations as to expenses and profits were completely upset. Let me just go over the list. There was Jackson, who took the Primrose-Hill contract—he failed. Then there was the next length—Nowells; then Copeland and Harding; north of them Townsend, who had the Tring cutting; next Stoke Hammond; then Lyers; then Hughes: I think all of these broke down, or at least were helped through by the directors. Then there was that terrible contract of the Kilsby tunnel, which broke the Nowells, and killed one of them. The contractors to the north of Kilsby were more fortunate, though some of them pulled through only with the greatest difficulty. Of the eighteen contracts in which the line was originally let, only seven were completed by the original contractors. Eleven firms were ruined by their contracts, which were re-let to others at advanced prices, or were carried on and finished by the company.'

The skill with which he overcame obstacles between London and Birmingham established Robert Stephenson's reputation beyond cavil, and projectors thought themselves fortunate who could secure his name, and he had only to propose his own terms to obtain them. In one session of parliament he appeared as engineer for no fewer than thirty-three new schemes. His work was enormous, and his income larger than ever fell to any of his profession. His business did not, however, fall into easy routine, but he was continually called to exercise his genius in surmounting difficulties hitherto unattempted by engineers. He designed the Royal Border Bridge, which crosses the Tweed at Berwick, and the High Level Bridge over the Tyne at Newcastle, both of which are marvellous and beautiful works; but as engineer to the Chester and Holyhead Railway he won his chief triumph in carrying the line through tubular bridges over the Straits of Menai and the estuary of the Conway. These Welsh works cost him intense thought and anxiety. When he had got the first tube floated at Conway, and saw all safe, he said: 'Now I shall go to bed!' The Britannia Bridge over the Straits gave him still more trouble. 'It was,' he said, 'a most anxious and harassing time with me. Often at night I would lie tossing about, seeking sleep in vain. The tubes filled my head. I went to bed with them and got up with them. In the gray of the morning, when I looked across the square,* it seemed an immense distance across to the houses on the opposite side. It was nearly the same length as the span of my tubular bridge!' When the first tube had been floated, a friend remarked to him: 'This great work has made you ten years older.' 'I have not slept sound,' he replied, 'for three weeks.'

The tubular bridge he repeated on a grander scale in the Victoria Bridge across the St Lawrence, at Montreal; and in two bridges over the Nile, he varied his plan by running the line *upon* the tubes instead of *within* them. It was from his experience in Egypt that he addressed the House of Commons with so much effect on the Suez Canal scheme. 'I have surveyed the line,' said he, 'I have travelled the whole distance on foot, and I declare there is no fall between the two seas. Honourable members talk about a canal. A canal is impossible—the thing would only be a ditch!'

George Stephenson was once invited to offer himself as member of parliament for South Shields, but he declined the honour, having slight interest in politics. 'Politics,' he used to say, 'are all matters of theory—there is no stability in them; they shift about like the sands of the sea; and I should feel quite out of my element amongst them.' On the question of free-trade, nevertheless, he held a decided opinion. 'England,' said he to Sir Joseph Paxton, 'is, and must be a shopkeeper; and our docks and harbours are only so many wholesale-shops, the doors of which should always be kept open.' Robert, on the other hand, was, strange to say, a thorough-going Protectionist, and represented Whitby in parliament as a Conservative from 1847. He resisted free-trade, and supported the Navigation Laws; and on the 26th of November 1852, he went into the lobby with the famous minority of 53, who voted in disapproval of liberal commercial legislation, and thereby earned the name of 'cannon balls,' their heads being presumed too hard for the entrance of a new idea.

Robert Stephenson died on the 12th of October 1859, in the fifty-sixth year of his age, and was buried by the side of Telford in Westminster Abbey.

NOTES FROM AUBREY :
ON ENGLISH MANNERS IN OLD TIMES.

John Aubrey was an English gentleman-scholar who flourished in the latter half of the seventeenth century, and made many curious collections in history and antiquities. From some papers drawn up by him about the year 1678, and which are preserved in the Ashmole Museum, the following notes are condensed by an eminent historical student—H. T. Riley—who has obligingly communicated them to the editor of the *Book of Days*.

'There were very few free-schools in England before the Reformation. Youths were generally taught Latin in the monasteries, and young women had their education, not at Hackney, as now (1678 A. D.), but at nunneries, where they learned needlework, confectionary, surgery, physic, writing, drawing, &c. Anciently, before the Reformation, ordinary men's houses had no chimneys, but flues like louvre-holes. In the halls and parlours of great houses were written texts of Scripture, on painted cloths.

'Before the late civil wars, at Christmas, the first dish that was brought to table was a boar's head, with a lemon in his mouth. At Queen's College, in Oxford, they still retain this custom ; the bearer of it brings it into the hall, singing to an old tune an old Latin rhyme—*Caput apri defero, &c.* [The boar's head in bring I.] The first dish that was brought to table on Easter-day was a red herring riding away on horseback—*i. e.*, a herring arranged by the cook, something after the manner of a man on horseback, set in a corn-salad. The custom of eating a gammon of bacon at Easter was this—namely, to shew their abhorrence of Judaism at that solemn commemoration of our Lord's resurrection.

'The use of "Your humble servant," came first into England on the marriage of Queen Mary, daughter of Henry IV. of France [to King Charles I.]. The usual salutation before that time was, "God keep you!" "God be with you!" and, among the vulgar, "How dost do?" with a thump on the shoulder. Until this time, the court itself was unpolished and unmannered. King James's court was so far from being civil to women, that the ladies, nay, the queen herself, could hardly pass by the king's apartment without receiving some affront.

'In days of yore, lords and gentlemen lived in the country like petty kings : had their castles and their boroughs, and gallows within their liberties, where they could try, condemn, and execute. They never went to London but in parliament time, or once a year, to do their homage to their king. They always ate in Gothic halls, at the high table or oriel (a little room at the upper end of the hall, where stands a table), with the folks at the side-tables. The meat was served up by watchwords. Jacks are but of late invention ; the poor boys did turn the spits, and licked the dripping for their pains. The beds of the men-servants and retainers were in the hall, as now in the grand or privy chamber. The hearth was commonly in the middle, whence the saying,* "Round about our coal-fire."

'The halls of the justices of the peace were dreadful to behold ; the screen was garnished with corslets and helmets gaping with open mouths with coats of mail, lances, pikes, halberts, brown bills, and bucklers. Public inns were rare. Travellers were entertained at religious houses for three days together, if occasion served. The meetings of the gentry were not at taverns, but in the fields or forests, with hawks and hounds, and their bugle-horns in silken baldrics.

'In the last age, every gentleman-like man kept a sparrow-hawk, and a priest kept a bobby,* and Dame Julian Berners teaches us (who wrote a treatise on field-sports, *temp.* Henry VI.) ; it was also a diversion for young gentlewomen to man† sparrow-hawks and merlins.

'Before the Reformation, there were no poor-rates ; the charitable doles given at religious houses, and the church-ale in every parish, did the business. In every parish there was a church-house, to which belonged spits, pots, crocks, &c. for dressing provisions. Here the housekeepers met and were merry, and gave their charity. The young people came there too, and had dancing, bowling, and shooting at butts. Mr Antony Wood assures me, there were few or no alms-houses before the time of King Henry VIII. ; that at Oxford opposite Christ Church, is one of the most ancient in England. In every church was a poor-man's box, and the like at great inns.

'Before the wake, or feast of the dedication of the church, they sat up all night fasting and praying—that is to say, on the eve of the wake. In the Easter-holidays was the clerk's "ale," for his private benefit and the solace of the neighbourhood.

'Glass windows, except in churches and gentlemen's houses, were rare before the time of Henry VIII. In my own remembrance, before the civil wars, copyholders and poor people had none in Herefordshire, Monmouthshire, and Salop : it is so still (1678 A. D.).

'About ninety years ago, noblemen's and gentlemen's coats were [like those] of the bedels and yeomen of the guards—*i. e.*, gathered at the middle.

'Captain Silas Taylor says, that in days of yore, when a church was to be built, they watched and prayed on the vigil of the dedication, and took that point of the horizon where the sun arose, for the east, which makes the variation that so few stand true, except those built between the two equinoxes. I have experimented [with] some churches, and have found the line to point to that part of the horizon where the sun rises on the day of that saint to whom the church is dedicated.

'In Scotland, especially among the Highlanders, the women make a courtesy to the new moon; and our English women, in this country, have a touch of this, some of them sitting astride on a gate or stile the first evening the new moon appears, and saying, "A fine moon, God bless her!" The like I observed in Herefordshire.

'From the time of Erasmus [*temp.* Henry VIII.] till about twenty years last past, the learning was downright pedantry. The conversation and habits of those times were as starched as their bands and square beards, and gravity was then taken for wisdom. The gentry and citizens had little learning of any

* And burden of a well-known song of former times.

* A very small kind of hawk.

† 'To man a hawk' was a current phrase, meaning, to make a hawk tractable.

kind, and their way of breeding up their children was suitable to the rest. They were as severe to their children as their schoolmasters, and their schoolmasters as masters of the house of correction. Gentlemen of thirty and forty years old were to stand, like mutes and fools, bareheaded before their parents; and the daughters—grown women—were to stand at the cupboard-side during the whole time of the proud mother's visit, unless leave was desired, forsooth, that a cushion should be given them to kneel upon, brought them by the serving-man, after they had done sufficient penance in standing. The boys had their foreheads turned up and stiffened with spittle. The gentlewomen had prodigious fans, as is to be seen in old pictures; and it had a handle at least half-a-yard long: with these the daughters were oftentimes corrected. Sir Edward Coke, Lord-Chief Justice, rode the circuit with such a fan; Sir William Dugdale told me he was an eye-witness of it; the Earl of Manchester also used such a fan.

'At Oxford (and, I believe, at Cambridge) the rod was frequently used by the tutors and deans; and Dr Potter, of Trinity College, I know right well, whipped his pupil with his sword by his side, when he came to take his leave of him to go to the Inns of Court.'

TRAGEDY OF THE CALAS FAMILY.

Of all the *Causes Célèbres* of France, there is none which possesses a more painful interest, or points a more instructive moral, than the trial and condemnation of Jean Calas, by the parliament of Toulouse, in the last century. Presenting, on the one hand, a striking instance of the extremities to which even judicial assemblies may be carried by the influence of bigotry and fanaticism, it also gave occasion to the exercise of a powerful effort on the part of Voltaire, whose successful exertions to procure the reversal of an iniquitous sentence, form one of the most meritorious actions in the life of the sceptic philosopher.

In the year 1761, there resided at Toulouse, in the south of France, an old man, sixty-four years of age, named Jean Calas, who for forty years had exercised the vocation of a respectable shopkeeper in that town, and had gained general esteem amid all classes for the amiability and probity of his character. His family, like himself, were all Protestant, with the exception of his third son Louis, who had been converted to the Roman Catholic faith through the instrumentality of an old female servant, who still formed one of the household. The eldest son, Marc-Antoine, was a moody young man of twenty-nine, possessed of great abilities, but depressed and disheartened by finding himself excluded as a Protestant by the tyrannical laws of the time from exercising the profession of an *avocat* or barrister for which he had qualified himself by study. Thus debarred from following out his inclinations, he had no other resource than to fill the post of assistant to his father, whilst his leisure hours were devoted to cards and billiards. At length, on the 13th of October, in the year above mentioned, a young man, named La Vaysse, who had been absent for some time from his native town, called on the Calas family, and was pressed by Marc-Antoine and his father to remain to supper. The family-party, consisting of M. and Madame Calas, Marc-Antoine, and Pierre Calas, and the young La Vaysse, sat down to table. Marc-Antoine appeared rather depressed, ate little, and abruptly quitted the company, entering the kitchen for a few moments before he passed out. The old servant inquired if he were cold. 'On the contrary,' replied he, 'I am burning.' The supper-party imagined that he had gone out to his usual haunt, the billiard-room, and therefore gave themselves no concern for his absence. La Vaysse at last rose to depart, and Pierre Calas followed with a light to shew him the way to the street. On arriving there, they found the shop-door open, and entering to ascertain the cause, were horrified at finding Marc-Antoine Calas suspended from one of the folding-doors which communicated between the shop and a warehouse behind. A cry of consternation, uttered by the two young men, summoned down-stairs the elder Calas and his wife; but La Vaysse, placing himself before her, prevented her from advancing further, whilst her husband and second son cut down the body of her first-born. La Vaysse then ran for a surgeon, who, on arriving, found that life had been extinct for two hours.

The lamentations of the household had meantime reached the surrounding neighbourhood, and a crowd soon gathered, attracted by the intelligence that Marc-Antoine had perished, and in a mysterious manner, for the Calas family, very imprudently for themselves, had agreed to conceal the cause of death, owing to the feeling of infamy which attaches to an act of suicide. Two magistrates speedily arrived to investigate the case, the multitude still increasing around the house, and expressing their opinions on the event, when a voice suddenly called out from the crowd: 'Marc-Antoine has been murdered by his father, because he intended to become a Catholic!'

By one of those electrical impulses, of which numerous instances occur in the history of popular commotions, this monstrous idea at once took possession of the public, including the magistracy, and an order was forthwith given for the arrest of all the members of the Calas family who were in the house on that fatal night, including La Vaysse and the old female-servant, the converter of Louis Calas, who some time before had ceased to reside with his father. The body of Marc-Antoine received, under this belief, the honours due to a martyr, and was interred with the utmost pomp and circumstance in the cathedral of St Stephen, a crowd of twenty thousand persons accompanying the procession, in which an imposing array of priests and monks strove to celebrate, with all the impressiveness of the Roman Catholic Church, the obsequies of a man who had ever regarded their faith with the utmost aversion.

In the meantime the unhappy Calas family were treated with great cruelty. The aged Jean Calas was repeatedly tortured to extort confession, but in vain, and a similar result attended all attempts to terrify the other accused parties into an admission of guilt. The trial of the old man came on shortly before the parliament of Toulouse. Notwithstanding the absolute impossibility of a person, at his time of life, being able to strangle a vigorous young man, in the immediate neighbourhood of a public thoroughfare, and the total absence of any evidence to support the charge, the blind stolidity

and fanaticism of his judges pronounced sentence of death, though only by a majority of seven to six in a court of thirteen. It is said that, latterly, the constancy and nerve of Jean Calas forsook him, and that in his last appearance before the parliament, he betrayed such signs of agitation as told strongly against his innocence. In crossing the court of the building, from his place of confinement to the judgment-hall, his attention had been attracted by a flaming pile, to which the public executioner, surrounded by a large crowd, was committing some Protestant treatise. The poor victim of fanatical prejudice imagined that in this spectacle he beheld the preparations for his own death, and was seized by an uncontrollable terror, which influenced him throughout the subsequent judicial procedure. But he persistently as ever maintained his innocence, and by the day of execution, he had regained such firmness as excited the admiration of many, and induced a strong revulsion of feeling in his favour. The cruel sentence was accomplished on 9th March 1762, when the old man endured a lingering death of two hours' duration, by having first his bones broken with an iron bar, and then being stretched on the wheel. He died, maintaining his innocence with his last breath, and rejecting firmly all the adjurations addressed him by the confessor who attended him on the scaffold. The other members of the family were afterwards brought to trial and acquitted, though Pierre Calas was banished on the charge of an offence against religion.

In the last century, news travelled slowly, and consequently it was not till the end of March that the intelligence of this terrible execution was brought to Voltaire, at Ferney, by a traveller from Toulouse to Geneva. The philosopher was horror-struck, and formed at once the resolve to leave no stone unturned for the purpose of establishing the innocence of the Calas family. Through D'Alembert and other friends in Paris, he caused representations of the case to be made to the king and his ministers, and himself sent for Pierre Calas, and a younger brother, who was apprenticed at Geneva, and examined them with the most searching minuteness. The information which he obtained from this and other quarters was carefully sifted and forwarded by him to Paris. He also supplied the widow of Calas with money to convey her to the capital, as a necessary witness for re-establishing her husband's innocence. At last his arduous exertions were successful, the decision of the Toulouse parliament was reversed, and on 9th March 1765, exactly three years from Calas's death, the tribunal which had condemned him pronounced a solemn judgment, annulling their former sentence, and rendering thus a tardy and ineffectual justice to the unfortunate man and his family.

MRS FRY.

The labours of Howard in effecting an amelioration on the condition of prisons throughout Europe, though signal and important, cannot be said to have accomplished any radical change in the management of these establishments, and derive their highest estimate, in a reformatory point of view, from their directing the attention of the general public to this momentous topic. It was reserved for a woman to carry out what John Howard had so gloriously begun, and, by assuming the mantle which he had dropped, to inaugurate, through her philanthropic exertions, these enlarged views on the subject of prison-discipline by which it is now so conspicuously characterised both in legislative enactment and practice. In recording the name of Elizabeth Fry, we inscribe that of a true heroine, who made the moral and physical wellbeing of her fallen brothers and sisters the aim and study of her life, with the same spirit of devotedness and self-sacrifice which, more recently, has been so nobly exhibited by Miss Florence Nightingale on behalf of our gallant soldiers.

As is well known, Mrs Fry's maiden name was Gurney, and both by the father and mother's side, she inherited eminently the Quaker element; her father, John Gurney of Earlham, in Norfolk, being a distinguished member of the Society of Friends, and her mother, a great-granddaughter of the celebrated Quaker apologist, Robert Barclay. Mr Gurney, however, was not a very strict adherent of his society, and, from the liberal and extended intercourse which he maintained with men of all denominations, there was little of the sectarian or fanatical principle followed in the bringing up of his family. They seem, on the contrary, to have entered freely into all the amusements and pleasures of the world, Elizabeth among the rest. At the age of eighteen, however, she was much impressed by a sermon delivered by William Savery, an American Quaker, and from that period, her religious views became gradually more and more decided. They were more steadfastly established by her marriage, shortly afterwards, to Mr Joseph Fry, a Quaker of the strictest sort, and the junior partner of an extensive mercantile firm in London. It was not, however, till a good many years subsequently that her attention was first directed to the question of prisoners and prison-discipline; a subject which appears first to have been suggested to her mind by a visit paid, along with some members of the Society of Friends, to the condemned cell in Newgate in 1813. The impressions produced upon her by the spectacles which she witnessed in that prison of profligacy, poverty, and filth, was such, that she set her energies seriously forthwith to the task of devising some method for the alleviation of these scenes of horror. With the approbation of the magistrates of Middlesex, she commenced the establishment, in the female wards, of a school for the purpose of affording to the inmates instruction as well as employment. She also succeeded in organising an association of ladies for visiting the female prisoners in Newgate, an occupation in which she herself took a most active share, conversing and praying with them, and by her earnest kindness exercising a softening influence on the hearts of even the most depraved. Through her exertions and representations, a most marked change was effected in the condition of Newgate, more especially the female department, and the improved state of the prison attracted the attention of individuals of the highest authority and position in the land. But Mrs Fry's labours did not cease with Newgate. She gradually extended their sphere, and soon made the general subject of prison-discipline the object of consideration and amendment, and before committees both of the Lords and Commons, she was examined as an important and

valuable auxiliary in the cause of criminal reform. The severity of the then law regarding capital punishments, stirred up all the promptings of her benevolent heart, and, among those who contributed by their exertions to the introduction of a more lenient system, her name deserves honourable mention. In the progress of her mission for the improvement of prisons and reclaiming of criminals, Mrs Fry made repeated journeys through Great Britain and Ireland, besides making several excursions to the continent. It is satisfactory, also, to state, that notwithstanding the multifarious and engrossing nature of her philanthropic labours, she never laid herself open to the charge of neglecting her own family, but was throughout most sedulous in the performance of her duties, both as a wife and mother. Her offspring was numerous, and she records herself, that on the occasion of the king of Prussia paying her a visit at her residence of Upton Lane, she presented to him seven of her sons and sons-in-law, eight of her daughters and daughters-in-law, and twenty-five of her grandchildren.

Towards the close of her life, Mrs Fry suffered severely from a neuralgic affection, but, to the last, she retained an undiminished interest in the great philanthropic cause to which she had devoted her life. Though a strict Quaker in every respect, she practised in her dealings with the world at large the most liberal-hearted toleration, and was quite as ready to appreciate the self-denying labours of the Romish Sisters of Charity, as of persons professing sentiments more in accordance with her own. Courageous and energetic as she shewed herself in the prosecution of her mission, she was naturally, in some respects, of a very sensitive and nervous temperament, causing her, when a child, to be unable to go to sleep in the dark, and an insupportable horror at being obliged to enter the sea for the purpose of bathing. As she grew up, much of that timidity of disposition disappeared, and she became noted as a keen and enthusiastic horsewoman; but she still, throughout life, continued to be distinguished in physical constitution by the extremes of timidity and courage. The portrait of Mrs Fry exhibits a most pleasing combination of benevolence and intellect, with a decided expression of humour about the mouth, a quality which, as in most persons of genius, formed a marked characteristic of her organisation.

BATTLE OF HASTINGS.

The battle of Hastings, fought on Saturday, the 14th of October 1066, was one of those decisive engagements which at various periods have marked the commencement of a new epoch or chapter in the world's history. Gained by the Duke of Normandy, mainly through superiority of numbers, and several well-directed feints, the conduct of the Saxons and their monarch Harold was such as to command the highest admiration on the part of their enemies, and the result might have been very different had Harold, instead of marching impetuously from London with an inadequate army to repel the invaders, waited a little while to gather strength from the reinforcements which were every day pouring in to his standard. But the signal success which, only a few days previous, he had gained over the Norwegians in the north of England, made him over-confident in his own powers, and the very promptitude and rapidity which formed one of his leading characteristics proved the principal cause of his overthrow.

On the 28th of September, sixteen days before the battle, the Normans, with their leader William, had disembarked, totally unopposed, from their ships at a place called Bulverhithe, between Pevensey and Hastings. The future Conqueror of England was the last to land, and as he placed his foot on shore, he made a false step, and fell on his face. A murmur of consternation ran through the troops at this incident as a bad omen, but with great presence of mind William sprang immediately up, and shewing his troops his hand filled with English sand, exclaimed: 'What now? What astonishes you? I have taken seisin of this land with my hands, and by the splendour of God, as far as it extends it is mine—it is yours!'

The invading army then marched to Hastings, pitching their camp near the town, and sallying out from this intrenchment to burn and plunder the surrounding country. Landed on a hostile shore, with a brave and vigorous foe to contend with, all William's prospects of success lay in striking a decisive blow before Harold could properly muster his forces or organise his means of resistance. The impetuosity of the Saxon king, as already mentioned, soon furnished him with such an opportunity. Arriving at *Senlac*, which the bloody engagement a few days subsequently was destined to rechristen by the appellation of *Battle*, Harold pitched his camp, and then received a message from William, demanding that he should either resign his crown in favour of the Norman, submit the question at issue to the decision of the pope, or finally maintain his right to the English crown by single combat with his challenger. All these proposals were declined by Harold, as was also a last offer made by William to resign to his opponent all the country to the north of the Humber, on condition of the provinces south of that river being ceded to him in sovereignty.

On Friday the 13th, the Normans quitted Hastings, and took up their position on an eminence opposite to the English, for the purpose of giving battle on the following day. A singular contrast was noticeable in the manner that the respective armies passed the intervening night. Whilst the Saxons, according to their old convivial custom,

spent the time in feasting and rejoicing, singing songs, and quaffing bumpers of ale and wine, the Normans, after finishing their warlike preparations, betook themselves to the offices of devotion, confessed, and received the holy sacrament by thousands at a time.

HASTINGS FROM THE FAIRLIGHT DOWNS.

At early dawn next day, the Normans were marshalled by William and his brother Odo, the warlike bishop of Bayeux, who wore a coat of mail beneath his episcopal robes. They advanced towards the English, who remained firmly intrenched in their position, and for many hours repulsed steadily with their battle-axes the charge of the enemy's cavalry, and with their closed shields rendered his arrows almost inoperative. Great ability was shewn by William and his brother in rallying their soldiers after these reverses, and the attacks on the English line were again and again renewed. Up to three o'clock in the afternoon, the superiority in the conflict remained with the latter. Then, however, William ordered a thousand horse to advance, and then take to flight, as if routed. This stratagem proved fatal to the Saxons, who, leaving their position to pursue the retreating

BATTLE OF HASTINGS—BAYEUX TAPESTRY.

foe, were astounded by the latter suddenly facing about, and falling into disorder, were struck down on every side. The same manœuvre was twice again repeated with the same calamitous results to the English, and on the last occasion Harold, struck by a random arrow which entered his left eye and penetrated to the brain, was instantaneously killed. This still further increased the disorder of his followers, who, however, bravely maintained the fight round their standard for a time. This at last was grasped by the Normans, who then raised in its stead the consecrated banner, which the pope had sent William from Rome, as a sanction to his expedition. At sunset the combat terminated, and the Normans remained masters of the field.

Though by this victory William of Normandy won a kingdom for himself, it was not till years afterwards that he was enabled to sheathe his sword as undisputed sovereign of England. For generations, indeed, the pertinacity so characteristic

of the Saxon race displayed itself in a steady though ineffective resistance to their Norman rulers, and for a long time they were animated in their efforts by a legend generally circulated among them, that Harold, their gallant king, instead of being killed, had escaped from the field of battle, and would one day return to lead them to victory. History records many such reports, which, under similar circumstances, have been eagerly adopted by the vanquished party, and are exemplified, among other instances, by the rumours prevalent after the deaths of Don Roderick, the last of the Gothic kings of Spain, and of the Scottish sovereign James IV., who perished at Flodden.

FIELD-MARSHAL KEITH.

Among the eight generals of Frederick the Great, who, on foot, surround Rauch's magnificent equestrian statue of the monarch in Berlin, one is a Briton. He was descended of a Scotch family, once as great in wealth and station as any of the Hamiltons or the Douglases, but which went out in the last century like a quenched light, in consequence of taking a wrong line in politics. James Edward Keith, and his brother the Earl Marischal, when very young men, were engaged in the rebellion of 1715–16, and lost all but their lives. Abroad, they rose by their talents into positions historically more distinguished than those which their youthful imprudence had forfeited.

The younger brother, James, first served the czar in his wars against Poland and Turkey; but, becoming discontented with the favouritism that prevailed in the Russian army, and conceiving himself treated with injustice, he gave in his resignation in 1747, and was admitted into the Prussian service as field-marshal. Frederick the Great made him his favourite companion, and, together, they travelled *incognito* through Germany, Poland, and Hungary. Keith also invented a game, in imitation of chess, which delighted the king so much, that he had some thousands of armed men cast in metal, by which he could arrange battles and sieges. On the 29th of August 1756, he entered with the king into Dresden, where he had the archives opened to carry away the documents that particularly interested the Prussian court: he also managed the admirable retreat of the army from Olmutz in the presence of a superior force, without the loss of a single gun; and took part in all the great battles of the period. He was killed in that of Hochkirchen, 14th of October 1758. His correspondence with Frederick, written in French, possesses much historical interest. He was of middle height, dark complexion, strongly-marked features, and an expression of determination, softened by a degree of sweetness, marked his face. His presence of mind was very remarkable; and his knowledge, deep and varied in character; whilst his military talents and lively sense of honour made him take rank among the first commanders of the day. His brother, the lord-marshal of Scotland, thus wrote of him to Madame de Geoffrin: 'My brother has left me a noble heritage; after having overrun Bohemia at the head of a large army, I have only found seventy dollars in his purse.' Frederick honoured his memory by erecting a monument to him in the Wilhelmsplatz, at Berlin, by the side of his other generals.

ORATOR HENLEY.

Possessing considerable power of eloquence, with great perseverance, a fair education, and a good position in life, Henley might have pursued a quiet career of prosperity, had not overweening vanity induced him to seek popularity at any risk, and eventually make himself 'preacher and zany of the age,' according to the satirical verdict of Pope, which he had well earned by his ill-placed buffoonery.

Henley was the son of a clergyman residing at Melton Mowbray, in Leicestershire, where he was born in 1692; he was sent to St John's College, Cambridge, and while an undergraduate there, sent a communication on punning to the *Spectator* (printed in No. 396), which is now the most readily accessible of all his voluminous writings, scattered as they were in the ephemeral literature of his own day. This paper is a strange mixture of sense and nonsense, combined with a pert self-sufficiency, very characteristic of its writer.

On his return to Melton, he was employed as assistant in a school. He preached occasionally, and from the attention which his fluency and earnestness attracted, was induced to betake himself to London, as the proper sphere for the display of his rhetorical talents. He was appointed reader at St George's Chapel, in Queen Square, and afterwards at St John's, Bedford Row; delivered from time to time charity-sermons with great success; and worked at translations for the booksellers. After some years, he was offered a small country living, but would not consent to the obscurity which it entailed. The same exaggeration of style and action in the pulpit, however, which rendered him a favourite with the public, exposed him to animadversion on the part of the clergy and church-patrons. He now attempted political writing, offering his services to the ministry; and when they were declined, made the same offer to their opponents, with no better success. Determined for the future to trust to his own power of eloquence to draw an income from the public, he announced himself as 'the restorer of Ancient Eloquence,' and opened his 'Oratory' in a large room in Butcher Row, Newport Market. Here he preached on Sundays upon theology, and on Wednesdays, on any subject that happened to be most popular. Politics and current events were treated with a vulgar levity that suited the locality. The greatest persons in the land were attacked by him. 'After having undergone some prosecutions, he turned his rhetoric to buffoonery upon all public and private occurrences. All this passed in the same room where at one time he jested, and at another celebrated what he called the "primitive eucharist."'* In a money point of view, he was very successful, his Oratory was crowded, and cash flowed in freely. For the use of his regular subscribers, he issued medals (like the free tickets of theatres and public gardens) with the vain device of a star rising to the meridian, the motto, *Ad summa;* and, beneath it, *Inveniam viam aut faciam.* Pope has immortalised 'Henley's gilt tub,' as he terms the gaudy pulpit from which he poured forth his rhapsodies. There is a caricature of him as a

* Note to Pope's *Dunciad.*

clerical fox seated on his tub; a monkey within it acting as clerk, and peeping from the bung-hole with a broad grin, as he exhibits a handful of coin, the great end for which he laboured. Henley charged one shilling each for admission to his lectures. Another of these caricatures we here copy. It

ORATOR HENLEY.

represents Henley in his pulpit, half-clergyman, half-fox; his pulpit is supported by a pig, emblematic of the 'swinish multitude;' the 'brazen-head' of the popular romance of Friar Bacon;* and a well-filled purse. The lines of *Hudibras* are made to apply to him, beginning—

> 'Bel and the Dragon's chaplains were
> More moderate than you by far.'

In an unlucky hour he attacked Pope, who afterwards held him up to obloquy in the *Dunciad:*

> 'Imbrown'd with native bronze, lo! Henley stands,
> Tuning his voice, and balancing his hands.
> How fluent nonsense trickles from his tongue!
> How sweet the periods, neither said nor sung!
> Still break the benches, Henley, with thy strain,
> While Sherlock, Hare, and Gibson preach in vain.
>
> O great restorer of the good old stage,
> Preacher at once and zany of thy age!
> O, worthy thou of Egypt's wise abodes,
> A decent priest, where monkeys were the gods!
> But fate with butchers placed thy priestly stall,
> Meek modern faith to murder, hack, and maul;
> And bade thee live, to crown Britannia's praise,
> In Toland's, Tindal's, and in Woolston's * days.'

After some years, Henley left Newport Market, but, faithful to his old friends the butchers, he opened his new Oratory in Clare Market, in the year 1746, and indulged in the most scurrilous censoriousness, and a levity bordering on buffoonery. His neighbours, the butchers, were useful allies, and, it is said, he kept many in pay to protect him from the consequences of his satire. In some instances, he must have run risks of riot and mischief to his meeting-room, which could only be repressed by fear of his brawny protectors. In one instance he tricked a mob of shoemakers, by inducing them to come and hear him describe a new mode by which shoes could be made most expeditiously; the plan really being, simply to cut off the tops of ready-made boots! His reflections on the royal family led to his arrest, but he was liberated, after a few days, on proper bail being tendered, and a promise to curb his tongue in future. His ordinary free-and-easy vulgarity is well hit off in an article on the 'Robin Hood Society,'† published in No. 18 of the *Gray's Inn Journal*, February 17, 1753; he is called Orator Bronze, and exclaims: 'I am pleased to see this assembly; you're a twig from me, a chip of the old block at Clare Market; I am the old block, invincible; *coup de grace*, as yet unanswered. We are brother-rationalists; logicians upon fundamentals! I love ye all—I love mankind in general—give me some of that porter!'

Despite his boldness and impudence, and the daring character of his disquisitions on politics and religion, Henley found a difficulty in keeping up an interest in his Oratory. A contemporary writer says: 'for some years before its author's death, it dwindled away so much that the few friends of it feared its decease was very near. The doctor, indeed, kept it up to the last, determined it should live as long as he did, and actually exhibited many evenings to empty benches. Finding no one at length would attend, he admitted the acquaintances of his door-keeper, runners, &c., gratis. On the 13th of October 1753,‡ the doctor died, and the Oratory ceased, no one having iniquity or impudence sufficient to continue it.'

Irrespective of the improper character of the subjects he chose to descant upon, his inordinate conceit induced him to treat every one as his inferior in judgment; and he enforced his opinions with the most violent gesticulation. Henley's feverish career is a glaring instance of vanity overcoming and degrading abilities, that, properly cultivated, might have insured him a respectable

* In this old tale, the brazen-head was to do wonders when it spoke; but the friar, tired with watching, left his servant to listen while he slept. The head spoke the sentences which appear on the three labels issuing from the mouth, and having spoken the last, fell with a crash that destroyed it. This was typical of the unstable foundation of Henley's popular power.

* Three deistical writers, whose works were published in the early years of the last century.

† A public debating-society, held at the sign of the *Robin Hood*, in Butcher Row, near Temple Bar. Each person paid sixpence for admission, and had a ticket for four pennyworth of drink, the twopence paying the expenses of the society.

‡ This is an error, Henley's death being recorded in the obituary of the *Gentleman's Magazine*, on 14th October 1756.

position, instead of an anxious and fretful life, and an immortality in the pages of a great satirist, of a most undesirable nature.

OCTOBER 15.

St Hospicius or Hospis, anchoret, about 580. St Tecla, virgin and abbess. St Teresa, virgin, foundress of the Reformation of the Barefooted Carmelites, 1582.

Born.—Virgil, Latin poet, 70 B. C., *Andes, near Mantua;* Evangelista Torricelli, inventor of the barometer, 1608, *Piancaldoli, in Romagna;* Allan Ramsay, Scottish poet, 1686, *Leadhills, Lanarkshire;* Alexander Fraser Tytler, Lord Woodhouselee, author of *Elements of General History*, 1747, *Edinburgh;* Christian, Count Stolberg, poet and dramatist, 1748, *Hamburg;* Frederick William IV., king of Prussia, 1795.

Died.—Lucretius, Latin philosophical poet, 55 B. C.; Andreas Vesalius, eminent anatomist, 1564, *Zante;* Pope Gregory XIV., 1591; Dr James Anderson, author of works on political economy, &c., 1808, *London;* Michael Kelly, composer, 1826, *Ramsgate;* Letitia Elizabeth Maclean (*née* Landon), poetess, 1838, *Cape Coast Castle;* Rev. John Foster, celebrated essayist, 1843, *Stapleton, near Bristol.*

MRS MACLEAN ('L. E. L.').

On New-year's Day morning, 1839, the readers of newspapers were startled by the announcement of the death, at Cape Coast Castle, of Mrs Maclean, wife of Mr George Maclean, the governor of that settlement. But a few months before she had quitted the shores of England with all the gay paraphernalia of a bride, proceeding after the nuptial knot had been tied to her future home by the palm-clad shores, and amid the tropical vegetation of West Africa. Recollections of the young and enthusiastic 'L. E. L.,' whose contributions to the *Literary Gazette* had in their youthful days of romance called forth so many juvenile tributes of admiration both in prose and verse, filled with tears the eyes of many staid men of middle age, whilst to those who had enjoyed the privilege of her society, and the vivacity and charm of her conversation, the shock produced by this sad and unexpected intelligence was overwhelming. Other feelings, however, were speedily to be excited —those of an intense curiosity and interest, not unmingled with horror, by the report that Mrs Maclean had died from the effects of a dose of prussic acid, incautiously taken, and, as some did not hesitate to insinuate, with the intention of self-destruction. The whole affair was involved in the deepest mystery, the sole explanation afforded being that between eight and nine o'clock on the morning of Monday, 15th October, a female servant had gone to Mrs Maclean's room, for the purpose of delivering a note which had just been received. She experienced some difficulty in opening the door, and found that it was occasioned by Mrs Maclean having fallen with her back against it. The unfortunate lady was lying perfectly senseless, with an empty bottle in her hand, labelled as containing hydrocyanic or prussic acid. Assistance was immediately procured, but all in vain—the vital spark had fled. Mr Maclean, her husband, had been suffering from indisposition for a few days previous, and had been most assiduously tended by his wife, who, on the morning of her death, had risen to administer some refreshment to him, and had then retired to her room to resume repose. The servant also who found her in the condition we have mentioned, had seen her about half an hour previously. No one had observed anything peculiar in her demeanour, or any indication of depression of spirits, though from her attendance night and day on her husband, she had become very much exhausted, and was besides liable to spasmodic attacks, for the relief of which, it was stated at the inquest, that she was in the habit of taking in a glass of water a few drops of medicine from the bottle which was found in her hand. The conjecture then come to was, that she had inadvertently taken an overdose, and feeling its effects, had endeavoured to open her door and call for assistance, when she was stricken down helpless. No satisfactory conclusion was ever arrived at, and there the matter rests. It should be stated, however, that all the evidence brought forward went entirely to negative the idea of suicide having been committed. Between Mr Maclean and herself a strong and sincere affection subsisted; there had never been an unkind word between them; and from the tone of all her communications to her friends at home, it was evident that she looked forward with great complacency and cheerfulness to her future career at Cape Coast.

Previous to her marriage, the life of Letitia Elizabeth Landon had not been diversified by much incident. The greater part of it was spent in London, in the neighbourhood of Chelsea and Brompton, in the former of which localities she was born in 1802. Her father, John Landon, the son of a Herefordshire rector, had in his early days gone to sea, but afterwards settled in London as an army-agent. From her earliest years Letitia displayed a most engrossing propensity for reading, and the bent of her genius towards poetry was displayed nearly at as early a date as with Pope and Cowley. When the family resided at Brompton, they happened to have as their near neighbour William Jerdan, the celebrated editor of *The Literary Gazette*, and an acquaintance having been formed, some of Miss Landon's juvenile pieces were shewn to him, approved of, and inserted in his journal. Public attention was soon attracted by the beauty of these pieces; and the mysterious initials 'L. E. L.,' by which the authoress subscribed herself, came soon to be recognised as belonging to the finest lyrics of the day. Thus stimulated, she proceeded to more ambitious undertakings, and the poems of *The Improvisatrice*, *The Troubadour*, *The Golden Violet*, and *The Venetian Bracelet*, procured for her all the fame which their glow and luxuriance of description, with the most melodious harmony of verse, so richly merited. Whether, however, from its essentially artificial character, however natural an appearance it may wear, the poetry of Miss Landon is destined to an abiding immortality, may not unreasonably be questioned. Never was there a poet whose works were *less* a reflex of his own mind than those of L. E. L. With all the enchanting descriptions of woodland glades, sunny gardens, and flowery meadows, beneath the magic of a Provençal or Italian sky, Miss Landon,

like Charles Lamb, had little affection for the country, and found herself nowhere in a more congenial atmosphere than amid the smoke and bustle of London. Neither did her disposition partake of the pensive, melancholy cast, so conspicuous in her poems, being, on the contrary, remarkable for its vivacity and cheerfulness. Those who expected to find in her an embodiment of the feelings portrayed in her works, found themselves generally egregiously mistaken in their anticipations. It was said of her, 'that she should write with a crystal pen dipped in dew upon silver paper, and use for pounce the dust of a butterfly's wing;' the real fact being, that her locality for invoking the Muses was her bedroom—a bare homely-looking room facing the street, where she wrote at an old worn-out desk, placed on a little old dressing-table. In person, the impression conveyed was a very pleasing one. Her figure was slight and graceful, and without being artistically beautiful in feature, her face, when she spoke, became handsome in its expressiveness. It is recorded of Hogg the Ettrick Shepherd, that, on being first presented to her at the house of Mrs Hall, he took her hand, and looking earnestly in her face, exclaimed: 'Oh dear! I hae written and thocht mony a bitter thing about ye, but I'll do sae nae mair; I didna think ye'd been sae bonny!'

THE WYNYARD GHOST-STORY.

No modern ghost-story has been more talked of in England, than one in which the seers were two military officers named Sherbroke and Wynyard. The men occupied conspicuous places in society, and were universally known as persons of honour, as well as cool good sense;* the reality of their vision was attested by a remarkable circumstance which afterwards took place; and every effort of their own or on the part of others to give an 'explanation' has been vain.

John Cope Sherbroke and George Wynyard appear in the army list of 1785, the one as a captain and the other a lieutenant in the 33d Regiment—a corps which, some years after, had the honour to be commanded by the Hon. Arthur Wellesley, subsequently Duke of Wellington. The regiment was then on service in Canada, and Sherbroke and Wynyard, being of congenial tastes, had become friends. It was their custom to spend in study much of the time which their brother-officers devoted to idle pleasures. According to a narration resting on the best authority now attainable,† 'They were one afternoon sitting in Wynyard's apartment. It was perfectly light, the hour was about four o'clock; they had dined, but neither of them had drunk wine, and they had retired from the mess to continue together the occupations of the morning. It ought to have been said, that the apartment in which they were had two doors in it, the one opening into a passage, and the other leading into Wynyard's bedroom. There was no other means of entering the sitting-room but from the passage, and no other egress from the bedroom but through the sitting-room; so that any person passing into the bedroom must have remained there, unless he returned by the way he entered. This point is of consequence to the story.

'As these two young officers were pursuing their studies, Sherbroke, whose eye happened accidentally to glance from the volume before him towards the door that opened to the passage, observed a tall youth, of about twenty years of age, whose appearance was that of extreme emaciation, standing beside it. Struck with the presence of a perfect stranger, he immediately turned to his friend, who was sitting near him, and directed his attention to the guest who had thus strangely broken in upon their studies. As soon as Wynyard's eyes were turned towards the mysterious visitor, his countenance became suddenly agitated. "I have heard," says Sir John Sherbroke, "of a man's being as pale as death, but I never saw a living face assume the appearance of a corpse, except Wynyard's at that moment."

'As they looked silently at the form before them,—for Wynyard, who seemed to apprehend the import of the appearance, was deprived of the faculty of speech, and Sherbroke perceiving the agitation of his friend, felt no inclination to address it—as they looked silently upon the figure, it proceeded slowly into the adjoining apartment, and, in the act of passing them, cast its eyes with an expression of somewhat melancholy affection on young Wynyard. The oppression of this extraordinary presence was no sooner removed, than Wynyard, seizing his friend by the arm, and drawing a deep breath, as if recovering from the suffocation of intense astonishment and emotion, muttered in a low and almost inaudible tone of voice, "Great God! my brother!"—"Your brother!" repeated Sherbroke, "what can you mean, Wynyard? there must be some deception—follow me;" and immediately taking his friend by the arm, he preceded him into the bedroom, which, as before stated, was connected with the sitting-room, and into which the strange visitor had evidently entered. It has already been said, that from this chamber there was no possibility of withdrawing but by the way of the apartment, through which the figure had certainly passed, and as certainly never had returned. Imagine, then, the astonishment of the young officers, when, on finding themselves in the centre of the chamber, they perceived that the room was perfectly untenanted. Wynyard's mind had received an impression at the first moment of his observing him, that the figure whom he had seen was the spirit of his brother. Sherbroke still persevered in strenuously believing that some delusion had been practised.*

* Archdeacon Wrangham alludes to them in a note in his edition of Plutarch. 'A very singular story, however,' says he, 'could be told on this head by Generals S—— and W ——, both men of indisputable honour and spirit, and honourably distinguished by their exertions in their country's service.' The death of the first is thus noted in *Blackwood's Magazine* for June 1830: 'At Calverton, General Sir John Cope Sherbroke, G.C.B.' The other seer seems to have passed into another branch of the army, and died as lieutenant-colonel of the 24th Light Dragoons, June 13, 1809.

† The narration here given is from *Accredited Ghost Stories*, collected by T. M. Jarvis, Esq. London, 1823. Mr Jarvis adds the following note: 'This story has been read by a relation of General Wynyard, *who states that, in all important circumstances, it is strictly true.*'

* The two gentlemen remarked at the time, that the figure appeared as dressed in a light indoor costume, while they wore furs and wraps owing to the severity of the weather.—*M. E. M., in Notes and Queries, April* 3, 1858.

'They took note of the day and hour in which the event had happened; but they resolved not to mention the occurrence in the regiment, and gradually they persuaded each other that they had been imposed upon by some artifice of their fellow-officers, though they could neither account for the reason, nor suspect the author, nor conceive the means of its execution. They were content to imagine anything possible, rather than admit the possibility of a supernatural appearance. But, though they had attempted these stratagems of self-delusion, Wynyard could not help expressing his solicitude with respect to the safety of the brother whose apparition he had either seen, or imagined himself to have seen; and the anxiety which he exhibited for letters from England, and his frequent mention of his fears for his brother's health, at length awakened the curiosity of his comrades, and eventually betrayed him into a declaration of the circumstances which he had in vain determined to conceal. The story of the silent and unbidden visitor was no sooner bruited abroad, than the destiny of Wynyard's brother became an object of universal and painful interest to the officers of the regiment; there were few who did not inquire for Wynyard's letters before they made any demand after their own; and the packets that arrived from England were welcomed with more than usual eagerness, for they brought not only remembrances from their friends at home, but promised to afford the clue to the mystery which had happened among themselves.

'By the first ships no intelligence relating to the story could have been received, for they had all departed from England previously to the appearance of the spirit. At length the long-wished-for vessel arrived; all the officers had letters except Wynyard. They examined the several newspapers, but they contained no mention of any death, or of any other circumstance connected with his family that could account for the preternatural event. There was a solitary letter for Sherbroke still unopened. The officers had received their letters in the mess-room at the hour of supper. After Sherbroke had broken the seal of his last packet, and cast a glance on its contents, he beckoned his friend away from the company, and departed from the room. All were silent. The suspense of the interest was now at its climax; the impatience for the return of Sherbroke was inexpressible. They doubted not but that letter had contained the long-expected intelligence. After the interval of an hour, Sherbroke joined them. No one dared be guilty of so great a rudeness as to inquire the nature of his correspondence; but they waited in mute attention, expecting that he would himself touch upon the subject. His mind was manifestly full of thoughts that pained, bewildered, and oppressed him. He drew near to the fireplace, and leaning his head on the mantel-piece, after a pause of some moments, said in a low voice, to the person who was nearest him: "Wynyard's brother is no more!" The first line of Sherbroke's letter was—"Dear John, break to your friend Wynyard the death of his favourite brother." He had died on the day, and at the very hour, on which the friends had seen his spirit pass so mysteriously through the apartment.

'It might have been imagined, that these events would have been sufficient to have impressed the mind of Sherbroke with the conviction of their truth; but so strong was his prepossession against the existence, or even the possibility of any preternatural intercourse with the souls of the dead, that he still entertained a doubt of the report of his senses, supported as their testimony was by the coincidence of vision and event. Some years after, on his return to England, he was walking with two gentlemen in Piccadilly, when, on the opposite side of the way, he saw a person bearing the most striking resemblance to the figure which had been disclosed to Wynyard and himself. His companions were acquainted with the story, and he instantly directed their attention to the gentleman opposite, as the individual who had contrived to enter and depart from Wynyard's apartment without their being conscious of the means. Full of this impression, he immediately went over, and at once addressed the gentleman. He now fully expected to elucidate the mystery. He apologised for the interruption, but excused it by relating the occurrence, which had induced him to the commission of this solecism in manners. The gentleman received him as a friend. He had never been out of the country, but he was the twin-brother* of the youth whose spirit had been seen.'

From the interesting character of this narration—the facts of the vision occurring in daylight and to two persons, and of the subsequent verification of likeness by the party not previously acquainted with the subject of the vision—it is much to be regretted that no direct report of particulars has come to us. There is all other desirable authentication for the story, and sufficient evidence to prove that the two gentlemen believed and often told nearly what is here reported. Dr Mayo makes the following statement on the subject: 'I have had opportunities of inquiring of two near relations of this General Wynyard, upon what evidence the above story rests. They told me that they had each heard it from his own mouth. More recently a gentleman, whose accuracy of recollection exceeds that of most people, has told me that he had heard the late Sir John Sherbroke, the other party in the ghost-story, tell it much in the same way at a dinner-table.'†

A writer, signing himself COGNATUS, states in *Notes and Queries* (July 3, 1858), that the brother (not twin-brother) whose spirit appeared to Wynyard and his friend was John Otway Wynyard, a lieutenant in the 3d regiment of Foot-guards, who died on the 15th of October 1785. As this gentleman writes with a minute knowledge of the family-history, we may consider this date as that of the alleged spiritual incident.

In *Notes and Queries*, July 2, 1859, appeared a correspondence, giving nearly the strongest testimony then attainable to the truth of the Wynyard ghost-story. A series of queries on the subject, being drawn up at Quebec by Sir John Harvey, adjutant-general of the forces in Canada, was sent to Colonel Gore, of the same garrison, who was understood to be a survivor of the officers who were with Sherbroke and Wynyard at the time of

* The particular as to this person being a *twin*-brother has been denied. See *Notes and Queries*, June 12, 1858.

† *Letters on the Truths contained in Popular Superstitions.* By Herbert Mayo, M.D. Ed. Frankfort, 1849, p. 62.

the occurrence; and Colonel Gore explicitly replied to the following effect. He was present at Sydney, in the island of Cape Breton, in the latter end of 1785 or 1786, when the incident happened. It was in the then new barrack, and the place was blocked up by ice so as to have no communication with any other part of the world. He was one of the first persons who entered the room after the supposed apparition was seen. 'The ghost passed them as they were sitting at coffee [between eight and nine in the evening], and went into G. Wynyard's bedcloset, the window of which was putt[i]ed down.' He next day suggested to Sherbroke the propriety of making a memorandum of the incident; which was done. 'I remember the date, and on the 6th of June our first letters from England brought the news of John Wynyard's death [which had happened] on the very night they saw his apparition.' Colonel Gore was under the impression that the person afterwards seen in one of the streets of London by Sherbroke and William Wynyard, was not a brother of the latter family, but a gentleman named (he thought) Hayman, noted for being like the deceased John Wynyard, and who affected to dress like him.

SHOW PRODIGIES.

The English newspapers and broadsides of old days preserve to us some curious notices of what have been, from time to time, brought before the public as personal prodigies. We find the grave King William in a novel kind of association in the following account, for example, of a Strong Man. The article is dated, 'London, printed by J. W., near Fleet Street, 1699.'

'THE ENGLISH SAMPSON: HIS STRENGTH PROVED BEFORE THE KING; being an account of the wonderful exploits that Mr William Joyce performed before his majesty at *Kinsington*, the 15th of this instant November, 1699.'

[After a little prefatory flourish, the advertisement thus continues.] 'Being asked how much he was capable of lifting, he reply'd above a tun weight; whereupon a solid piece of lead was prepar'd according to his desire, being shap'd as convenient as possible for his laying hold of, in order to lift it; and being weigh'd, it contained a tun and fourteen pound and an half, which was more than he at first proposed: notwithstanding which he lifted it up at a considerable heighth from the ground, to the admiration of his majesty and his nobles, who were eye-witnes thereof, supposing such an exploit far beyond the ability of any mortal man to perform—after which, at his majesty's command, a rope of incredible thicknes was brought and fastned about his middle, and the other end to an extraordinary strong horse; at which time he told his majesty that the horse could not move him; upon which, to try the experiment, the said horse was order'd to be whip't in order to pull him out of the place; but, notwithstanding all his strength, Mr Joyce stood as immovable as an oak-tree: whereupon, seeing his majesty and others of the nobility to be seemingly astonish'd at this strange action, he thereupon declared that he could, by meer strength, break the same rope in two; whereupon, tying the same to two postes, he twitch'd it in pieces seemingly as easie as another man does a piece of pack-thred; and not only so, but afterwards putting his armes about one of the said postes (which was of extraordinary magnitude), he at one violent pull broke it down, and in the same manner he served the other also, to the extraordinary wonder of all then present. At which strange performances his majesty was mightily well pleas'd (and, 'tis said), has ordred him a considerable gratuity, besides an honorable entertainment for both him and his acquaintance.—We are credibly inform'd that the said Mr Joyce pull'd up a tree of near a yard and half circumferance, by the roots, at Hamstead, on Tuesday last, in the open view of some hundreds of people, it being modestly computed to weigh near 2000 weight;* these, and several other strange and amazing exploytes, he performs almost every day, even to the wonder of all mankind!'

In some degree in contrast with King William's Strong Man, is the account of a wonderfully small Scotsman, who was subjected to public attention in the same reign.

'A SCOTCH DWARF.

'These are to give notice to all persons of quallity, and others, that there is newly come to this place, a little Scotch man, which hath been admired by all that hath yet seen him, he being but two foot and six inches high; and is near upon 60 years of age. He was marry'd several years, and had issue two sons (one of which is with him now). He sings and dances with his son; and has had the honour to be shewn before several persons of note at their houses, as far as they have yet travelled. He formerly kept a writing-school; and discourses of the Scriptures, and of many eminent histories, very wisely; and gives great satisfaction to all spectators; and if need requires, there are several persons in this town that will justifie, that they were his schollars, and see him marry'd. He is to be seen at the lower end of Brookfield Market, near the market-house.' (Further than this, there is no clue to the name of the town).

Other wonders of the same kind follow:

'A "CHANGLING"† CHILD.

'To be seen next door to the *Black Raven*, in *West-Smithfield*, being a living skeleton, taken by a Venetian galley from a Turkish vessel in the Archipelago: This is a fairy child, suppos'd to be born of Hungarian parents, but chang'd in the nursing, aged nine years and more, not exceeding a foot and a half high. The legs, thighs, and arms are so very small, that they scarce exceed the bigness of a man's thumb, and the face no bigger than the palm of one's hand; and seems so grave and solid, as if it were threescore years old. You may see the whole anatomy of its body by setting it against the sun. It never speaks. And when passion moves it, it cries like a cat. It has no teeth, but is the most voracious and hungry creature in the world, devouring more victuals

* We take this to mean 2000 lbs., or within about 2 cwt. of a ton; although one would have computed the weight of a tree of this stated circumference, allowing proportionally for its height, branches, &c., at much more.

† *Changeling*, a child left or changed by the fairies for the parents' own child. It was either deformed, mischievous, or idiotic, and hence the term came to be generally applied to a child having those qualities.

than the stoutest man in England.'—The above is headed by the royal arms, and at the foot are the words—*Vivant Rex et Regina*—thus shewing it to be towards the latter end of the seventeenth century.

AN IRISH GIANT.

To the annexed there is no date: '*Miracula Naturæ;* or, a miracle of nature. Being that so much-admired gyant-like young man, aged twenty-three years last June; born in Ireland, of such a prodigious height and bigness, and every way proportionable; that the like hath not been seen in England in the memory of man. He was shewn to his late and present majesty, and several of the nobility at court, five years ago; and his late majesty was pleased to walk under his arm, and he is grown very much since. And it is generally thought, that if he lives three years more, and grows as he has done, he will be much bigger than any of those gyants we read of in story: for he now reaches with his hand three yards and a half, spans fifteen inches, and is the admiration of all that sees him.—He is to be seen at Cow-Lane-End, in Bartholomew Fair, where his picture hangs out.'

THE PAINTED PRINCE.

There is no date to the following, further than that which may be gathered from the style of its typography, which would seem to be of about the period to which most, if not all, of these curious advertisements belong. The one immediately before us runs thus:

'*Prince* Giolo, *Son to the King of* Moangis, *or* Gilolo; *lying under the* Æquator *in the* Long. *of* 152 Deg. 30 Min.; *a Fruitful Island abounding with rich spices and other valuable commodities.*

'This unfortunate prince sailing towards a neighbouring island, with his mother and young sister, to complement the intended marriage betwixt her and the king of that island, a violent tempest surpriz'd them, and drove them on shoar upon the coast of Mindanao, where they were all made prisoners, except the young lady, with whom the king was so inamoured, that he took her to wife; yet suffered the prince and his mother Nacatara to be purchased for money. The mother died, but the prince, her son, is arriv'd in England.

'This famous *Painted Prince* is the first wonder of the age, his whole body (except face, hands, and feet) is curiously and most exquisitely *painted* or *stained*, full of variety of invention, with prodigious art and skill performed. Insomuch, that the antient and noble mystery of painting or staining upon humane bodies seems to be comprised in this one stately piece.

'The pictures, and those other engraven figures copied from him, serve only to describe as much as they can of the foreparts of this inimitable piece of workmanship. The more admirable back-parts afford us a lively representation of one quarter-part of the world upon and betwixt his shoulders, where the arctick and tropick circles center in the north pole on his neck. And all the other lines, circles, and characters are done in such exact symmetry and proportion that it is astonishing, and surmounts all that has hitherto been seen of this kind.

'The paint itself is so durable that nothing can wash it off, or deface the beauty of it. It is prepared from the juice of a certain herb or plant peculiar to that country, which they esteem infallible to preserve humane bodies from the deadly poison or hurt of any venomous creatures whatsoever. This custom they observe—that in some short time after the body is painted, it is carried naked, with much ceremony, to a spacious room appointed, which is filled with all sorts of the most venomous, pernicious creatures that can be found; such as snakes, scorpions, vipers, centapees (centipeds), &c. The king himself [is] present. The grandees and multitudes of spectators seeing the naked body surrounded with so many venomous creatures, and unable to wound or do any mischief to it, seem transported and ready to adore him; for none but those of the royal family are permitted to be thus painted.

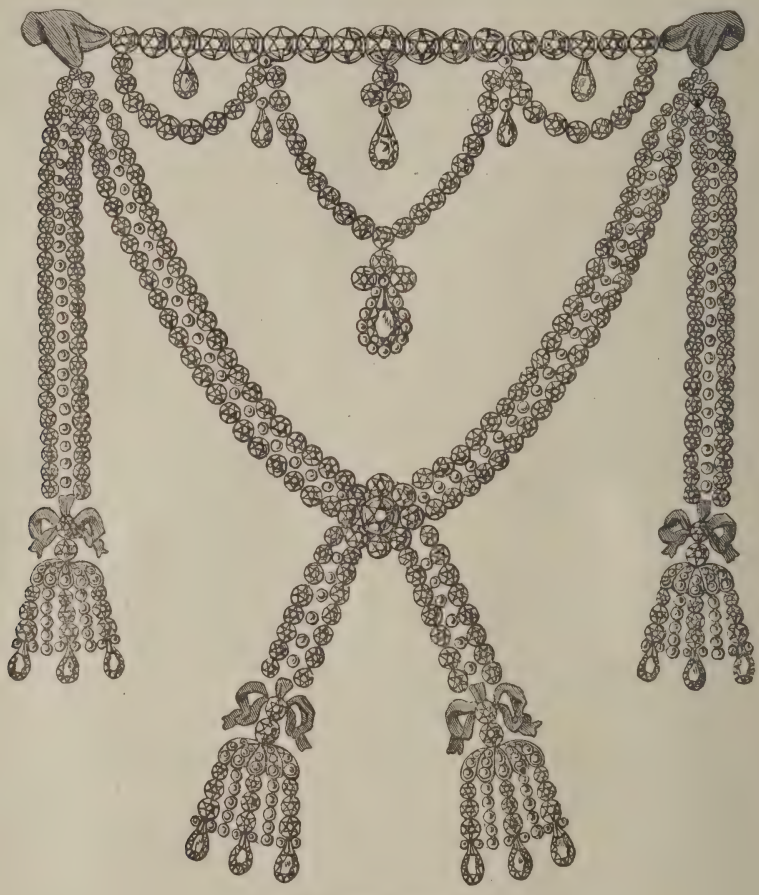
'This excellent piece has been lately seen by many persons of high quality, and accurately surveyed by several learned *virtuosi*, and ingenious travellers, who have express'd very great satisfaction in seeing of it.

'This admirable person is about the age of thirty, graceful, and well-proportioned in all his limbs; extreamly modest and civil, neat and cleanly, but his language is not understood, neither can he speak English.

'He will be exposed to publick view every day from the 16th of this instant June, at his lodgings at the Blew Boar's Head, in Fleet Street, near Water Lane; where he will continue for some time, if his health will permit. But if any persons of quality, gentlemen or ladies, do desire to see this noble person, at their own houses or any other convenient place, in or about this city of London, they are to send timely notice, and he will be ready to wait upon them in a coach or chair any time they may please to appoint, if in the day-time.'

OCTOBER 16.

St Gall, abbot, 646. St Mummolin or Mommolin, bishop of Noyon, confessor, 7th century. St Lullus or Lullon, archbishop of Mentz, confessor, 787.



Born.—Dr Albert Von Haller, distinguished physiologist, 1708, *Berne;* John George Sulzer, writer on the fine arts, 1720, *Winterthur, in Zurich.*

Died.—Bishops Nicholas Ridley and Hugh Latimer, martyred at Oxford, 1555; Roger Boyle, Earl of Orrery, politician and versifier, 1679; Robert Fergusson, Scottish poet, 1774, *Edinburgh;* Marie Antoinette, queen of Louis XVI., guillotined at Paris, 1793; John Hunter, celebrated anatomist, 1793, *London;* Victor Amadeus III. of Sardinia, 1796; Joseph Strutt, antiquary, 1802, *London;* Sharman Crawford, Irish political character, 1861; Henry Martyn, oriental missionary, 1812, *Tokat, Asia Minor;* Thaddeus Kosciusko, Polish patriot, 1817, *Soleure, in Switzerland.*

STORY OF THE DIAMOND NECKLACE.

In connection with the unfortunate Marie Antoinette, whose judicial murder by sentence of the Convention took place on 16th October 1793, we may in this place not inappositely introduce the famous story of the Diamond Necklace, in which the French queen played a conspicuous

though involuntary part. This extraordinary affair originated in the profligate state of French society preceding the Revolution, when the upper classes, as if in mockery of the sufferings of the starving poor, displayed a magnificence as insulting as it was reckless and insane. We are told that the officers of the king's *maison militaire* not only wore uniforms, but had the harness and caparisons of their horses covered with gold, and the very manes and tails of these animals plaited with gold braid. Louis XVI. and his queen fell into this strange infatuation; and one of their most serious errors of judgment, was their conduct in the case of the Diamond Necklace, which cast a slur upon the fair fame of the queen, and finally proved one of the most deadly weapons in the hands of her

THE DIAMOND NECKLACE.

enemies. The details long occupied the attention of the court of France, the College of Cardinals, and the higher ranks of the clergy. Many versions of the facts were given, but the following narrative, compiled from the documents of the case, from the memoirs, pamphlets, and petitions of the accusers and the accused, may be relied on as essentially correct.

In 1774, Louis XV., wishing to make a present to his mistress, Madame du Barry, commissioned the court-jewellers to collect the finest diamonds to form a necklace that should be unique of its kind. Some time and a considerable outlay were required to make arrangements to procure the largest, purest, and most brilliant diamonds. Unfortunately, before the necklace was completed, Louis XV. was laid in his grave, and the fallen favourite was fain to be content with the riches she possessed, without requiring the execution of the deceased monarch's intentions. The work, however, was too far advanced to permit of its being abandoned without great loss; and in the hope that Louis XVI. might be induced to purchase it for the queen, the jewellers finished the necklace, which was valued at 1,800,000 francs (£72,000 sterling). The new king's finances were in too low a state for him to purchase the necklace; and when it was offered to him, he replied that a ship was more needed than a necklace, which, therefore, remained in the hands of the jewellers for some years, until the occurrence of the event which, by breaking it up and dispersing it, gave it historical celebrity.

To understand by what a complication of circumstances, a woman without position, fortune, favour at court, or even very great charms of person, could have conceived the idea of obtaining an ornament that was beyond the means of sovereigns, can only be explained by reference to events much

anterior to her meeting with her victim, and which gave rise to the life-long antipathy of Marie Antoinette to Louis, prince-cardinal of Rohan. In 1772, the prince was appointed ambassador to Vienna. At one of the merry suppers of Louis XV., Madame du Barry drew from her pocket, and read aloud a letter, purporting to be addressed *to her* by the ambassador at Vienna, and giving particulars of the private life of the empress of Austria, whose daughter, Marie Antoinette, had been, three years previously, married to the dauphin. The prince was, however, guiltless of any thought of offending the dauphiness; he had had no correspondence with Madame du Barry, but had merely replied to the king's inquiries as to what was taking place at the imperial court. Louis had left one of the ambassador's private letters in the hands of the Duke d'Aguillon, who was a creature of Du Barry, and had given the letter to her, which she, with her accustomed levity, read to amuse her guests.

The anger of Marie Antoinette, thus unwittingly incurred by M. de Rohan, continued to rankle in her breast after she had succeeded to the throne. Although, being allied to the most powerful families of France, and possessed of a princely income, he had obtained the post of grand-almoner of France, a cardinal's hat, the rich abbey of St Waast, and had been elected *proviseur* of the Sorbonne, the displeasure of the queen effectually disgraced him at court, and embittered his very existence. Such was his disagreeable position when he was introduced to an *intrigante*, who, taking advantage of his desire to regain the royal favour, involved him in the disgraceful transaction that placed him before the world in the attitude of a thief and a forger.

This woman was the descendant of royal blood, and had married a gendarme named Lamotte. Being reduced to beggary, she presented herself before the Cardinal de Rohan, to petition that in his capacity as grand-almoner, he would procure her aid from the royal bounty. Madame Lamotte, without being beautiful, had an intelligent and pleasing countenance and winning manners, and moved the cardinal-prince to advance her sums of money. He then advised her to apply in person to the queen, and, lamenting it was not in his power to procure her an interview, was weak enough to betray the deep chagrin which the sovereign's displeasure had caused him. Some days after, Madame Lamotte returned, stating that she had obtained admittance to the queen's presence, had been questioned kindly, had introduced the name of the cardinal as being one of her benefactors, and, perceiving she was listened to with interest, had ventured to mention the grief he endured, and had obtained permission to lay before her majesty his vindication. This service Madame Lamotte tendered in gratitude to the prince, who intrusted to her the apology, written by himself, which she stated had been placed in the sovereign's hands, and to which a note was vouchsafed in reply, Madame Lamotte having previously ascertained that the cardinal had not seen, or did not remember, the queen's handwriting. The contents were as follows: 'I have seen your note; I am delighted to find you innocent. I cannot yet grant you the audience you solicit; as soon as circumstances will permit, I will let you know. Be discreet.'

The prince was now completely duped. He was convinced that Madame Lamotte was admitted daily into her majesty's private apartments, and he thought it natural that the lively queen should be amused by her quick-witted sallies, and that she should make use of her as a ready tool. Following his guide's advice, he expressed his joy and gratitude in writing, and the correspondence thus commenced was continued, and so worded on the queen's part, that the cardinal had reason to believe that he had inspired unlimited confidence. When he was supposed to be sufficiently prepared, a note was risked from the queen, commissioning the grand-almoner to borrow for a charitable purpose 60,000 francs, and transmit them to her through the medium of Madame Lamotte. Absurd as was this clandestine negotiation, the cardinal believed it; he borrowed the money himself, and remitted it to Madame Lamotte, who brought, in return, a note of thanks. A second loan of a like amount was obtained. With these funds Madame Lamotte and her husband furnished a house handsomely, and started gay equipages, though not until the artful woman had, through her usual medium—a letter from the queen—insinuated to the cardinal that, to prevent suspicion, he should absent himself for a time, when he instantly set out for Alsace.

Meanwhile, Madame Lamotte accounted for her sudden opulence by saying that the queen's kindness supplied her with the means. Her majesty would not allow a descendant of royal blood to remain in poverty. This success emboldened Madame Lamotte to aim at much higher game. The court-jewellers were by this time tired of having the costly necklace lying idle; an emissary of Madame Lamotte had insinuated to them, that an influential lady at court might be able to recommend the purchase of the necklace. A handsome present was promised for such a service. But Madame Lamotte was cautious; she did not meddle with such matters; she would consider the subject. In a few days, she called on the jewellers, and announced that a great lord would that morning look at the necklace, which he was commissioned to purchase. The cardinal, in the meantime, received from his quasi-royal correspondent a note to hasten his return for a negotiation. On reaching Paris, he was informed that the queen earnestly desired to purchase the necklace without the king's knowledge, for which she would pay with money saved from her income. She had chosen the grand-almoner to negotiate the purchase in her name, as a special token of her favour and confidence. He was to receive an authorisation, written and signed by the queen, though the contract was to be made in the cardinal-prince's name. He unsuspectingly hastened to fulfil his mission; and on February 1, 1785, the necklace was placed in the cardinal's hands. Twenty thousand livres of the original price were taken off, quarterly payments agreed to, and the prince's note accepted for the whole amount. The jewellers, however, were made aware that the necklace was being purchased on her majesty's account, the prince having shewn them his authority, and charged them to keep the affair secret from all except the queen.

The necklace was to be delivered on the eve of a great fête, at which Madame Lamotte asserted the queen desired to wear it. The casket containing it was taken to Versailles, to the house of Madame

Lamotte, by whom it was to be handed to the person whom the queen was to send. At dusk, the cardinal arrived, followed by his valet bearing the casket; he took it from the servant at the door, and, sending him away, entered alone. He was placed by Madame Lamotte in a closet opening into a dimly-lighted apartment. In a few minutes a door was opened, a 'messenger from the queen' was announced, and a man entered. Madame Lamotte advanced, and respectfully placed the casket in the hands of the last-comer, who retired instantly. And so adroitly was the deception managed, that the cardinal protested that through the glazed sash of the closet-door, he had perfectly recognised the confidential valet of the queen! To strengthen the cardinal's belief, Madame Lamotte told him that she had taken lodgings at Versailles, as the queen was desirous of having her at hand; and to corroborate this statement, she persuaded the cardinal, disguised, to accompany her, when the queen, as she pretended, desired her attendance at Trianon. On one of these occasions, Madame Lamotte and the cardinal were escorted by the pretended valet, who was the former's accomplice; but it was the *concierge* of the Château of Trianon, and not the queen, whom Madame Lamotte went to visit.

The acknowledgment of the necklace was next artfully planned. Madame Lamotte had noticed that when the queen passed from her own apartment, crossing the gallery, to go to the chapel, she made a motion with her head, which she repeated when she passed the Œil de Bœuf. On the same evening that the necklace was delivered Madame met the cardinal on the terrace of the château, and told him that the queen was delighted. Her majesty could not then acknowledge the receipt of the necklace; but next day, if he would be, as if by chance, in the Œil de Bœuf, her majesty would, by the motion of her head, signify her approbation. The cardinal went, saw, and was satisfied. Meanwhile, as Madame Lamotte informed her dupe, the queen thought it advisable not to wear the necklace until she had mentioned its purchase to the king.

The presence of the cardinal now becoming troublesome, a little note sent him again to Alsace. Madame Lamotte then despatched her husband with the necklace to London, where it was broken up; the small diamonds were reset in bracelets and rings, for the three accomplices; the remainder was sold to jewellers, and the money placed in the Bank of England in a fictitious name.

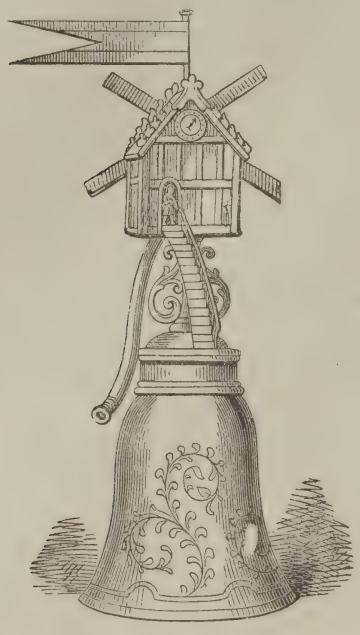
The cardinal, in the meantime, induced the jewellers to write to the queen (if they could not see her), to thank her for the honour she had done them. They did so, and were soon summoned to explain their letter, which was an enigma to the queen; and the whole affair of the purchase, as far as the cardinal was concerned, was then explained to her majesty. This was in the beginning of July. From that moment Marie Antoinette acted in an unjust and undignified manner. Instead of exposing the manœuvre, and having the authors of the fraud punished, the queen allowed herself to be guided by two of the most inveterate enemies of the cardinal, whom she left to their surveillance; and the jewellers were merely told to bring a copy of the agreement, and leave it with her majesty.

Meanwhile, the first instalment in payment of the necklace was nearly due, and the cardinal being wanted to provide funds for it, he was recalled to Paris in the month of June, by a note assuring him that the realisation of the queen's promises was near at hand, that she was making great efforts to meet the first payment, but that unforeseen expenditure rendered the matter difficult. The prince, however, began to think it strange that no change was apparent in the queen's behaviour towards him in public, nor was the necklace worn; but, to satisfy him, Madame Lamotte arranged a private interview with the queen, between eleven and twelve o'clock, in a grove near Versailles. To personate her majesty at this rendezvous, the conspirators had chosen a certain Mademoiselle Leguet, whose figure, gait, and profile gave her a great resemblance to the queen. This new accomplice was not initiated into the secrets of the plot, but was told that she was to play her little part to mystify a certain nobleman of the court, for the amusement of the queen, who would be an unseen witness of the scene. It was rehearsed in the appointed grove: a tall man, in a blue great-coat and slouched hat, would approach and kiss her hand, with great respect. She was to say in a whisper: 'I have but a moment to spare; I am greatly pleased with all you have done, and am about to raise you to the height of power.' She was to give him a rose, and a small box containing a miniature. Footsteps would then be heard approaching, on which she was to exclaim, in the same low tone: 'Here are Madame, and Madame d'Artois! we must separate.' The scene took place as planned; the queen's relatives being represented by M. Lamotte and a confederate named Villette, who, approaching, cut short the cardinal's interview, of which he complained bitterly to his friends. Nevertheless, understanding that the queen was unable to pay the 300,000 livres, he endeavoured to borrow them; when a note came to say, that if the payment could be delayed one month, the jewellers should receive 700,000 livres at the end of August, in lieu of the 300,000 livres due in July; 30,000 livres being tendered as interest, which Madame Lamotte contrived to pay out of the proceeds of the sale of the diamonds. This the jewellers took and gave the cardinal a receipt on account; but they refused all further delay, and daily pressed the prince for payment, and threatened to make use of the power his note gave them. 'Why,' exclaimed he, 'since you have had frequent access to her majesty, have you not mentioned the disagreeable situation in which her delay places you?' 'Alas! Monseigneur,' they replied, 'we have had the honour of speaking to her majesty on the subject, and she denies having ever given you such a commission, or received the necklace. To whom, my prince, can you have given it?' The cardinal was thunderstruck: he replied, however, that he had placed the casket in Madame Lamotte's hands, and saw her deliver it into those of the queen's valet. 'At any rate,' he added, 'I have in my hands the queen's authorisation, and that will be my guarantee.' The jewellers replied: 'If that is all you count upon, my lord, we fear you have been cruelly deceived.' Madame Lamotte was absent from Paris, but repaired thither, and arriving at the grand-almoner's in the middle of the night, assured him she had just left the queen, who threatened to

deny having received the necklace, or authorised its purchase, 'and to make good her own position, would have me arrested, and ruin you;' at the same time entreating his eminence to give her shelter until she could concert with her husband her means of escape. This was, in reality, a *ruse* to clear herself and criminate the cardinal, who, she declared on her arrest, had kept her a close prisoner for four-and-twenty hours, to prevent her disclosing that she had been employed to sell the diamonds for him.

This took place early in August. An enemy of the cardinal now drew up a memorial of the whole affair, which, however, was not presented to the king until the 14th of August; and next morning being a great fête, while the grand-almoner, in his pontifical robes, was waiting to accompany her majesty to the chapel, he was summoned to the royal closet before Louis and Marie Antoinette, the memorialist, and two other court-dignitaries. The king, handing him the depositions of the jewellers, and the financier of whom the cardinal had endeavoured to borrow for the queen 300,000 livres, bade him read them. This being done, the king asked what he had to say to these accusations. 'They are correct in the more material points, sire,' replied the cardinal. 'I purchased the necklace for the queen.' 'Who commanded you?' exclaimed she. 'Your majesty did so by a writing to that effect, signed, and which I have in my pocket-book in Paris.' 'That writing,' exclaimed the queen, 'is a forgery!' The cardinal threw a significant glance at the queen, when the king ordered him to retire, and in a few minutes he was arrested and sent to the Bastile.

A few days after, Madame Lamotte was arrested in the provinces, where she was entertaining a large party of friends; her husband had escaped, and she had sent her other accomplices out of the kingdom. She was taken to the Bastile on the 20th of August: when examined, she at first denied all knowledge of the necklace, though she admitted that she and her husband had been employed by the cardinal to dispose of a quantity of loose diamonds. She afterwards said that the necklace had been purchased by the cardinal to sell in fragments, in order to retrieve his affairs; and that he had acted with the connivance of Cagliostro, into whose hands the funds had passed. She denied all mention of the queen's name, and her tone was ironical and daring. Cagliostro and his wife were sent to the Bastile, where they were kept for many months; but nothing proved that they had been concerned in the affair, though the cardinal used to consult Cagliostro, in whose cabalistic art he had great faith.



At this stage light unexpectedly broke in. Father Loth, a neighbour of Madame Lamotte, whom she had intrusted with her secret, revealed to the friends of the cardinal the parts played by Villette and Mademoiselle Leguet, who were accordingly arrested, one in Geneva, and the other in Belgium. Their evidence was conclusive as to the deception Madame Lamotte had practised upon the cardinal with regard to the queen, and the other facts were easily proved. The testimony of Cagliostro also weighed heavily against her; and when confronted with the witnesses, in a violent rage she exclaimed: 'I see there is a plot on foot to ruin me; but I will not perish without disclosing the names of the great personages yet concealed behind the curtain!'

This strange drama was at length brought to a close on the 31st of May 1786; when, in the trial before the Criminal Court, the prince-cardinal was proved innocent of all fraud, but was ridiculed for his extreme credulity; was ordered by the king to resign his posts at court; and was exiled to his abbey of La Chaise Dieu, in the mountains of Auvergne. The wretched woman, Lamotte, was sentenced to be flogged, branded on both shoulders, and imprisoned for life. When the former part of the sentence was executed, she most foully abused the queen; and though she was gagged, enough was heard to form the ground of the vilest calumnies. Her husband, who had escaped to England, was condemned by default; when he threatened to publish a pamphlet compromising the queen and her minister, Baron de Breteuil, if his wife were not set free. This was treated with contempt; but, ten months after, Madame Lamotte was permitted to escape to England, whither the Duchess of Polignac was sent to purchase the silence of the infamous Lamottes with a large sum of money. The bribe was thrown away, for though one edition of the slanderous pamphlet, or memoir, was burned, a second was published some time after; and the copies which are now extant in the Imperial Library of Paris, were found in the palace of Versailles, when it was taken possession of by the Republican government.

THE WHISTLE DRINKING-CUP.

The drinking-customs of various nations would form a curious chapter in ethnology. The Teutonic races have, however, the most claim to be considered 'potent in potting.' The Saxons were great drinkers; and took with them to their graves their ornamental ale-buckets and drinking-glasses, the latter made without foot or stand, so that they must be filled and emptied by the drinker before they could be set down again on the festive-board. Mighty topers they were, and history records some of their drinking-bouts. Notwithstanding the assertion of Iago, that 'your Dane, your German, and your swag-bellied Hollander, are nothing to your English' in powers of drinking, it may be doubted if the Germans have ever been outdone. Certainly no persons have bestowed more thought on quaint inventions for holding their liquors, or enforcing large consumption, than they have. The silversmiths of Augsburg and Nuremberg, in the sixteenth and seventeenth centuries, devoted a large amount of invention to the production of drinking-cups, taking the form of men, animals, birds, &c., of most grotesque design. Our engraving (see the following page) represents one surmounted by a wind-mill. It will be perceived that the cup must be held in the hand to be filled, and retained there till it be emptied, as then only it can be set upon the table. The drinker having swallowed the contents, blew up the pipe at the side, which gave a shrill whistle, and set the sails of the wind-mill in motion also. The power of the blow, and the length of the gyration, were indicated in a small dial upon the front of the mill, and also in some degree testified to the state of the consumer. Among the songs of Burns is one upon

a whistle, used by a Dane of the retinue of Anne of Denmark, which was laid upon the table at the commencement of the orgie, and won by whoever

WHISTLE DRINKING-CUP.

was last able to blow it. The Dane conquered all-comers, until Sir Robert Lawrie of Maxwelton, 'after three days and three nights' hard contest, left the Scandinavian under the table.' On 16th October 1789, a similar contest took place, which has been immortalised in Burns's verses.

NATHANIEL LLOYD'S WILL—ODD BEQUESTS.

On the 16th of October 1769, Nathaniel Lloyd, of Twickenham, Middlesex, Esquire, completed his testament in the following terms :

'What I am going to bequeath,
When this frail spark submits to death;
But still I hope the spark divine
With its congenial stars shall shine;
My good Executors, fulfil,
I pray ye, fairly, my last will,
With first and second codicil.
First, I give to dear Lord Hinton,
At Tryford school—not at Winton,
One hundred guineas for a ring,
Or some such memorandum thing;
And truly, much I should have blundered,
Had I not giv'n another hundred
To Vere, Earl Poulett's second son,
Who dearly loves a little fun.
Unto my nephew, Robert Longden,
Of whom none says he ever has wrong done,
Tho' civil law he loves to lash,
I give two hundred pounds in cash.
One hundred pounds to my niece Tuder
(With loving eyes one Matthew view'd her)
And to her children—just among 'em
A hundred more, and not to wrong 'em,
In equal shares I freely give it,
Not doubting but they will receive it.
To Sally Crouch and Mary Lee,
If they with Lady Poulett be,
Because they would the year did dwell
In Twickenham House, and served full well,
When Lord and Lady both did stray
Over the hills and far away:
The first, ten pounds: the other twenty;
And, girls, I hope that will content ye.
In seventeen hundred, sixty-nine,
This with my hand I write and sign,
The sixteenth day of fair October,
In merry mood, but sound and sober;
Past my threescore-and-fifteenth year,
With spirits gay and conscience clear,
Joyous and frolicsome, though old,
And like this day—serene, but cold;
To foes well-wishing, and to friends most kind,
In perfect charity with all mankind.
For what remains, I must desire,
To use the words of Matthew Prior:—
"Supreme! All-wise! Eternal Potentate!
Sole Author! sole Disposer of my Fate!
Enthron'd in Light and Immortality!
Whom no man fully sees, and none can see!
Original of Beings! Power Divine!
Since that I think, and that I live, is thine!
Benign Creator! let thy plastic hand
Dispose of its own effect! Let thy command
Restore, Great Father, thy instructed son,
And in my act, may Thy great will be done."'

To be thus quaint and eccentric in one of the most solemn affairs of life, is of by no means unfrequent occurrence among the denizens of this cloudy island. Some men choose to burden their executors with a great number of injunctions, partly to express certain tastes and prejudices, but mainly, as we may presume, for the vanity of causing some little sensation about themselves when they are no more. The following is a notable example :

'*A True Copy of the Last Will and Testament of* Mr Benjamin Dod, *Citizen and Linen Draper, who lately fell from his Horse, and Dy'd soon after.*

'*In the Name of God*, Amen. I, Benjamin Dod, citizen and mercer of *London*, being in health of body, and good and perfect memory, do make this my last will and Testament in manner and form following (*that is to say*): First, my soul I commend to Almighty God that gave it me, and my body to the earth from whence it came. I desire to be interr'd in the parish church of St John, *Hackney*, in the county of *Middlesex*, about eleven o'clock at night, in a decent and frugal manner, as to Mr Robert Atkins shall seem meet, the management whereof I leave to him. I desire Mr Brown to preach my funeral sermon; but if he should happen to be absent or dead, then such other persons as Mr Robert Atkins shall appoint: and to such minister that preaches my funeral sermon I give five guineas.

'*Item:* I desire four-and-twenty persons to be at my burial, out of which Messrs J. Low, &c. [naming six persons] to be pall-bearers: but if any of them be absent or dead, I desire Mr Robert Atkins to appoint others in their room, to every of which four-and-twenty persons so to be invited to my funeral, I give a pair of white gloves, a ring of ten shillings' value, a bottle of wine at my funeral, and half-a-crown to spent at their return that night, to drink my soul's health, then on her journey to purification in order to eternal rest. I appoint the room where my corps shall lye, to be hung with black, and four-and-twenty wax-candles

to be burning. On my coffin to be affixed a cross, and this inscription—

Jesus Hominum Salvator.

I also appoint my corps to be carried in a hearse, drawn with six white horses, with white feathers, and follow'd by six coaches, with six horses to each coach, to carry the four-and-twenty persons. I desire Mr John Spicer may make the escutcheons, and appoint an undertaker, who shall be a noted churchman. What relations have a mind to come to my funeral may do it without invitation.

'*Item:* I give to forty of my particular acquaintance, not at my funeral, to every of them a gold ring of ten shillings' value; the said forty persons to be nam'd by Mr Robert Atkins. As for mourning, I leave that to my executors hereafter nam'd; and I do not desire them to give any to whom I shall leave a legacy.'

After enumerating a number of legacies, &c., the testator concludes thus:

'I will have no Presbyterians, moderate Low-churchmen, or occasional Conformists, to be at, or have anything to do with, my funeral. I die in the faith of the true Catholick Church. I desire to have a Tombstone over me, with a Latin inscription; and a lamp, or six wax-candles, to burn seven days and nights together thereon.'

The will of Peter Campbell, of Darley, dated October 20, 1616, contained the following passage: 'Now for all such household goods at Darley, whereof John Howson hath an inventory, my will is, that my son Roger shall have them all towards housekeeping upon this condition, that if, at any time hereafter, any of his brothers or sisters shall find him taking of tobacco, that then he or she, so finding him, and making just proof to my executors, shall have the said goods, or the full value thereof, according as they shall be praised.'*

Some men, again, have an amiable dying satisfaction in charging their wills with a sting or a stab at some relative or other person who has not behaved well, or has (or is supposed to have) been guilty of some special delict towards the testator. Some have a similar pleasure in shewing their contempt for their own kind by careful provision for favourite cats, dogs, and parrots. Others, good easy-natured souls, love to charge their wills with a joke, which they know will provoke a smile from their old friends when they are lying cold in the grave. A few examples of these various testamentary eccentricities follow:

1788.—'I, David Davis, of Clapham, Surrey, do give and bequeath to Mary Davis, daughter of Peter Delaport, the sum of 5*s.*, which is sufficient to enable her to get drunk for the last time at my expense.'

1782.—'I, William Blackett, governor of Plymouth, desire that my body may be kept as long as it may not be offensive; and that one or more of my toes or fingers may be cut off, to secure a certainty of my being dead. I also make this request to my dear wife, that as she has been troubled with one old fool, she will not think of marrying a second.'

1781.—'I, John Aylett Stow, do direct my executors to lay out five guineas in the purchase of a picture of the viper biting the benevolent hand of the person who saved him from perishing in the snow, if the same can be bought for that money; and that they do, in memory of me, present it to —— Esq., a King's Counsel, whereby he may have frequent opportunities of contemplating on it, and, by a comparison between that and his own virtue, be able to form a certain judgment which is best and most profitable, a grateful remembrance of past friendship and almost parental regard, or ingratitude and insolence. This I direct to be presented to him in lieu of a legacy of £3000, which I had, by a former will, now revoked and burnt, left him.'

Extract from the Will of S. Church, in 1793.—'I give and devise to my son, Daniel Church, only *one shilling*, and that is for him to hire a porter to carry away the next badge and frame he steals.'

1813.—'I, Elizabeth Orby Hunter, of Upper Seymour Street, widow, do give and bequeath to my beloved parrot, the faithful companion of 25 years, an annuity for its life of 200 guineas a year, to be paid half-yearly, as long as this beloved parrot lives, to whoever may have the care of it, and proves its identity; but the above annuity to cease on the death of my parrot; and if the person who shall or may have care of it, should substitute any other parrot in its place, either during its life or after its death, it is my positive will and desire, that the person or persons so doing shall refund to my heirs or executors the sum or sums they may have received from the time they did so; and I empower my heirs and executors to recover it from whoever could be base enough to do so. And I do give and bequeath to Mrs Mary Dyer, widow, now dwelling in Park Street, Westminster, my foresaid parrot, with its annuity of 200 guineas a year, to be paid her half-yearly, as long as it lives; and if Mrs Mary Dyer should die before my beloved parrot, I will and desire that the aforesaid annuity of 200 guineas a year may be paid to whoever may have the care of my parrot as long as it lives, to be always the first paid annuity; and I give to Mrs Mary Dyer the power to will and bequeath my parrot and its annuity to whomsoever she pleases, provided that person is neither a servant nor a man—it must be bequeathed to some respectable female. And I also will and desire that no person shall have the care of it that can derive any benefit from its death; and if Mrs Dyer should neglect to will my parrot and its annuity to any one, in that case, whoever proves that they may have possession of it, shall be entitled to the annuity on its life, as long as it lives, and that they have possession of it, provided that the person is not a servant or a man, but a respectable female; and I hope my executors will see it is in proper and respectable hands; and I also give the power to whoever possesses it, and its annuity, to any respectable female on the same conditions. And I also will and desire, that 20 guineas may be paid to Mrs Dyer directly on my death, to be expended on a very high, long, and large cage for the foresaid parrot. It is also my will and desire, that my parrot shall not be removed out of England. I will and desire that whoever attempts to dispute this my last will and testament, or by any means neglect, or tries to avoid paying my parrot's annuity, shall forfeit whatever I may have left them; and if any one that I have left legacies to attempt bringing in any bills or charges against me, I will and desire that they forfeit whatever I may have left them, for so doing, as I owe nothing to any one. Many owe to me both gratitude and money, but none have paid me either.'

1806.—'I, John Moody, of Westminster, boot-maker, give to Sir F. Burdett, Bart., this piece of friendly advice, to take a special care of his conduct and person, and never more to be the dupe of artful and designing men at a contested election, or ever amongst persons moving in a higher sphere of life; for placemen of all descriptions have conspired against him, and if prudence does not lead him into private life, certain destruction will await him.'

1810.—Richard Crawshay, of Cyfartha, in the

* *Gentleman's Magazine*, April 1769.

county of Glamorgan, Esq. 'To my only son, who never would follow my advice, and has treated me rudely in very many instances; instead of making him my executor and residuary legatee (as till this day he was), I give him £100,000.'

1793.—'I, Philip Thicknesse, formerly of London, but now of Bologna, in France, leave my right hand, to be cut off after my death, to my son, Lord Audley; and I desire it may be sent to him, in hopes that such a sight may remind him of his duty to God, after having so long abandoned the duty he owed to a father who once affectionately loved him.

1770.—'I, Stephen Swain, of the parish of St Olave, Southwark, give to John Abbot, and Mary, his wife, 6*d.* each, to buy for each of them a halter, for fear the sheriffs should not be provided.'

1794.—'I, Wm. Darley, late of Ash, in the county of Herts, give unto my wife, Mary Darley, for picking my pocket of 60 guineas, and taking up money in my name, of John Pugh, Esq., the sum of one shilling.'

1796.—'I, Catharine Williams, of Lambeth, give and bequeath to Mrs Elizabeth Paxton £10, and £5 a year, to be paid weekly by my husband, to take care of my cats and dogs, as long as any of them shall live; and my desire is that she will take great care of them, neither let them be killed or lost. To my servant-boy, George Smith, £10 and my jackass, to get his living with, as he is fond of traffic.'

1785.—'I, Charles Parker, of New Bond Street, Middlesex, bookseller, give to Elizabeth Parker, the sum of £50, whom, through my foolish fondness, I made my wife, without regard to family, fame, or fortune; and who, in return, has not spared, most unjustly, to accuse me of every crime regarding human nature, save highway-robbery.'

Amongst jocular bequests, that of David Hume to his friend John Home, author of *Douglas*, may be considered as one of the most curious. John Home liked claret, but detested port wine, thinking it a kind of poison; and the two friends had doubtless had many discussions on this subject. They also used to have disputes as to which of them took the proper way of spelling their common family-name. The philosopher, about a fortnight before his death, wrote with his own hand the following codicil to his will: 'I leave to my friend, Mr John Home, of Kilduff, ten dozen of my old claret at his choice, and one single bottle of that other liquor called port. I also leave him six dozen of port, provided that he attests under his hand, signed John *Hume*, that he has himself alone finished that bottle at two sittings. By this concession, he will at once terminate the only two differences that ever arose between us concerning temporal matters.'

Somewhat akin to this humour was that shewn in a verbal bequest of a Scotch judge named Lord Forglen, who died in 1727. 'Dr Clerk, who attended Lord Forglen at the last, told James Boswell's father, Lord Auchinleck, that, calling on his patient the day his lordship died, he was let in by his clerk, David Reid. "How does my lord do?" inquired Dr Clerk. "I houp he's *weel!*" answered David, with a solemnity that told what he meant. He then conducted the doctor into a room, and shewed him two dozen of wine under a table. Other doctors presently came in, and David, making them all sit down, proceeded to tell them his deceased master's last words, at the same time pushing the bottle about briskly. After the company had taken a glass or two, they rose to depart; but David detained them. "No, no, gentlemen; not so. It was the express will of the deceased that I should fill ye a' fou, and I maun fulfil the will o' the dead." All the time the tears were streaming down his cheeks. "And, indeed," said the doctor afterwards in telling the story, "he did fulfil the will o' the dead, for before the end o't there was na ane of us able to bite his ain thoomb!"' *

JOHN HUNTER'S MUSEUM.

It is doubtful whether any private individual ever formed a museum more complete and valuable than that of John Hunter, now under the care of the Royal College of Surgeons, in Lincoln's Inn Fields. Whatever else the great surgeon was doing, he never forgot or neglected his museum. In 1755, when his brother Dr William Hunter was a surgeon and lecturer of eminence, John was his assistant, and helped him in making anatomical preparations. He soon, however, went far beyond his mere duties as an assistant, and examined all the living and dead animals he could get hold of, to compare their structure with that of the human body. He made friends with the keepers of all the travelling-menageries, and lost no opportunity of profiting by the facilities thus afforded. A mangy dog, a dead donkey, a sick lion, all alike were made contributary to the advancement of science in the hands of John Hunter. He took a house in Golden Square in 1764, and then built a second residence at Earl's Court, where he might carry on experiments in science. After having been made a member of the College of Surgeons, he removed from Golden Square to Jermyn Street, where he packed all the best rooms in the house full of anatomical specimens and preparations. He married in 1771, and his wife thereafter lived at Earl's Court, for there was no room for her among the physiological and pathological wonders of Jermyn Street. Indeed, for more than twenty years, he was accustomed to carry on his favourite researches at Earl's Court, only being in London a sufficient time each day to attend to his practice as a surgeon. His collection increased so rapidly, that the house in Jermyn Street became filled to repletion; insomuch that, in 1782, he took a larger house on the east side of Leicester Square. Here he built a new structure expressly as a museum, comprising a fine room fifty-two feet by twenty-eight, lighted at the top, and provided with a gallery all round. Sir Joseph Banks aided John Hunter out of his own ample store of natural-history specimens, and the museum soon became a wealthy one. Mr Home, a brother-in-law, who had been an assistant army-surgeon, came to reside with him as a sort of curator of the museum. Hunter also employed a Mr Bell for fourteen years, in making anatomical drawings and preparations; while he himself was accumulating a vast mass of MS. papers—building up almost a complete system of physiology and surgery, on the evidence furnished by the specimens in his museum. Hunter was always poor, and very frequently embarrassed, by the expenses which his scientific enterprise entailed upon him, and this notwithstanding the fact that his professional income reached £5000 a year for some years before his death. In 1794, he began to open his museum

* This anecdote is taken from *Boswelliana*, a volume privately printed by R. M. Milnes, Esq.

occasionally to the public, and justly prided himself on the scientific way in which it was arranged. Being a hasty and irritable man, he soon took offence, and was not readily appeased; and he himself predicted that any sudden or violent anger would probably kill him. The result mournfully verified his prediction; for, on the 16th October 1795, having had a very exciting quarrel with some of the members at the College of Surgeons, he dropped down dead in the attempt to suppress his feelings.

In his will, he directed that his museum, the pride of his life, should be offered to the nation if anything like a fair sum were tendered for it; in order that it might be retained in the country. Failing in this, it was to be offered to certain foreign governments, in succession; and if all these attempts failed, it was to be disposed of by private contract. After much negotiation, the government bought the splendid collection, in 1799, for £15,000. The question, what to do with it? had then to be decided, and the following arrangement was come to. The College of Surgeons received a new charter in 1800, constituting it a 'Royal' College, and giving it increased powers. The Hunterian Collection was intrusted to the keeping of the college, on condition of the public being allowed access to it; and twenty-four 'Hunterian Lectures' on surgery being given annually by the college. The government granted £27,500 to construct a building for the reception of the collection; but it was many years before the museum was really opened.

One painful circumstance connected with this museum roused the indignation of the whole medical profession of Europe. John Hunter left a vast mass of manuscripts of priceless value, recording the results of forty years' researches in comparative and pathological anatomy and physiology. This treasure was placed in the museum. Mr (afterwards Sir Everard) Home was one of the executors, and also one of the trustees. He took these manuscripts to his own house, about 1810, under pretence of drawing up a catalogue of them; and no entreaties or remonstrances would ever induce him to return them. He kept them ten or twelve years, and *then burned them!* The only reason he assigned was, that John Hunter had requested him to do so. The world viewed the matter otherwise. Year after year, while the manuscripts were in his possession, Sir Everard poured forth scientific papers in such profusion as astonished all the physicians and anatomists of Europe, who had hitherto been ignorant of his possessing such attainments. Then, after years of surprise and disappointment at the non-return of the Hunter manuscripts, the act of their destruction was openly admitted by Home, and the source of his scientific inspiration now became tolerably manifest. Unhappily, this disgraceful transaction remains beyond a doubt. The trustees and the board of curators indignantly remonstrated with Home in 1824 and 1825, and compelled him to make an attempt to vindicate himself, but none of his excuses or explanations could do away with the one cruel fact, that the invaluable manuscripts were irrevocably gone.

The Hunterian Museum, comprising 22,000 specimens, occupies a fine suite of rooms and galleries at the Royal College of Surgeons, on the south side of Lincoln's Inn Fields. Most of them are valuable only to medical men; but some, such as the skeletons of the Bosjesman, the Irish giant, and the Sicilian dwarf, and the embalmed body of the wife of Martin Van Butchell, a celebrated quack-doctor in the last century, will be viewed by all with the greatest interest.

OCTOBER 17.

St Etheldreda or Audry, abbess of Ely. St Anstrudis or Austru, abbess at Laon, 688. St Andrew of Crete, 761. St Hedwiges or Avoice, Duchess of Poland, widow, 1243.

ST ETHELDREDA OR AUDRY.

This saint, commemorated in the Romish calendar on 23d June, but in the English calendar on 17th October, in celebration of the translation of her relics from the common cemetery of the nuns to a splendid marble coffin within the church of Ely, was the daughter of a king of East Anglia, and earned an exalted reputation both by her piety and good works, and the maintenance of an early vow of virginity which she observed through life, though married successively to two Saxon princes. She founded the convent and church of Ely on the spot where the cathedral was erected at a subsequent period, and died in 679 as its abbess. Various churches throughout England are named after her, among others Ely Cathedral, the patronage of which, however, she shares with St Peter.

From St Etheldreda's more homely appellation of St Audry, is derived an adjective of the English language in familiar use. At the fair of St Audry, at Ely, in former times, toys of all sorts were sold, and a description of cheap necklaces, which, under the denomination of *tawdry laces*, long enjoyed great celebrity. Various allusions to tawdry laces occur in Shakspeare, Spenser, and other writers of their age.

> 'One time I gave thee a paper of pins,
> Another time a tawdry lace,
> And if thou wilt not grant me love,
> In truth I'll die before thy face.'
>
> *Old Ballad.*

'It was a happy age when a man might have wooed his wench with a pair of kid-leather gloves, a silver thimble, or with a tawdry lace; but now a velvet gown, a chain of pearl, or a coach with four horses, will scarcely serve the turn.'—*Rich's 'My Lady's Looking-glass,'* 1616.

In process of time, the epithet *tawdry* came to be applied to any piece of glittering tinsel or tarnished finery.

Born.—Augustus III., king of Poland, 1696; John Wilkes, noted demagogue, 1727, *Clerkenwell, London;* William Scott, Baron Stowell, great consistorial lawyer, 1745, *Heworth, near Newcastle-on-Tyne.*

Died.—Pope John VII., 707; Philip de Comines, historian, 1509, *Argenton, in Poitou;* Andrew Osiander, eminent Lutheran divine, 1552, *Königsberg;* Sir Philip Sidney, poet and hero, 1586, *Arnheim, Holland;* Sir Edmundbury Godfrey, mysteriously murdered, 1678; Ninon de Lenclos, celebrated beauty and wit, 1705; Dr John Ward, rhetorician, 1758; Frederic Chopin, musical composer, 1849, *Paris.*

SIR PHILIP SIDNEY.

Sir Philip Sidney, the idol of his own, and the boast of succeeding ages, was not quite thirty-two when he died. He lived long enough to afford, to all who knew him, unmistakable promise of greatness, but not so long as to leave to posterity any singular proof of it. And yet we can read his character with sufficient clearness, to feel assured that the universal love of him was founded on a solid basis. Though at times we catch glimpses of a certain haughtiness, a hastiness, an ill-tempered boldness of valour, such as in an older man we should not have looked for, we find, on the other hand, unmistakable marks of a true-hearted patriot, a wise statesman, a skilful general, an elegant scholar, a graceful writer, a kind patron, and a Christian gentleman. Ophelia's description of Hamlet has often been applied to him, and it seems to fail in no particular—

'The courtier's, scholar's, soldier's, eye, tongue, sword,
The expectancy and rose of the fair state,
The glass of fashion and the mould of form,
The observed of all observers.'

He was beautiful within and without; elegant as well in fashion of person as in grace of mind. 'Imitate his virtues, studies, and actions,' said his father to Sidney's younger brother, speaking of Sidney; 'he is a rare ornament of this age, the very formular that all well-disposed young gentlemen of our court do form their manners and life by. . . . In truth, I speak it without flattery of him or of myself, he hath the most rare virtues that ever I found in any man.'

Sir Philip Sidney was named *Philip* after Philip of Spain, as well from gratitude to that king, to whom the family was beholden, as in honour of Mary. His mother was a Dudley. Her father, her grandfather, her brother, and her sister-in-law, Lady Jane Grey, had all died on the scaffold; and this was the Dudley blood of which Sidney was proud.

The events of Sidney's short career are not very prominent in history. After leaving the university, he travelled for some years. Being a Protestant, he encountered some personal danger at Paris, where he happened to be during the treacherous massacre of St Bartholomew. Afterwards he was present at Venice, at a time when that already waning power was making peace with the Turk. Besides these particulars, there is nothing worthy of remark in Sidney's travels. After his return, his progress at court was slow. Elizabeth employed him on several important embassies, in which he gave entire satisfaction; but the queen had a way of holding back ambitious youths of merit, and though she was very fond of Sidney, and even took a journey to stand godmother to his daughter Elizabeth, she received his honest, unasked counsels, with considerable coldness, while she appears, at the same time, prudently to have acted on them. At last, she stopped him in the very act of secretly embarking with Sir Francis Drake on a voyage of discovery; and, as she was always whimsical, instead of punishing him, she made him governor of Flushing, a post which some time previously he had applied for in vain. Sidney threw himself heart and soul into the cause of the Low Countries; took an important town by a skilful night-attack; shewed himself apt for war; and received his death-wound in the battle of Zutphen. This battle of Zutphen, so named, was not a battle. A few hundred men were sent to intercept supplies, which the Prince of Parma was conveying into the town, and fell into an ambush of several thousands. Sidney, from a restless thirst for adventure, had joined the troop, unbidden, with other English leaders; and these valiant men, to whom retreat was open, foolishly performed prodigies of valour. Sidney, in a fit of generous boldness, had thrown away his thigh-armour, because a friend had unintentionally come without his own, and a ball shattered his thigh. He had the best of attendance, his wife's nursing, and many tears of true friends; but nothing remained for him but to die a noble and Christian death, and to be borne in a black ship over the still sea and up the Thames, to lie in state many months, to have a national funeral, and be laid in peace in old St Paul's.

A curious contemporary ballad accurately describes the melancholy close:

'The king of Scots bewrayed his grief in learned verse,
And many more their passions penned, with praise to deck his hearse.
The Flushingers made suit his breathless corpse to have,
And offered a sumptuous tomb the same for to engrave;
But O, his loving friends, at their request did grieve,
It was too much he lost his life, his corpse they should not have.
And so from Flushing port, in ship attired with black,
They did embark this perfect knight, that only breath did lack;
The wind and seas did mourn to see this heavy sight,
And into Thames did carry this much lamented knight;
Unto the Minories his body was conveyed,
And there, under a martial hearse, three months or more was laid;
But when the day was come he to his grave must go,
An host of heavy men repaired to see the solemn show.'

Thus the pride of the English people passed out of the view of men, and 'for many months it was counted indecent for any gentleman of quality to appear, at court or in the city, in light or gaudy apparel.'

King James of Scotland, as we have seen, wrote certain sonnets; the two universities between them produced three volumes of mournful elegies; and Spenser honoured his lost friend and patron with the poem of *Astrophel*, which was published in company with several others; the most beautiful of them, to our taste, is *The Dolefull Lay of Clorinda*, because of its true feeling; such true feeling as becomes well Mary, Countess of Pembroke, Sidney's sister, who is said to have been the writer of it.

'O Death! that hast us of such riches reft,
Tell us at least, what hast thou with it done?
What is become of him whose flowre here left
Is but the shadow of his likenesse gone?
Scarse like the shadow of that which he was,
Nought like, but that he like a shade did pas.

But that immortall spirit, which was deckt
With all the dowries of celestiall grace,
By soveraine choyce from th' hevenly quires select,
And lineally derived from Angels' race.
O! what is now of it become aread?
Ay me, can so divine a thing be dead?

Ah no! it is not dead, ne can it die,
But lives for aie, in blisfull paradise:
Where, like a new-borne babe, it soft doth lie,
In bed of lillies wrapt in tender wise;
And compast all about with roses sweet,
And daintie violets from head to feet.

Three thousand birds, all of celestiall brood,
To him do sweetly carol day and night;
And with straunge notes, of him well understood,
Lull him a sleep in angelick delight;
Whilest in sweet dreame to him presented bee
Immortall beauties, which no eye may see.'

Sidney was an author. His *Defence of Poesy* was the earliest offspring of English criticism. His popular romance of *The Arcadia* contains the prayer which Charles I. copied for his own use, and which Milton styled 'heathenish,' when he wished to reproach Charles with the employment of it. The prayer is put in the mouth of a heathen woman, and contains no distinct reference to the cardinal doctrines of Christianity; but as it is both a beautiful composition in itself, and has obtained a singular celebrity through its appearance in *Ikon Basilike*, we take this occasion to quote it:

PAMELA'S PRAYER.—(*Arcadia*, Book iii.)

'O all-seeing Light, and eternal Life of all things, to whom nothing is either so great that it may resist, or so small that it is contemned; look upon my misery with thine eye of mercy, and let thine infinite power vouchsafe to limit out some proportion of deliverance unto me, as to thee shall seem most convenient. Let not injury, O Lord, triumph over me, and let my faults by thy hand be corrected, and make not mine enemy the minister of thy justice. But yet, O Lord, if, in thy wisdom, this be the aptest chastisement for my inexcusable folly; if this low bondage be fittest for my over-high desires; and the pride of my not enough humble heart be thus to be broken, O Lord, I yield unto thy will, and joyfully embrace what sorrow thou wilt have me suffer. Only thus much let me crave of thee—let my craving, O Lord, be accepted of thee, since even that proceeds from thee—let me crave (even by the noblest title which in my great affliction I may give myself, that I am thy creature; and by thy goodness, which is thyself) that thou wilt suffer some beams of thy majesty to shine into my mind, that it may still depend confidently on thee. Let calamity be the exercise, but not the overthrow of my virtue: let their power prevail, but prevail not to destruction. Let my greatness be their prey; let my pain be the sweetness of their revenge; let them (if so seem good unto thee) vex me with more and more punishment. But, O Lord, let never their wickedness have such a hand, but that I may carry a pure mind in a pure body.'

Sidney was a poet also. His sonnets, under the title of *Astrophel and Stella*, were first published some years after his death. Stella had been betrothed to Sidney, but was afterwards compelled to marry Lord Rich; and being ill-treated by him, she eloped with Lord Mountjoy. Her true name was Penelope Devereux: she was sister to Robert, Earl of Essex, beheaded for treason, and who married Sidney's widow.

Lastly, Sidney was a true friend and excellent patron. Spenser owed to him the notice which Elizabeth took of him: and Fulke Greville, Lord Brooke, who wrote his life, felt himself honoured to be able to have such a motto as the following engraved on his tomb:

'Servant to Q. Elizabeth,
Counsellor to K. James,
And Friend to Sir Philip Sidney,
Trophæum Peccati.'

'SIDNEY'S SISTER.'

Mary, Countess of Pembroke, the sister of Sir Philip Sidney, made a name for herself by her poetical writings, which, added to her beauty and amiability, have placed her in the Pantheon of notable Englishwomen. All the poets united in singing her praises, Spenser described her as—

'The gentlest shepherdess that lived that day,
And most resembling, both in shape and spirit,
Her brother dear.'

And that brother dedicated to her the celebrated romance, which he wrote at her request, and therefore entitled *The Countess of Pembroke's Arcadia.*

Mary Sidney married Henry, Earl of Pembroke, in 1576; her wedded life was short but happy. After her husband's early death, she retired from the gaieties of the court, devoting herself to the education of her children, the enjoyments of literary leisure, and the exercises of religion. Her longest poem, on the sublime subject of our Saviour's Passion, was written at this time; and though perhaps tinged with poetical exaggeration, thus reflects the pious regrets of her widowed life:

'My infant years misspent in childish toys,
My riper age in rules of little reason,
My better years in all mistaken joys
My present time (O most unhappy season!)
In fruitless labour and in endless love,
O what a horror hath my heart to prove!

I sigh to see my infancy misspent,
I mourn to find my youthful life misled,
I weep to feel my further discontent,
I die to try how love is living dead;
I sigh, I mourn, I weep, I living die,
And yet must live to know more misery.

Sir Philip Sidney concludes his *Apology for Poetry*, with a malediction on all those whose creeping souls cannot look up to the sky of poesy; praying that they may be unsuccessful in love, for lack of skill to compose a sonnet, and that their memories may fade from the earth, for want of an epitaph. His sister neither merited nor obtained such a fate; her memory having been honoured in lines more lasting than brass or marble. Her epitaph, written by Ben Jonson, has never been exceeded in the records of posthumous praise:

'Underneath this sable hearse,
Lies the subject of all verse,
Sidney's sister, Pembroke's mother.
Death! ere thou hast killed another,
Fair, and learned, and good as she,
Time shall throw a dart at thee.'

To these simple and elegant lines, six more, of a rather inferior character, were subsequently added,

by an unknown author, supposed to be her son William, Earl of Pembroke :

> 'Marble piles let no man raise
> To her name, for after-days,
> Some kind woman, good as she,
> Reading this, like Niobe,
> Shall turn marble, and become
> Both her mourner and her tomb.'

NINON DE LENCLOS.

This celebrated beauty, who almost enjoyed, like Helen of Troy, the gift of perennial youth, exhibits in her life a striking illustration of French society and morals during the seventeenth century, over nearly the whole of which period her history extends, having been born in 1616 and died in 1706, at the age of ninety. Time seemed hardly to make any impression upon her ; and so enduring were her charms of person, that even when she had passed her seventieth year, they still retained the power of attracting admirers and enkindling love. Nor were her attractions restricted solely to those of face and figure. For conversational wit or *esprit* —that special prerogative of the French nation—she occupied a distinguished place, even in the brilliant circles of Parisian society, in the reign of Louis XIV. Of the general laxity which then prevailed in social ethics, we need no more convincing proof than the fact of a person, who led so disreputable a life as Ninon de Lenclos, being openly received into the company of, and courted by individuals, male and female, of the highest respectability and position. Even Madame de Sevigné, whose son was one of Ninon's many lovers, could jestingly address her in her letters as her *belle-fille ;* and the prudish and bigoted Madame de Maintenon, after her own elevation to the matrimonial couch of Louis XIV., did not hesitate to invite this Aspasia of France to take up her abode in the palace of Versailles. The latter, however, preferred a life of licence and freedom to the lugubrious restraint and austerity which had just then been inaugurated at court. The great Condé sought repose after his military toils in the society of Ninon, and the subtle La Rochefoucauld could here only satisfy his longing for personal beauty in conjunction with the charms of vivacity and wit. Molière and La Bruyère were constantly to be met in her *salons,* and what she spoke they wrote ; in the words of Jules Janin, hers was spoken and theirs was written eloquence. She was well informed on general subjects, spoke several languages, was a thorough and enthusiastic student of Montaigne, and performed with much skill on various musical instruments. Christina, ex-queen of Sweden, paid her a visit, and declared, on leaving Paris, that she had seen nothing more attractive there than the illustrious Ninon. Yet with all her natural advantages, and amid all the splendours by which she was surrounded, Mademoiselle de Lenclos was not happy, and used to declare, in her old age, that were she compelled to live over again her past years, she should certainly commence by hanging herself. So impossible is it to enjoy that serenity of mind, so essential to true happiness, that 'peace of God which passeth all understanding,' where the life is a habitual violation of the precepts of religion and morality, let us bask ourselves as we may in the sunshine of worldly pleasures, honours, and wealth.

The name of *Ninon* was a pet-epithet bestowed on Mademoiselle de Lenclos by her father, her baptismal appellation being *Anne.* To the pernicious lessons inculcated by this relative, who professed unblushingly the grovelling and materialistic doctrines popularly ascribed to Epicurus, most of the subsequent errors of his daughter are to be traced. He was a gentleman of good family in Touraine, and served with distinction in the wars of Louis XIII. against the Huguenots. His wife was also of aristocratic birth from the Orléanais, and, with totally contrary tendencies to her husband, was of a pious and even ascetic turn of mind. Anne's natural disposition to gaiety revolted against such undeviating regularity in religious observances, whilst in her father she found a friend but too ready to encourage her in her determination to free herself from the salutary restraint to which she was subjected by her mother. When a girl of ten years old, it is said he had her dressed in boy's clothes, took her with him to the camp, and instructed her in various military exercises. He died prematurely, and was followed, not long afterwards, by his wife, who had vainly endeavoured to make a nun of her daughter, and expired recommending her to the protection of God, to shield her from the dangers to which she was exposed by her youth and inexperience. These forebodings of affection and maternal piety were but too fully realised. Deprived, at the age of fifteen, of both her parents, left entire mistress of her fortune and actions, with unrivalled mental and personal attractions just beginning to develop themselves, the heedless girl was not long in putting the maxims of her father into practice, and adopting the profession of the regular courtesan. This character, refined no doubt though it might be, but still the Traviata from first to last, she maintained far beyond the usual period enjoyed by women of her class. It must be recorded to her credit, that she betrayed no tendencies to avarice, but was liberal and generous with her money, and was perfectly free from malice in her disposition. There can be no doubt of her possessing naturally many good and amiable qualities, and that, had her early education been more judiciously conducted, her career in life might have been very different. There seemed to be nothing that she dreaded more than forming a permanent connection by marriage. One of the most unfavourable points in her character, was the absence of maternal feeling, which, apparently, had no place in her breast. Of her two sons, one, called La Boissière, became an officer in the French navy, and died at Toulon in 1732. The fate of the other, a son of the Marquis of Gersay, and named Villiers by his father, possesses a singularly tragic interest, rivalling the celebrated story of Oedipus. His parentage, at least on the mother's side, had been carefully concealed from him, and in this state of ignorance he reached the age of nineteen. Having heard of the wondrous charms of Ninon de Lenclos, which were celebrated over France, he sought and obtained an introduction to her, and became desperately enamoured at first sight. It was not long before he declared his passion, and the horror of his mother when he did so may be imagined. Not wishing, if possible, to disclose the secret, she implored the young man to

moderate his ardour; but her remonstrances rather adding fuel to the flame, she found herself obliged to state the fact. The confusion and horror experienced by Villiers on hearing this unexpected announcement were so great, that he snatched up a pistol and blew out his brains. Yet the volatile mind of his mother was comparatively little affected by so terrible an incident. This sad story has been introduced by Le Sage as an episode into *Gil Blas*.

THE POPISH PLOT:

MYSTERIOUS DEATH OF SIR EDMUNDBURY GODFREY.

One of the most remarkable outbreaks of popular prejudice recorded in British history, is the celebrated so-called Popish Plot in 1678, which for a time may be said to have infected the English people with an absolute frenzy, and was certainly the most wide-spread national delusion under which it ever laboured. The fierceness of religious and political zeal was only exceeded by the astonishing, and all but universal, credulity that prevailed. And yet the ferment excited throughout the country was by no means wholly groundless, however extravagant may have been its development. Let us glance for a moment at the then social and political condition of England.

The eloquent pen of Macaulay has familiarised his countrymen with the remarkable changes inaugurated by the Restoration, from republican theories to the doctrine of passive obedience on the one hand, and from the rigid austerity of puritanical morals to the wildest libertinism and excess on the other. For a time the court had it nearly all its own way, but it was not long before a strong reaction set in, and a jealous watch came to be maintained on the proceedings of the king and government. Foremost among the grounds of suspicion and complaint were the popish leanings of the court, and the influence universally believed to be exercised by Catholics in controlling the affairs of the nation. The avowed adherence by the Duke of York to the Romish faith, the prospect of his ascending the throne in default of heirs of the king's body, and a general disposition on the part of the authorities to relax the penal laws against the papists, excited the most lively apprehensions throughout the kingdom, apprehensions which were intensified from day to day. The dread of Puritans and sectaries began even in the church to be extinguished by the fear of the machinations of Jesuits, and the overthrow of Protestantism. A secret but thoroughly organised conspiracy was believed to be carried on for the destruction of church and state, and no mode of action, it was asserted, would be rejected, however atrocious, provided it were calculated to insure success. The great fire of London, in 1666, and subsequent calamities of a similar nature, were stoutly maintained to have been the work of the papists. The opposition, or country-party, with Shaftesbury at its head, gained rapidly ground in parliament, and a formal impeachment was sent up by the Commons of the Lord-Treasurer Danby, for corrupt and unconstitutional measures. In the midst of the agitation which preceded this last measure, the revelation of the Popish Plot took place.

That a plot was really being carried on by the king and his ministers is indisputable. The secret and disgraceful compact between Charles II. and Louis XIV., by which the former, in return for an annual pension, sold himself and his country to France, would, if successfully carried out, have resulted in the total overthrow of Protestantism by giving free scope to the ambitious schemes of Louis, who would in return have assisted his English brother in trampling into the dust all popular rights, and rendering himself an irresponsible sovereign. But the pretended conspiracy revealed by Titus Oates was only calculated to divert men's minds from the real matter in hand.

This worthy seems to have chosen the most fortunate possible conjuncture for his revelations, as, notwithstanding the gross and palpable contradictions in his statements, the infamy of his previous character, and his entire want of any trustworthy evidence to support his allegations, his monstrous tissue of falsehoods, accusing the Catholics of an atrocious conspiracy to assassinate the king, massacre all Protestants, and establish a popish dynasty in the Duke of York, was received with the utmost gravity and attention. From poverty and obscurity Oates suddenly emerged into wealth and fame, and became the hero and popular favourite of the day. He supplemented his first declaration by additional matter, and from the success which had attended his speculation on the credulity of the public, other informers soon followed in his steps. The ferment spread like wild-fire, and no statement, however absurd, which tended to criminate the Catholics was rejected. Yet the common-sense of the nation might, in a short time, have opened its eyes, had it not been for a mysterious occurrence which goaded to madness its nerves, already so highly strung.

The first deposition of Titus Oates was made on 27th September 1678, before Sir Edmundbury Godfrey, one of the magistrates for Westminster, who, however, does not appear to have been a fanatical partisan of the No-Popery party, as Coleman, an agent of the Duke of York, and seriously criminated by Oates's statements, was a personal friend of his, and warned by him in consequence of the danger to which he was exposed. Godfrey, it has been said, was a man of a melancholy temperament, and suffering at the time from depression of spirits, but this assertion was afterwards denied. He occupied a house in Green's Lane, in the Strand, and about a fortnight after the above deposition was made before him, left home at nine o'clock on the morning of Saturday the 12th of October. Shortly after this, he was seen in the neighbourhood of Marylebone, and at noon of the same day had an interview on business with one of the churchwardens of St Martin's in the Fields. From this time he was never again seen alive. Surprise was felt by his servants at home, at his neither returning in the evening nor sending any message to inform them of his intending to be absent for the night. Sunday came, and no tidings of him; Monday, Tuesday, Wednesday, and Thursday followed with the like result. At six o'clock on the evening of the last-mentioned day (the 17th), as two men were crossing a field on the south side of Primrose Hill, they observed a sword-belt, stick, and pair of gloves lying by the side of the hedge, but paid no attention to them at the time, and continued their journey to the White House in the

neighbourhood. Arriving there, they happened to mention what they had seen to the master of the house, who thereupon recommended them to go back to the place, and offered himself to accompany them. The three accordingly started for the spot where they had seen the articles in question; and having arrived there, one of them stooped down to lift them, but happening at the same time to look into the adjoining ditch, saw there the body of a man lying on his face. It was Sir Edmundbury Godfrey, with a sword run through his body, his face bruised, and a livid mark round the neck, as if he had been strangled. He was conveyed at once to the White House, and information sent to the authorities. A jury was impannelled, to inquire into the cause of his death; but no definite conclusion could be come to beyond the evidence furnished by two surgeons, that his death must have been occasioned by strangulation, and his body then pierced with the sword, which had been left sticking in the wound. The ditch was dry, and there were no marks of blood in it, and his shoes were perfectly clean, as if, after being assassinated, he had been carried and deposited in the place where he was found. A large sum of money and a diamond-ring were found in his pockets, but his pocket-book, in which, as a magistrate, he used to take notes of examinations, was missing. Spots of white wax, an article which he never used himself, and which was only employed by persons of distinction, and by priests, were scattered over his clothes; and from this circumstance people were led to conclude that the Roman Catholics were the authors of his death. The whole affair was an inscrutable mystery, but popular impulse seizing hold of the circumstance that Oates had made his deposition before him, and also that no robbery had been committed, attributed at once his murder to the vengeance of the papists.

London was now in a blaze. Here, it was maintained, was a thorough confirmation of what Oates and his companions had asserted of the bloody designs of the Catholics. Stories soon came pouring in to increase and spread the clamour, and among others, informations were sworn to by persons, who pretended to have seen Sir Edmundbury trepanned into an apartment near Somerset House, then strangled, and his body conveyed away in a sedan-chair, and thence conveyed by a man on horseback to the ditch at Primrose Hill. Though the most glaring contradictions appeared in these narratives, they were eagerly caught up and accepted as gospel by an excited and furious people. To doubt the reality of the Popish Plot was regarded as tantamount to a participation in it. Oates, and informers of a similar type, were caressed and encouraged more than ever, and it will be readily believed, that they did not suffer public enthusiasm to languish from a lack of a proper supply of nutriment. It was a time when, as Hume remarks, 'reason could no more be heard than a whisper in the midst of the most violent hurricane.'

From White House, the corpse of Godfrey was carried home to his own residence, where for two days it lay in state, and was visited by vast multitudes. The funeral was attended by an immense procession, at the head of which walked seventy-two clergymen of the Church of England, in full canonicals, whilst the minister who preached a sermon on the occasion, was supported on each side by a stalwart brother-divine, lest he should be killed by the papists! If the murder was really the work of a fanatic Roman Catholic, it was a most ill-judged procedure for the tranquillity of his fellow-religionists, as numbers of them, priests as well as laymen, were ruthlessly immolated to the popular fury. The mere fact of their being Catholics, and being charged as participators in the Popish Plot, was sufficient to insure their condemnation with any jury. The real cause of Godfrey's death has never been discovered, and to this day it remains one of those mysterious occurrences of which no satisfactory explanation can be given. An undoubted fact, it stands out in melancholy prominence amid the tissue of absurdities and falsehoods which compose the substance of the Popish Plot.

OCTOBER 18.

St Luke the Evangelist. St Justin, martyr, in France, 4th century. St Julian Sabas, hermit. St Monan, martyr, 7th century.

ST LUKE.

Of the companion and biographer of St Paul, little is recorded in Scripture; but from a passage in the Epistle to the Colossians, we infer that he had been bred to the profession of a physician. In addition to this vocation, he is stated by ecclesiastical writers to have practised that of a painter, and some ancient pictures of the Virgin, still extant, are ascribed to his pencil. In consequence of this belief, which, however, rests on very uncertain foundations, St Luke has been regarded as the patron of painters and the fine arts. He is commonly represented in a seated position, writing or painting, whilst behind him appears the head of an ox, frequently winged. This symbol has been associated with him, to quote the words of an ancient writer, 'because he devised about the presthode of Jesus Christ,' the ox or calf being the sign of a sacrifice, and St Luke entering more largely, than the other Evangelists, into the history of the life and sufferings of our Saviour.

Born.—Pope Pius II. (Æneas Silvius), 1405, *Corsignano;* Justus Lipsius, miscellaneous writer, 1547, *Isch, Brabant;* Matthew Henry, eminent divine and commentator, 1662, *Broad Oak, Flintshire;* François de Savoie, Prince Eugene, celebrated imperial general, 1663, *Paris;* Richard Nash (Beau Nash), celebrated master of the ceremonies at Bath, 1674, *Swansea;* Peter Frederik Suhm, Danish archæologist, 1728, *Copenhagen;* Jean Jacques Regis Cambacères, eminent lawyer and statesman, 1753, *Montpellier;* Thomas Phillips, portrait-painter, 1770, *Dudley, Warwickshire.*

Died.—John Ziska, Hussite commander, 1424; Sarah Jennings, Duchess of Marlborough, 1744; Réné Antoine de Réaumur, practical philosopher and naturalist, 1757.

REAUMUR AND HIS THERMOMETER.

Réné Antoine Ferchault de Réaumur is an instance, among many, of those persons who, having devoted the greater part of their lives to scientific investigations, become known to posterity for only one, and that often a very subordinate achievement. Réaumur is now remembered almost exclusively

by his thermometer: that is to say, his mode of graduating thermometers—a very small thing in itself. Yet in his day he occupied no mean place among French *savans*. From 1708, when he read his first paper before the Academy of Sciences, till his death on October 18, 1757, he was incessantly engaged in investigations of one kind or other. Geometrical speculations; the strength of cordage; the development of the shells of testaceous animals; the colouring-matter of turquoise-gems; the manufacture of iron, steel, and porcelain; artificial incubation; the imitating of the famous purple dye of the ancients; the graduation of thermometers; the reproduction of the claws of lobsters and crabs; the instincts and habits of insects—all, in turn, engaged the attention of this acute and industrious man, and all furnished him with means for increasing the sum-total of human knowledge.

Scientific men, each in his own department, fully appreciate the value of Réaumur's labours; but to the world at large, as we have said, the thermometric scale is the only thing by which he is remembered. Almost precisely the same may be said of Fahrenheit. Had not the English persisted in using the graduation proposed by the last-named individual, his name would never have become a 'household word' among us; and had not Réaumur's scale been extensively adopted on the continent, his more elaborate investigations, buried in learned volumes, would have failed to immortalise his name.

Till the early part of the last century, the scales for measuring degrees of temperature were so arbitrary, that scientific men found it difficult to understand and record each other's experiments; but Fahrenheit, in 1724, had the merit of devising a definite standard of comparison. He divided the interval between freezing water and boiling water into 180 equal parts or degrees, and placed the former at 32 degrees above the *zero* or point of intense cold, so that the point of boiling-water was denoted by 212°. It is supposed that the extreme cold observed in Iceland in 1709 furnished Fahrenheit with the minimum, or zero which he adopted in his thermometers; but such a limit to the degree of cold would be quite inadmissible now, when much lower temperatures are known to exist. Réaumur, experimenting in the same field a few years after Fahrenheit, adopted also the temperature of freezing water as his *zero*, and marked off 80 equal parts or degrees between that point and the temperature of boiling-water. Celsius, a Swede, invented, about the year 1780, a third mode of graduation, called the *Centigrade;* in which he took the freezing of water as the zero point, and divided the interval between that and the point of ebullition into 100 parts or degrees. All three scales are now employed—a circumstance which has proved productive of an infinite amount of confusion and error. Thus, 212° F. is equal to 80° R., or 100° C.; 60° F. is equal to $12\frac{4}{9}$° R., or $15\frac{5}{9}$° C.; and so on. Like the names of the constellations, it is difficult to make changes in any received system when it has become once established; and thus we shall continue to hear of Réaumur on the continent, and of Fahrenheit in England.

THE LAST LOTTERY IN ENGLAND.

On the 18th of October 1826, the last 'State Lottery' was drawn in England. The ceremony took place in Cooper's Hall, Basinghall Street; and although the public attraction to this last of a long series of legalised swindles was excessive, and sufficient to inconveniently crowd the hall, the lottery-office keepers could not dispose of the whole of the tickets, although all means, ordinary and extraordinary, had been resorted to, as an inducement to the public to 'try their luck' for the last time.

This abolition of lotteries deprived the government of a revenue equal to £250,000 or £300,000 per annum; but it was wisely felt that the inducement to gambling held out by them was a great moral evil, helping to impoverish many, and diverting attention from the more legitimate industrial modes of money-making. No one, therefore, mourned over the decease of the lottery but the lottery-office keepers, then a large body of men, who rented expensive offices in all parts of England.

The lottery originated among ourselves during the reign of Queen Elizabeth, when 'a very rich lottery-general of money, plate, and certain sorts of merchandise' was set forth by her majesty's order, 1567 A.D. The greatest prize was estimated at £5000, of which £3000 was to be paid in cash, £700 in plate, and the remainder in 'good tapestry meet for hangings, and other covertures, and certain sorts of good linen cloth.' All the prizes were to be seen at the house of Mr Dericke, the queen's goldsmith, in Cheapside; and a wood-cut was appended to the original proclamation, in which a tempting display of gold and silver plate is profusely delineated. The lots, amounting in number to 400,000, appear to have been somewhat tardily disposed of, and the drawing did not take place until January 1568-69. On the 11th of that month, it began in a building erected for the purpose, at the west door of St Paul's Cathedral, and continued, day and night, until the 6th of the following May. The price of the lots was 10*s.* each, and they were occasionally subdivided into halves and quarters; and these were again subdivided for 'convenience of poorer classes.' The objects ostensibly propounded as an excuse to the government for founding this lottery, were the repair of the harbours and fortifications of the kingdom, and other public works. Great pains were taken to 'provoke the people' to adventure their money; and her majesty sent forth a second most persuasive and argumentative proclamation, in which all the advantages of the scheme were more clearly set forth; so that 'any scruple, suspition, doubt, fault, or misliking' that might occur, 'specially of those that be inclined to suspitions,' should be removed, so that all persons have 'their reasonable contentation and satisfaction.' That adventurers had 'certain doubts' still, is apparent from a proclamation issued as a supplement to this from the lord mayor; in which he says, 'though the wiser sort may find cause to satisfy themselves therein, yet to the satisfaction of the scrupler sort' he deigns to more fully explain the scheme. In spite of all this, 'the wiser sort' did not rapidly buy shares, and the 'scrupler sort' held tight their purses, so that her majesty sent a somewhat

The fan-mount, here pictured, was exhibited at the Worcester Congress of the Archæological Institute. The subject, printed in body colours on vellum, represents either the great lottery in 1718, when popular excitement was stimulated in so extravagant a degree, that £1,500,000 was subscribed, or that of 1714, which also presented unusual attractions. The scene, of which so spirited a representation is given on

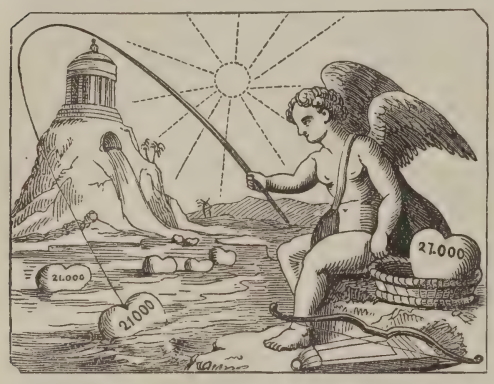
FAN-MOUNT REPRESENTING A LOTTERY.

the fan, is probably in Mercer's Hall, Ironmonger Lane, Cheapside, where transactions connected with lotteries usually took place. A dignified person, in black robes, is presiding; over his head is an escutcheon of St George's cross; above are the royal arms, with the initials of Queen Anne. Many officials are in attendance, including three clerks curiously accommodated in a pit in front of the president. There is a platform, with side-boxes conveniently arranged for gay gallants and fashionable ladies in the full costume of the period. The tickets are in the course of being drawn by Blue-coat boys. On one side is the wheel for blanks; on the other, that for prizes—the valve coverings being marked respectively B. P. These wheels, when not in use, appear to have been locked up in cases that separated into two portions when removed from the drawing apparatus, and bore the queen's initials. A precisely similar scene to that here represented, is given in the contemporary engraving, by N. Parr, in six compartments, entitled *Les Divertissements de la Loteric.* It was designed by J. Marchant, drawn by H. Gravelot, and published by Ryland. Ave Maria Lane. Gambling, in private lotteries, was so prevalent about the time, that they were suppressed by act of parliament.

In reference to the subject of fan-decoration, it may here be observed, that the practice of adorning these fashionable appendages with attractive designs, was in great vogue about the middle of the last century. A gentleman, writing in the *Gentleman's Magazine* for May 1753, states the twelve designs upon as many fans held up before as many pretty faces, at a late celebration of the communion 'in a certain church of this metropolis,' as follows: 1. Darby and Joan; 2. Harlequin and Columbine; 3. The prodigal son, with his harlots, copied from the Rake's Progress; 4. A rural dance, with a band of music, consisting of a fiddle, a bagpipe, and a Welsh harp; 5. The taking of Portobello; 6. The solemnities of a filiation; 7. Joseph and his mistress; 8. The humours of Change Alley; 9. Silenus; 10. The first interview of Isaac and Rebecca; 11. The judgment of Paris; 12. Vauxhall Gardens, with the decorations and company.

fretful mandate to the mayor of London, and the justices of Kent, Sussex, Surrey, and Hampshire, because, 'contrary to her highness' expectation,' there were many lots untaken, 'either of their negligence, or by some sinister disswasions of some not well-disposed persons.' She appoints one John Johnson, gentleman, to look after her interests in the matter, and to 'procure the people as much as maybe to lay in their monies into the lots,' and orders that he 'bring report of the former doings of the principal men of every parish, and in whom any default is, that this matter hath not been so well advanced as it was looked for;' so that 'there shall not one parish escape, but they shall bring in some money into the lots.' This characteristic specimen of royal dragooning for national gambling in opposition to general desire, is a very striking commencement for a history of lottery-fraud.

In the year following, a lottery 'for marvellous rich and beautiful armour,' was conducted for three days at the same place. In 1612, King James I., 'in special favor for the plantation of the English colonies in Virginia, granted a lottery to be held at the west end of St Paul's; wherof one Thomas Sharplys, a tailor of London, had the chief prize, which was 4000 crowns in fair plate.' In 1619, another lottery was held ostensibly for the same purpose. Charles I. projected one in 1630, to defray the expenses of conveying water to London, after the fashion of the New River. During the Commonwealth, one was held in Grocer's Hall by the committee for lands in Ireland. It was not, however, until some years after the Restoration that lotteries became popular. They were then started under pretence of aiding the poor adherents of the crown, who had suffered in the civil wars. Gifts of plate were supposed to be made by the crown, and thus disposed of 'on the behalf of the truly loyal indigent officers.' Like other things, this speedily became a patent monopoly, was farmed by various speculators, and the lotteries were drawn in the theatres. Booksellers adopted this mode to get rid of unsaleable stock at a fancy value, and all kinds of sharping were resorted to. 'The Royal Oak Lottery' was that which came forth with greatest éclat, and was continued to the end of the century; it met, however, with animadversion from the sensible part of the community, and formed frequently, as well as the patentees who managed it, a subject for the satirists of the day. In 1699, a lottery was proposed with a capital prize of a thousand pounds, which sum was to be won at the risk of one penny; for that was to be the price of each share, and only one share to win.



The rage for speculation which characterised the people of England, in the early part of the last century, and which culminated in the South-sea bubble, was favourable to all kinds of lottery speculations; hence there were 'great goes' in whole tickets, and 'little goes' in their subdivisions; speculators were protected by insurance offices; even fortune-tellers were consulted about 'lucky numbers.' Thus a writer in the *Spectator* informs us, 'I know a well-meaning man that is very well pleased to risk his good-fortune upon the number 1711, because it is the year of our Lord.—I have been told of a certain zealous dissenter, who, being a great enemy to popery, and believing that bad men are the most fortunate in this world, will lay two to one on the number 666 against any other number; because, he says, it is the number of the beast.' Guildhall was a scene of great excitement during the time of the drawing of the prizes there, and, it is a fact, that poor medical practitioners used constantly to attend, to be ready to let blood in cases when the sudden proclaiming of the fate of tickets had an overpowering effect.

On the foregoing page, we have copied a very curious representation of a lottery, originally designed for a fan-mount.

Lotteries were not confined to money-prizes, but embraced all kinds of articles. Plate and jewels were favourites; books were far from uncommon; but the strangest was a lottery for deer in Sion Park. Henry Fielding, the novelist, ridiculed the public madness in a farce produced at Drury Lane Theatre in 1731, the scene being laid in a lottery-office, and the action of the drama descriptive of the wiles of office-keepers, and the credulity of their victims. A whimsical pamphlet was also published about the same time, purporting to be a prospectus of 'a lottery for ladies;' by which they were to obtain, as chief prize, a husband and coach-and-six, for five pounds; such being the price of each share. Husbands of inferior grade, in purse and person, were put forth as second, third, or fourth rate prizes, and a lottery for wives was soon advertised on a similar plan. This was legitimate satire, as so large a variety of lotteries were started, and in spite of reason or ridicule, continued to be patronised by a gullible public. Sometimes they were turned to purposes of public utility. Thus in 1736, an act was passed for building a bridge at Westminster by lottery, consisting of 125,000 tickets at £5 each. London Bridge at that time was the only means of communication, by permanent roadway between the City and Southwark. This lottery was so far successful, that parliament sanctioned others in succession until Westminster Bridge was completed. In 1774, the brothers Adam, builders of the Adelphi Terrace and surrounding streets in the Strand, disposed of these and other premises in a lottery containing 110 prizes; the first-drawn ticket entitling the holder to a prize of the value of £5000; the last-drawn, to one of £25,000.

Lotteries, at the close of the last century, had become established by successive acts of parliament; and, being considered as means for increasing the revenue by chancellors of our exchequer, they were conducted upon a regular business-footing by contractors in town and country. All persons dabbled in chances, and shares were subdivided, that no pocket might be spared. Poor persons were kept poor by the rage for speculation, in hopes of being richer. Idle hope was not the only demoralisation produced by lotteries; robbery and suicide came therewith. The most absurd chances were paraded as traps to catch the thoughtless, and all that ingenuity could suggest in the way of advertisement and puffing, was resorted to by lottery-office keepers. About 1815, they began to disseminate hand-bills, with poetic, or rather rhyming, appeals to the public; and about 1820, enlisted the services of wood-engravers, to make their advertisements more attractive. The subjects chosen were generally of a humorous kind, and were frequently very cleverly treated by Cruikshank and the best men of the day. They appealed, for the most part, to minds of small calibre, by depicting people of all grades expressing confidence

in the lottery, a determination to try their chances, and a full reliance on 'the lucky office' which issued the hand-bill. Hone, in his *Every-Day Book*, vol. ii., has engraved several specimens of these 'fly-leaves,' now very rare, and only to be seen among the collections of the curious. We add three more examples, selected from a large assemblage, and forming curious specimens of the variety of design occasionally adopted. It is seldom any sentimental or serious subject was attempted, but our first specimen comes in that category. This lottery was drawn on Valentine's Day; Cupid is,

therefore, shewn angling for hearts, each inscribed with their value, £21,000; they float toward him in a stream descending from the temple of Fortune, on a hill in the background; and beneath is inscribed: 'Great chance! small risk! A whole ticket for only eighteen shillings!—a sixteenth for only two shillings! in the lottery to be drawn on Valentine's Day; on which day, three of £2000 will be drawn in the first five minutes, which the public are sure to get for nothing!!'

A whimsical notion of depicting figures of all kinds by simple dots and lines, having originated abroad, was adopted by the keepers of British lottery-offices. The following is a specimen sent out by a large contractor named Sivewright.

When possess'd of sufficient
We sit at our ease;
Can go where we like,
And enjoy what we please.

But when pockets are empty,
If forced to apply
To some friend for assistance,
They 're apt to deny.

Not so with friends Sivewright,
They never say nay,
But lead us to Fortune
The readiest way.

They gallop on gaily;
The fault is your own
If you don't get a good share
Before they 're all gone.

Our third specimen is selected from a series representing the itinerant traders in the streets of London, engaged in conversation on the chances of the lottery. This is the fishwoman, who declares:

'Though a *dab*, I'm not *scaly*—I like a good *plaice*,
And I hope that good-luck will soon smile in my face;
On the 14th of June, when Prizes in *shoals*,
Will cheer up the *cockles* of all sorts of *soals*.'

The English government at last felt the degradation of obtaining revenues by means of the lottery, and the last act which gave it a legal existence received the royal assent on the 9th of July 1823, and soon after 'the last' was drawn in England, as described already.

Lotteries linger still upon the continent; from Hamburg we occasionally get a prospectus of some chateau and park thus to be disposed of, or some lucky scheme to be drawn; but Rome may be fairly considered as the city where they flourish best and most publicly. At certain times, the Corso is gay with lottery-offices, and busy with adventurers. All persons speculate, and a large number are found among the lower grades of the clergy. The writer was present at the drawing of the lottery which took place in November 1856, in the great square termed Piazza Navona. The whole of that immense area was crammed with people, every window crowded, the houses hung with tapestries and coloured cloths, and a showy canopied stage erected at one end of the Piazza, upon which the business of drawing was conducted. As the space was so large, and the mob all eager to know fortune's behests, smaller stages were erected midway on both sides of the square, and the numbers drawn were exhibited in frames erected upon them. Bands of military music were stationed near; the pope's guard, doing duty as mounted police. The last was by no means an unnecessary precaution, for a sham quarrel was got up in the densest part of the crowd for the purpose of plunder, and some mischief done in the turmoil. Of the thousands assembled, many were priests; and all held their numbers in their hands, anxiously hoping for good-fortune. It was a singular sight, and certainly not the most moral, to see people and clergy all eagerly engaged on the Sunday in gambling.

OCTOBER 19.

Saints Ptolemy, Lucius, and a companion, 166. St Ethbin or Egbin, abbot, end of 6th century. St Frideswide, virgin, and patroness of Oxford, 8th century. St Peter of Alcantara, confessor, 1562.

Born.—Sir Thomas Browne, antiquary and philosopher, 1605, *Cheapside, London;* James Butler, Duke of Ormond, commander and statesman, 1610, *Clerkenwell, London;* James Gronovius, scholar and author (*Thesaurus Antiquitatum Græcarum*), 1645, *Deventer;* John Adams, distinguished American statesman, 1735, *Braintree, Massachusetts;* James Henry Leigh Hunt, poet and miscellaneous writer, 1784, *Southgate, Middlesex.*

Died.—King John of England, 1216, *Newark Castle;* Jacobus Arminius (Jacob Harmensen), celebrated Dutch theologian, 1609; Sir Thomas Browne, antiquary and philosopher, 1682, *Norwich;* Dean Jonathan Swift, humorous and political writer, 1745, *Dublin;* Henry Kirke White, youthful poet, 1806, *Cambridge;* Francis Joseph Talma, great French tragedian, 1826, *Paris.*

SIR THOMAS BROWNE.

To many generations of gentle and meditative readers, Sir Thomas Browne has been a choice classic. Southey said, that were his library confined to a dozen English authors, Browne should be one of them. De Quincey describes Donne, Chillingworth, Jeremy Taylor, Milton, South, Barrow, and Sir Thomas Browne, as 'a pleiad or constellation of seven golden stars, such as in their class no literature can match,' and from whose works he would undertake to build up an entire body of philosophy.

Browne was the son of a London merchant, and was born within the sound of Bow Bells in 1605. His father died and left him, in childhood, with a fortune of £6000, out of a great part of which, says Dr Johnson, 'he was defrauded by one of his guardians, according to the common fate of orphans.' He was educated at Winchester and Oxford, and after practising physic for a while in Oxfordshire, he set out on a long tour through Italy, France, and Holland. About 1634, he returned to London, and in the following year he is supposed to have written his *Religio Medici.* In 1636, he settled in Norwich, and commenced business as a physician; and in the enjoyment of an extensive and lucrative practice, he passed in that city the remainder of his long life. Of women he wrote very slightingly, saying, that 'the whole world was made for man, but only the twelfth part of man for woman;' and 'that man is the whole world, but woman only the rib or crooked part of man.' Nevertheless, in 1641, he married a Mrs Mileham, of a good Norfolk family, 'a lady of such symmetrical proportion to her husband, both in the graces of her mind and her body, that they seemed to come together by a kind of natural magnetism,' writes Whitefoot, one of Browne's biographers. Together they lived happily for forty years; she bore him ten children, and lived to be his widow. Charles II., in a visit to Norwich in 1671, knighted Browne. Such, in a few words, is the story of Sir Thomas Browne's life. He died on his seventy-seventh birthday, the 19th of October 1682.

The chief incident in his life was the publication of the *Religio Medici*—the *Religion of a Physician.* It was written, he declares, 'with no intention for the press, but for his own exercise and entertainment.' For some six years it appears to have been handed about in manuscript, and on the plea of its being surreptitiously and imperfectly printed, he gave 'a true and full copy,' under his own hand, to the world in 1643. It at once excited the attention of the public, even in that stormy age, as Johnson says, 'by the novelty of paradoxes, the dignity of sentiment, the quick succession of images, the multitude of abstruse allusions, the subtilty of disquisition, and the strength of language.' In the book he speaks much of himself, but in such terms as to pique rather than satisfy curiosity. He asserts, he understands six languages; that he is no stranger to astronomy; that he has seen many countries; and leaves us to puzzle our heads over the mysterious and solemn announcement, 'that his life has been a miracle of thirty years, which to relate were not history, but a piece of poetry, and would sound like a fable.' So far as concerns the autobiographical portions, the reader of the *Religio Medici* will do well to bear in mind that he is dealing with a humorist; and Browne's humour is so irresistible, that it oozes through some of his gravest passages. Coleridge describes the *Religio Medici* as 'a fine portrait of a handsome man in his best clothes; it is much of what he was at all times; a good deal of what he was only in his best moments. I have never read a book in which I have felt greater similarity to my own make of mind—active in inquiry, and yet with an appetite to believe—in short, an affectionate visionary! It is a most delicious book.'

The success of the *Religio Medici*, which was translated into Latin, and thence into French, German, Dutch, and Italian, probably tempted Browne into the publication of his second work, in 1646, entitled *Pseudodoxia Epidemica*, 'or inquiries into very many received tenets and commonly presumed truths, which examined, prove but vulgar and common errors.' This curious book treats in a pedantic way of a large number of odd notions, such as, that Jews stink; that the forbidden-fruit was an apple; that storks will only live in republics and free states; that the flesh of peacocks corrupteth not; that elephants have no joints; that a pot full of ashes will contain as much water as it would without them; that men weigh heavier dead than alive, and before meat than after; that crystal is nothing but ice strongly congealed, &c. Notwithstanding his zeal to discover old errors, he was a prey to not a few himself. 'Natural diseases,' he writes, 'are heightened to a great excess by the subtlety of the devil co-operating with the malice of those we term witches, at whose instance he doth those villanies.' Sir Matthew Hale fortified himself by this opinion in condemning two poor women as witches. Further he advises, 'that to those who would attempt to teach animals the art of speech, the dogs and cats, that usually speak unto witches, may afford some encouragement.' The motion of the earth he never mentions but with contempt and ridicule, though the opinion was in his time growing popular.

The discovery of some urns in Norfolk, in 1658, induced him to write *Hydriotaphia;* a discourse on urn-burial, in which, with a strange mixture of ideality and pedantry, he describes the funeral

rites of ancient nations. 'There is perhaps none of his works,' says Dr Johnson, 'which better exemplifies his reading or memory. It is scarcely to be imagined how many particulars he has amassed, in a treatise which seems to have been occasionally written.' To *Hydriotaphia* he added a disquisition on *The Garden of Cyrus, or the Quincunxial Lozenge or Net-work Plantations of the Ancients artificially, naturally.* Quincunx order is a plantation of trees disposed originally in a square, consisting of five trees, one at each corner, and a fifth in the middle, which disposition, repeated again and again, forms a regular grove, wood, or wilderness. The quincunx, Browne pursues through art and nature with a pertinacity that almost leads his reader to conclude that on that figure the universe was planned.

These were all the writings Sir Thomas Browne published, but after his death a mass of papers was discovered in his study, carefully transcribed, and ready for the press. These miscellanies have been printed, and supply fresh evidence of the versatility and originality of his reading and meditation. Considering the drudgery of his practice as physician, it is surprising that he should have read and written so much; but it is recorded that he was a skilful economist of time, that he could never bear to be a minute idle, and that the hours he could steal from his patients were spent in his study. He was always cheerful, though rarely merry; and, though in his writing garrulous, in speech he was slow and weighty. In his dress he affected plainness, and was averse to all finery; and was a strong advocate for thick and warm garments, as essential to health in the English climate.

The stability the English language had acquired in the age of Elizabeth was lost under her successors, and Browne, along with Milton and others, poured a multitude of exotic words into his compositions, to the great injury of their effect. He uses *commensality*, for the state of many living at the same table; *paralogical*, for an unreasonable doubt; and *arthritical analogies*, for parts that serve some animals in the place of joints; besides a host of other pedantries to even less purpose; so that his style in some parts is rather a tissue of many tongues than honest English.

DEAN SWIFT.

The life of the celebrated dean of St Patrick's presents a history at once singular and painful. Born and educated in adversity, we find him emerging, after a hard struggle, into prosperity and fame; then disappointed in his canvass for clerical honours, we see him retire from the contest, and devote himself to literature and study; but cursed by a splenetic and morbid disposition, little real enjoyment is seemingly ever derived by him from any source, whilst the cold calculating selfishness which prompted him to trifle with the affections of a loving and self-sacrificing woman, entailed on him the pangs of a secret and agonising remorse. Disease, bodily and mental, comes to complete his miseries, and the last days of the great satirist and politician are characterised by the most melancholy and unqualified idiocy.

'From Marlborough's eyes the streams of dotage flow,
And Swift expires a driveller and a show.'

Though born and resident in Ireland during the greater part of his life, Swift was thoroughly English both by extraction and disposition. His grandfather, the Rev. Thomas Swift, was vicar of Goodrich, in Herefordshire, four of whose sons, of whom he had ten, besides four daughters, settled in Ireland. One of these, Jonathan, who had been bred to the law, was appointed steward of the King's Inns, Dublin, but died about two years afterwards, leaving his widow in great poverty, with an infant daughter, and also pregnant of a son, who was born on 30th November 1667, and received his father's name.

Young Jonathan received his first education at a school in Kilkenny, and was afterwards sent to Trinity College, Dublin, being indebted for these advantages to his uncle, Godwin Swift, who formed the main support of his mother and her family, but seems to have bestowed his bounty in a niggardly and ungracious manner. While at college, Swift made himself specially distinguished in no way, except idling, and the perpetration of many reckless pranks. In 1688, he passed over to England, and joined there his mother, who had been residing for some time in Leicestershire. She was a relation of the wife of Sir William Temple. Introduced to this celebrated statesman, the young man was appointed private secretary, and took up his abode with Sir William, at the latter's seat of Moor Park, in Surrey. Here a reformation took place in his habits; and having both gained the approbation of his patron and his patron's master, King William, who used frequently to visit at Moor Park, he was enabled in 1692 to proceed to Oxford, where he obtained the degree of M.A. in the same year. Returning to his former employment under Sir William, a disagreement arose, and Swift set off to Ireland, with the hope of pushing his way in the church. He had the mortification of being obliged to solicit his patron for a certificate before he could obtain preferment, but in 1695 was made prebend of Kilroot, in the diocese of Connor, with a revenue of a hundred a year. Life, however, in this remote locality was far too dull for him, and he was, consequently, very happy to adjust his difference with Sir William Temple, and return to his secretaryship at Moor Park. On the death of Sir William, he proceeded to London, and superintended there the publication of his patron's posthumous works.

Having accompanied Lord Berkeley to Ireland in 1699, as his chaplain, Swift was presented by him to the rectory of Agher and the vicarages of Rathbeggan and Laracor, in the diocese of Meath. At the last-named of these livings he took up his residence, and continued there, during nearly the whole of the reign of Queen Anne, to pass the life of a country clergyman, varied by occasional visits to England, with which he kept up a constant correspondence; and employing himself, from time to time, in various literary lucubrations, including the celebrated *Tale of a Tub*, and the *Battle of the Books*, published anonymously in 1704, and the *Predictions of Isaac Bickerstaff, Esq.*, in 1708. He also gave to the world several tracts, in one of which, the *Letter on the Sacramental Test*, he opposed strenuously the relaxation of the penal laws regarding dissenters. Swift was thoroughly a High Churchman; and though in politics attached,

both by disposition and the connections of early life, to the principles of the Revolution, he became, latterly, the sworn friend and associate of Bolingbroke, Lord Oxford, and the rest of that class of statesmen who maintained a correspondence with the exiled family in France. The utmost, however, which the Tory party bestowed on him, was the deanery of St Patrick's Cathedral, in Dublin; and shortly afterwards, the death of Queen Anne, and the accession of the Hanoverian dynasty, shut him out effectually from all hopes of further preferment. He refrained for many years from visiting England, but earned an immense popularity in Ireland by his denunciation of the unworthy system of restriction imposed on that country by the English parliament. His famous *Drapier's Letters*, on the patent right granted to William Wood to coin farthings and halfpence for Ireland, exposed him to considerable danger from the authorities, but with the Irish raised him to the dignity of a patriot, a position which he ever afterwards maintained in their estimation. A reward of £300 having been offered for the discovery of the author of the Drapier's fourth letter, and a bill against the printer being about to be presented to the grand jury, the following quotation from Scripture was largely circulated in Dublin: 'And the people said unto Saul, shall Jonathan die, who hath wrought this great salvation in Israel? God forbid: as the Lord liveth, there shall not one hair of his head fall to the ground; for he hath wrought with God this day. So the people rescued Jonathan, that he died not.' The grand jury's verdict was *ignoramus*, and the patent was ultimately withdrawn from Wood, who received in compensation a yearly grant of £3000 for twelve years.

In 1726, Swift once more visited England, and in the same year appeared the celebrated *Gulliver's Travels*, which, published anonymously like most of Swift's writings, achieved ere long a European popularity, and more than any other work has conferred on him an immortal reputation. But the moody, misanthropical author cared little for the applause of mankind, whose judgments he regarded with the most withering scorn and contempt. No better proof could be afforded of the general bent of his disposition than the work just alluded to, and more especially the description of the country of the Houynhnhnms. For ironical and sarcastic humour, nothing can be more piquant than his *Directions to Servants*, which, with the utmost gravity, inculcates on domestics the performance of every act which they should *not* do, and the omission of every duty which they *should*. It was about the last literary work in which Swift engaged, and was not published till after his death.

In thus sketching the life of Swift, we have as yet said nothing of a circumstance which has found a prominent place in every biography. Need we say that we allude to his attachments to Stella and Vanessa? The former of these, whose proper name was Esther Johnson, and who is said to have been a natural daughter of Sir William Temple, was a pretty girl of fourteen when she first made Swift's acquaintance at Moor-Park, where she was an inmate. The young secretary acted the part of tutor towards her, and a life-long attachment, on the part of Esther at least, was the result. After Swift was settled as vicar of Laracor, Stella and a female friend, named Mrs Dingley, followed him to Ireland. They generally resided in the town of Trim, but took up their abode in the vicarage at Laracor whenever its master was absent. Up to 1716, the intercourse between them seems to have been entirely of a Platonic character, but in that year—Swift having by this time become dean of St Patrick's—they were married in the deanery garden by the bishop of Clogher. This circumstance, however, was carefully concealed, and the cold-blooded indifference with which Swift could thus expose the character of a generous and loving woman to the world's aspersion exhibits him in a very repulsive light. Neither did he remain constant in his attachment to her. During his visits to London about 1712, he made the acquaintance of a young lady of good position, Miss Esther Vanhomrigh, who, like Stella, has been handed down to posterity by a poetic appellation—*Vanessa*. Unlike her rival, however, she appears to have been of a forward, enterprising disposition, and actually made known to Swift the state of her affections; a declaration which he treated at first jestingly, and afterwards replied to by a proffer of everlasting friendship. There can be no doubt that the conduct of the dean in his friendship with Vanessa was wholly unjustifiable, and he reaped the just punishment of his double-dealing in the misery to which he was subjected by the opposing claims of the two rivals on his affections. This embarrassment was considerably increased by the circumstance of Vanessa coming over to Ireland, and fixing her residence in Dublin, from which she afterwards removed to Marley Abbey, near Celbridge. Here Swift used frequently to visit her; and our opinion of his character is by no means heightened, when we know that at the very time when he was indulging in the language of love and affection towards Miss Vanhomrigh, he was himself bound to another by the irrevocable tie of marriage. After the death (about 1720) of a younger sister who lived with her, the attachment of Vanessa to Swift became more violent than ever; and, determined to elicit the nature of his mysterious connection with Stella, she despatched a letter of inquiry to that effect to Mrs Johnson. The tragical consequence is well known. Stella's jealousy being roused by the receipt of this communication, she at once sent the letter to Swift, whom it stirred to a paroxysm of fury. He mounted his horse, rode to Marley Abbey, and entering the apartment where Miss Vanhomrigh was sitting, glared at her with such a terrible expression of countenance, that the unfortunate woman could scarcely muster courage to speak. He threw on the table a packet containing the letter to Stella, quitted the house without a word, and returned to Dublin. Disappointment, indignation, and terror combined, brought Vanessa to her grave in the space of a few weeks after this interview, but not till she had revoked a will by which she had bequeathed the whole of her large fortune to Swift.

Mrs Johnson survived Vanessa by a few years, and died of a decline on the 8th of January 1728. It may be stated, that in addition to these world-renowned names of Stella and Vanessa, there was another lady with whom Swift had contracted an attachment previous to his acquaintance with Stella. She was a Miss Jane Waryng, the sister of a fellow-student at Trinity College, Dublin, and was courted by him under the designation of *Varina*. This,

his first love, Swift regarded for a time with all the ardour of boyish affection, but in a few years his passion cooled, and an estrangement took place. Alluding to these passages in his history, it is beautifully remarked by Mr Thackeray in *The English Humorists*, that the book of Swift's life may be said to open at places kept by these blighted flowers!

One of the best traits in Swift's character, was his large-hearted and unostentatious benevolence. About a third of his income was devoted to charitable objects, and by his will the bulk of his fortune was devised for the foundation of an hospital for idiots, a bequest very suggestive of the melancholy fate of the testator. The anecdotes related of him as a humorist have been so often repeated as to have become, for the most part, utterly threadbare. It may be remarked on this subject, that however fond Swift might be of a joke where the weight of sarcasm rested on the shoulders of another, he had little relish for it when any of the shafts of ridicule rebounded against himself. On such occasions, he would fairly lose temper, and betray a contemptible littleness of mind. Thus he was so incensed at a Catholic priest whom he met in a friend's house, and who smartly replied to his sarcastic interrogation, Why the Catholic Church used pictures and images when the Church of England did not? with the retort: 'Because we are old housekeepers, and you are new beginners,' that he quitted the room, and refused to remain to dinner. Another time, he complained to the mistress of an inn of the sauciness of her cookmaid, who, when the dean asked her how many maggots she had got out of a piece of mutton she was scraping, answered: 'Not so many as are in your head!'

OCTOBER 20.

St Barsabias, abbot, and his companions, martyrs, in Persia, 342. St Artemius, martyr, 362. St Zenobius, bishop of Florence, confessor, 5th century. St Sindulphus or Sendou, of Rheims, 7th century. St Aidan, bishop of Mayo, 768.

Born.—Sir Christopher Wren, architect of St Paul's, 1632, *East Knoyle, Wilts*; Stanislaus Leczinski, king of Poland, 1677; Henry John Temple, Viscount Palmerston, statesman, 1784, *Broadlands, Hants.*

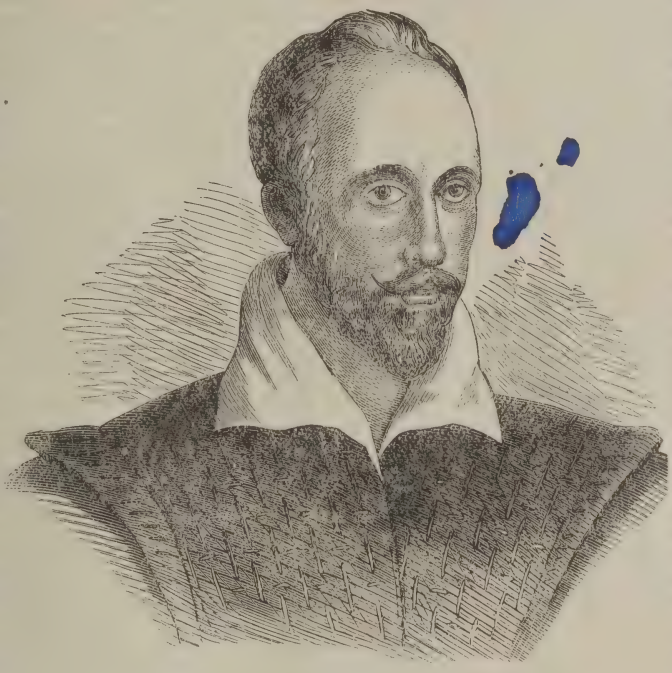
Died.—Charles VI., king of France, 1422; Lord William Howard, 1640, *Naworth Castle, Cumberland*; Henri Basnage du Fraquenet, eminent lawyer, 1695, *Rouen*; Archibald Pitcairn, physician and author, 1713, *Edinburgh*; Charles VI., emperor of Germany, 1740; Michael Dahl, Swedish portrait-painter, 1743, *London*; Philip Astley, author of works on horsemanship, 1814, *Paris.*

LORD WILLIAM ('BELTED WILL') HOWARD.

One of the most memorable worthies famed in English history is Lord William Howard, commonly known as 'Belted Will,' and one of the most picturesque monuments of Old England is his border stronghold of Naworth Castle, near Brampton, in Cumberland.

He was the third son of Thomas, Duke of Norfolk, the most potent and popular nobleman of his day; and his mother, the duke's second wife, was Margaret, who was daughter and sole heiress of Lord-Chancellor Audley. It was not, however, by this alliance, but by the third marriage of the duke, that the Howard family acquired the magnificent inheritances they enjoy in Cumberland, Northumberland, and Yorkshire. Lord William was born on the 19th December 1563; and in 1566 the duke married, as his third wife, the widow of Thomas, Lord Dacre of Gilsland and Greystoke, whose three daughters and co-heiresses came in ward to the duke, and were prudently destined by him for his three sons. One of the daughters was Elizabeth, who was born in the same year as Lord William Howard, was brought up with him, and became his bride when only fourteen years of age. The duke, however, did not live to see this object of his ambition realised, for Lord William was only in his ninth year when 'good' Queen Bess beheaded his father for his chivalrous devotion to Mary Queen of Scots, and Lord William and his brother were afterwards confined in the Tower for their adherence to the Catholic faith. Naworth Castle and the barony of Gilsland were part of the inheritance of Lord William Howard's youthful bride, but after the attainder of the duke, the crown withheld her estates for many years, and it was not until long after her marriage that they were restored to her, and only then upon her paying Queen Elizabeth a fine of £10,000.

The vindictive persecution thus suffered by Lord William, sadly overclouded his early manhood, and the long and costly litigation for recovery of his young wife's inheritance, impoverished his estate for many years; but adversity served to develop those high qualities of energy, prudence, courage, and perseverance which distinguished him throughout his eventful life. It was not until the accession of James I., when Lord William was in his fortieth year, that the fortunes of the Howard family were restored. He was soon afterwards appointed by the king his lieutenant, and warden of the marches; and it was probably the acquisition of this onerous and martial office, that determined him to repair Naworth Castle and make it his chief abode for the future.



This old stronghold and the adjacent territory had belonged from the days of the Norman kings to the lords of Gilsland—a martial race of barons of the old historic family of Vallibus or De Vaux. By an heiress, the estates came, in the reign of Henry III., to the family of De Malton, and in the following century the marriage of the heiress of the De Maltons to Ralph de Dacre brought Naworth and Gilsland to that nobleman and his posterity.

In those days, a building could not put on castellated dignity without the royal licence; and accordingly, in 1335, Ralph de Dacre obtained license to castellate Naworth. He built his fortress in quadrangular form, enclosing a large courtyard, and at each angle of the south front he built a massive tower; on the other sides the building was naturally fortified by the steep declivities on the edge of which its walls were built. And so in days—

> 'When English lords and Scottish chiefs were foes,
> Stern on the angry confines Naworth rose.
> In dark woods islanded its towers looked forth,
> And frowned defiance on the growling north.'

For more than two centuries and a half, and until the marriage of Lord William Howard to the

co-heiress of Thomas, Lord Dacre, as already mentioned, the property was held by the Dacre family. It does not, however, appear to have been the scene of any very memorable events in our national annals, and the castle had fallen into decay before the reign of Elizabeth. Lord William Howard's repairs seem to have occupied from 1605 to 1620; and the architecture of the chief part of the quadrangle, as it stood down to the time of the fire in 1845, remained as he left it. Much of the massive architecture of the time of Edward III.—that is to say, Lord Dacre's work—was not only preserved at the time of Lord William's repairs, but is standing at the present day; but, conservative as has been the work of restoration, undertaken by the good-hearted Earl of Carlisle after the fire, the aspect of the old stronghold was, in 1845, more medieval than it is now. The characteristic old hall and chapel, and some other antique features of the castle, were destroyed in the fire; but the tower at the south-east angle, known as 'Lord William's Tower,' escaped destruction, and the formidable warden's own chambers, which consisted of his library, his oratory, and his bed-chamber, all reached by a narrow winding-stair, defended by doors strengthened with iron, retained, down to the time of the fire, the very furniture and books he had used, insomuch that these chambers seemed to recall the hour—

LORD WILLIAM ('BELTED WILL') HOWARD.

> 'When helmèd warders paced the keep,
> And bugler blew for Belted Will.'

And when, as Sir Walter Scott remarked, the lord warden in person might be heard ascending his turret stair, and the visitor was almost led to expect his arrival. And pleasantly does the poet bring the picturesque old chieftain before us:

> 'Costly his garb, his Flemish ruff
> Fell o'er his doublet shaped of buff,
> With satin slash'd and lined;
> Tawny his boot and gold his spur,
> His cloak was all of Poland fur,
> His hose with silver twined;
> His Bilboa blade, by marchmen felt,
> Hung in a broad and studded belt.'

Apropos to his costume, it may be mentioned that the very suit of black in which he is represented in the portrait (attributed to Cornelius Jansen) at Castle Howard, is mentioned in his steward's account, and appears to have cost £17, 7*s.* 6*d.* The dress is a close jacket of black figured thick silk, with rounded skirts to mid-thigh, and many small buttons; black silk is the material of the hose, and black silk stockings come above the knee; he wears a plain falling shirt-collar, the sleeves turned up at the wrist. His dress-rapier has a gilt basket-hilt, and hangs by a narrow (not broad) belt of black velvet, with gilt hooks. So much for his costume.

There was much to occupy his energies besides the repair of his castle, for he had not only to recover and then to set in order the great inheritances he had acquired, but to govern, as one of the Lords Marchers, the turbulent border country committed to his care. It was in a state of rapine and desolation when he began his rule; but the lawless were soon made to feel the rule and presence of a great man. He maintained at Naworth a garrison of a hundred and forty men at arms, for protection of the country and apprehension of evil-doers, and made his name a word of terror on the border lands. Yet Camden, the great antiquary, found the formidable warden occupied amongst his books, and speaks of him as 'an attentive and learned searcher into venerable antiquity.' His literary tastes and public duties may be said, indeed, to have blended in him the character of scholar and soldier; and it is evident that he was as well practised with the pen as with the sword.

His border stronghold of Naworth stands near the line of the old Roman Wall, and he copied for Camden the inscriptions on Roman altars and tablets, which he had collected from the vicinity. In his days, manuscripts—the spoils of the monasteries—were often to be found scattered in private hands; and Lord William himself collected some manuscripts which are now treasured in the British Museum and the Herald's College, in the collections which bear the name of the great Earl of Arundel, his illustrious nephew. Nor was he a collector only, for the same hand which drew up a list of sixty-eight felons, whom he had captured and hung, edited the chronicle of Florence of Worcester, one of the old monastic historians. A large number of his books are still in his tower at Naworth (unfortunately they have remained stowed in chests ever

since the fire); many of them are rare and early printed books, many are great and ponderous tomes, and most of them bear his annotations in his firm and distinct handwriting.

When we view him in

'The tranquil hour
Of social pleasures ill-exchanged for power,'

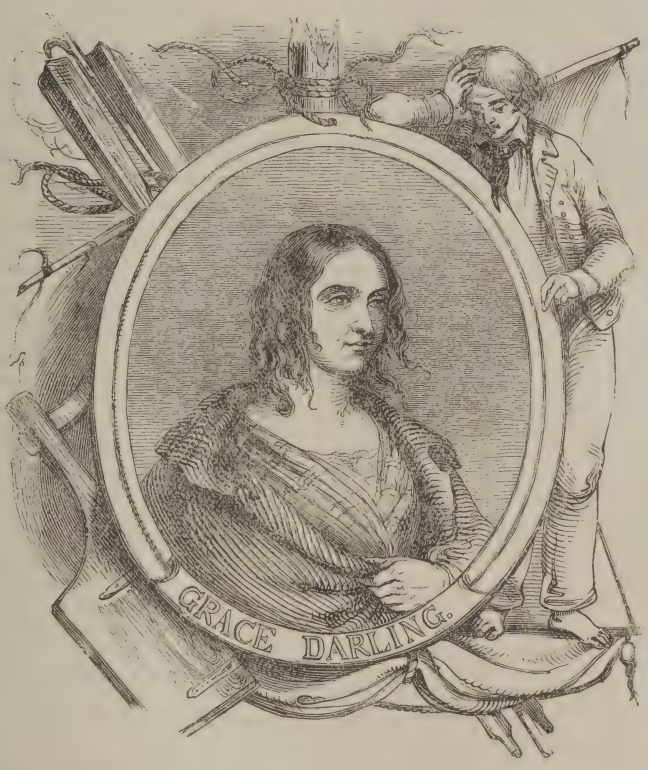
we see Lord William surrounded by a family circle numbering, on some festive occasions, fifty persons, for sons with their wives, and daughters with their husbands then assembled round their noble parents.

He was accustomed to travel with a large retinue, sometimes numbering eighteen persons, and the expenses of his journeys to London varied from £15 to £30 in the money of the time. When in town, he resided sometimes at Arundel House (then standing on the south side of the Strand), and sometimes in St Martin's Lane.

At length this politic and martial chieftain, having won for himself the honourable distinction of CIVILISER OF THE ENGLISH BORDERS, having consolidated a noble inheritance for his posterity, and seen his children grow to be the comfort of his old age, died at Naworth Castle on the 20th October 1640, in his seventy-seventh year.

The repairs and restorations of Naworth Castle, made by the Earl of Carlisle, have been already adverted to: this notice should not be concluded without stating that, in these works, the original character of the picturesque old stronghold has been so well studied, that an air of antiquity seems still to pervade it, and one might expect to find the warders spell-bound in its gallery or court-yards, ready to issue with their chieftain to repel some hostile foray.

PHILIP ASTLEY.



The founder of the celebrated amphitheatre, bearing his name, and which, till its metamorphosis by Mr Boucicault into a temple of the regular drama, formed one of the most attractive places of amusement in London to children, great and small, deserves a notice here, both from his own individual merits and the interest attaching to him as the father of the modern circus. He was a native of Newcastle-under-Lyne, and in his early years assisted his father in the occupation of a cabinet-maker; but enlisted when a stripling of seventeen, in the 15th regiment of light-horse, commanded by General Elliot. From his boyhood, he had shewn a marked predilection and aptness for equestrian exercises, for which his new mode of life supplied him with a congenial sphere, and he soon became famous as a regimental rough-rider and instructor in horsemanship. During the last years of the Seven Years' War, he served abroad on the continent, and by his steadiness and intelligence, as well as courage, displayed on numerous occasions, attained the rank of sergeant-major, but, not long afterwards he solicited and obtained his discharge from the army. The object of his doing so, appears to have been the design of turning his equestrian abilities to account in the way of public exhibition; but at first his gains in this line were very scanty, and he was obliged to eke out a living by resuming occasionally his old trade as a cabinet-maker. With a horse, which had been presented to him as a parting-gift and token of esteem by General Elliot, and another which he purchased himself, he conducted his equestrian performances in a field near the Halfpenny Hatch, Lambeth, receiving such trifling gratuities as the liberality of the spectators and passers-by might bestow. From this humble exhibition, he advanced first to the dignity of an unroofed wooden circus, erected by him in the midst of a timber-yard. Here he achieved such success as to attract the patronage of royalty, and a few years later was enabled to erect, on the same site, a spacious wooden building, which he opened in 1780 under the title of the Amphitheatre Riding-House, diversifying his feats by the introduction of musical pieces, and dancing on a regular stage with scenery. Such an interference, however, with dramatic monopoly, was not to be tolerated, and as he had obtained no licence, Astley was prosecuted and imprisoned. Through the influence of Lord Thurlow, whose daughters he had instructed in riding, he was released from confinement, and at the same time granted a licence. A rapid and uninterrupted career of success now attended him, and, from time to time, he enlarged and embellished his amphitheatre, the name of which he changed first to The Royal Grove, and afterwards to the Amphitheatre of Arts; but the title of Astley's Amphitheatre, given it by the public, has proved a more enduring epithet than either. On the breaking out of the war with the French republic, the revival of the old spirit of military enthusiasm in the breast of Astley, induced him to proceed to the Low Countries as a volunteer in the campaign there, under the Duke of York. From him he received the present of two horses, as a mark of esteem for his gallantry at the siege of Valenciennes; but the benevolence and generosity which were as conspicuous characteristics of Astley as courage, induced him to sell the steeds and employ their price in providing winter-comforts for the soldiers of his troop. The news of the burning of his amphitheatre made him hastily quit the seat of war and return to London, but the edifice was soon rebuilt and reopened. A similar disaster befell it a few years afterwards, with the same display of reconstructive energy on the part of the proprietor.

The death of Astley took place at Paris, in October 1814, from gout in the stomach. With the no less celebrated Franconi, he was associated in the establishment of the Cirque Olympique, in the French capital. In physical organisation, Astley presented a fine type of English vigour, being upwards of six feet high, with extraordinary muscular power, and possessing all that love for, and dexterity in managing, the horse, so eminently characteristic of his countrymen. But the warmth and generosity of his heart, so unequivocally evinced during the Low-Country campaign, as well as the unflinching bravery shewn by him on many occasions, inspire us with a much higher respect than any amount of personal ability or worldly success. And as an author, his manuals of horsemanship, and his descriptive account of the theatre of war in the Netherlands, in which he himself had taken a part, if not displaying high merit in a literary point of view, are at least conspicuous for industry and good sense, and the thorough knowledge which the author possesses of his subject.

GRACE DARLING.

One of the most pleasing incidents in humble life, within the present century, was the heroic achievement of Grace Darling. Her very pretty name, too, had something to do with the popularity which she acquired; for, without attaching over-importance to the matter, there can be little doubt that lovable actions become more fixed in the public mind when connected with such gentle and pleasant names as Grace Darling and Florence Nightingale.

Grace Darling, born in November 1815, was the daughter of William Darling, keeper of the light-house on the Longstone, one of the Farne Islands, off the coast of Northumberland. They are scarcely islands, indeed, being little more than barren and desolate rocks, in most parts very precipitous, and inhabited by little besides sea-fowl. The sea rushes between the islands with great violence; and the spot is so dangerous to ships passing near, that a light-house has long been maintained there. Almost shut out from the world in such a spot, Grace Darling saw very little society; yet her parents managed to give her a fair education for a girl in her station. She was described as being 'remarkable for a retiring and somewhat reserved disposition, gentle in aspect, and mild and benevolent in character; of a fair complexion and comely countenance, with nothing masculine in her appearance.'

It was on the 6th of September 1838, when Grace was about twenty-two years of age, that the event took place which has given her celebrity. The *Forfarshire*, a steamer of about 300 tons, John Humble, master, was on her way from Hull to Dundee. She had a valuable cargo, and sixty-three persons on board—the master and his wife, a crew of twenty men, and forty-one passengers. A slight leak, patched up before her departure, broke out afresh when off Flamborough Head, and rendered it difficult to maintain the fires for the engine. She passed between the Farne Islands and the mainland about six in the evening of the 5th, and then began to encounter a high sea and a strong north wind. The leak increasing, the engine-fires gradually went out; and although the sails were then used, they could not prevent the vessel from being driven southward. Wind, rain, fog, and a heavy sea, all beset the hapless vessel at once. About four o'clock on the morning of the 6th, she struck bows foremost on a precipitous part of one of the rocky islands. Some of the crew and one of the passengers left the ship in one of the boats; two other passengers perished in the attempt to throw themselves into the boat. The females on board clustered round the master, shrieking, and imploring aid which he could not afford them. A heavy wave, striking the vessel on the quarter, raised her from the rock, and then caused her to fall violently on it again; she encountered a sharp ledge, which cut her in twain about midships; the fore-part remained on the rock, while the hinder part was carried off by a rapid current through a channel called the Pifa-gut. In this fearful plight the remainder of the passengers and crew awaited the arrival of daylight, no one knowing how soon the waves might destroy them altogether. At daybreak, William Darling descried them from Longstone, about a mile distant; and it soon became known at Bamborough that a ship had been wrecked. So fearfully did the waves beat against the rock, that the boatman at Bamborough refused to push off; and Darling, accustomed to scenes of danger as he was, shrank from the peril of putting off to the wreck in a boat. Not so his gentle but heroic daughter. She could see, by the aid of a glass, the sufferers clinging to the wreck; and, agonized at the sight, she entreated him to let her go with him in a boat to endeavour to rescue them. At last he yielded; the mother helped to launch the boat into the water, and the father and daughter each took an oar. And so they rowed this fearful mile, at each instant in danger of being swamped by the waves. They reached the wreck, and found nine survivors. One of them, a weaver's wife, was found in the fore-cabin, exposed to the intrusion of the sea, and two children lay stiffened corpses in her arms. The whole nine went with Darling and his daughter into the boat, and safely reached the light-house, where, owing to the severity of the weather, they were forced to remain two days, kindly attended to by the three inmates.

When the news of this exploit reached the coast, all Northumberland was filled with admiration; and speedily the whole kingdom was similarly affected. Grace Darling's name became everywhere known, and she herself received attentions from all quarters. Tourists came from all parts to see the Longstone light-house, and, still more, to see Grace herself. The Duke and Duchess of Northumberland invited her and her father to Alnwick Castle, and gave her a gold watch; the silver medal of the Shipwreck Institution was awarded to her; and testimonials came from various public bodies. A purse of £700 was presented to her by public subscription. Portraits of her were eagerly sought for and purchased; and a speculating manager of a London theatre even offered a large sum to her, if she would merely sit in a boat on the stage for a few minutes, during the performance of a piece written for the occasion. But her modest and retiring disposition revolted from this last-named notoriety; she rejected the offer; and throughout the whole of this novel and tempting career, she never once departed from her gentle, womanly demeanour. Lovers, of course, she had in plenty, but she accepted none of them; she continued to reside with her father and mother at the light-house. And there she died of consumption, on the 20th of October 1842, at the early age of twenty-seven, about four years after the event which had given her fame. Long before her death, she had the means of seeing how literature was invoked in her honour; for memoirs, tales, and poems relating to her were issued from the press—such as *Grace Darling, the Heroine of the Farne Islands; Grace Darling, the Maid of the Isles;* and so forth. One biographer managed to fill 480 octavo pages with an account of her life and of the shipwreck!

OCTOBER 21.

St Hilarion, abbot, about 371. St Ursula and her companions, virgins and martyrs, 5th century. St Fintan, surnamed Munnu, or Mundus, abbot, in Ireland, 634.

Born.—Marshal Augereau, Duke of Castiglione, Bonapartist general, 1757, *Paris;* George Colman, the Younger, dramatist and humorous writer, 1762; Samuel Taylor Coleridge, poet, 1772, *Ottery St Mary, Devonshire;* George Combe, phrenologist, 1788, *Edinburgh.*

Died.—Julius Cæsar Scaliger, scholar and critic, 1558, *Agen on the Garonne;* Edmund Waller, poet, 1687, *Beaconsfield, near Windsor;* James Gronovius, scholar and author, 1716, *Leyden;* Tobias Smollett, novelist, 1771, *Leghorn;* Samuel Foote, humorous writer, 1777, *Dover;* Alexander Runciman, Scottish painter, 1785; Horatio, Lord Nelson, killed in Trafalgar Bay, 1805; John Philpot Curran, celebrated Irish orator, 1817, *London;* Charles E. Horn, musical composer, 1849, *Boston, U. S.*

SAMUEL FOOTE.

This celebrated humorist, whose comic genius procured for him the appellation of the English Aristophanes, and who, by his witty conversation, enjoyed the same pre-eminence in the society of the last, that Sydney Smith did in that of the present century, has nevertheless come now to be nearly forgotten, mainly in consequence of the ephemeral character of much of his writings, which derived a considerable portion of their zest from their stinging personalities, and allusions to events of passing interest.

He was a native of Truro, in Cornwall, where his father held a good position as one of the county magistrates. Having received his primary education at the grammar school of Worcester, he was sent from thence to Oxford, and afterwards entered himself at the Temple, in London, as a law-student, but made little or no progress towards qualifying himself for that profession. The whole bent of his mind was in the direction of fun and frolic, and for several years he led the gay and dissipated life of a man about town, till his pecuniary means were wholly exhausted, and it became necessary to look about seriously for some settled mode of support. From a boy, his talent for mimicry had been conspicuous, its first display, it is said, being a recitation at his father's table, during the Christmas holidays, of a supposed decision by the magisterial bench in an affiliation case, in which the justices, including his own parent, were hit off in the most truthful and ludicrous manner. At college, while under the care of the provost, Dr Gower, his reckless conduct drew down upon him severe lectures from the former, who does not, however, appear to have administered them with much judgment, interlarding his objurgations with many sesquipedalian words and phrases. On such occasions, Foote would appear before his preceptor with a huge folio dictionary under his arm, and on any peculiarly hard word being used, would beg pardon with much formality for interrupting him; turn up his book, as if to find out the meaning of the learned term which had just been uttered; and then closing it, would say with the utmost politeness: 'Very well, sir, now please to go on.' Another of his tricks was setting the bell of the college church ringing at night, by tying a wisp of hay to the bell-rope, which hung down low enough to be within reach of some cows that were turned out to graze in a neighbouring lane. The mishap of Dr Gower and the sexton, who caught hold of the peccant animal, whilst in search of the author of the mischief, and imagined they had made a prisoner of him, provided a rich store of amusement for many days to the denizens of Oxford.

But a life of mirth and pleasantry cannot last for ever, and Foote, having dissipated his fortune, as already mentioned, in London, resolved to turn his talents to account, and with that view tried his fortune on the stage. His first attempt, like Liston, was in tragedy, and he made his appearance in the character of Othello. This, however, was unsuccessful, and a few more impersonations having convinced him of his unfitness for tragedy, he exchanged the buskin for the sock, and gained considerable celebrity by his performance of Lord Foppington in the *Relapse*, Dick in the *Confederacy*, and Bayes in the *Rehearsal*. It then occurred to him to start a performance on his own account, and he accordingly engaged the theatre in the Haymarket, or, as it was then generally termed, the *Little Theatre*. The following advertisement, in consequence, appeared in the *General Advertiser* of 22d April 1747:

'At the Theatre, in the Haymarket, this day, will be performed, a Concert of Music, with which

will be given *gratis*, a new entertainment, called the Diversions of the Morning, to which will be added a farce, taken from the Old Bachelor, called the Credulous Husband. Fondlewife by Mr Foote, with an Epilogue, to be spoken by the B—d—d Coffee-house. To begin at 7.'

This entertainment went off with great success, but was stopped in consequence of the opposition of Lacy, the patentee of Drury-Lane Theatre, who procured an interdict against its repetition on the following day, on the ground of Foote having obtained no licence for the Haymarket theatre. The latter, nowise daunted, issued the following advertisement on 24th April :

'On Saturday noon, exactly at 12 o'clock, at the New Theatre, in the Haymarket, Mr Foote begs the favour of his friends to come and drink a dish of chocolate with him ; and 'tis hoped there will be a great deal of comedy and some joyous spirits; he will endeavour to make the Morning as diverting as possible. Tickets for the entertainment to be had at George's Coffee-House, Temple Bar, without which no person will be admitted.—*N.B.* Sir Dilbury Diddle will be there, and Lady Betty Frisk has absolutely promised.'

This announcement attracted a considerable audience, many of whom, however, were rather bemuddled in regard to the promise of chocolate, and seem to have expected that they would be served with that refreshment. Whilst waiting in this dubiety, Mr Foote came forward and stated that he had some young performers whom he had been drilling for some time back, and that perhaps the company would have no objections to see them go through their lessons till the chocolate could be got ready. The performance then commenced in earnest, was received with immense applause, and regularly continued with the greatest success, the manager's opponents finding it useless to attempt any further objection. He then altered the time of exhibition to the evening, with the following notice :

'At the request of several persons who are desirous of spending an hour with Mr Foote, but find the time inconvenient, instead of chocolate in the morning, Mr Foote's friends are desired to drink a dish of tea with him at half an hour past 6 in the evening.'

The *tea* proved as popular an entertainment as the *chocolate*, and money flowed liberally into the coffers of the host. But the death, in 1748, of a relative, who bequeathed him a large sum of money, induced Foote to resume the gay life of a gentleman at large, which he indulged for several years, residing principally, during that period, on the continent. In 1752, he again made his appearance in London, and from time to time was engaged as a comedian at the leading theatres, besides contributing to them various dramatic pieces. He resumed the management of the little theatre in the Haymarket in 1760, and retained it, first as lessee and afterwards as proprietor, till a few months previous to his death. A royal patent was granted to him in 1766, through the interest of the Duke of York, for the representation of dramatic pieces during the summer months, from 14th May to 14th September. For this boon he was indirectly indebted to an unlucky horse-accident which had befallen him in the duke's company, and cost him the loss of one of his limbs, necessitating him to use a cork-leg for the remainder of his life. In the eyes of some persons this might appear a judgment for the manner in which he had introduced and ridiculed on the Haymarket stage, under the character of Peter Paragraph, Mr George Faulkner, printer of the *Dublin Journal*, a worthy man, whose chief peculiarity consisted in having lost a leg. But Foote was perfectly reckless how the laugh was raised, and made no exception in favour of either friends or foes.

Subsequent to this misfortune, the pecuniary circumstances of Foote were greatly improved, and for many years he continued to delight the public with his drolleries, and gather thereby a golden harvest. An unfortunate *fracas*, however, in which he got involved with the notorious Duchess of Kingston, whom he had introduced into a farce, *A Trip to Calais*, under the title of Lady Kitty Crocodile, caused him so much annoyance and disquietude, as ultimately to shorten his days. His procedure in this matter is not much to his credit. Though a good deal of obscurity exists in regard to it, it was positively sworn to by the duchess's chaplain in a regular affidavit, that Mr Foote had offered to withdraw the obnoxious piece on receiving the sum of £2000. The lady had interest enough with the lord-chamberlain to get its representation prohibited, though it was afterwards brought out in an altered form as the *Capuchin*. The vindictive feeling, however, of the duchess, led her, through her emissaries, to get a charge of the most odious nature preferred against Foote, which does not appear to have had the slightest foundation in truth. He was honourably acquitted, but the shame and distress which he felt at the imputation of such a crime, completely prostrated him. He sank into a most depressed state of health, both of body and mind ; and feeling himself unable longer to attend to his professional duties, he disposed of his theatre to Colman, in the spring of 1777. In the autumn of the same year he resolved to try the restorative effects of a visit to France, and on 20th October arrived at the Ship Inn, Dover, on his way to Calais. Here he is said to have given vent to his last flash of merriment. Going into the kitchen to order a particular dish for dinner, he encountered the cook, who, hearing that he was going to France, boasted that for her part she had never been out of her own country. 'Why, Cooky,' said Foote, 'that is very strange, for they tell me upstairs that you have been several times all over *Greece*.' 'They may say what they like,' she replied, 'but I never was ten miles from Dover in my life.' 'Nay,' rejoined Foote, 'that must be a fib, for I myself have seen you at *Spithead*.' The other servants now perceived the joke, and a universal roar pervaded the kitchen, Foote presenting them with a crown to drink his health and a prosperous voyage. On this, he was destined never to embark, being seized the next morning with a succession of shivering fits, of which he expired in the course of a few hours, at the age of fifty-seven. His body was removed to his house in Suffolk Street, London, and interred in Westminster Abbey.

Respecting Foote's personal character, there is not much to be said. He was one of those beings who seem to be born to be drolls, and whose irresistibly comic powers render it almost impossible to contemplate them in a moral or serious

light. The following is Dr Johnson's declaration regarding him, as related to Boswell: 'The first time I was in company with Foote was at Fitzherbert's. Having no good opinion of the fellow, I was resolved not to be pleased; and it is very difficult to please a man against his will. I went on eating my dinner pretty sullenly, affecting not to mind him; but the dog was so very comical, that I was obliged to lay down my knife and fork, throw myself back in my chair, and fairly laugh it out. Sir, he was irresistible.' On another occasion he thus contrasts him with Garrick: 'Garrick, sir, has some delicacy of feeling; it is possible to put him out; you may get the better of him; but Foote is the most *incompressible* fellow that I ever knew: when you have driven him into a corner, and think you are sure of him, he runs through between your legs or jumps over your head, and makes his escape.' It must be recorded to Foote's credit that he was very generous to his poor friends, authors, actors, and others, by whom he was always surrounded, and was really a man of considerable attainments, being both a good classical scholar and well informed on all subjects of general learning.

The literary merit of his dramatic pieces is far from contemptible, and they teem throughout with passages of the raciest humour. Partly owing, however, to their personalities and allusions to events of the day, the interest in which has passed away, and also, it may be, to a certain freedom and levity of language incompatible with modern tastes, his works are now scarcely ever read or represented on the stage. They are all in the comic or satirical vein; and among them may be mentioned the names of *The Author*, *The Liar*, *The Minor*, *The Orators*, *The Nabob*, *The Devil on Two Sticks*, and *The Mayor of Garratt*, in the last of which, the character of Jerry Sneak has become proverbial as an embodiment of a henpecked husband.

We shall be readily excused for introducing here a few of the sayings recorded of Foote.

While present one evening at the *Lectures on the Ancients*, adventured on by Charles Macklin, the lecturer hearing a buzz of laughter in a corner of the room, looked angrily in that direction, and perceiving Foote, said pompously: 'You seem very merry, pray, do you know what I am going to say?' 'No,' replied Foote, 'do you?' On another occasion, while dining at Paris with Lord Stormont, the host descanted volubly on the age of his wine, which was served out in rather diminutive decanters and glasses. 'It is very little of its age,' said Foote, holding up his glass. 'Why do you hum that air?' he said one day to a friend. 'It for ever haunts me,' was the reply. 'No wonder,' he rejoined, 'you are for ever murdering it.' A mercantile friend, who imagined he had a genius for poetry, insisted one day on reading to him a specimen of his verses, commencing with, 'Hear me, O Phœbus and ye Muses Nine;' then perceiving his auditor inattentive, exclaimed, 'Pray, pray, listen.' 'I do,' replied Foote, 'nine and one are ten, go on.' Having made a trip to Ireland, he was asked, on his return, what impression was made on him by the Irish peasantry, and replied that they gave him great satisfaction, as they settled a question which had long agitated his own mind, and that was, what became of the cast-clothes of the English beggars. When bringing out his comedy of *The Minor*, considerable objections were started to its being licensed, and among other parties by the archbishop of Canterbury, Thomas Secker. Foote offered to submit the play to his revisal, with permission to strike out whatever he deemed objectionable; but this proposal the prelate wisely declined, as he observed that he should not like the author to announce the performance of the piece 'as altered and amended by his Grace the Archbishop of Canterbury.' One evening he was asked at a coffee-house if he had attended that day the funeral of a friend, for whom he cherished a great regard, and who happened to be the son of a baker. 'O yes,' he replied, 'poor fellow, I have just seen him shoved into the family oven.'

The celebrated gambler, Baron Newman, having been detected at Bath in cheating at cards, was pitched out at the window. Meeting Foote shortly afterwards, he complained bitterly of the usage to which he had been subject, and asked what he should do to repair his honour. 'Do!' replied Foote, 'never play so *high* again in your life.'

Having once paid a professional visit to Scotland, where he was well received, he was one day dining at a gentleman's house, when an old lady present was called on for a toast, and gave 'Charles the Third.' 'Of Spain, madam?' said Foote. 'No, sir,' she replied somewhat tartly, 'of England.' 'Never mind her,' said one of the company, 'she is one of our old folks who have not got rid of their political prejudices.' 'Oh, dear sir, make no apology,' cried Foote, 'I was prepared for all this; as, from your living so far north, I suppose none of you have yet heard of the Revolution.'

A country gentleman, whom Foote was visiting, was complaining to him of the great expenses to which he had been put by the funeral of a relation, an attorney. 'Why,' said Foote gravely, 'do you bury your attorneys here?' 'Yes, to be sure,' replied the other, 'what should we do?' 'Oh, we never do that in London.' 'How do you manage then?' 'Why, when the patient happens to die, we lay him in a room overnight by himself, lock the door, throw open the sash, and in the morning he is entirely off.' 'Indeed,' said his friend, 'what becomes of him?' 'Why, that we cannot exactly tell, not being acquainted with supernatural causes. All that we know of the matter is, that there's a strong smell of brimstone in the room next morning!'

Foote's mother bore a strong resemblance to her son, both in person and disposition. From her he inherited his mirthful, as well as his extravagant propensities. Though she was heiress to a large fortune, her carelessness in pecuniary matters involved her in such embarrassments, that she at last became dependent on the bounty of Samuel, who allowed her a hundred a year. On one occasion she wrote him as follows:

'DEAR SAM,

I am in prison for debt; come and assist your loving mother, E. FOOTE.'

To this brief note he replied.

'DEAR MOTHER,

So am I; which prevents his duty being paid to his loving mother by her affectionate son, SAM. FOOTE.

'*P.S.*—I have sent my attorney to assist you; in the meantime let us hope for better days.'

One little circumstance remains to be stated in connection with Foote's domestic relations. He is generally said to have been married in early life to a Worcester lady, but the union turned out ill assorted, and his wife was never brought forward among his London friends. They had no children, and so little can now be learned of her history, that it has come to be doubted whether he ever entered the married state at all. He used to say, laughingly, in excuse for bachelorhood, that a lady's age was like a hand at picquet, *twenty-five, twenty-six, twenty-seven, twenty-eight, twenty-nine—sixty,* and that he had no idea of finding himself so unequally matched.

LORD NELSON'S RELICS.

One of the most observable characteristics of English society at the present day, and perhaps of society in general, is the desire of obtaining some memorials of those who have achieved greatness, or have obtained notoriety whether good or bad. From the autograph of Shakspeare or Napoleon, down to the rope with which a notorious criminal was hanged, all such relics have their admirers, according to the varieties of taste in those who collect them. Lord Nelson's relics have been especially sought, and have been made the subject, not only of pamphlets and lengthened correspondence, but of actions at law. We may regard as a *mental* relic that famous saying of Nelson: 'ENGLAND EXPECTS EVERY MAN TO DO HIS DUTY!' Sir Harris Nicolas, in his *Correspondence and Letters of Nelson,* deemed it worth while to ascertain as precisely as he could the circumstances under which those words were uttered. There are three accounts of the matter—one by Mr James, in his *Naval History;* one by Captain Blackwood, who commanded the *Euryalus* at the battle of Trafalgar; and one by Captain Pasco, who had been Nelson's flag-lieutenant in the *Victory.* Sir Harris Nicolas accepts Pasco's version, because that officer had himself to signal the words by means of flags. His account runs thus: 'His lordship came to me on the poop, and after ordering certain signals to be made, about a quarter to noon he said: "Mr Pasco, I wish to say to the fleet, '*England confides that every man will do his duty;*' and he added, "you must be quick, for I have one more to make, which is for close action." I replied: "If your lordship will permit me to substitute '*expects,*' for '*confides,*' the signal will soon be completed, because the word '*expects*' is in the vocabulary, whereas the word '*confides*' must be spelled?" His lordship replied in haste, and with seeming satisfaction: "That will do, Pasco; make it directly!" When it had been answered by a few ships in the van, he ordered me to make the signal for close action.' Captain Blackwood says that the correction suggested by the signal-officer was from '*Nelson* expects' to '*England* expects;' but Captain Pasco's is accepted as being more probable.

Anything which belonged to Nelson at the critical moments of the battles of the Nile and Trafalgar is highly prized. The coat which he wore on the first of these two occasions has been preserved ever since at Greenwich Hospital. The coat which he wore at the battle of Trafalgar has been the theme of some exciting controversies. It was said by many writers, early in this century, that he put on a full-dress uniform-coat, the stars and orders of which were so brilliant as to attract the notice of the enemy's musketeers; and that to this he probably owed his death-wound. A writer in *Notes and Queries,* in 1851, described a copy of Harrison's *Life of Nelson,* which had belonged to Dr Scott, who was the chaplain and friend in whose arms Nelson died on board the *Victory.* Scott had written numerous manuscript notes on the margin of the copy; one of these, relating to the story of the dress-coat, was to the following effect: 'This is wrong. Nelson wore the same coat he did the day before; nor was there the smallest alteration in his dress whatsoever from other days.' He *did* wear his brilliant stars, however (four arranged diamond-wise, thus * *, on his breast); but they were * embroidered on his undress-coat, and not fixed on temporarily with clasps, as at the present day. This veritable coat fell into the hands of Lady Hamilton, who pledged it with a London alderman for a sum of money. In 1845, after a quarrel between Sir Harris Nicolas and a curiosity-dealer concerning the mode in which the coat was obtained from the widow of the alderman, the late Prince Consort bought the Trafalgar coat and waistcoat for £150, and presented them to Greenwich Hospital, where they are now reverently preserved.

A bit of bullion fringe from Nelson's epaulet is treasured up as a relic. Mr Westphal, who was midshipman on board the *Victory* at the battle of Trafalgar, wrote to the *United Service Magazine,* thirty-seven years afterwards (in 1842), under his higher designation of Sir George Westphal, and gave the following account of one incident on that memorable 21st of October: 'When I was carried down wounded, I was placed by the side of his lordship; and his coat was rolled up and put as the substitute for a pillow under my head, which was then bleeding very much from the wound I had received. When the battle was over, and an attempt was made to remove the coat, several of the bullions of the epaulet were found to be so firmly glued into my hair, by the coagulated blood from my wound, that the bullions, four or five of them, were cut off and left in my hair; one of which I have still in my possession.' The coat to which this epaulet belonged was apparently *the* coat now displayed to visitors at Greenwich Hospital.

The musket-ball that killed the hero is in like manner treasured up as a memento. The late Sir William Beattie was, as Mr Beattie, surgeon on board the *Victory.* In his *Authentic Narrative of the Death of Lord Nelson,* he said: 'The ball struck the forepart of his lordship's epaulet, and entered the left shoulder. . . . . On removing the ball, a portion of the gold lace, and part of the epaulet, together with a small piece of his lordship's coat, were found firmly attached to it.' Indeed this adhesion was almost as close as if the fragments had been inserted into the metal of the bullet while in a molten state. Captain Hardy caused the bullet to be mounted in crystal and silver as a locket, and presented it to Mr Beattie. In 1840, this bullet-locket was in the possession of the Rev. F. W. Baker, of Bathwick. In 1851, it was stated to be in the possession of the Prince Consort.

It is known that when Nelson died, a miniature of Lady Hamilton was found suspended at his

breast, with a lock of her hair at the back, and her initials formed in small pearls. This miniature was sold, many years afterwards, among the effects of Sir Alexander Davidson, who had been private secretary to Nelson at the time of his death. There was also a kind of miniature cenotaph made of the guineas which Nelson had in his pocket when he fell. The 'whereabouts' of these two relics was earnestly inquired for a few years ago in *Notes and Queries*. One among a small number of finger-rings has been described, containing, instead of a stone, a small *bas-relief* of Nelson, executed in some dark metal, *said* to be the bullet that killed him; but this is just the sort of story that 'needs confirmation'—especially if the account of the bullet-locket is (as appears to be the case) reliable. The Nelson *car*, in which the body of the hero had been conveyed to its last resting-place in St Paul's Cathedral, was long retained as a relic. It was at first kept in the Painted Hall at Greenwich Hospital, and afterwards at the foot of the dome over the chapel; but it became dilapidated, and then it was picked away piecemeal to form relics.

The Nelson relic which became the subject of a lawsuit was the so-called *Trafalgar Sword;* that which the hero wore at his last great battle. In 1846, Lord Saye and Sele gave a hundred guineas for this sword, and presented it to Greenwich Hospital. Sir Harris Nicolas inspected it, and at once wrote to the *Times*, announcing that the transaction was a fraud, and that the dealer (the same person with whom he had had a dispute in the preceding year) had knowingly deceived the nobleman who had purchased it. It was an undisputed fact that the dealer had bought for £1 that which he sold for a hundred guineas; but he continued to assert that the sword was genuine. Sir Harris asserted, on the contrary, that it was not such a sword as an English admiral was in the habit of wearing in the year 1805; that the scabbard did not belong to the sword; and that *Nelson did not wear any sword at all on the day of Trafalgar.* Dr Scott, in the manuscript notes above adverted to, said: 'In this action he had not his sword with him on deck, which in his other actions he had always carried; the sword was left hanging in the admiral's cabin.' Other testimony corroborates this. The curiosity-dealer then asserted that this was the sword which Nelson *would* have carried at Trafalgar, if he had carried any. A trial for libel arose out of Sir Harris Nicolas's letter to the *Times;* but the curiosity-dealer was twice defeated in it. There was some sort of proof, though indistinct, that the sword had belonged to Nelson; but it was not what it professed to be—the Trafalgar Sword.

S. T. COLERIDGE.

Coleridge and Southey were brothers-in-law, and it would be scarcely possible to bring together two men of letters whose habits were more dissimilar. Southey wrought at literature with all the regularity of a banker's clerk; his day was duly apportioned among separate tasks, and these it was his delight to fulfil with energy and punctuality. Coleridge, on the other hand, did nothing save under strong external compulsion or extraordinary internal impulse. Day after day he dawdled away his time in dreaming and in desultory reading, and his genius was spent in grand designs and small performances.

Samuel Taylor Coleridge was born in 1772 at Ottery St Mary, Devonshire, of which parish his father was vicar. Samuel was the youngest of a numerous family, and at the age of nine he was left an orphan. To Christ's Hospital, London, he was sent for his education, and there he had Charles Lamb for a school-fellow. The man was manifest in the boy: dreamy, solitary, disinclined to the usual amusements of children he was an omnivorous devourer of books. He read straight through a circulating library, folios and all. 'At a very premature age,' he writes, 'even before my fifteenth year, I had bewildered myself in metaphysics and theological controversy. Nothing else pleased me. History and particular facts lost all interest in my mind. Poetry itself, yea novels and romances, became insipid to me.' The perusal of Bowles's *Sonnets*, however, so charmed him, that his lost tastes were thereby restored. Destitute of ambition, he desired to be apprenticed to a shoemaker; but by the advice and efforts of some friends, who appreciated his talents, he went to Cambridge. In a fit of despondency, produced, some say, by slighted love, and others by pecuniary difficulties, he left the university, and after wandering about the streets of London until his last penny was gone, he enlisted as a dragoon under the name of Silas Thompson Comberbatch. An officer discovering his classical attainments, elicited his secret, and his friends being communicated with, they purchased his discharge. Shortly after, in the summer of 1794, he met Southey at Oxford, at that time a fervid republican and Unitarian, and an ardent friendship ensued. Together, they planned a communistic colony, to be called a Pantisocracy, and to be settled on the banks of the Susquehanna. Happily, neither of them had any money, and in the delay requisite for earning some, their vision of social bliss was dissipated, and they were preserved from a bootless adventure. On one day in October 1795, Coleridge and Southey married in Bristol sisters of the name of Fricker, penniless as themselves. Cottle, a Bristol bookseller, had promised Coleridge a guinea and a half for every hundred lines of poetry he should write, and on the strength of this promise he entered on matrimony. He retired with his bride to a small cottage at Clevedon, rented at £5 a year, and was soon lost in a variety of schemes. He projected the *Watchman*, a weekly newspaper, and travelled through the manufacturing districts canvassing for subscribers, and preaching wherever he stayed on Sundays in Unitarian chapels. The *Watchman* was commenced, but it only reached a tenth number. Rising early one morning, he found the servant lighting the fire with an extraordinary quantity of paper. Remonstrating with her on her wastefulness, 'La, sir,' replied Nanny, 'why, it 's only *Watchmen!*' From Clevedon he removed to Nether Stowey, at the foot of the Quantock Hills, where he had Wordsworth for a companion, and in that rural retreat he composed most of those pieces which have won for his name an assured place in the register of poets. In 1798, Josiah and Thomas Wedgewood, the potters, provided him with funds to go to Germany to prosecute his studies. After a sojourn there of fourteen

months, he returned to England with a renewed passion for metaphysics and theology, and went to live with Southey, who had settled at Keswick. His political and religious opinions about this time underwent a great change; from a Revolutionist he passed into a Conservative, and from a Unitarian into an English Churchman: his politics and theology, however, were both held in a peculiar and philosophic sense, which were very far from being satisfactory to the orthodox. He now sought his livelihood by writing for the newspapers, and by lecturing. He contributed articles to the *Morning Post* and *Courier*. He went to Malta, and served for some months as secretary to the governor of the island. He delivered a course of lectures on poetry and the fine arts at the Royal Institution. He started the *Friend*, a periodical which ran to twenty-seven numbers, and then ceased. The management of a periodical, demanding method and punctuality, was the last thing for a man like Coleridge to succeed with, and to his constitutional indolence he had added the vice of opium-eating. The misery and degradation into which this practice led him were unspeakable. His earnings were spent in the purchase of the pernicious drug. His wife and family dwelt with Southey, and subsisted on his bounty. All dependence on his word was lost, and he became little better than a vagabond upon earth. Of his horrible condition he had the keenest sense, but he had no strength to break his bonds. To Cottle, the Bristol bookseller, he wrote in 1814: 'Conceive a poor miserable wretch, who for many years has been attempting to beat off pain by a constant return to the vice that reproduces it. Conceive a spirit in hell, employed in tracing out for others a road to that heaven from which his crimes exclude him! In short, conceive whatever is most wretched, helpless, hopeless, and you will form as tolerable a notion of my state, as it is possible for a good man to have!' Finally, in 1816, he was induced to place himself under the care of Mr Gilman, a surgeon at Highgate; and on the top of that umbrageous hill, which from the north overlooks London, he found a peaceful and congenial home until his death on the 25th of July 1834.

SAMUEL TAYLOR COLERIDGE.

Mr and Mrs Gilman fully appreciated their patient, and to their house resorted pilgrims from far and near, to listen to the wisdom, metaphysical, theological, and literary, for which his repute was high. If writing was irksome, talking was the pastime and delight of Coleridge's life. Give him but a listener—appreciative or non-appreciative it did not matter, so that he was passive — and he would discourse to him by the hour together. 'Did you ever hear me preach?' he once asked Charles Lamb. 'I never heard you do anything else!' was Lamb's frank reply. More than once did Coleridge assert, that with pen in hand he felt a thousand checks and difficulties in the expression of his meaning, but that he never found the smallest hitch or impediment in the fullest utterance of his abstrusest thoughts and most subtle fancies by word of mouth. The effect of his Highgate monologues is variously described by different auditors; by some, they are spoken of as inexpressibly tedious and unintelligible, and by others, as eloquent, profound, and instructive in the highest degree. Carlyle, in his graphic style, relates: 'I have heard Coleridge talk, with eager musical energy, two stricken hours, his face radiant and moist, and communicate no meaning whatsoever to any individual of his hearers. He began anywhere, and nothing could be more copious than his talk. He suffered no interruption, however reverent; hastily putting aside all foreign additions, annotations, or most ingenuous desires for elucidation, as well-meant superfluities which would never do. He had knowledge about many things and topics, much curious reading; but, generally, all topics led him, after a pass or two, into the high-seas of theosophic philosophy, the hazy infinitude of Kantean transcendentalism. Besides, it was talk not flowing anywhither like a river, but spreading everywhither in inextricable currents and

regurgitations like a lake or sea; terribly deficient in definite goal or aim, nay, often in logical intelligibility; *what* you were to believe or do, on any earthly or heavenly thing, obstinately refusing to appear, from it. So that, most times, you felt logically lost; swamped near to drowning in this tide of ingenious vocables, spreading out boundless as if to submerge the world.'

Coleridge's irresolution shewed itself in his gait: in walking, he rather shuffled than decisively stepped; and a lady once remarked, he never could fix which side of the garden-walk would suit him best, but continually shifted, in cork-screw fashion, and kept trying both. His indolence may, in great part, be accounted for by his lymphatic temperament—a temperament which, according to the degree of its predominance, indisposes its subject to active exertion. De Quincey, describing Coleridge in 1807, draws an accurate picture of a lymphatic man: 'In height, he might seem to be about five feet eight inches; he was in reality about an inch and a half taller, but his figure was of the order which drowns height. His person was broad and full, and tended even to corpulence; his complexion was fair, though not what painters technically style fair, because it was associated with black hair; his eyes were large and soft in their expression, with a peculiar appearance of haze or dreaminess.' Carlyle, speaking of him when about sixty, confirms the observation: 'Brow and head were round, and of massive weight, but the face was flabby and irresolute. The deep eyes, of a light hazel, were as full of sorrow as of inspiration; confused pain looked mildly from them, as in a kind of mild astonishment. The whole figure and air, good and amiable otherwise, might be called flabby and irresolute; expressive of weakness under possibility of strength. He hung loosely on his limbs, with knees bent, and stooping attitude.'

Though Coleridge's prose works are irregular and fragmentary, they have not been without considerable influence at home and in the United States; and the party in the Church of England, of which the late F. D. Maurice was the most notable representative, derives its being from his teaching. How far Coleridge's philosophy was original, is a matter of dispute among metaphysicians. It would seem to be beyond question, that to Schelling he was indebted so far as in some cases to be little more than his translator. Sir William Hamilton —a competent authority, certainly—writing of Coleridge's obligations to the Germans, styles him 'a literary reaver of the Hercynian brakes.'

OCTOBER 22.

St Mark, bishop of Jerusalem, confessor, 2d century. St Philip, bishop of Heraclea, and companions, martyrs, 304. St Mello, or Melanius, bishop of Rouen, confessor, beginning of 4th century. Saints Nunilo and Alodia, virgins and martyrs, in Spain, 9th century. St Donatus, bishop of Fiesoli, in Tuscany, confessor, 9th century.

Born.—John Reinhold Forster, traveller and naturalist, 1729, *Dirschau, West Prussia;* Sir Philip Francis, reputed author of the *Letters of Junius*, 1740, *Dublin;* Dr Alexander Murray, distinguished orientalist, 1775, *Dunkitterick, Kirkcudbright.*

Died.—Charles Martel, vanquisher of the Saracens, 741, *France;* Athelstan, king of England, 940; Sir Cloudesley Shovel, British admiral, 1707; William Wollaston, author of *The Religion of Nature Delineated*, 1724, *Great Finborough, Suffolk;* John David Michælis, biblical critic, 1791, *Gottingen;* Dr Samuel Arnold, composer, 1802; Henry Richard, Lord Holland, Whig statesman and man of letters, 1840, *Kensington;* Sir William Molesworth, philosopher and statesman, 1855; Louis Spohr, celebrated composer, 1859, *Cassel.*

SIR PHILIP FRANCIS.

Though a man of distinguished ability, and playing a prominent part in connection with the history of British India, and the governor-generalship of Warren Hastings, towards the close of the last century, it is very probable that the name of Sir Philip Francis might have ceased to be remembered at the present day, were it not for the interest attaching to him as the supposed author of the celebrated *Letters of Junius.* The question of the individuality of this famous writer has been investigated with the most indefatigable and searching minuteness, and all the powers of literary and critical analysis brought to bear on its decision. To no less than thirty-five persons, including the great Earl of Chatham, the elegant and courtly Lord Chesterfield, the orator and statesman Edmund Burke, the historian Edward Gibbon, the witty politician John Horne Tooke, the demagogue John Wilkes, Horace Walpole, Henry Grattan, and Lord-Chancellor Loughborough, have these vigorous and stinging philippics been ascribed. Never was a literary secret more carefully and successfully kept, or more sedulous efforts employed to trace and ferret it out. But about forty years after the appearance of these Letters, the publication by the son of Mr Woodfall, the printer, of the private letters addressed by Junius to his father, afforded a clue to the identity of the writer, which was most ingeniously followed out by Mr Taylor, and the results given to the world in his *Junius Identified.* The result arrived at was the fixing of the authorship on Sir Philip Francis, then an old man upwards of seventy, whose participation in the matter had scarcely as yet been even suspected. With the position thus laid down by Mr Taylor, though speciously enough controverted by several parties, public opinion has been led generally to coincide, and it may now be almost regarded as established. To the grounds by which this belief is supported we shall shortly advert, but may, in the first place, give a brief sketch of the life of Francis.

He was a native of Dublin, and born there in 1740. His father, Dr Francis, is well known among classical scholars as the translator of Horace, and his grandfather was dean of Lismore. The family removed to England when Philip was a mere boy, and he received his education at St Paul's School, London, where he had as one of his companions Henry Woodfall, who was afterwards to become so famous as the printer and publisher of the *Letters of Junius.* Young Francis was early noted as a remarkably clever lad, and at the age of sixteen obtained a place in the office of the secretary of state, then held by his father's friend, Mr Fox, afterwards Lord Holland. He continued in this place under Fox's successor, Lord Chatham, but quitted

it in 1758, to act as secretary to General Bligh, and was present in that capacity at the capture of Cherbourg. Subsequently to this, he became secretary to the Earl of Kinnoul, and in 1763 received an important appointment in the War-Office, which he retained for nine years. The character which he had acquired for diplomatic abilities occasioned his being appointed, along with General Clavering and Colonel Monson, a member of the Supreme Council of Bengal, which was designed to co-operate with, but in reality to act as a check on, the governor-general in the management of affairs. As might have been expected, it proved anything but a harmonious relationship; and Francis, after a six years' residence in India, and a duel with the governor-general, the celebrated Warren Hastings, which nearly proved fatal to the councillor, resigned his office, and returned to England. Not long afterwards he succeeded in getting himself returned to parliament as member for Yarmouth in the Isle of Wight, and from that period till 1807, when he retired from public life, he acted as one of the most active members of the Opposition. Under the Grenville ministry, he was made a knight of the Bath, and it was even said, at one time, that he was going to be sent out to India again as governor-general. He died in St James's Square, London, in 1818.

We have now to consider the evidence as to the identity of Sir Philip with the author of the *Letters of Junius*. There is, first, a remarkable coincidence between the known handwriting of the former and the disguised characters made use of by the latter. Both are the productions of persons having a great command of the pen; but however successfully a person may disguise his writing, it is impossible for him to guard wholly against betraying himself through those minutiæ of penmanship which every one has his own peculiar mode of executing. Thus we find that both Sir Philip Francis and Junius, instead of a round dot over the *i*, make use of an oblique stroke; they mark their quotations not by inverted commas, but by short perpendicular lines; and instead of marking the division of a word at the end of a line by a hyphen, do it by a colon. In the spelling of numerous words, the formation of certain capitals, and the general *style* of the manuscript, there is a great similarity. It has also been found on comparing an envelope addressed by Sir Philip Francis in a feigned hand with the writing of Junius, that they were absolutely identical.

The time at which the *Letters of Junius* appeared coincides very closely with the theory of Francis being the writer. The publication of the first letter in the *Public Advertiser* took place on 21st January 1769, and of the last on 21st January 1772. Letters by the same author, under different names, and also private communications to Woodfall the printer, occur both prior and subsequent to these dates, but none before 1767 or after January 1773. Now we know that from 1763 to 1772, Sir Philip Francis was in the War-Office, and in June 1773, sailed for India as a member of the Supreme Council. The intimate acquaintance of Junius with public matters, inferring often a knowledge of what was transacting behind the scenes of the administrative stage, is thus accounted for, in addition to the coincidence of date. In regard to the style and sentiments of Junius, a great similarity is traceable between them and those of Sir Philip Francis, the same vigour and terseness being conspicuous in each, with the same recklessness of assertion and pungency of sarcasm. Many other circumstances might be mentioned in support of the view we have indicated, but we shall only adduce, in addition, the facts that the authorship of Junius was never formally denied by Sir Philip Francis; that it was firmly believed by his widow, Lady Francis, to whom, on their marriage, he presented an edition of the Letters, with a request never to speak of the book nor let it be seen, but to take it with her to her room. In his drawer, after his death, a parcel containing a book was found sealed up, and directed to his wife. It was *Junius Identified*.

The question may perhaps be asked—why did Sir Philip Francis, supposing him to have been the author of Junius, seek to conceal the fact after all danger of prosecution or party violence had passed away? A sufficient answer may be found in the words of Shylock—'It is my humour;' a reason which Sir Walter Scott very candidly assigns for his long and sedulous endeavours to conceal the authorship of the Waverley Novels. But from a communication of Lady Francis to Lord Campbell, published in the *Lives of the Lord Chancellors*, it would appear that he considered himself in honour bound to secrecy, from his having given a promise to that effect to an eminent person deceased. What share the individual in question had in the matter is not ascertained, but probably some of the letters had been submitted to him before publication by Sir Philip Francis, who had possibly also received in this way some important information. It has since been learned that this mysterious coadjutor of Junius was the Earl of Chatham.

REVOCATION OF THE EDICT OF NANTES.

The Edict of Nantes is very seldom spoken or written about in modern times; whereas its *Revocation* has become stamped as one of the notable historical events of the seventeenth century. The reason for this distinction will soon be apparent. Towards the close of the sixteenth century, France was troubled both by a war with Spain and by the struggles between the Catholics and Huguenots. Henry IV. had the whole force of the Catholic League against him so long as he was a Protestant or Huguenot; but when, in 1593, he became a convert to Romanism, he had to bear the animosity of Protestants instead of Catholics. This was so perplexing to him, that, after having signed a treaty of peace with Spain in 1598, he promulgated the *Edict of Nantes*. This was a tolerant measure, not tending to disturb the national religion of France, but giving to the Protestants a guarantee that they would not be disturbed in the free exercise of their religion. It gave them, indeed, more than this; for it assured to them a share in the administration of justice, and the privilege of being admitted to various employments of trust, profit, and honour.

After remaining in operation eighty-seven years, this edict was suddenly revoked by Louis XIV. in 1685. It was a gloomy time for the Protestants, seeing that James II. had become king of England; while in France Louis had allowed bigoted advisers

to drive him into a cruel course of proceeding towards his Protestant subjects. All the pledges given to them and by the edict were at once revoked, and desolation followed. 'All the iniquities inseparable from persecution,' says Hume, 'were exercised against those unhappy religionists; who became obstinate in proportion to the oppressions which they suffered, and either covered under a feigned conversion a more violent abhorrence of the Catholic communion, or sought among foreign nations for that liberty of which they were bereaved in their native country. Above half a million of the most useful and industrious subjects deserted France; and exported, together with immense sums of money, those arts and manufactures which had chiefly tended to enrich that kingdom. They propagated everywhere the most tragical accounts of the tyranny exercised against them, and revived among the Protestants all that resentment against the bloody and persecuting spirit of popery, to which so many incidents in all ages had given too much foundation. Near fifty thousand refugees passed over into England.'

It is sickening to go through the story of the *Dragonnades*, the forcible conversion of Protestants to Catholicism by means of Louis's dragoons, at Nismes and other French towns. Without dwelling upon those recitals, it may be more to the purpose to say that France injured herself in an incalculable degree by these proceedings: seeing that she drove away from her borders much of that wealth, skill, and industry which was essential to her wellbeing. A numerous body of refugees, as we have said, came to England. Many of them settled in Spitalfields as silk-weavers; and their superior taste, skill, and ingenuity were displayed in the richness and variety of the silks, brocades, satins, and lutestrings which the looms of England afterwards produced. To this day, Spitalfields contains a larger proportion of families, whose names denote a French origin, than is customary in other parts of the metropolis. The art of paper-making, too, was greatly improved in England by this occurrence; for whereas most of our fine papers had until then been imported, now the skilled papermakers themselves were settled in England.

It is singular, indeed, that the king's advisers should not have foreseen the result of these violent measures. First, the Protestants were excluded from all civil employments. Next, they were forbidden to hold any share in the principal silk manufactures. But when an ordinance banished all the pastors, the government were perplexed at finding that the people voluntarily shared in the banishment. It was ordered that all who attempted to leave the kingdom should be sentenced to the galleys; but this did not prevent half a million persons from fleeing to England, Holland, and Germany. The loss of so much capital, skill, and industry to France, was certainly not intended or expected by the ill-advised court.

SOME STUART STATUES.

On the 22d of October 1635, Viscount Wimbledon, military governor of Portsmouth, wrote the following epistle to the mayor of that town:

'Mr Mayor—Whereas, at my last being at Portsmouth, I did commend it to you most earnestly in regard of his majesty's figure, or statue, that it hath pleased his majesty to honour your town with more than any other; so that these signs of your inns do not only obscure his majesty's figure but outface, as you yourselves may well perceive. Therefore, I desire you that you will see that such an inconveniency be not suffered; but that you will cause, against the next spring, that it be redressed, for that any disgrace offered his majesty's figure is as much as to himself. To which end I will and command all the officers and soldiers not to pass by it without putting off their hats. I hope I shall need to use no other authority to make you do it; for that it concerneth your obedience to have it done, especially now you are told of it by myself.'

The more celebrated statue of the First Charles, now standing at Charing Cross, was treated with much less respect immediately afterwards. Cast by Le Sœur about 1638, it had not been erected when the civil war commenced, and so the parliament sold it for old metal to one John Rivet, a brazier, residing in Holborn, with strict injunctions that it should be broken into pieces. But the brazier, in defiance of those injunctions, preserved the statue intact, exhibiting some fractured bits of brass to the parliamentarians as its mutilated remains, and immediately commenced to drive a brisk trade in brass-handled knives and forks, which he sold as being partly made of the broken statue. These were eagerly purchased by both parties—by the Royalists, as sacred relics of their murdered monarch; by the Roundheads, as triumphal emblems of a vanquished tyranny. After the Restoration, the disgraced statue was exhumed from its concealment in Rivet's back-yard, and in 1674, was erected on a pedestal designed by Grinling Gibbons, on its present site. Waller, 'by four kings beloved,' wrote the following lines on the occasion:

'That the First Charles does here in triumph ride;
See his son reign, where he a martyr died;
And people pay that reverence, as they pass
(Which then he wanted!), to the sacred brass;
Is not the effect of gratitude alone,
To which we owe the statue and the stone.
But heaven this lasting monument has wrought,
That mortals may eternally be taught,
Rebellion, though successful, is but vain;
And kings, so killed, rise conquerors again.
This truth the royal image does proclaim,
Loud as the trumpet of surviving fame.'

Though universally considered to be the finest of our London statues, this specimen of Le Sœur's artistic powers has not escaped adverse criticism. Connoisseurs sometimes differ in opinion, as well as persons of less æsthetic tastes. Walpole proclaims that 'the commanding grace of the figure, and the exquisite form of the horse, are striking to the most unpractised eye.' While, on the other hand, Ralph asserts that 'the man is ill designed and as tamely executed; there is nothing of expression in the face, nor character in the figure; and though it may be vulgarly admired'—(shade of Strawberry Hill! the courtly Horace vulgar!)—'it ought to be generally condemned.'

The next royal statue in chronological order, erected in London, possessed less artistic pretensions. The great civil war, though it ruined thousands, was nevertheless the cause of many

large fortunes being acquired. Robert Viner, merchant and goldsmith of London, was one of the lucky individuals thus enriched. In a single transaction, recorded by Pepys, he cleared ten thousand pounds by a timely loan to Charles II. Exuberant of loyalty, and rejoicing in the full-blown honour of knighthood, Sir Robert determined to erect a statue to the careless monarch, whose lavish propensities and consequent necessities proved so profitable to the money-lending goldsmith. But, knowing little of art or artists, his principal object was to procure a statue as soon and cheaply as he could, and this he accomplished through one of his mercantile correspondents at Leghorn. The statue was of white marble, and having been executed in honour of John Sobieski, king of Poland, in commemoration of his great victory over the Turks, represented that hero on horseback, the animal trampling upon a prostrate Mussulman. A little alteration—not by any means an improvement—was made on the faces of the figures. Sobieski was converted into an exceedingly bad likeness of Charles, and the prostrate Mussulman transformed into Oliver Cromwell; but the artist leaving the Turkish turban on the head of the latter figure, most ludicrously revealed the original import of the work. The statue was erected on a conduit in Stocks Market in 1674; and Sir Robert Viner, keeping his mayoral-feast on the same day, the king dined with him at Guildhall. On this occasion, the lord mayor, in the pride of his heart and warmth of feeling, did such justice to the various loyal toasts, that he actually began to treat the king more as a familiar friend than a most honoured guest. Charles, with his usual tact, perceiving this conduct, and not altogether unaccustomed to difficulties of the kind, after giving a hint to the nearest courtiers, attempted to steal away to his carriage, then in readiness at the gate. But Viner, seeing the intended retreat, rushed after the monarch, and seizing his hand, exclaimed with an oath: 'Sir! sir! you shall stay and take t'other bottle!' Charles, looking over his shoulder, with a smile and graceful air, repeated the line of an old song—

'He that is drunk is as great as a king,'

and at once returned to the company and 't'other bottle.'

About 1735, the citizens of London, determining to erect a residence for their chief magistrate, two sites, Stocks Market and Leadenhall Market, were proposed for the purpose. Both sites had their advocates, and considerable contention prevailed on the subject, as recorded in the following epigram of the period:

'At Guildhall great debates arose
'Twixt common-council, friends and foes,
About a lord mayor's mansion-house.
Some were for having it erected
At Stocks Market, as first projected;
But others, nor their number small,
Voted for market Leadenhall:
One of the places, all agreed,
Should for their purpose be decreed.
Whence springs this strife we're in the dark yet,
Whether to keep or make a market;
And on the affair all can be said,
They differ but as *stocks* or *lead*.'

One or two circumstances concerning the erection of the Mansion-house may be noticed here. While the discussion was in progress, some one proposed the commanding site formed by the block at the Newgate-street end of Cheapside, but without avail, Stocks Market being ultimately selected. The Earl of Burlington sent a design of Palladio to the lord mayor; but the common-council, discovering, after some inquiry, that Palladio was not a freeman of the city, but a foreigner and papist, rejected his magnificent model with contempt. A citizen was selected for architect of the Mansion-house, and as he had begun life as a ship-builder, he seems not to have forgotten his original profession, the front of the building resembling very much one of the old East India Company's ships, what sailors used irreverently to term 'tea-wagons,' with her clumsy stern and quarter-galleries. The stairs and passages in the interior of the dark edifice were little more than ladders and gangways; and a superstructure on the roof, long since taken down, was an exact resemblance of Noah's ark, as represented by a child's toy. This last appendage to the building was popularly termed 'the Mare's Nest.'

Stocks Market being selected for the mansion-house, the statue that had served to represent four different persons was taken down in 1736. The following rhymes on the occasion allege that the figure on the horse had represented Cromwell also; but this is an anachronism, the Protector being dead before Sobieski won his great battle.

'THE LAST DYING SPEECH AND CONFESSION OF THE HORSE AT STOCKS MARKET.

Ye whimsical people of London's fair town,
Who one day put up what the next you pull down;
Full sixty-one years have I stood in this place,
And never till now met with any disgrace.
What affront to crowned heads could you offer more bare,
Than to pull down a king to make room for a mayor.
The great Sobieski, on horse with long tail,
I first represented when set up for sale;
A Turk, as you see, was placed under my feet,
To prove o'er the sultan my triumph complete.
Next, when against monarchy all were combined,
I for your Protector, Old Noll, was designed.
When the king was restored, you, then, in a trice,
Called me Charles the Second, and by way of device,
Said the old whiskered Turk had Oliver's face,
Though, you know, to be conquered he ne'er felt the disgrace.
Three such persons as these on one horse to ride—
A hero, usurper, and king all astride:
Such honours were mine; though now forced to retire,
Perhaps my next change may be something still higher,
From a fruit-woman's market, I may leap to a spire.
As the market is moved, I 'm obliged to retreat,
I could stay there no longer when I 'd nothing to eat:
Now the herbs and the greens are all carried away,
I must trot unto those who will find me in hay.'

For many years after the demolition of Stocks Market, the wretched statue was destitute of a fitting resting-place. Long it lay neglected in a builder's shed, till an enterprising innkeeper set it up in his yard. At last, in 1779, the corporation presented it to Robert Viner, a descendant of the loyal lord mayor, who at once took it away to decorate his country seat.

SHAKSPEARE RELICS AT STRATFORD-ON-AVON.

As one among several steps towards perpetuating the national interest in the great dramatist, the ground of his house at Stratford was purchased by public subscription on the 22d of October 1861, or rather, some of the ground which had belonged to him was purchased. The truth is, there is a difficulty in identifying some of the property; and there have been two separate purchases made in the name of the public. It is believed that the house in which Shakspeare was born still exists. His father, John Shakspeare, bought two freehold houses in Henley Street, Stratford, in 1574; and it is now the cherished theory that William was born in one of these houses ten years earlier, while his father merely rented it. The property remained with John till his death, and then it descended to William; who, in his turn, bequeathed it to his sister, Mrs Hart. It is supposed that she lived in one of the houses till her death in 1646, and that the other was converted into the 'Maidenhead Inn;' this latter became the 'Swan,' and afterwards the 'Swan and Maidenhead.' After many years, that which had been Mrs Hart's portion of the house was divided into two tenements, one of which was a butcher's shop. The butcher who occupied this shop about the year 1807, put up the inscription:

'WILLIAM SHAKSPEARE WAS BORN IN THIS HOUSE.
N.B.—A HORSE AND TAXED CART TO LET.'

In more recent times the inscription was—

'THE IMMORTAL SHAKSPEARE WAS BORN IN THIS HOUSE.'

It ceased to be a butcher's shop, and was rented by an old woman, who made money by shewing the house to visitors. The bedroom, said to be that in which the great dramatist was born, was scribbled all over the walls and ceiling with the names of visitors, some illustrious, but the great portion obscure. The last descendant of the Harts, quitting the house under process of ejectment, took her revenge by whitewashing over all these names; and her successor had much trouble in removing the whitewash. In the condition of a show-place, that which was called Shakspeare's house, comprised about one-fourth of the original building, and consisted of a little shop, a kitchen behind, and two small rooms upstairs. Subsequently, the Royal Shaksperian Club of Stratford-on-Avon purchased some of this property; and another portion of the house was purchased afterwards, to be preserved in the name of the nation. There is no actual proof that William Shakspeare was born in this house; but Stratford has believed it ever since Shakspeare became famous. Washington Irving, delighted with the house and the few so-called relics exhibited in his day, said: 'What is it to us whether these stories be true or false, so long as we can persuade ourselves into the belief of them, and enjoy all the charm of the reality?' And Mr Charles Knight has said: 'Disturb not the belief that William Shakspeare first saw the light in this venerated room!' Here are also preserved, amongst other curiosities, a portrait of Shakspeare, Richard Quiney's letter to the poet asking a loan of £30, and a gold seal ring with the initials 'W. S.' upon it.

The property purchased in 1861, was land rather than houses. At the corner of Chapel Street, Stratford, was an old substantial house called New Place, which belonged to William Underhill in 1597, and was by him sold to William Shakspeare. The property was described as 'one messuage, two barns, two gardens, two orchards, and appurtenances.' In 1643, while occupied by Mrs Nash, Shakspeare's granddaughter, Queen Henrietta Maria stayed three weeks in the house. It was then owned in succession by Edward Nash, Sir Reginald Foote, Sir John Clopton, and the Rev. Francis Gastrell. This last-named owner was a most unsuitable possessor of such a place: for, in 1756, to save himself the trouble of shewing it to visitors, he cut down the celebrated mulberry-tree in the garden which Shakspeare had planted with his own hands; and, in 1759, he pulled down the house itself—which he did not inhabit—in order that he might not have to pay poor-rates for it! A house which stood on the site of New Place, together with about an acre of what had been Shakspeare's garden and orchard, were purchased after some difficulty; and the property was vested in the mayor and corporation of the town, on the conditions—that no building is to be erected on the ground, and that it shall be gratuitously open to the public. At the time of the Shakspeare tercentenary in 1864, his birthplace in Henley Street was renovated, and a fund was started for the erection of a Memorial Hall, which has since been opened and used for the representation of his plays; there is a picture gallery and library attached. The corporation decided in 1883 to acquire some of the adjacent buildings for the purpose of converting the ground into a garden.

OCTOBER 23.

St Theodoret, priest and martyr, 362. St Severin, archbishop of Cologne, confessor, 400. Another St Severin or Surin, bishop. St Romanus, archbishop of Rouen, confessor, 639. St Ignatius, patriarch of Constantinople, confessor, 878. St John Capistran, confessor, 1456.

Born.—Dr John Jortin, eminent critic, 1698, *London;* Marshal Andoche Junot, French commander, 1771, *Bussy-les-Forges;* Francis, Lord Jeffrey, eminent critic, 1773, *Edinburgh.*

Died.—Anicius Manlius Torquatus Severinus Boethius, Latin philosopher, beheaded by King Theodoric, 524; William Prynne, author of *Histrio-Mastix*, or *The Scourge of Players*, 1669, *London;* Jean Foy Vaillant, eminent medallist, 1706; Anne Oldfield, celebrated actress, 1730, *London.*

WALLER'S SACHARISSA.

Dorothy Sidney, Waller's Sacharissa, lives in the memory of men as a literary curiosity; as one of the brightest ornaments of virtue in the court of Charles I., she is consigned to oblivion.

Dorothy Sidney was born in 1620. She was the eldest of eight daughters, and the favourite of both parents. Her father was Robert Sidney, Earl of Leicester, and her mother, daughter of Henry Percy, ninth Earl of Northumberland.

To compile the lives of poets out of their works, is to build biography with treacherous materials, and little is known of Waller's relations to the lady of his verses, besides the meagre information which is to be found in them. It appears clear, however, that the poet proposed to her, and was somewhat disdainfully rejected. He was then a widower, popular at court, with a large estate and handsome person. The lady was gentle and virtuous, Waller wild and dissolute, and it might be supposed that his loose habits stood in his way. But other suitors of 'dearest Doll,' whose addresses were entertained, were by no means faultless. The truth is, the parents could countenance no one of less rank than a lord.

Waller was not inconsolable; he presently found a comforter, though we would conceive the transfer of his affections to have been a process of some difficulty:

'All that of myself is mine,
Lovely Amoret, is thine:
Sacharissa's captive fain
Would untie his iron chain,
And, those scorching beams to shun,
To thy gentle shadow run.
If the soul had free election
To dispose of her affection,
I would not thus long have borne
Haughty Sacharissa's scorn:
But 'tis sure some power above
Which controls our wills in love.'

Waller was soon afterwards married, as also was Sacharissa herself, on July 11, 1639, to Henry, third Lord Spencer, afterwards Earl of Sunderland. Waller's anathemas on this occasion, conveyed in a letter to Lady Lucy Sidney, another of the sisters, are worthy of quotation:

'May my Lady Dorothy (if we may yet call her so) suffer as much, and have the like passion for this young lord, whom she has preferred to the rest of mankind, as others have had for her; and may this love, before the year go about, make her taste of the first curse imposed on womankind—the pains of becoming a mother. May her first-born be none of her own sex, nor so like her but that he may resemble her lord as much as herself. May she, that always affected silence and retiredness, have the house filled with the noise and number of her children, and hereafter of her grandchildren; and then may she arrive at that great curse, so much declined by fair ladies—old age. May she live to be very old, and yet seem young; be told so by her glass, and have no aches to inform her of the truth; and when she shall appear to be mortal, may her lord not mourn for her, but go hand-in-hand with her to that place where we are told there is neither marrying nor giving in marriage; that, being there divorced, we may all have an equal interest in her again. My revenge being immortal, I wish all this may also befall their posterity to the world's end, and afterwards.' . . .

Lady Sunderland was not so fortunate as to have the poet's curses fulfilled. Her husband was killed at the battle of Newbury, in 1643, and his wife survived a second husband, whom she married in 1652. She died on the 25th February 1684, leaving one son and one daughter by her first, and one son by her second husband.

THE IRISH MASSACRE.

This fearful event, though its atrocities have been denied or extenuated by party zeal, is nevertheless but too well authenticated, and constitutes a most painful phase in the history of Ireland during the seventeenth century. There can be no doubt that the natives of that country had been harshly and unjustly treated by the English government; they had been insulted and ground down by all kinds of oppressive restrictions; their religion had been proscribed; and large portions of their territory, more especially in the province of Ulster, had been confiscated and transferred to English and Scottish colonists. Yet even all these provocations, combined with a due allowance for the barbarous condition of the time and country, will be wholly insufficient to excuse or palliate the horrible excesses which took place—excesses reminding us of the worst features of the Bartholomew massacre in France.

The hopes of the Irish had been excited by the successful resistance made by the Scotch to the arbitrary measures of Charles I., and the prospect of re-establishing the supremacy of their religion, as well as of regaining the lands which had been bestowed on the English settlers, stirred them up to the designment of a wide-spread conspiracy and revolt. The principal leaders were Roger Moore, a gentleman of Kildare, with Cornelius Maguire, Baron of Inniskillen, and Sir Phelim O'Neil, two chieftains of Ulster. The plot was successfully matured without the English authorities having any idea of its existence beyond receiving some obscure hints of a conspiracy being in progress; and the 23d of October 1641, was fixed on as a day of general insurrection, to be inaugurated by the surprise of the castle of Dublin. The previous night, one of the confederates getting drunk in a tavern, revealed the whole plot to an Irish Protestant, named Owen O'Connelly, who communicated the information to Sir William Parsons, one of the lords-justices, and the capital was saved. The rising, however, as preconcerted, burst forth in other parts of the country, and most frightful scenes of cruelty and bloodshed ensued. The Ulster colonists, dwelling in profound peace and the prosecution of a prosperous industry, were taken completely by surprise, and butchered promiscuously, without distinction of age or sex, by the savage and infuriated natives. In the words of Lord Clarendon, 'they who escaped best were robbed of all they had, to their very shirts, and so turned naked to endure the sharpness of the season; and by that means, and for want of relief, many thousands of them perished by hunger and cold.' The rebellion spread with frightful rapidity, and in less than a fortnight many of the fairest tracts in Ireland, which the enterprise of the British colonists had reclaimed and adorned, were converted into waste and desolation, as if it had been the object of the devastators to obliterate every trace of English occupancy.

Energetic measures were at once taken by the Long Parliament, on hearing of this outbreak, to effect its suppression, but it nevertheless continued to rage for nearly two years. Great exaggeration was made as to the number of persons who actually perished, but after rejecting all extravagant estimates,

it seems to be clearly ascertained, that from the beginning of the insurrection to its end, nearly fifty thousand individuals were murdered in cold blood; and this is exclusive of those who fell with arms in their hands on the field of battle, or endured every indignity and suffering short of death.

BATTLE OF EDGEHILL: REMARKABLE CASES OF SUSPENDED ANIMATION.

The battle of Edgehill, in which both the Royalist and Parliamentary party claimed the victory, took place on the morning of Sunday, October 23, 1642. Amongst those who fell on the king's side, and were left on the field as dead, was Sir Gervase Scroop, who had fallen covered with wounds about three o'clock on Sunday afternoon. It was not till Tuesday evening that his son, who was also in the king's forces, was able to return to the battle-field to search for the body of his father. When he found it, it was perfectly naked, having been stripped, like the rest of the slain, on Sunday evening, by camp-plunderers. In this state it had lain all Sunday night, all Monday, and Monday night, and was apparently dead, having received no less than sixteen severe wounds. Monday night, it ought to be stated, had been remarkably cold and frosty. Sir Gervase's son carried him to a lodging near at hand, and fancied he felt in the body some degree of heat. 'That heat,' says Fuller, 'was, with rubbing, within few minutes, improved into motion; that motion, within some hours, into sense; that sense, within a day, into speech; that speech, within certain weeks, into a perfect recovery; living more than ten years after, a monument of God's mercy and his son's affection. The effect of his story I received from his own mouth.'* The next day (Wednesday, 26th October), another gentleman, named Bellingham, was found in a like condition among the dead, having received twenty wounds. Being carried off by his friends, he also was restored, and lived for ten days, but died subsequently from one of his wounds terminating in a gangrene. 'The surgeons were of opinion,' says Clarendon, 'that both these gentlemen owed their lives to the inhumanity of those who stripped them, and to the coldness of the nights, which stopped their blood, better than all their skill and medicaments could have done, and that if they had been brought off within any reasonable distance of time after their wounds, they had undoubtedly perished.'

In connection with the subject of unexpected reanimation, the case of Sir Hugh Ackland, of Kellerton, Devonshire, may be mentioned as even more extraordinary. This gentleman was seized with a violent fever, and having apparently expired, had been laid out as dead. The nurse and two footmen were appointed to sit up through the night to watch the corpse. Lady Ackland, to cheer them, had sent them a bottle of brandy, whereupon one of the footmen, 'being an arch rogue,' said to the other: 'Master dearly loved brandy when he was alive, and now, though he is dead, I am determined he shall have a glass with us!' Accordingly, he poured out a bumper, and forced it down Sir Hugh's throat. A gurgling noise immediately ensued, accompanied with a violent motion of the neck and upper part of the chest. A terrible consternation seized the watchers, who rushed violently down stairs; 'the brandy genius' with such speed, that he fell, and rolled head-over-heels, bumping down from step to step till he reached the bottom; while the nurse screamed with terror. The noise having roused a young gentleman who was sleeping in the house, he immediately got up, and went to the room where the noise had first begun. There, to his astonishment, he saw Sir Hugh sitting upright on the bed. He summoned the servants, and ordering them to place their master in a warm bed, sent off for his medical attendants. In a few weeks, Sir Hugh was restored to perfect health, and lived many years afterwards. He often used to relate this strange story of his own resuscitation by his footman's facetious conceit, for which he is said to have bequeathed him a handsome annuity.

* *Worthies of Lincolnshire.*

OCTOBER 24.

St Felix, bishop and martyr, 303. St Proclus, confessor, archbishop of Constantinople, 447. St Magloire, bishop and confessor, about 575.

Born.—Sir James Mackintosh, politician and miscellaneous writer, 1765, *Aldourie, Inverness-shire.*

Died.—Hugh Capet, king of France, 996; Jane Seymour, consort of Henry VIII., 1537, *Hampton Court;* Tycho Brahe, celebrated astronomer, 1601, *Prague;* Professor John M'Cullagh, scientific writer, 1847, *Dublin;* Daniel Webster, American statesman, 1852, *Marshfield, Massachusetts.*

DANIEL WEBSTER.

This distinguished American statesman and orator was born at Salisbury, New Hampshire, January 18, 1782. His father, a descendant of the Puritan settlers of New England, said by Mr Webster to have been the handsomest man he ever saw, except his brother Ezekiel, was a farmer and innkeeper. He owned and cultivated a tract of land, and welcomed travellers to the hospitalities of his log-cabin. He was also a soldier in the French war, and in the revolution he was present at the battles of Saratoga, and the surrender of General Burgoyne. He afterwards became a judge of the court of Common Pleas. The son, Daniel, was educated at Dartmouth College, studied law, taught an academy, and copied deeds, to support himself and aid his brother. He was elected member to congress, became senator for Massachusetts, secretary of state under two presidents, and the first lawyer and orator of his country. He has been considered by many as the greatest man, intellectually, which America has produced. As a lawyer, he had no superior; as senator, only two or three were ever regarded as his equals in ability; while, as an orator, he stands almost alone in a nation of orators. His most remarkable efforts were his speeches in the senate—on the Greek revolution, and in his debate with Mr Hayne, of South Carolina. He has also acquired great fame by two orations—one at the laying of the corner-stone of the Bunker-Hill Monument, on the anniversary of the battle, June 17, 1825, and

the other at the completion of that structure, eighteen years after. But, in spite of his great talents, and unbounded local popularity, Mr Webster, like Mr Clay, was disappointed of his highest ambition; and his death was undoubtedly hastened by his failure to receive the nomination of his party to the presidency. Mr Webster's appearance and manner were very impressive. He was a large, massive man, with the head of a giant, deep cavernous eyes, a sallow complexion, and a deep bass voice. His manner of speaking was slow, dignified, and impressive, rising at times to great energy. His character, unfortunately, was marred by some defects. Generous to prodigality, he was a spendthrift, and unreliable in business-matters. Requiring stimulants, he did not always use them in moderation. As a statesman, he was more admired than trusted. Still, his patriotism was undoubted, and his faults were most easily overlooked by those who knew him best. He embodied much of the character, the patriotism, and the ambition of the northern people, and was devoted to the preservation of the Union, as the condition of the future power and greatness of the republic. The following passage from one of his speeches, as a specimen of his oratory, and a proof of his devotion to the Union, may be almost looked upon as a prophecy, too literally and terribly fulfilled. 'When my eyes shall be turned to behold for the last time the sun in heaven, may I not see him shining on the broken and dishonoured fragments of a once glorious union; on states dissevered, discordant, belligerent; on a land rent with civil feuds, or drenched, it may be, in fraternal blood!'

FOX-HUNTING.

Now that the cornfields have been thoroughly cleared of their produce, that the woods are strewed with fallen leaves, and the shortened days bespeak the near approach of winter, when the fields in the mornings are crisp with the glittering rime which soon dissolves beneath the autumn sunbeams, when angling for the season has fairly closed, and even the sportsman's ardour has begun to languish, then commences the most renowned and exhilarating of all rural pastimes—the thoroughly British sport of fox-hunting. The period over which it extends comprises nearly six months, from the latter part of October to the beginning of April. Much of that space is of course, however, wholly unavailable for hunting-purposes, whilst the ground is either bound by hard frost or covered with snow.

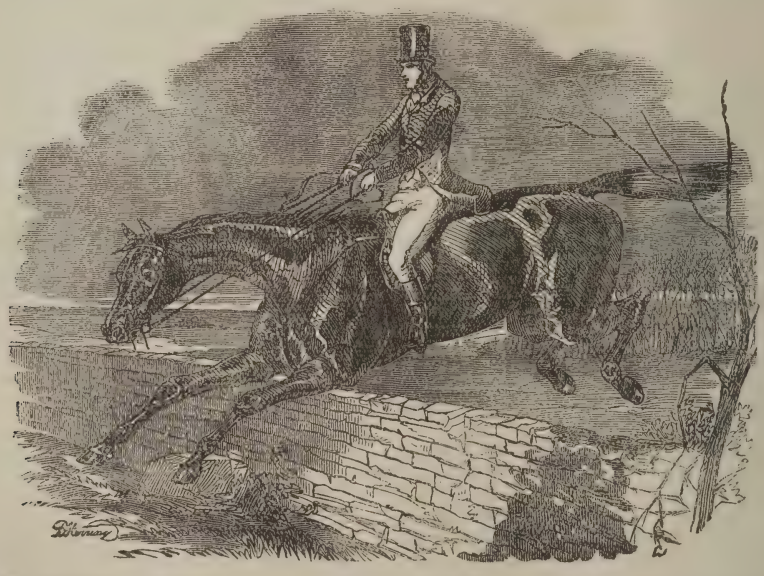
Though this sport requires, for its exercise, the possession both of a considerable amount of physical courage and activity, and of pecuniary means to sustain the expenses which it entails, there is, nevertheless, no amusement which engages so large and universal a sympathy with all classes of the community. No Briton, however unable he may be from the circumstances of his position to take an active part in the chase, can refrain from experiencing a mingled feeling alike of envy and admiration as he witnesses the gallant array of horsemen assemble at the 'meet;' see the grand 'burst' when the fox has been started, and the cry of 'Tallyho! Gone away!' breaks forth; and then follow with his eye the cavalcade in its exciting pursuit, as it sweeps o'er hill and dale, with the hounds in full cry, till the outlines of the figures, becoming rapidly less and less distinct, are fairly lost in the distance. A scene like this stirs the blood in the veins of the most sluggish, whilst with the devotees of the exciting sport, the

FOX-HUNTING—'GONE AWAY!'

enthusiasm felt is such as frequently remains unimpaired by the progress of years or the chills of age, and the grayheaded fox-hunter of threescore may often be seen following the hounds with the same ardour as the stripling of eighteen.

As is well known, much of the success of a 'run' in hunting depends on the condition of the atmosphere. When this is very dry, or when a sharp northerly breeze prevails, the scent or exhalation from the hunted animal is rarefied and dissipated, and becomes consequently impossible to be traced and followed up by the dogs. When, on the other hand, the air is moist, but without the presence of actual rain, and a gentle gale blows from the south or west, then the scent clings to the adjoining soil and vegetation; and a more favourable condition still is, when it is suspended in the air at a certain height from the earth, and the dogs are enabled to follow it *breast high*, at full speed, without putting their heads to the ground. In reference to this subject we may here introduce the celebrated old hunting-song, which depicts very graphically the incidents of a fox-chase:

'A southerly wind and a cloudy sky
Proclaim a hunting-morning;
Before the sun rises we nimbly fly,
Dull sleep and a downy bed scorning.
To horse, my boys, to horse, away;
The chase admits of no delay;
On horseback we've got, together we'll trot:
On horseback, on horseback, together we'll trot:
Leave off your chat, see the cover appear;
The hound that strikes first, cheer him without fear;
Drag on him! ah, wind him, my steady good hounds,
Drag on him! ah, wind him, the cover resounds.



How complete the cover and furze they draw!
Who talks of Jolliffe, or Meynell?
Young Rockwood he flourishes now through the shaw,
And Ringwood roars out in his kennel.
Away we fly, as quick as thought;
The new-sown ground soon makes them fault;

Cast round the sheep's train, cast round, cast round!
Try back the deep lane, try back, try back!
Hark! I hear some hound challenge in yonder spring sedge;
Comfort bitch hits it there, in that old thick hedge.
Hark forward! hark forward! have at him, my boys.
Hark forward! hark forward! zounds, don't make a noise!

A stormy sky, o'ercharged with rain,
Both hounds and huntsmen opposes;
In vain on your mettle you try, boys, in vain,
But down, you must to your noses.
Each moment, now, the sky grows worse,
Enough to make a parson curse:
Pick through the ploughed grounds, pick through, pick through;
Well hunted, good hounds, well hunted, well hunted!
If we can but get on, we shall soon make him quake;
Hark! I hear some hounds challenge in midst of the brake;
Tally-ho! tally-ho, there! across the green plain;
Tally-ho! tally-ho, boys! have at him again!

Thus we ride, whip and spur, for a two hours' chase,
Our horses go panting and sobbing;
See Ranter and Riot begin now to race;
Ride on, sir, and give him some mobbing.
But hold—alas! you'll spoil our sport,
For through the pack you 'll head him short.
Clap round him, dear Jack, clap round, clap round!
Hark Lasher, hark Jowler, hark back, hark back!
He's jumping and dangling in every bush;
Little Riot has fastened his teeth in his brush!
Whohoop, whohoop, he 's fairly run down!
Whohoop, whohoop, give Tom his half-crown!'

The leaps taken by fox-hunters during the chase form alike the most exciting and perilous part of the pastime. In Leicestershire, which is generally regarded *par excellence* as the hunting-county of England, two specially formidable descriptions of fences require frequently to be surmounted. These are the *ox-fence* and the *bullfinch-fence*. In the former, which is rendered necessary in the locality as an effectual barrier to the roaming of cattle from their pastures during the season of the *œstrus*, or gadfly, the adventurous votary of Diana finds himself confronted by a wide ditch, bordered by a strong blackthorn-hedge, and beyond that by a railing four feet in height, all of which obstacles must be cleared by him and his steed. The bullfinch-fence, on the other hand, of still more frequent occurrence, is a thick and lofty quickset-hedge, of perhaps half a century's growth, with a ditch on one side, and requiring to be charged at full speed by the horseman, who manages to push through, whilst the bushes close after him, leaving no more trace, in the words of 'Nimrod,' 'than if a bird had hopped through.' Brooks also require frequently to be crossed; and from the aversion with which many horses regard them, requiring to be urged to them at full speed, this leap is often considered as the most difficult of any. In many parts of the country, and more especially in Ireland, stone walls are of common occurrence, and to clear these with success, calls forth all the courage and enterprise of the fox-hunter. In connection with this subject, we may here allude to the celebrated feat, achieved in 1792 by Mr Bingham, of

BLOODHUNTER CLEARING A STONE WALL IN GOOD STYLE—FROM BLAINE'S 'ENCYCLOPÆDIA OF RURAL SPORTS.'

leaping a horse over the wall of Hyde Park, the height of which was six feet and a half on the inside, and eight on the outside, where a bed of manure was laid to receive the animal. The high-spirited steed performed the feat twice, merely displacing a few bricks at the last jump. On the subject of accidents, it may likewise here be remarked, that though far from uncommon in the hunting-field, they are generally less disastrous than might be expected, partly from the soft nature of the ground on which they take place, and partly from the skill shewn by riders in evading as much as possible the consequences of a fall. To know 'how to fall' judiciously becomes, therefore, an important accomplishment of the chase.

Of all hunting-enthusiasts, none is more distin-

guished in sporting annals than the celebrated Thomas Assheton Smith, of Tedworth, in Hampshire, who may be said to have presented the *beau-ideal* of the British fox-hunter and country gentleman in the most splendid type of the character. Possessed of immense wealth in landed property and otherwise, and endowed by nature with the most herculean strength and courage, he continued till the age of eighty to follow the hounds with unabated vigour, having been a votary of the chase for seventy years, and a master of hounds for fifty. Even during the last two years of his life, when he became unable to ride to cover, or even face the inclemency of the weather out of doors, he would still mount his horse, and make the circuit of an extensive conservatory which adjoined to and communicated with his mansion. The extent of his experience in the sport may be estimated from the fact that, as a master of hounds, he had cut off no less than fifteen hundred brushes from as many foxes. In reference to the value set by him on a fox, an amusing anecdote is related that one morning, while at breakfast at Tedworth, he was observed to drop the newspaper with an expression of horror. A lady present inquired what was the matter: 'Good God!' was the reply, 'a fine dog-fox has been burned alive in a barn!' On another occasion, he had been hearing one of the first sermons of Mr Dyson, the clergyman's son at Tedworth, who was no less an adept in fox-hunting than in theological studies. Mr Smith was greatly pleased with the discourse, and on coming out of church after service was over, he slapped the young man on the back, and exclaimed: 'Well done, Frank, you shall have a mount on Rory O'More on Thursday!'

The enthusiasm of the master seems to have imparted itself to his servants, and we find the following instance recorded of his huntsman, George Carter. On Mr Smith's death, it was generally expected that he would be interred in the mausoleum, on the grounds, and under this impression, George made, with great earnestness, the following proposition to the friend in charge of the funeral arrangements: 'I hope, sir, when I, and Jack Fricker, and Will Bryce [the whippers-in] die, we may be laid alongside master in the mausoleum, with Ham Ashley and Paul Potter [two hunters], and a fine couple of his honour's hounds, in order that we may all be ready to start again together in the next world!'

Though the expense of maintaining a hunting-stud is considerable, amounting, in the case of the aristocratic frequenters of Melton-Mowbray, to £1000 per annum and upwards, whilst the yearly sum incurred in keeping up a pack of fox-hounds, with accessory expenses, will fall little short of £5000, there are, nevertheless, some remarkable instances on record of economy in the management of these matters. Thus, the celebrated miser, John Elwes, whose indulgence in hunting formed a solitary exception to his habitually penurious disposition, contrived to maintain a kennel of foxhounds and a stable of hunters, reputed at the time to be the best in the kingdom, at an annual outlay of less than £300. The way in which he managed is said to have been as follows: His huntsman, who acted as servant of all-work, and held no sinecure in his office, rose at four every morning, and after milking the cows, prepared breakfast for his master and any friends that might happen to be staying at the house. He then donned a green coat, saddled the horses, and got out the hounds, and the whole party started for the chase. After the day's 'run' was over, he would return to the stables, rub down the horses as quickly as possible, and then hurry into the house to lay the cloth and wait at dinner. After this, he would betake himself again to his outdoor duties, feed the horses and dogs, litter them down for the night, and milk the cows. Such multifarious avocations would seem almost to have required the hands of a Briareus, and yet Elwes used to call his huntsman an idle dog, that wanted to be paid for doing nothing. Probably the man received occasional assistance in the performance of his duties from his master's tenants, with whom the dogs were boarded during the summer months, as it is almost incredible otherwise that he could have accomplished the herculean task laid on his shoulders.

The other instance of adroit management which we shall quote, is that of Mr Osbaldeston—not the celebrated master of the Quorn hounds of that name, but the younger son of a gentleman of good family in the north of England, who, in consequence of having contracted an imprudent marriage, was turned by his father out of doors, and obliged to support himself by acting as clerk to an attorney in London. His salary amounted only to £60 per annum; and yet on this slender income he contrived not only to maintain himself and large family without running into debt, but also to keep two hunters and a dozen of hounds. This he managed to accomplish by the following method. After business-hours, he acted as accountant to the butchers of Clare Market, who paid him in pieces of meat and offal. With the first he fed himself and family, with the last his hounds, which he kept in the garret of his house. His horses were stabled in the cellar, and fed with grain from an adjoining brewery, and damaged corn from a corn-chandler, to the keeping of whose books Mr Osbaldeston devoted one or two evenings in the week. Serving either an indulgent master, or enabled by circumstances to make arrangements to that effect, he contrived, during the hunting-season, to obtain such leave of absence as permitted him to enjoy his favourite sport.

The enthusiasm for fox-hunting has not always been confined to those whose means enabled them to mount on horseback. A tailor of Cheltenham used to be well known for his pedestrian activity in following Lord Segrave's hounds. Such was his fleetness of foot and knowledge of the country, that, after following the hounds from kennel to cover, he would continue his progress on foot after the fox had been started, and contrived almost always to make his appearance at the death. He would hunt thus five days a week on foot with Lord Segrave, and meet the Duke of Beaufort's hounds on the sixth. On one occasion he walked from Cheltenham to Berkeley, a distance of twenty-six miles, found that the hounds had gone to Haywood, ten miles further off, proceeded thither, and, though rather late, witnessed a splendid run. Lord Segrave, it is said, once offered him a good situation as earth-stopper; but his characteristic answer was, that he could not 'stop earths a-nights and hunt a-days too.' Another pedestrian fox-hunter has been known to travel on foot sixty miles a day.

The reader of the *Spectator* may recollect Sir

Roger de Coverley declining, with thanks, a hound which had been sent him as a present, informing the sender with all courtesy that the dog in question was an excellent *bass*, but that at present he wanted only a *counter-tenor*. Fox-hunters dilate with rapture on the cry of a pack of hounds, more grateful, doubtless, to their ears than the most ethereal warblings of a Lind or a Grisi. A whimsical anecdote is often related of the Cockney, who, when the ardent fox-hunter exclaimed, in reference to the baying of the pack: 'What glorious music! don't you hear it?' replied: 'Music! I can hear nothing of it for the yelping of these confounded dogs!'

Till the end of the seventeenth century, fox-hunting can scarcely be said to have existed as a sport, the stag, the buck, and the hare taking the precedence with our ancestors as objects of the chase, which, at an earlier period, included the wolf and the boar. The county of Leicester, at the present day, constitutes the head-quarters of the sport; a pre-eminence which it owes partly to the nature of the ground, more pastoral than arable, partly to the circumstance of the covers being separated by considerable intervals, preventing the fox from readily getting to earth, and thus securing a good 'run.' The town of Melton-Mowbray, which may be regarded as the fox-hunting metropolis, is thronged during the season by sporting-visitors, who benefit the place to the extent, it is said, of £50,000 a year, and indeed form its main support. The vicinity is the country of the celebrated Quorn or Quorndon pack of hounds, so called from Quorndon Hall, the residence of the great hunter, Mr Meynell, and subsequently of the successive masters of 'the Quorn,' which takes the first place amid the fox-hunting associations of the United Kingdom.

JOHN DOE AND RICHARD ROE.

The 24th of October 1852, witnessed the deaths of two individuals who, though *personally* unknown to any one, enjoyed, nevertheless, like Mrs Gamp's Mrs Harris, a most extensive reputation by report. Through the whole length and breadth of England, no persons were more frequently referred to (in legal documents) than John Doe and Richard Roe. Their connections with the landed property of the kingdom appeared to be both universal and multiform. In every process of ejectment, instead of the real parties to the suit being named, *John Doe*, plaintiff, sued *Richard Roe*, defendant. Their names were also inserted in criminal proceedings as pledges to prosecute.

This well-known fiction appears to have been introduced into English legal practice about the time of Edward III., in consequence, it is said, of a provision of *Magna Charta* which requires the production of witnesses before every criminal trial. John Doe and Richard Roe were thenceforth inserted as the names of the alleged witnesses. By act 15 and 16 Vic. cap. 76, passed in 1852, sentence of death, to take effect on 24th October of that year, is passed on the two illustrious personages just mentioned, and it is ordered that 'instead of the present proceeding by ejectment, a writ shall be issued, directed to the persons in possession of the property claimed, which property shall be described in the writ with reasonable certainty.'

OCTOBER 25.

Saints Chrysanthus and Daria, martyrs, 3d century. Saints Crispin and Crispinian, martyrs, 287. St Gaudentius of Brescia, bishop and confessor, about 420. St Boniface I., pope and confessor, 422.

St Crispin's Day.

St Crispin and his brother Crispinian were natives of Rome, and having become converts to Christianity, travelled northwards into France, to propagate the faith. They fixed their residence at Soissons, where they preached to the people during the day, and at night earned their subsistence by the making of shoes. In this they followed the example of the apostle Paul, who worked at his craft of tent-making, and suffered himself to be a burden to no man. They furnished the poor with shoes, it is said, at a very low price, and the legend adds that an angel supplied them with leather. In the persecution under the Emperor Maximian, they suffered martyrdom, and according to a Kentish tradition, their relics, after being cast into the sea, were washed ashore at Romney Marsh. In medieval art, the two brothers are represented as two men at work in a shoemaker's shop, and the emblem for their day in the Clog Almanacs is a pair of shoes.

From time immemorial, Crispin and Crispinian have been regarded as the patron-saints of shoemakers, who used to observe, and still in many places celebrate, their day with great festivity and rejoicings. One special ceremony was a grand procession of the brethren of the craft with banners and music, whilst various characters representing King Crispin and his court were sustained by different members.

At Tenby, it was customary, on the eve of St Crispin's Day, to make an effigy of the saint, and suspend it from the steeple or some other elevated place. In the morning it was formally cut down, and carried in procession throughout the town. In front of the doors of each member of the craft the procession halted, when a document, purporting to be the last will and testament of the saint, was read, and in pursuance thereof some article of dress was left as a memento of the noisy visit. At length, when nothing remained to be distributed, the padding which formed the body of the effigy was made into a football, and kicked about by the crowd till they were tired. As a sort of revenge for the treatment of St Crispin, his followers hung up on St Clement's Day the effigy of a carpenter, which was treated in a similar way.

CHAUCER.

Many biographies of Chaucer have been written at different times, but unfortunately very little which is trustworthy is to be gleaned from them.

If the reader can succeed in deciphering the almost obliterated legend on Chaucer's monument in Westminster Abbey, he will find it recorded that he died in the year 1400, at the age of seventy-two. Some doubt is thrown on this statement, however, by recent research, which fixes the date of his birth about 1340. This monument was not set up until about a century and a half after his death; and the poet's own testimony points to the last-mentioned date as the most correct one.

To decide where Chaucer was born, is a still more puzzling question. Fuller inclines to think that his native place was Woodstock, in Oxfordshire. When Queen Elizabeth 'passed a fair stone house next to her palace in that town' to some tenant or other, this same building was described as *Chaucer's House*, and retained the name long afterwards. But as we find the poet living at Woodstock in Edward III.'s time, and dying there in his old age, the name of the house is accounted for. Another authority (Leland) leans to Berkshire, where Dunnington Castle, near Newbury, is said to have been Chaucer's family property. An oak in the park there, went by the name of *Chaucer's Oak*. But we afterwards find this same property in the possession of a certain Thomas Chaucer—whether he were Chaucer's son or not makes no matter—and thus the place need not by any means have been the poet's birthplace, so far as the name of the oak is concerned. Others maintain that London can justly claim the honours; and it appears from Chaucer's own words, in his *Testament of Love*, that, whether he were born there or not, he was certainly brought up there. His words are these: 'Also in the citie of London, that is to mee soe deare and sweete, in which I was foorth growne; and more kindely love have I to that place than to any other in yerth (as every kindely creature hath full appetite to that place of his kindly engendure).'

Apropos of the poet's origin, Stowe records that 'Richard Chawcer, vintner, gave,' to the church of St Mary Aldermary, 'his tenement and tavern, with the appurtenance, in the Royal Streete the corner of Kerion Lane, and was there buried, 1348.' Mr Furnivall has brought to light a deed of 1380, in which Chaucer describes himself as the son of John Chaucer, vintner; by other documents this John Chaucer is shewn to be the son of Richard Chaucer, also a vintner, and both of London.

Chaucer was educated at Oxford or Cambridge—it cannot be ascertained which—and afterwards travelled—it is not known where, or for how long a period. He returned home to become a courtier, and continued in great favour during the long reign of the third Edward; to all appearance winning honours, gaining friends, and meriting respect, as the first poet of his time.

But Chaucer gained, in Edward's court, something more substantial than honours. He held a succession of offices, which—though under such ambiguous appellations as have come down to us they seem to our ignorance suspicious—were probably of the nature of creditable sinecures, intended to afford the poet competence without toil. He himself informs us, that at this time the profits of his numerous grants enabled him to live with dignity and hospitality. He speaks of himself, looking back, in a sadder time, as 'once glorious in worldly wellfulnesse, and having such godes in welthe as maken men riche.' What would one not give to have been the guest of 'the morning-star of song'—

> 'Which first made to distil and reine
> The gold dewe-dropes of spech and eloquence.'

Wood, in his Annals, describes Chaucer as having been a pupil of Wickliffe, when that enterprising priest was warden of Canterbury Hall. The story is too good to be true. Yet, if we see reason to reject the tradition, it is certain that Chaucer, if not a Wickliffite, sympathised with what we may call the advanced religionists. He considered the pope to be Antichrist, and abhorred the mendicant priests. Nor did these tendencies of his shew themselves only in words. As Chaucer was a good old English yeoman, so we conceive him to be slightly belied by the meek demureness of the likeness which survives of him. Who would expect to find Master Geoffrey Chaucer fined 'two shillings for beating a Franciscane frier in Fleet Street?' Yet such was the fact.

Chaucer had a stanch friend in John of Gaunt, the Duke of Lancaster, and champion of Wickliffe. Not merely an honourable relation of patron and client, but a bond of intimate friendship, existed between them. Duchess Blanche and the duke gave Chaucer to wife a favourite of their own. This was Philippa, sister to Catharine Rouet. Catharine was a knight's daughter, at the time John of Gaunt's mistress, and governess to his children, and afterwards his wife.

In Richard II.'s reign, when the duke's influence declined, Chaucer got into trouble, in consequence of which he found his means considerably straitened. He involved himself in some Wickliffite disturbances, and had to seek safety in flight. Venturing soon after to return to London, he was seized and imprisoned in the Tower. Here, it is said, either faltering in courage through the rigour of his confinement, or provoked by the ingratitude of certain accomplices, he informed against the rest, and regained his liberty. For some time after, though he retained apparently many of his grants, Chaucer seems to have been in rather low water. He describes himself as 'being berafte out of dignitie of office, in which he made a gatheringe of worldly godes.' Soon after his release he disposed of sundry pensions, took his leave of the court, and retired to Woodstock.

It is probable that Chaucer remained for the most part in retirement during the rest of his life. He seems to have written much, if not the whole, of his *Canterbury Tales* during this period. He died an old man, and persisted to the last, says Wood, in his dislike of 'friers.' He is said to have died in the Romish faith. The statement has been disputed, but we scarcely see on what grounds. He does not appear to have been a Wickliffite, although he supported, in certain cases, members of that party. It must be borne in mind that hatred of monks, with their ignorance and licentiousness, and disrespect of reigning popes, worse than the monks, were not by any means in that day, nor indeed long afterwards, inconsistent with strict adherence to the Romish tenets.

Though we have seen that his hatred of the friars was unabated to the last moment, there were some things for which Chaucer, on his dying bed, is said to have been sorry. 'Of that he wrote of love and baudery,' records Wood, 'it grieved him much on his death-bed: for one that lived shortly after his time maketh report, that when he saw death approaching, he did often cry out: 'Woe is me, woe is me, that I cannot recall and annull those things which I have written of the base and filthy love of men towards women: but, alas! they are now continued from man to man, and I cannot do what I desire.'

It is some comfort to find the old man repenting of those blemishes in his works which so often offend the reader of a more refined age. Chaucer's last words, at least, were consistent with his profession. From an old folio edition of his works, dated 1602, presented to the British Museum by Tyrwhitt in 1786, we have gleaned a little tribute to the poet, not unworthy to be recovered from the grasp of oblivion:

'A BALLADE IN THE PRAISE AND COMMENDACION OF MASTER GEFFRAY CHAUCER FOR HIS GOLDEN ELOQUENCE.

Maister Geffray Chaucer, that now lithe in grave,
The noble rhetoricion, and poet of Great Britaine,
That worthy was, the laurer (*sic*) of poetry to have
For this his labour, and the palme to attaine,
Which first made to distil, and reine,
The gold dewe dropes, of spech and eloquence,
Into English tonge, through his excellence.'

It appears that Chaucer had children. He dedicates one of his treatises to a son, Lewis. Fuller mentions a son Thomas—Thomas Chaucer, 'sole son of Geffery Chaucer, that famous poet, from whom he inherited fair lands at Dunnington Castle in this county (*Berkshire*), and at Ewelme, in Oxfordshire. He married Maud, daughter and co-heir of Sir John Burwash, by whom he had one only daughter, named Alice, married unto William de la Pole, Duke of Norfolk. He lyeth buried under a fair tomb in Ewelme Church.' Whether this was really a son of Geoffrey Chaucer, has been doubted, with or without sufficient reason we are unable to say; but if he was, he was not, as we have seen, the 'sole son.'

THE EARL OF PETERBOROUGH.

Like Charles XII. of Sweden, the character of the great Earl of Peterborough presents a singular combination of the hero and the madman. His career in Spain, as commander of the British forces in the War of Succession, resembles more the history of Amadis or Orlando, than an episode in real warfare; and in the achievements recorded of him, we find ourselves transported once more to the legendary times of chivalry. The conquest of Valencia, more especially, which he commenced with a detachment of 150 dragoons, and accomplished as much to the astonishment of his own army as to the bewilderment of the prostrated enemy, overpowers us with wonderment; and had the narrative only descended to us from antiquity, instead of being the chronicle of an undisputed fact, it would have been infallibly discredited as fabulous and extravagant. Had it not been for the mulishness of the Archduke Charles, as well as the political jealousies and dissensions at home, which prevented his plans from being carried out, and ultimately occasioned his premature recall to England, there seems little reason to doubt that Peterborough might have seated a German monarch on the throne of Madrid, and altered very materially the future arrangements of European diplomacy. But the advantages so surprisingly gained were destined ere long to be as rapidly lost; and in the battle of Almanza, after Peterborough's departure, the prestige, which the British arms had won in the siege of Barcelona and the Valencian campaign, was sadly forfeited.

Peterborough's private life was far from regular; and in all the phases of this extraordinary man's history, we perceive the same enthusiastic bravery and intellectual acumen, the same warmth and generosity of disposition, and the same eccentricities and absurdities, the last two qualities shewing themselves in his love of practical jokes and whimsical adventures. The following anecdote is related in connection with one of his youthful escapades. He was courting a young lady who was remarkably fond of birds, and had taken a fancy to an uncommonly fine canary which belonged to a widow, the keeper of a coffee-house at Charing Cross. She besought Peterborough, then Lord Charles Mordaunt, to procure for her, as a pledge of his affection, this unrivalled songster. He offered, accordingly, an enormous sum to its owner, who, however, was so much attached to it, that she refused to part with it at any price. Determined to gain the prize, he contrived to obtain another bird, of the same size and colour, but a hen, and wholly tuneless. The coveted bird was almost never allowed to be out of sight of its mistress, who sat behind the bar of the coffee-house; but one day Peterborough succeeded in getting her out of the way on some pretext, and made use of the opportunity to effect an exchange of the canaries. This was about the time of James II.'s expulsion. After the Revolution, Peterborough happened to be visiting the coffee-house where he had committed the fraud, and ventured to remark to the landlady: 'I would have bought that bird of yours, and you refused my money for it; I daresay you are by this time sorry for it.' 'Indeed, sir,' she replied, 'I am not, nor would I now take any money for him; for—would you believe it?—from the time that our good king was forced to go abroad and leave us, the dear creature has not sung a note!'

As illustrative of his puerile propensity to petty mischief, it is recorded that, one day while riding in his coach, and seeing a dancing-master, with pearl-coloured silk stockings, and otherwise sprucely attired, picking his steps daintily along the street, he jumped down and pursued him with a drawn sword, forcing the poor man to run ankle-deep into the gutter, into which, however, the earl himself was also forcibly drawn. When stationed at the town of Huete, he learned that a very beautiful young lady had just taken refuge there, in a convent. Peterborough was determined to get a sight of this celebrated fair one, but he was well known as a gay Lothario, and the strictness of the lady-abbess would have opposed an effectual bar to the gratification of his wishes. Procuring the attendance, then, of an engineer-officer, he proceeded with him to the convent, and demanded admission, for the purpose of tracing out a line of defences in the garden, preparatory to converting the place into a

fort for protecting his position at Huete. The lady-abbess and her nuns, including the object of Peterborough's curiosity, rushed out in an agony of terror, and besought him to spare their convent. It would seem that the great general was not inexorable, and the construction of the fort was indefinitely postponed. Whether the real purpose of his *ruse* was ever discovered by the fair nun whose beauty prompted the act, or how far she appreciated it, history does not record.

A strong antipathy existed between Peterborough and the Duke of Marlborough. On one occasion, the former was surrounded by an angry mob who took him for the duke, at that time rather unpopular. He ran a chance of receiving some violent usage, when he exclaimed: 'Gentlemen, I shall convince you by two good and sufficient reasons that I am not the Duke of Marlborough. First, I have only five guineas in my pocket; and, second, here they are at your service,' suiting his action at the same time to the word, by scattering the money amongst the crowd. He was then allowed to depart amid loud huzzas, after having thus hurled an ingenious satire both at the wealth and avarice of the great commander.

When very young, Lord Peterborough was married to the daughter of a Kincardineshire baronet, by whom he had two sons, who predeceased their father, being cut off by small-pox within six weeks of each other, and a daughter, who became Duchess of Gordon. Left a widower, and solitary in his old age, he contracted a private marriage with Miss Anastasia Robinson, a celebrated opera-singer, whose beauty and talents were only surpassed by her rare modesty and worth, and who proved to him a most devoted wife. The union was subsequently acknowledged by him, and publicly solemnised. He died at Lisbon, whither he had gone in the hope of re-establishing his failing health, at the age of seventy-seven.

DEATH OF GEORGE II.: CURIOUS SUPERSTITION.

On the morning of 25th October 1760, George II. expired suddenly at Kensington, at the age of seventy-six. The cause of death was the rupture of the right ventricle of the heart. Though never a popular sovereign, the glories attending the British arms during the latter years of George II.'s reign were such as to conciliate largely the affections of his subjects. Frugal to penuriousness, choleric, and by no means correct in moral deportment, he was, nevertheless, honest and open in character, and possessed of considerable personal courage, as evinced by his bravery at the battle of Dettingen. To both George and his father must be accorded the credit of eminently prudent and judicious management, enabling them alike to preserve the allegiance of their subjects throughout a peculiarly difficult and critical period, and secure for the country a degree of material prosperity such as it had never before enjoyed.

Two years previous to his death, George II. had been attacked by a serious illness, which was expected to prove fatal; but he rallied, and regained for a short period the enjoyment of good health. A curious circumstance, illustrative of popular superstition, is mentioned in connection with this indisposition by Lord Chesterfield, and quoted by Earl Stanhope in his *History of England:* 'It was generally thought his majesty would have died, and for a very good reason—for the oldest lion in the Tower, much about the king's age, died a fortnight ago!'

In old times, it was customary to name the lions in the Tower menagerie after the reigning kings, and the fate of the royal beast was thought to be bound up with that of human majesty. The notion is humorously alluded to by Addison, in the *Freeholder*, where he represents the Jacobite country squire inquiring anxiously at the keeper, at the Tower, whether none of the lions had fallen sick on the taking of Perth and the flight of the Pretender!

THE BATTLE OF AZINCOURT.

In connection with St Crispin's Day occurs one of the most brilliant events of English history—the celebrated battle of Azincourt, gained, like those of Crécy and Poitiers, under an immense disparity in point of numbers on the side of the victors, and also under the most disadvantageous circumstances from the effect of fatigue and privations. The chivalrous Henry V., after proclaiming what can only be designated a most unjustifiable war with France, had embarked on an expedition for its conquest at Southampton, in August 1415, and landed near Harfleur, which he invested and captured after a siege of thirty-six days. So great, however, was the loss sustained by the English army, owing to a terrible dysentery which had broken out in the camp, that the project of re-embarking for England was seriously deliberated in a council of war. The idea was indignantly rejected by Henry, who declared that he must first see a little more of 'this good land of France.' With a greatly reduced army, he accordingly commenced a march through Normandy and Picardy to Calais; and after surmounting numerous difficulties, was engaged on 25th October, near the village of Azincourt or Agincourt, by D'Albret, the Constable of France, at the head of an army which outnumbered that of the English monarch in the proportion of at least six to one. In immediate prospect of the conflict, and in reference to the day on which it was to be fought, Shakspeare represents Henry delivering himself as follows:

'This day is call'd the feast of Crispian:
He that outlives this day, and comes safe home,
Will stand a tip-toe when this day is nam'd,
And rouse him at the name of Crispian.
He that shall live this day, and see old age,
Will yearly on the vigil feast his neighbours,
And say, To-morrow is Saint Crispian:
Then will he strip his sleeve and shew his scars,
And say, These wounds I had on Crispian's day.
Old men forget; yet all shall be forgot,
But he 'll remember, with advantages,
What feats he did that day: then shall our names
Familiar in their mouths as household words—
Harry the king, Bedford and Exeter,
Warwick and Talbot, Salisbury and Gloster—
Be in their flowing cups freshly remember'd:
This story shall the good man teach his son;
And Crispin Crispian shall ne'er go by,
From this day to the ending of the world,
But we in it shall be remembered—
We few, we happy few, we band of brothers;
For he to-day that sheds his blood with me
Shall be my brother; be he ne'er so vile,
This day shall gentle his condition:

And gentlemen in England, now a-bed,
Shall think themselves accurs'd they were not here;
And hold their manhoods cheap whiles any speaks
That fought with us upon St Crispin's day.'

As in the two previous great battles between the English and French, the success of the former was mainly owing to their bowmen, whose arrows threw the French cavalry into confusion, and who themselves afterwards broke into the enemy's ranks, and did terrible execution with their hatchets and bill-hooks. The chivalry of France was fearfully thinned, upwards of 7000 knights and gentlemen, and 120 great lords perishing on the field, whilst the loss of the English did not exceed 1600 men. An immense amount of plunder was obtained by the victors, the weakness of whose army, however, prevented them from improving their advantages, and they accordingly continued their march to Calais. From this Henry embarked for England, landed at Dover, and marching in triumph from thence to London, entered that city with a long array of captives, and a pageant of imposing splendour such as had been wholly unprecedented in the case of any previous English monarch.

PUNCH AND PUNCH-BOWLS.

On the 25th October 1694, Admiral Edward Russell, then commanding the Mediterranean fleet, gave a grand entertainment at Alicant. The tables were laid under the shade of orange-trees, in four garden-walks meeting in a common centre, at a marble fountain, which last, for the occasion, was converted into a Titanic punch-bowl. Four hogsheads of brandy, one pipe of Malaga wine, twenty gallons of lime-juice, twenty-five hundred lemons, thirteen hundredweight of fine white sugar, five pounds' weight of grated nutmegs, three hundred toasted biscuits, and eight hogsheads of water, formed the ingredients of this monster-brewage. An elegant canopy placed over the potent liquor, prevented waste by evaporation, or dilution by rain; while, in a boat, built expressly for the purpose, a ship-boy rowed round the fountain, to assist in filling cups for the six thousand persons who partook of it.

Punch is comparatively a modern beverage, and came to us from India, in the latter part of the seventeenth century. One of the earliest printed notices of it, is in Fryer's Travels, published in 1672, where we are told that punch is an enervating liquor, drunk on the Coromandel Coast, and deriving its name from the Industani word *paunch*, signifying five; the number of ingredients required to form the mixture. Sailors brought the novel compound from the east, and for some time it seems to have been drunk by them alone. On the first day that Henry Teonge joined the ship *Assistance*, as naval chaplain, in 1675, he drank part of three bowls of punch, a liquor very strange to him; and we are not surprised, when he further naïvely informs us, that he had considerable difficulty in finding his pillow when he attempted to go to bed. However great a stranger punch was then to him, they soon became intimately acquainted, for it appears from his amusing *Diary*, that naval officers, in those days, were ready to mix and quaff capacious bowls of punch on the slightest provocation.

The Indian potation, making its way from sea to land, met everywhere with a most welcome reception. In 1680, appeared from the pen of Captain Ratcliff a doggrel poem, entitled *Bacchanalia Cœlestia*, which had an immense popularity, though now almost utterly forgotten. In this effusion, Jupiter is represented with the minor deities on Mount Olympus, hearing for the first time of the novel beverage just invented on earth, and determined to try it. Accordingly, all unite to compound a jovial bowl of punch.

'Apollo despatched away one of his lasses,
Who filled up a pitcher from th' well of Parnassus.
To poets new born, this water is brought;
And this they suck in for their morning's draught.

Juno for lemons sent into her closet,
Which, when she was sick, she infused into posset:
For goddesses may be as qualmish as gipsies;
The sun and the moon we find have eclipses;
These lemons were called the Hesperian fruit,
When vigilant dragon was sent to look to 't.
Three dozen of these were squeezed into water;
The rest of th' ingredients in order came after.

Venus, the admirer of things that are sweet,
Without her infusion there had been no treat,
Commanded her sugar-loaves, white as her doves,
Supported to the table by a brace of young loves,
So wonderful curious these deities were,
The sugar they strained through a sieve of thin air.

Bacchus gave notice by dangling a bunch,
That without his assistance there could be no punch,
What was meant by his sign was very well known,
For they threw in a gallon of trusty Langoon.

Mars, a blunt god, though chief of the briskers,
Was seated at table still twirling his whiskers;
Quoth he, "Fellow-gods and celestial gallants,
I'd not give a fig for your punch without Nantz;
Therefore, boy Ganymede, I do command ye
To put in at least two gallons of brandy."

Saturn, of all the gods, was the oldest,
And we may imagine his stomach was coldest,
Did out of his pouch three nutmegs produce,
Which, when they were grated, were put to the juice.

Neptune this ocean of liquor did crown,
With a hard sea-biscuit well baked in the sun.
This bowl being finished, a health was began,
Quoth Jove, "Let it be to our creature called Man;
'Tis to him alone these pleasures we owe,
For heaven was never true heaven till now."
Since the gods and poor mortals thus do agree,
Here 's a health unto Charles his Majesty.'

The toasted biscuit, though long since disused as an ingredient of punch, formed, from a very early period, a favourite addition to many old English drinks. Rochester, when instructing Vulcan how to contrive him a drinking-cup, says:

'Make it so large, that filled with sack
Up to the swelling brim,
Vast toasts, on the delicious lake,
Like ships at sea may swim.'

It was from this use of toasted bread or biscuit, that we acquired the word toast as applied, in the first instance, to a beautiful woman, whose health is often drunk; and, latterly, to the act of drinking the health of any person, or to any idea or sentiment, as it is termed.

The following anecdote, from the *Tatler*, tells us how a piece of toasted bread, in a prepared drink, became ideally connected with a lovely woman. It must be premised that, at one time, it was the

fashion for ladies, attired in elegant dresses made for the purpose, to bathe publicly in the baths of the city of Bath. 'It happened, on a public day, a celebrated beauty was in the Cross-bath, and one of the crowd of her admirers took a glass of the water in which the fair one stood, and drank her health to the company. There was in the place a gay fellow, half-fuddled, who offered to jump in, and swore though he liked not the liquor, he would have the toast. He was opposed in this resolution; yet this whim gave foundation to the present honour which is done to the lady we mention in our liquor, who has ever since been called a toast.'

The five ingredients—spirit, water, sugar, lemon, and spice—from which punch derived its name, were in time reduced to four:

'Whene'er a bowl of punch we make
Four striking opposites we take—
The strong, the weak, the sour, the sweet,
Together mixed most kindly meet.
And when they happily unite,
The bowl is pregnant with delight.'

Or, as another minor poet thus describes the 'materials:'

'Whilst I sat pensive in my elbow-chair,
Four nymphs appeared, O how divinely fair!
Unda came first, in water-colours gay;
Brandysia next, as bright as Phœbus' ray.
In a straw gown, then came Limonia keen,
And Saccharissa sweet, was near her seen;
They, to divert my melancholy strain,
Me, all at once agreed to entertain;
And, to relieve my grief-oppressed soul,
To mix their different quotas in a bowl.
First Unda added to the bowl her share,
Water, as crystal clear, her hand as fair:
Brandysia, next her spirit did impart,
To give a warmth and fillip to the heart;
Nor did Limonia make the drink too keen,
For Saccharissa sweetly stepp'd between.
Whilst fairest Unda pours the limpid stream,
And brisk Brandysia warms the vital frame;
Whilst Saccharissa and Limonia meet
To form that grateful contrast, famed sour-sweet,
And all together make the bowl complete;
I'll drink; no longer anxious of my fate,
Nor envy the *poor* rich, nor *little* great.'

During the whole of the last century, punch ruled with sovereign sway. Besides its peculiar attractions, it had a kind of political prestige, as being the favourite beverage of the dominant Whig party; the Tories, at first, regarding it with prejudicial eyes as a foreign interloper coming in about the same time as an alien usurper. The statesmen, generals, and admirals of King William, whether Dutch or English, revelled in 'punch.' The wits and essayists of Anne's Augustan age praised it as the choicest of liquors—need we speak of Johnson, Reynolds, Garrick, Fox, Sheridan, as punch-drinkers! The punch-bowl was an indispensable vessel in every house above the humblest class. And there were many kindly recollections connected with it, it being very frequently given as a present. No young married couple ever thought of buying a punch-bowl; it was always presented to them by a near relative. And the complete change in the feelings of society, as respects drinking-usages, is prominently shewn by the fact, that a punch-bowl was in the last century considered to be a very suitable present from a merchant or banker to a trusty clerk or book-keeper, or from a ship-owner to a sea-captain. Bowls were made and painted with inscriptions and devices for testimonial purposes; the first successful whaling-voyage from Liverpool is commemorated by a punch-bowl, given by the merchants to the fortunate captain. This bowl, on which the ship is depicted in full sail, is now in the collection of Mr Joseph Mayer, the eminent archæologist.

There is no error in saying, that the punch-bowl was frequently one of the most cherished of household effects. In dissenters' families, from its being used as a baptismal-font, it acquired a kind of semi-sacred character; and the head of a household naturally felt a solemn, benignant pride in dispensing hospitality from the vessel in which his father, himself, and his children had been christened. Nor did the high-churchman less esteem the bowl. Punch, as the clergy admitted, was a thoroughly orthodox liquor; for though excess in wine was reprobated by the Scriptures, there was not, from the first chapter of Genesis to the last in Revelation, one word said against punch!

Songs, innumerable, proclaimed the virtues of punch, and extolled it as a panacea for all diseases. Dr Short, a physician of great ability and repute, writing in 1750, says that 'punch is an admirable liquor—the best liquor in the world—the universe cannot afford a better liquor for students.' But doctors differ, and Dr Cheyne, with much better judgment, asserted that there was not one salutary ingredient in it, except the water. Alluding to its Indian origin, he termed it a 'heathenish liquor,' and stigmatised it as being 'nearest arsenic, in its deleterious and poisonous qualities.' It was, no doubt, the unhealthy qualities of punch, the horrible headaches it inflicted, that drove it completely out of use. Besides, it was a terror to tidy housewives; 'the nastiest, sloppiest sluster,' as an old lady once told the writer, ever placed on a dining-room table. For a continual filling of glasses from flowing bowls, with continually increasing unsteadiness of hands, soon made a swimming table and a drenched carpet. Punch-stains, too, were in some materials ineradicable—in black cloth particularly so, leaving small holes, as if the cloth had been burned by a strong acid.

In Scotland, the jolly topers of its western metropolis, the city of Glasgow, long enjoyed an undisputed pre-eminence in the manufacture of punch. The leading ingredients, rum and lemons, were compounded with sugar and cold water, after a peculiarly artistic fashion, which was supposed to be only known to the initiated. This far-famed liquor came into disrepute, on the occasion of the visitation of the cholera to Scotland, about 1833. Being proscribed by the medical faculty, it lost its hold on public favour, a position which it has never since regained. Advanced ideas on the question of temperance have, doubtless, also had their influence in rendering obsolete, in a great measure, this beverage, regarding which some jovial spirits of the old school, reverting sorrowfully to their youthful days, will inform you that gout has considerably increased in the west

since the abandonment of punch for claret and champagne.

As may readily be supposed, many of the old tavern-signs displayed a punch-bowl. Addison, in the *Spectator*, notices a sign near Charing Cross, representing a punch-bowl curiously garnished, with a couple of angels hovering over, and squeezing lemons into it. The most popular tavern of the last century that exhibited a punch-bowl on its sign, was the 'Spiller's Head,' in Clare Market. Spiller was a fellow of infinite jest; he started in life as a landscape painter, but taking to the stage, became a very popular actor, and was the original 'Mat of the Mint' in the *Beggars' Opera*. Akerby, his biographer, an artist also, says that Spiller, in the character of Mat, 'outdid his usual outdoings to such a degree, that whenever he sung, he executed his part with so truly sweet and harmonious a tone, and in so judicious and ravishing a manner, that the audience could not avoid putting his modesty to the blush by repeated clamours of encore.' The history of the sign is curious. Spiller, as may be learned from one of his benefit-tickets, engraved by Hogarth, was not unacquainted with the inside of a debtor's prison. During his last confinement, he so charmed one of the turnkeys with his wit, that the man, on Spiller's liberation, resigned office, and took a tavern, so that he might oftener enjoy the laughter-provoking comedian's company. As many notabilities flocked to the house for the same purpose, the original sign was considered scarcely suitable; and so, as Akerby informs us, 'by the concurrent desire of an elegant company, who were assembled there over a bowl of arrack-punch one evening, and by the generous offer of Mr Laguerre, who was one of the company, and as excellent a master in the science of painting as music, the sign was changed from the 'Bull and Butcher' to 'Spiller's Head,' and painted by the said Mr Laguerre gratis, in a manner and with a pencil that equals the proudest performances of those who have acquired the greatest wealth and reputation in the art of painting.'

A PUNCH-BOWL SIGN: THE 'SPILLER'S HEAD.'

The accompanying illustration, representing Spiller with a punch-bowl before him, is taken from an engraved copy of the sign in question. But ere this could be painted and set up, Spiller, struck down by apoplexy on the stage, had fallen a victim to the pernicious bowl. And so the following lines were painted beneath the figure:

'View here the wag, who did his mirth impart,
With pleasing humour, and diverting art.
A cheerful bowl in which he took delight,
To raise his mirth, and pass a winter's night.
Jovial and merry did he end his days,
In comic scenes and entertaining plays.

The 'Spiller's Head' was a favourite haunt of the wits and artists of the Hogarthian era. At a later period, when Clare Market was voted low, and 'Old Slaughters' became the artists' house of resort, they were waited on there by a witty waiter, whom they named Suck, from his habit of slily drinking out of the bowls of punch, as he carried them upstairs to the company. This practice, however disgusting it would be considered now, was then looked upon as a mere trifling indiscretion, and forgiven in consideration of the waiter's wit and birth, he being, according to his own account, an illegitimate son of the renowned Spiller.

THE CHURCH BUILT BY THE PRESIDENT OF THE MEDMENHAM CLUB.

On the 25th of October 1761, the six musical bells of West Wycombe chimed their first merry peal, to announce the completion of the tower which forms part of one of the most extraordinary churches in the kingdom. The old church was entirely demolished, with the exception of a portion of the tower and chancel, which were again united by the new nave, and made to suit its peculiar and original design. The only door into it is through the tower at the west end; and such is the effect of its general appearance, that if a stranger were brought into it blindfolded through the grave-yard, he could scarcely believe himself in a place of Christian worship. It is a large oblong room, sixty feet in length, and forty in width; the ceiling is flat, and painted in mosaic pattern, with a festooned border on the side-walls, where they join the ceiling. The windows, which are large and numerous, are the common sashes of the period, each with a

window-seat, that opens, so as to form a cupboard; the floor is paved with black and white marble in lozenges; the seats are mere movable benches; the pulpit and reading-desk, which stand respectively on each side of the entrance to the chancel, are mahogany arm-chairs, with a book-stand in front. Each stands on a low chest of drawers, and when required for divine service, the drawers are pulled out to form steps for the minister to enter. The clerk's desk is somewhat similar, but stands at a distance down the nave. The font, placed in the centre, is of marble; it is about the size, and has the appearance of a small wash-hand basin; four doves are placed round the verge of the font; and it rests on a slender pillar, round which a serpent is entwined, as if pursuing the

INTERIOR OF WEST WYCOMBE CHURCH.

doves. It is said that the nave was thus constructed, that it might be used for convivial and other secular meetings, the window-seats being wine-bins, and cupboards for domestic utensils.

'Ah! well-a-day!—but this seems wondrous strange!
Is this a mart where gossips sell and buy?
A room for lectures, or a stock exchange?
Is that, which seems a pulpit to the eye,
A desk, where auctioneers their labours ply?'

MOULTRIE.

The chancel, which is very small, can scarcely be seen from the nave, for the entrance is so blocked up on both sides by the manorial-pews, or rather galleries, that the passage between is exceedingly narrow. When entered, it has a rich and gorgeous appearance. The ceiling is brilliantly painted with a representation of the Last Supper; the windows are filled with stained glass; the altar-rails are of massive oak, elaborately carved; the communion-table inlaid with mosaic-work; and the floor paved with fine polished marble. Yet the whole has a secular appearance.

The tower, which has large unsightly windows, is surmounted by a low spire, on which is placed a large hollow ball forming a room, with a seat round it that will hold twelve persons. But as it is entered by a ladder outside the spire, few persons have the nerve to make themselves acquainted with its interior. On the north wall, outside the church, which is dedicated to St Lawrence, there is a representation of him suffering martyrdom on a gridiron, with this inscription: 'Though I give my body to be burned, and have not charity, it profiteth me nothing.' And on the south side, there is a sun-dial, with this text: 'Keep thy tongue from evil-speaking, lying, and slandering.' Near the east end of the church is erected a large hexagonal mausoleum, without a roof. This singular building contains niches and recesses for sepulchral urns and monuments, and stands, together with the church, on a very high hill apart from the village. When seen at a distance, it is impossible to describe the odd appearance which the whole pile presents—the ball above the tower looking as if flying in the air.

These remarkable structures were built by the gay and eccentric Sir Francis Dashwood, about the time he became Lord le Despencer. He was the originator and president of the notorious Medmenham Club, or Monks of St Francis, as they named themselves, assuming the garb, but not the austerities, of that order. About half-way down the hill is an excavation, a quarter of a mile long, and running under the church, which is also said to have been his lordship's work, but more probably he only adapted it to his fancy. It is entered by a massive door, formed in an artificial ruin, and

consists of a series of lofty caves, connected by a passage, which is in some places divided into two or three parts by huge pillars of chalk, left to support the roof. Near the middle of the excavation, there is a small pool, which is now crossed by stepping-stones, but formerly, it is said, it could only be passed in a boat. The excavation terminates in a large, lofty, circular cavern, with a vaulted roof, in which is a hook for suspending a lamp or chandelier. Here, according to local tradition, the Medmenham Club occasionally held its meetings. And certainly, if its president wished to be near his home, this spot would be convenient, being only half a mile distant. So also, if the club desired special secrecy, no place could be more suitable, seeing that when the door at the entrance was barred from within, and the pool, which the monks called the Styx, was crossed in their boat, their doings in this cavern would be as secure from interruption from the rest of the world, as if they were actually being enacted in the infernal regions themselves. But it is probable, notwithstanding all that has been said on the subject, that nothing was really practised either here, or at Medmenham, their usual place of meeting, more profane or immoral than what was openly practised in most of the convivial societies of that period. This was strenuously maintained in his old age by the last surviving member of the society. And doubtless it was only the mystery and eccentricities with which they chose to invest their proceedings, that gave rise to so many foolish tales and conjectures respecting their doings. As to the assertions and insinuations against them by the author of *Chrysal*, they are unworthy of credit, since his description of their place of meeting shews that he had no personal knowledge of the subject. Medmenham Abbey is not, as he states, in an island, but beautifully situated on the north bank of the Thames; and the room in which the club met remains just as described by Langley in 1797, and is now frequently used by picnic-parties. The rest of the building, though occupied by cottagers, has been so slightly altered externally, that the whole has realised the appearance predicted by Langley seventy years ago. The additional ruined tower, cloister, and other corresponding parts, as he says, were made with so much taste and propriety, that, now they have become clothed with ivy and mosses, they can scarcely be distinguished from the ancient remains; and the whole building has now assumed such a natural and picturesque appearance, that more than one eminent artist has chosen it for the subject of his pencil, probably regarding the whole as the interesting remains of an ancient monastery.

OCTOBER 26.

St Evaristus, pope and martyr, 112. Saints Lucian and Marcian, martyrs, 250.

Born.—Charles François Dupuis, astronomer, 1742, *Trie-Chateau, near Chaumont;* George James Danton, revolutionary leader, 1759, *Arcis-sur-Aube.*

Died.—Abulfeda, Mohammedan historian, 1331, *Syria;* Samuel Puffendorf, distinguished jurist, 1694, *Berlin;* Sir Godfrey Kneller, portrait-painter, 1723; Dr Philip Doddridge, eminent divine and author, 1751, *Lisbon.*

DANTON.

Danton, more than any man whom the French Revolution threw to the surface, realises the popular idea of a revolutionist. In person he was almost gigantic—tall and muscular. His head was large, and covered with stiff black hair, and his eyebrows bushy. His features were bold and irregular, and were by some called ugly; but when lit up by the fire of his intellect, their coarseness disappeared in harmony. His voice was powerful—in the outbursts of his oratory, terrible—and was likened to thunder and a lion's roar. Courage, audacity, and power were manifest in his bearing, and his career did not belie his appearance.

He was born in 1759 at Arcis-sur-Aube, of well-to-do farming-people, and was educated for a lawyer. He went to Paris to finish his studies, and there commenced practice as a barrister. He sought the acquaintance of Mirabeau, Camille Desmoulins, Robespierre, Marat, and others, notable for their devotion to revolutionary ideas. He lived economically, and spent his days in the assembly and his nights at the clubs. He ventured to speak, and the discerning were not slow to perceive that in the orator a great power had arisen. Danton attached himself to the Girondists, and, says Lamartine, 'Madame Roland flattered him, but with fear and repugnance, as a woman would pat a lion.'

Daily he grew in popularity, and with Marat led the formidable club of Cordeliers. The court sought his influence by bribes, and in the pride of his strength he exclaimed: 'I shall save the king or kill him!' The revolution, however, was greater than Danton. He who would live in it was forced to run with it or be trampled in its path. After the flight of Louis to Varennes, he advocated his dethronement, and declared in the assembly that hesitation in pronouncing the throne vacant, would be the signal for general insurrection. When Prussia, in 1792, invaded France in vindication of royalty, and spread terror on every side, Danton, by his brave words, gave courage to the nation. 'Legislators!' said he, 'it is not the alarm-cannon that you hear: it is the *pas-de-charge* against our enemies. To conquer them, to hurl them back, what do we require? *Il nous faut de l'audace, et encore de l'audace, et toujours de l'audace*: To dare, and again to dare, and without end to dare!' In a few weeks, fourteen republican armies were in the field, repelling the allied forces with a vigour and success which set Europe aghast. For the king's death Danton voted, but, like the Abbé Sièyes, assigned no reason. In his defiant style, he said: 'The coalesced kings threaten us; we hurl at their feet, as gage of battle, the head of a king.'

Under the Revolution, Danton was first a minister of justice, and then president of the Committee of Public Safety—a body of six men, who were intrusted with absolute executive power, and who therefore bear the infamy of the Reign of Terror. In the course of events, Robespierre and Danton came face to face as rivals for the leadership of Paris, and in Paris, of France. Danton was luxurious, reckless, generous, and frank; on the other hand, Robespierre was ascetic, cold, severe, cautious, and uncompromising. In Robespierre's presence, Danton's power seemed to desert him, a-

if he were a bird and Robespierre a snake. Feeling that the contest was unequal, he resigned office, and, with his young wife, retired to rural privacy near his native town of Arcis. In domestic confidence, he asserted that the reason of his retreat was horror at the approaching fate of Marie Antoinette.

Robespierre was of far too suspicious and envious a temper to allow an adversary to escape so quietly. Danton likewise had associates who keenly felt his absence from the field of action. He was recalled from Arcis to Paris. He met Robespierre, and was accused by him of embezzling the public money. He retorted by calling Robespierre a sanguinary tyrant. This dispute fixed his doom. His wife and friends urged him to fly. 'Whither fly?' answered he. 'If freed France cast me out, there are only dungeons for me elsewhere. One carries not his country with him at the sole of his shoe.' He heard of the arrest of his friends, and that his own warrant was made out, yet he would not move, saying: 'They dare not, they dare not!' But he forgot that he had Robespierre the merciless, the inflexible, to deal with. He was denounced by St Just as a traitor, and on the night of the 31st March 1794, was arrested. Brought up for trial on the 2d of April, he was asked by Fouquier Tinville his name and place of abode. 'My name,' said he, 'is Danton; a name tolerably well known in the Revolution. I am thirty-five years old. My abode will soon be in nothingness, but my name shall live in the pantheon of history.' He defended himself with wild and scornful words, but was silenced on the ground that he was inciting the people to revolt. No witnesses were called against him, and his own witnesses were refused to be heard. As a matter of course, he was declared guilty.

In prison he affected indifference. 'They think to do without me,' said he; 'they deceive themselves. I was the statesman of Europe. They do not suspect the void which this head leaves' (pressing his cheeks between the palms of his large hands). 'As to me, I laugh at it. I have enjoyed my moments of existence well; I have made plenty of noise upon earth; I have tasted well of life—let us go to sleep!' In the cart in which he was taken to execution, he had thirteen companions, and among them Camille Desmoulins, the sprightliest spirit of the Revolution, who could not believe that he would be allowed to die. He wriggled to get free from the cords which bound him until his clothes came off, crying at the same time: 'Generous people! unhappy people! you are deceived, you are undone, your best friends are sacrificed! Recognise me! save me! I am Camille Desmoulins!' 'Be calm, my friend,' prayed Danton; 'heed not that vile rabble!' At the foot of the scaffold, Danton was heard to ejaculate: 'O my wife, my well-beloved, I shall never see thee more!'—then, interrupting himself—'Danton, no weakness!' He was the last to suffer. His last words were to Samson, the executioner: 'You will shew my head to the people—it is well worth shewing!' As it fell, Samson caught the head from the basket, and carried it round the scaffold amidst the howls of the people.

Danton died on the 5th April 1794. Robespierre's triumph was brief; his own head fell on the 28th of July.

SIR GODFREY KNELLER.

Sir Godfrey Kneller was the favourite painter of portraits in England, from Charles II.'s time to the reign of George I.

He was born at Lubeck in 1648. After having been some time a painter, he came to England in the ordinary course of his travels. When here, by a series of accidents, he was employed to paint Charles II. and the Duke of Monmouth, and gave such satisfaction, by his portraits of these personages, that he found it profitable to remain in the country.

Horace Walpole maintains that Kneller, had he chosen to turn his attention to high art, would have made an artist of the first class: as it was, he only painted portraits, and some of those in a very inferior manner. The reason which he assigned for his choice of portrait-painting above other branches of art, was that of a man who cared more for his rank on this earth than his rank in the universe. 'Painters of history,' he observed, 'make the dead live, and do not begin to live themselves till they are dead. I paint the living, and they make me live.'

Certainly, so they did. Kneller lived in magnificent style, lost £20,000 by the South-sea affair, and died in possession of £2000 a year. His accumulation of wealth bears witness to his popularity. He had the honour of painting ten crowned heads. These were Charles II., James II. and his queen, William and Mary, Anne, George I., Louis XIV., Peter the Great, and the Emperor Charles VI. Besides these, he painted many other illustrious personages; among whom were Addison, Bishop Burnet, John Locke, Lady Mary Wortley Montagu, Pope, Newton, &c. He painted the beauties of Hampton Court for King William, and likewise perpetuated on canvas the members of the Kit-Cat Club. These celebrated portraits of the most distinguished Whigs of that day were painted for Jacob Tonson, the secretary of the club. Mr Christopher Cat, pastry-cook, of King Street, Westminster, and keeper of the tavern where the club met, was thus immortalised.

James was sitting to Kneller at the very minute that the news reached him of the arrival of the Prince of Orange. The picture was for Pepys, who had been a favourite and faithful servant. James told the painter to proceed with his work, that his good friend Pepys might not be disappointed.

Kneller was knighted in 1692 by William, and made a baronet in 1715 by George I. He was always a vain man, a weakness for which his friend, Pope, incessantly ridicules him in his letters. The poet furnished an inscription (by no means a brilliant specimen of his genius) to Sir Godfrey's monument in Westminster Abbey, for the erection of which the latter himself bequeathed the sum of £300.

THE FOUNDER OF MERTON COLLEGE.

A codicil to the will of Walter de Merton, leaving the residue of his property to his college, bears date October 26, 1277. This ecclesiastic was one of the four lord-chancellors to whom Oxford is so largely indebted. These were Walter de Merton, who founded Merton College; William de

Wykeham, the founder of New College; William of Waynflete, who founded Magdalen College; and Thomas Wolsey of Ipswich, the founder of Christchurch College. Walter de Merton may be said to have exercised the most influence of the four upon Oxford, because it was he who introduced the collegiate system; the others only elaborated and extended it. In the same way Merton College must be considered the most interesting, if not the most beautiful, because it was the germ whence the rest were developed. The foundation of this establishment appears to have been a scheme to which Chancellor Merton gave his whole heart. There were, doubtless, halls of greater antiquity, but they consisted only of lodgings for the scholars. The scheme of Walter provided a chapel, with residence for chaplains, and accommodation for a warden having charge of the scholars, within the same premises. The endowments speak of a strong influence exerted on behalf of his favourite project, for the lands forming great part of the revenue are widely scattered, marking, it would seem, the gifts of numerous nobles. There are lands and houses and chancels of churches beyond the Tyne, pertaining to Merton College.

Following the rule, that the affix to a Christian name denoted a birthplace, Walter's biographers have mentioned Merton, in Surrey, as the place of his nativity. This is, however, conjectural; and there is equal probability that he was born at Basingstoke, where it is certain his parents lived, died, and were buried. In his after-days, he founded a hospital in Basingstoke to the memory of his father and mother. The day of his death, and the place at which it occurred, are as uncertain as those of his birth; but his will directed that he should be buried in his cathedral of Rochester. The intermediate events of his life are scarcely better known. He was lord-chancellor of England more than once; but whether he received the seals of office twice or thrice, is not quite apparent. Bishop Hobhouse considered he was chancellor twice during the reign of Henry III.; and it is certain that he fulfilled the duties of the chancellorship for the two years preceding the coronation of Edward I. When that event took place, Walter retired from office, and accepted the see of Rochester. A view of his life is a commentary upon his times. Scholar and ecclesiastic, he was chosen by the most powerful nobles in the land, who would not so trust each other, to hold the highest post.

THE TWO BIG BENS.

No other bell ever underwent such a career of misfortune as that which was intended for use in the new Houses of Parliament. From the time when that immense structure was commenced, it was resolved that both the clock and the hour-bell should be the largest ever seen in this country; but it was not till 1844 that the late Sir Charles Barry solicited tenders for their construction. Through a course of wrangling, which it would be of little use here to elucidate, fifteen years elapsed before the clock was finished and actually at work in its place; this was in 1859. The clock is not only the largest but one of the most accurate we possess. The ponderous weights hang down a shaft 160 feet deep, and require winding-up only once a week. The pendulum, 15 feet long, weighs 680 pounds; and so delicate is its action, that a small weight of only one ounce, placed on a particular part of the apparatus, will alter the rate of the clock one second per week. On the four sides of the clock-tower are dial-rooms, each a large apartment, traversed by mechanism which communicates motion from the clock to the hands. Each of the four clock-dials is 22½ feet diameter; and the mere cast-iron framework of each dial weighs no less than 4 tons. The hour-figures are 2 feet high and 6 feet apart, and the minute-marks are 14 inches apart. The outer point of the minute-hand makes a sudden leap of 7 inches every half minute. The hands weigh more than two hundredweight the pair; the minute-hand being 16 feet long, and the hour-hand 9 feet. In order to render the dials visible at night, each dial-face is glazed with enamelled or opalised glass, with 60 gas-jets behind it.

Such is the magnificent clock, for which suitable bells were sought to be made. The original scheme was for 'a clock that would strike the hours on a bell of eight to ten tons, and chime the quarters upon eight smaller bells.' It was afterwards decided that there should be only four bells for the chimes, in addition to the great hour-bell. In the four corners of the bell-room these bells are placed; the first with a weight of 4½ tons, and yielding the musical note B; the second, weight 2 tons, and note E♯; the third, weight 1¾ ton, and note F♯; and the fourth, weight 1¼ ton, and note G♯. By varying the order in which these are struck, they produce four chimes or partial melodies, at the four divisions of each hour; and at the full or completed hour, the whole sixteen sounds form a simple but beautiful melody in the key of E major. These four bells were made and hung nearly in the manner first designed; but the fifth—the king of the belfry, that was to hang in the vacant space between them—has not been so fortunate. It was to have been about 9 feet in diameter, 9 inches thick at the sound-bow, and to weigh 14 tons—nearly three times the weight of the great bell of St Paul's Cathedral; it was to be struck by a hammer of a ton weight, and was then to yield the note E, one octave lower than the E of the chimes, and forming a musical chord with the whole of them. The bell was designed by Mr E. B. Denison, who, as an amateur, has displayed considerable skill in the theory of clock and bell work. After much disputing between commissioners, architects, and others, it was cast in August 1856, at Stockton on Tees, in Yorkshire. The mould was six weeks in preparation. The metal was melted in two furnaces, each containing ten tons. Eighteen out of the twenty tons of molten metal were poured into the mould, producing a bell about 8 feet high and 9½ in diameter at the mouth. When turned and trimmed and finished, it weighed about 15 tons—a little more than had at first been intended. The ponderous mass was then carefully conveyed to London, and placed for a time at the foot of the clock-tower, where it was visited by multitudes of persons. Every Saturday it was struck a certain number of blows, that the quality and loudness of the sound might be tested. On one occasion,

the E was found to be a dull and uncertain sound; and this leading to a close scrutiny, it was found that, owing to a flaw in the metal, the bell was practically useless, and would ultimately be broken by the blows of the hammer. It was deemed a fortunate circumstance that the discovery was made before the bell had been raised into the tower. Officially, the bell was to have been named 'St Stephen;' but a random sobriquet used in the *Times*, 'Big Ben,' caught the taste of the public; and in October 1857, it was known all over the country that 'Big Ben was cracked.' There then ensued another series of disputations, accusations, and counter-accusations. Another bell was cast by another bell-founder; it was somewhat less in weight than the former, but was made to yield the same tone. In October 1858, it was raised into its place, a task requiring very perfect appliances; for the weight, raised to a height of nearly 200 feet, was not less than 25 tons, or 56,000 pounds—including bell, cradle, chains, and tackle.

Thus was Big Ben the second cast on the 10th of April, taken out of the mould on the 24th, sent to Westminster on the 31st of May, tried as to tone by Dr Turle on the 18th of June, and finally raised to his destined place in October. During November, Big Ben underwent a long series of blows with hammers weighing from 4 to 7 hundredweight each. The clock was put up in its place, and for some time the inhabitants of the metropolis heard the chime-bells every quarter of an hour, and Big Ben every hour. But another misfortune arose: Ben the second cracked like Ben the first. Then ensued an accusation, a bitter controversy, and a lawsuit; and then fragments of Big Ben were analysed by Professor Tyndall and Dr Percy; while Professor Airey tried to ascertain whether the bell might still be used, though cracked. The subject of Big Ben became almost ludicrous. Not only was the deep E of the bell not to be heard, but the other four were silenced also, and the clock was stopped; insomuch that Earl Derby, in June 1860, said in the House of Lords: 'We all know the circumstances under which we have been deprived of the doubtful advantage of hearing the tones of the great bell; but when a clock ceases to address itself to the sense of hearing, that is no reason it should decline to present itself to the sense of sight. One of the hands has disappeared altogether, and the other stands at twelve; so that it has the merit of being right at least once in the twelve hours.' The earl spoke of the 'doubtful' advantage of hearing the bell. It appears that the tone, when very slowly repeated, had a melancholy and depressing effect on many persons, and was not much liked by those who were attending parliament, or the courts in Westminster Hall. Earl Grey, speaking after the Earl of Derby, 'rejoiced that the great bell had been cracked, and trusted no attempt would be made to make the clock speak to their ears again in the old tones.'

The two Big Bens cost the country nearly £4000, all expenses included. One was broken up and remelted; the other had the flaw or crack for which it was condemned, widened by filing, in order to prevent vibration; in calm weather it can now be heard over the greater part of London.

OCTOBER 27.

St Frumentius, apostle of Ethiopia, bishop and confessor, 4th century. St Abban, abbot in Ireland, about 500. St Elesbaan, king of Ethiopia, confessor, 6th century.

Born.—Mrs Hester Chapone, moral writer, 1727, *Twywell, Northamptonshire;* Captain James Cook, celebrated voyager, 1728, *Marton, Yorkshire;* Dr Andrew Combe, eminent physiologist, 1797, *Edinburgh.*

Died.—Marcus Junius Brutus, assassin of Julius Cæsar, 42 B.C., *Philippi;* Pope Eugenius II., 827; Michael Servetus, burned for heresy at Geneva, 1553; Rev. John Thomson, landscape-painter, 1840, *Duddingston, near Edinburgh;* Madame Ida Pfeiffer, celebrated traveller, 1858, *Vienna.*

MICHAEL SERVETUS.

The fate of this unfortunate man has evoked an amount of discussion and interest which were doubtless little anticipated by the civil and spiritual rulers of Geneva, when they consigned him to the flames as a heretic and blasphemer. The reputation of Calvin and his followers is deeply concerned in this transaction, which no one, even of his warmest admirers, will at the present day attempt to defend, however much they may try to palliate and excuse. As regards the Reformers, and the right claimed by them of making the Scriptures the sole rule of faith, and interpreting them according to the dictates of private judgment, the burning of Servetus must be pronounced one of the most impolitic acts which they could have perpetrated, seeing that by this proceeding they committed themselves to the same cruel and intolerant system which they denounced so strongly in the Church of Rome.

Servetus was a native of Villanueva, in the kingdom of Aragon, in Spain, and having been destined by his father for the legal profession, was sent to study at Toulouse. Here he devoted himself to theological rather than juristic studies, and the result was a book entitled *De Trinitatis Erroribus*, which he published when only twenty-two. The heterodox views propounded in this work gave deep offence both to Protestants and Catholics, and so threatening to his safety was the hostile feeling excited, that the author deemed it prudent to change his name to Michel de Villeneuve, after his native town. He commenced, too, about this time the study of medicine, in which he made great proficiency, and appears, from a passage in his writings, to have first propounded the theory of the circulation of the blood, which, in the following century, was experimentally demonstrated by Harvey. Such eminence did he attain in his profession, that he came to be regarded as one of the ablest physicians in France, and both practised and lectured with great success at Paris, Lyon, and other places. Having subsequently obtained the post of municipal physician to the town of Vienne, in Dauphiné, he settled down there, and might have lived in tranquillity to the end of his days, were it not for an ardent missionary spirit which led him to fancy himself destined by Heaven for carrying out a sweeping reformation in religious doctrine and belief. With this view he composed, and had stealthily printed, his work entitled

Restitutio Christianismi, in which the same views which he had already promulgated regarding the Trinity were advanced afresh. Large consignments of copies were forwarded to Lyon, Frankfort, and Geneva, and in consequence of a representation made by a citizen of Lyon, Guillaume Trie, residing at Geneva, Servetus was arrested at the instance of the ecclesiastical authorities of Vienne, and subjected to a close examination. That Calvin, who had been engaged in a correspondence with Servetus during the composition of the book in question, and been made the subject by the latter of a rather acrimonious attack, was the original mover in this transaction, is a doubtful point; but it would seem that he handed over to Trie various documents which he had received from Servetus, and which were now produced in evidence before the inquisitors. They were, however, balked of their victim, who managed to escape by night from his confinement. For upwards of three months he remained concealed in France, and then took his way for Italy, with the intention of establishing himself at Naples as a physician. Through some unaccountable infatuation, the path which he chose was through Switzerland and Geneva, and in the latter town he arrived about the middle of July 1553. He dwelt in an inn there for about a month, and was on the eve of continuing his journey, when he was arrested in name of the Genevan Council, and committed to prison. A long list of charges, on the ground of heresy, drawn up by Calvin, who then exercised a paramount influence in Geneva, and had taken the initiative steps in procuring the arrest of Servetus by the state authorities, was produced in court against the unfortunate stranger. After a long and protracted trial, in which the magistrates and churches of Zurich, Berne, Basel, and Schaffhausen were consulted, and an unsuccessful demand also made by the authorities of Vienne for the delivery of the prisoner to them, sentence of capital punishment by burning was pronounced on 26th October, and executed the following day. The scene of this memorable event was the eminence of Champel, situated a little distance to the south of Geneva, and commanding a most enchanting view of the lake and surrounding mountains. To the end Servetus maintained, with unflinching constancy, his Unitarian opinions, rejecting firmly the pertinacious exhortations of the reformed pastor, Farel, who attended him to the stake. His last words were: 'Jesus, thou Son of the eternal God, have mercy upon me!'

In passing judgment on the chief actors in this tragedy, we must bear in mind that the principles of religious toleration, as now recognised, were in the sixteenth century not only almost unknown, but reprobated as dangerous and atheistic. Next to professing and disseminating religious error, was the guilt of those who permitted it to exist, and having the power of punishing heretics, refrained from its exercise. Toleration and indifference were, with our earnest-minded and devout ancestors, convertible terms. And it was argued that if treason and disrespect to earthly powers incurred the severest penalties, much more ought these to be inflicted on the guilty parties who, by their maintenance of false doctrine, had both imperilled souls, and done despite to the majesty of Heaven. Such sentiments were not peculiar to the Roman Catholics, but were equally shared by the adherents of the Reformed doctrines, who denounced the cruel persecutions of the papists, not on the ground of religious liberty, but on that of impiety in destroying the holders of the true faith. All sects, and even that to which Servetus belonged, agreed in the duty of exterminating heretics and unbelievers by the sword. Viewed in this light, we can therefore by no means regard Calvin as the unwarranted murderer of Servetus, seeing that he had the approval of the most eminent divines and writers of his day for the deed which was perpetrated under his sanction. But, abstractedly considered, it was a most foul and unjust action, and has left an indelible stain on the memory of the great reformer. An offence was committed, in the first instance, against the law of nations, by assuming jurisdiction over an absolute stranger, a citizen of another country, and who was merely passing through the city of Geneva. No moral or political offences were imputed to the prisoner, who seems, through his whole life, to have been of the most unblemished behaviour, and however offensively he might express himself, had never committed a greater transgression than claiming the right of interpreting the Scriptures according to the dictates of his own judgment. That he was sincere in his belief, is evident from the constancy with which he maintained his principles to the last. And the injustice of refusing to allow him the aid of an advocate—though such an interdiction was in accordance with the laws of the state—and the strong personal animus by which Calvin seemed to be inspired in his procedure towards Servetus, must ever excite the utmost indignation and regret.

The personal character of this victim of intolerance has been variously represented by the partisans and enemies of Calvin—the former depicting him as a man of weak intellect, arrogant and overbearing, but withal cowardly and subservient, and displaying in his conduct a total absence of truth and candour; whilst by the latter he is held up to admiration, as possessing every quality which contributes to form a hero and martyr. Neither of these portraits is correct. It must be admitted that in his defence before the inquisitors at Vienne, he made many statements which, whatever palliation might be made for him on the plea of self-defence, were indubitably false; and that when defending himself before the council of Geneva, he was most intemperate in his abuse of Calvin. But, on the other hand, there can be no doubt of his sincerity in the pursuit of truth, however much opinions may differ as to his having attained that object. His moral purity was unimpeachable, and in point of learning, industry, and scientific skill, he must be admitted to have fallen little, if at all, behind the most distinguished men of his century.

IDA PFEIFFER.

Among the many travellers who at different times have journeyed over and explored the various countries of our globe, the name of Madame Ida Pfeiffer deserves to be recorded as one of the most extraordinary and peculiar of the class. The mere fact of a woman accomplishing such an amount of travel, would in itself be an unprecedented circumstance; but when we reflect, in addition, that by herself, unattended, and but scantily provided with funds, she forced her way

through savage and inhospitable lands, where in some cases the foot of the European had never before trod, and where she experienced every imaginable species of danger and privation, our wonder and interest are heightened tenfold, and we experience a lively curiosity to know something of the personal history of so undaunted and adventurous a wanderer. This feeling is in nowise diminished by the perusal of the various narratives of her journeys, written in the most simple, unpretending style possible, without making the least pretence to scientific or politico-economical knowledge, but displaying, nevertheless, a fund of shrewd observation and sound common sense, combined with great dramatic and descriptive interest.

The maiden-name of this celebrated traveller was Reyer, and she was the third child of a wealthy merchant in Vienna, where she was born in October 1797. Being the only girl in a family of six, she freely shared in childhood in the sports of her brothers, and was encouraged in such tendencies by her parents, who allowed her to dress in boy's clothes, and take part in all sorts of rough games and pranks. This state of matters continued till her father's death, when Ida was about nine years old. A few months after this event, her mother, thinking she had worn the male attire long enough, obliged her to change her trousers for petticoats, an order which occasioned her such grief and indignation, that she actually made herself ill, and by the doctor's advice she was allowed to resume her former costume, and continued to wear it till the age of thirteen. For a time she maintained the character of an incorrigible hoyden. Considering the pianoforte as too much of a feminine instrument, she resisted long being taught its use, and would actually often cut her fingers, or burn them with sealing-wax, to unfit them for practising. Had she been allowed, she would have gladly made herself a proficient on the violin. While she was still a very young girl, a young man was received into Madame Reyer's house as tutor to the family, and it was not long before a warm attachment sprang up between him and Ida. Influenced by this new feeling, she abandoned her old masculine tendencies, and devoted herself assiduously to the acquisition of female accomplishments, useful and ornamental. The object of her attachment was in every way worthy of her, of unblemished character and manners, and greatly beloved by the whole family, her mother included. Having obtained subsequently a good situation in the Austrian civil service, he made a formal offer of his hand; but through some unaccountable caprice, her mother positively refused her consent, and even regarded the young man from that time forward with feelings of the deepest aversion. Ida inherited a considerable fortune from her father, and it was probably with the idea of her contracting a splendid alliance that she was thwarted in her present wishes. But though many other eligible suitors proffered themselves, she would listen to none of them, and the result was a sad series of domestic contentions. Worn out at last by importunity, she consented to receive the proposals of Dr Pfeiffer, an advocate of considerable celebrity in Lemberg, but twenty-four years older than herself, and a widower with a grown-up son. He was a man of the highest honour and integrity, almost too much so, as would seem from his subsequent history; and though there was never any profound feeling of sympathy between him and his wife, he treated her throughout with the most uniform kindness and attention. But his resolute denunciation of abuses stirred him up many enemies, and he was obliged to resign his appointment of counsellor at Lemberg, and remove to Vienna, where from being looked on by the authorities with suspicion, as an enemy of existing institutions, the same star of ill-fortune pursued him, and he was soon reduced to great straits. His generosity also was excessive, rendering him the dupe of numerous individuals, who borrowed large sums of money from him, including his wife's fortune, which was lent to a friend in pecuniary embarrassment, and entirely lost. The distress to which his family was subjected in consequence of these acts of improvidence is thus stated by Madame Pfeiffer.

'Heaven only knows what I suffered during eighteen years of my married life—not, indeed, from any ill treatment on my husband's part, but from poverty and want! I came of a wealthy family, and had been accustomed, from my earliest youth, to order and comfort; and now I frequently knew not where I should lay my head, or find a little money to buy the commonest necessaries. I performed household drudgery, and endured cold and hunger; I worked secretly for money, and gave lessons in drawing and music; and yet, in spite of all my exertions, there were many days when I could hardly put anything but dry bread before my poor children for their dinner. I might certainly have applied to my mother or my brothers for relief, but my pride revolted against such a course. For years I fought with poverty, and concealed my real position: often was I brought so near to despair, that the thought of my children alone prevented me from giving way. At last the urgency of my necessities quite broke my spirit and I had recourse several times to my brothers for assistance.'

Perseverance and self-denial enabled Madame Pfeiffer to struggle through her difficulties, give her two sons a good education, and see them prosperously established in the world. She was now at liberty to indulge that darling wish of her heart, the desire of seeing strange countries, which had haunted her from girlhood, but which circumstances had hitherto prevented her from gratifying. The feeling may indeed be regarded as eccentric, which could prompt the mother of a family, at the age of forty-five, and almost wholly inexperienced in travelling, to set forth on such an expedition. But she quitted no duties at home to embark on it, and as she had so bravely fulfilled these in the day of privation and trial, she may well be excused for following her own inclinations afterwards, when the doing so involved no dereliction of maternal or conjugal obligations. The funds which she possessed were by no means ample, but adversity had taught her economy, and her own nature was one that shrank not from hardship and privation. Her first journey was a visit to the Holy Land, which she accomplished in 1842, proceeding down the Danube to the Black Sea and Constantinople, thence to Syria and Palestine, and returning by way of Egypt, Sicily, and Italy. An

account of her tour was published the following year under the title of a *Journey of a Viennese Lady to the Holy Land*, and, meeting with considerable success, provided her with funds for a second journey, which she accomplished in 1845, to Iceland and Scandinavia. Her journal of this expedition was also published, and by the proceeds which she derived from this, as well as from the sale of the geological and botanical specimens which she had collected, she was enabled to effect a third and more ambitious undertaking—that of a voyage round the world. In June 1846, she sailed from Hamburg for Rio Janeiro, from thence rounded Cape Horn to Valparaiso, crossed the Pacific to Otaheite, and afterwards visited China, Ceylon, and India, traversing the latter country from Calcutta to Bombay. She then sailed for Bushire, in Persia, the interior of which country she intended to have visited, but was prevented by the disturbances which had broken out there, and directed her steps instead to Asiatic Turkey, where she visited Bagdad, the ruins of Babylon and Nineveh, and afterwards passed through Armenia and the Caucasus to the Black Sea. In this portion of her journey she underwent the greatest hardships in the shape of heat, discomfort, and scanty fare, besides being exposed to constant danger from the attacks of robbers. After voyaging across the Black Sea to Constantinople, and touching in her way at Sebastopol and Odessa, she returned by Greece and the Ionian Islands to Trieste, and arrived in Vienna in November 1848, in the midst of the confusion after the recapture of the city by Prince Windischgrätz from the revolutionary party.

The interest already excited in Madame Pfeiffer was greatly intensified by the publication of the narrative of her third journey, which, under the title of *A Lady's Voyage Round the World*, was translated both into English and French with much success. Her craving for travel was far from being extinguished, and rather stimulated by what she had gone through. A grant of £150 was made her by the Austrian government, and with her resources thus supplemented, she set out upon a second voyage round the world, proceeding first to London, and thence taking ship for the Cape of Good Hope. Arriving here, she hesitated awhile between an exploring expedition into the interior of the African continent and a voyage to Australia, and at last sailed to Singapore and Sarawak. She was hospitably received by Sir James Brooke, and traversed a great portion of Borneo, including the country of the savage Dyaks. She then visited Java and Sumatra, including in the latter island the cannibal tribes of the Battas, where she made a narrow escape from being killed and eaten, and afterwards voyaged to the Moluccas and Celebes. From this she crossed the Pacific to California, and subsequently sailed to Panama and Lima. Her intention was to cross the Cordilleras to the Amazon, and make her way down that river to the east coast; but after several attempts, in which she visited Quito and witnessed an eruption of the volcano of Cotopaxi, she found herself so thwarted by the treachery of the natives and other causes, besides narrowly escaping death on two occasions by drowning and a fall from her mule, that she abandoned all idea of proceeding further in this direction, and crossing the Isthmus of Panama to Aspinwall, sailed to New Orleans. She then made the tour of the United States and Canada, and having embarked for England, landed at Liverpool in the end of 1854. Before returning home, she made a voyage to the island of St Michael, in the Azores, where one of her sons was settled, and reached Vienna by way of Lisbon, Southampton, and London. An account of her adventures appeared shortly afterwards, under the title of *My Second Journey Round the World.*

After having scarcely rested for a year at home, Madame Pfeiffer set out again on her travels, her main object of curiosity being the island of Madagascar, so thoroughly still an almost *terra incognita* to Europeans. Proceeding through Germany to Berlin and Hamburg, she sailed for Holland, and there, after previously making excursions to London and Paris in quest of information regarding her route, embarked for Cape Town, and from thence made her way to Madagascar by the Mauritius. After landing in the island, and visiting Tananarivo, the capital, she was glad to retreat from it with life, having undergone an attack of the malignant Madagascar fever and a captivity of a fortnight, during which she and her European companions were almost hourly expecting death by the orders of the blood-thirsty queen Ranavola. And from the hardships and malady which had befallen her, Madame Pfeiffer was destined never to recover. Having returned to the Mauritius, she was attacked with such a violent access of fever, that her life was despaired of; she rallied, nevertheless, so far as to be able to embark for London, and arrived there in the month of June 1858. From this she crossed over to Hamburg, and then paid a visit to Berlin and Cracow, in the hope of re-establishing her health. For some time she steadily resisted all the solicitations of her friends to return to her native Vienna; but finding her illness rapidly gaining upon her, she at last consented, and was removed there to the house of her brother, Charles Reyer. Here, after undergoing great suffering for about a month, she expired in October 1858. Her diary of the last and fatal journey to Madagascar was given to the world after her death by her son Oscar.

OCTOBER 28.

St Simon the Canaanite, apostle. St Jude, apostle. St Faro, bishop of Meaux, confessor, 672. St Neot, anchoret and confessor, 9th century.

Born.—Desiderius Erasmus, distinguished scholar and writer, 1467, *Rotterdam;* Dr Nicholas Brady, versifier of the Psalms, 1659, *Bandon, Cork;* Sir David Dalrymple, Lord Hailes, historical writer, 1726, *Edinburgh;* Emanuel, Marshal Grouchy, Bonapartist commander, 1766, *Paris.*

Died.—Maxentius, Roman emperor, drowned in Tiber, 312; Alfred the Great, king of England, about 900, *Winchester;* Michael le Tellier, chancellor of France, 1685, *Paris;* John Wallis, eminent mathematician, 1703, *Oxford;* John Locke, philosopher, 1704, *Oates, Essex;* Prince George of Denmark, husband of Queen Anne of England, 1708; John Smeaton, engineer, 1792, *Austhorpe, near Leeds;* Charlotte Smith, novelist, 1806, *Tilford, Surrey.*

ERASMUS.

Though professedly an adherent of the ancient faith, Erasmus must be regarded as one of the most influential pioneers of the Reformation. His *Colloquies* and *Encomium Moriæ*, or Praise of Folly, in which the superstitions of the day, and the malpractices of priests and friars, are exposed in the wittiest and most ludicrous manner, found thousands of admirers who were unable to appreciate the subtleties of dogmatic theology. It was pithily said of him, that he laid the egg which Luther hatched.

Erasmus was the natural son of a Dutchman, called Gheraerd or Garrit, a name having the same signification as the *Amiable* or the *Beloved;* and from this circumstance he assumed the designation of *Desiderius Erasmus*, which, by reduplication, expresses the same meaning in the Latin and Greek languages. He was educated for the Roman Catholic Church, and entered for a time the monastery of Emaus, near Gouda, but found such a profession very uncongenial, and as he had already given great promise of mental vigour and acumen, he obtained a dispensation from his monastic vows, and travelled through different parts of Europe. While thus journeying from place to place, he supported himself by lecturing and taking charge of pupils, one of whom was Alexander Stuart, a natural son of James IV. of Scotland, who was afterwards slain with his father at Flodden. Among other countries visited by Erasmus was England, where he resided in the house of Sir Thomas More, and also acted for a time as professor of divinity at Cambridge. He afterwards passed over to the Low Countries on an invitation from the Archduke Charles, afterwards Charles V., by whom he was invested with the office of councillor, and a salary of two hundred florins. In 1516, he published his celebrated edition of the Greek Testament, with notes, being the first version which appeared in print. By many this is regarded as the greatest work of Erasmus, who was both an excellent Greek scholar and one of the principal revivers of the study of that ancient language in Western Europe. In 1521, he took up his residence at Basel, where, in the following year, his celebrated *Colloquies* were published. From this he removed in 1529 to Freiburg, but returned again in 1535. He died at Basel on 12th July 1536.

Though a kind-hearted generous-minded man, Erasmus had little of the hero or martyr in his composition, and however clearly his excellent judgment might enable him to form certain conclusions, he wanted still the courage and self-denial to carry them into practice. His indecision in this respect furnished Luther with materials for the most cutting and contemptuous sarcasm. Indeed, in one of his own letters, Erasmus states very candidly his timorous character as follows: 'Even if Luther had spoken everything in the most unobjectionable manner, I had no inclination to die for the sake of truth. Every man has not the courage to make a martyr; and I am afraid, if I were put to the trial, I should imitate St Peter.' He may be regarded in the light of an accomplished, ease-loving scholar, latitudinarian on the subject of religion, and neither disposed to sympathise with the despotism and burdensome ordinances of the old faith, or the austerities and fiery zeal of the new. It is stated, however, that the friends in whose arms he expired were Protestants, and that, in his dying moments, he commended himself to God and Christ alone, rejecting all the ceremonies of the Romish Church.

THE ALFRED JEWEL.

It may well be said, that of the many monarchs who have been endowed with the appellation *Great*, Alfred of England was one of the very few who really merited the distinguished title. The materials for his history are indeed scanty, yet they teem with romance of the highest and most instructive character—namely, that which represents a good man heroically contending with the greatest difficulties, until, by energy and perseverance, he ultimately overcomes them. His desperate conflicts with the invading Danes, and the various fortunes of the respective parties; Alfred's magnanimity and prudence, whether as conqueror or fugitive; his attachment to literature and the arts; his unwearied zeal to promote the moral, social, and political progress of his subjects—all make even the minutest details of his history of surpassing interest to all educated Britons.

The remarkable jewel, represented in the engraving, was found, in 1693, at Newton Park, a short

THE ALFRED JEWEL.

distance north of the site of Ethelney Abbey, in Somersetshire, near the junction of the rivers Parret and Thone. It is now preserved in the Ashmolean Museum, at Oxford; and, independent of its bearing the name of Alfred, is a most interesting specimen of Anglo-Saxon art. The inevitable melting-pot has left few similar specimens of that age, but we know there must have been many, for the business of a goldsmith was held in high repute by the Anglo-Saxons, and a poem in that language,

on the various conditions of men, contains lines that may be translated thus :

'For one a wondrous skill
in goldsmith's art
is provided,
full oft he decorates
and well adorns
a powerful king's noble,
and he to him gives broad
land in recompence.'

Asser, the friend and biographer of Alfred, informs us that, when the great monarch had secured peace and protection to his subjects, he resolved to extend among them a knowledge of the arts. For this purpose he collected, from many nations, an almost innumerable multitude of artificers, the most expert in their respective trades. Among these were not a few workers in gold and silver, who, acting under the immediate instructions of Alfred, executed, with incomparable skill, many articles of these metals. From the circumstance of the jewel having inscribed on it, in Saxon characters, *Ælfred me haet gewercan* (Alfred had me wrought), we may reasonably conclude that it was made under his own superintendence ; and further, from its richness of workmanship and material, that it was a personal ornament worn by the good king himself. The lower end of the jewel, as represented in the engraving, is formed into the head of a griffin, a national emblem of the Saxons. From the mouth of this figure issues a small tube, crossed in the interior by a minute pin of gold. The latter is evidently intended to connect the ornament with the collar or band by which it was suspended round the neck ; the general flatness of form indicating that it was worn in that manner. Antiquaries have not agreed as to the person represented on one side of the jewel. Some have supposed it to be the Saviour, others St Cuthbert, or Pope Martin. But the opinion, that it represented Alfred himself, symbolising his kingly office, is as general and tenable as any yet advanced upon the subject.

CHARLOTTE SMITH: FLORA'S HOROLOGE.

In the days of our grandfathers, this lady enjoyed a considerable reputation, both as a novelist and poet, though her lucubrations in both capacities are now almost forgotten. Two works of fiction composed by her, *Emmeline, or the Orphan of the Castle*, and the *Old Manor-House*, are mentioned by Sir Walter Scott in terms of high commendation. An ill-assorted marriage proved the source of an infinite series of troubles, and various domestic bereavements, combined latterly with bodily infirmities, saddened an existence which, during the greater part of its course, was more characterised by clouds than sunshine.

The annexed poem exhibits a pleasing specimen of Mrs Smith's talents, and is here introduced as apposite to the character of the *Book of Days*, presenting, as it does, the idea of a clock or dial of Flora. The phenomenon of the *sleep* of plants, or the closing and reopening of the petals of flowers at certain hours, was, as is well known, the discovery of the great botanist Linnæus.

FLORA'S HOROLOGE.

'In every copse and sheltered dell,
Unveiled to the observant eye,
Are faithful monitors, who tell
How pass the hours and seasons by.

The green-robed children of the spring
Will mark the periods as they pass,
Mingle with leaves Time's feathered wing,
And bind with flowers his silent glass.

Mark where transparent waters glide,
Soft flowing o'er their tranquil bed ;
There, cradled on the dimpling tide,
Nymphæa rests her lovely head.

But conscious of the earliest beam,
She rises from her humid nest,
And sees reflected in the stream
The virgin whiteness of her breast.

Till the bright Daystar to the west
Declines, in ocean's surge to lave ;
Then, folded in her modest vest,
She slumbers on the rocking wave.

See Hieraciums' various tribe,
Of plumy seed and radiate flowers,
The course of Time their blooms describe,
And wake or sleep appointed hours.

Broad o'er its imbricated cup
The Goatsbeard spreads its golden rays,
But shuts its cautious petals up,
Retreating from the noontide blaze.

Pale as a pensive cloistered nun,
The Bethlehem Star her face unveils,
When o'er the mountain peers the sun,
But shades it from the vesper gales.

Among the loose and arid sands
The humble Arenaria creeps ;
Slowly the Purple Star expands,
But soon within its calyx sleeps.

And those small bells so lightly rayed
With young Aurora's rosy hue,
Are to the noontide sun displayed,
But shut their plaits against the dew.

On upland slopes the shepherds mark
The hour, when, as the dial true,
Cichorium to the towering lark
Lifts her soft eyes serenely blue.

And thou, " wee crimson tipped flower,"
Gatherest thy fringed mantle round
Thy bosom, at the closing hour,
When night-drops bathe the turfy ground.

Unlike Silene, who declines
The garish noontide's blazing light ;
But when the evening crescent shines,
Gives all her sweetness to the night.

Thus in each flower and simple bell,
That in our path betrodden lie,
Are sweet remembrancers who tell
How fast the winged moments fly.'

SCHINDERHANNES ('JOHN, THE SCORCHER').

At the close of the last century, and the beginning of the present, the borderland between France and Germany was infested by bands of desperadoes, who were a terror to all the peaceful inhabitants. War, raging with great fury year after year, had brought the Rhenish provinces into a very disorganised state, which offered a premium to every species of lawless violence. Bands of brigands roamed about, committing every kind of atrocity. They were often called *Chauffeurs* or *Scorchers;* because they were accustomed to hold the soles of their victims' feet in front of a fierce fire, to extort a revelation of the place where their property was concealed. Sometimes they were called *Garotters* or *Stranglers* (from *garrot*, a stick which enabled the strangler to twist a cord tightly round the neck of his victim). Each band had a camp or rendezvous, with lines of communication throughout a particular district. The posts on these lines were generally poor country-taverns, the landlords of which were in league with the band. And not only was this the case, but from Holland to the Danube, the chauffeurs could always obtain friendly shelter at these houses, with means for exchanging intelligence with others of the fraternity. The brigands concocted for their own use a jargon composed of French, German, Flemish, and Hebrew, scarcely intelligible to other persons. Not unfrequently, magistrates and functionaries of police were implicated with this confederacy. Names, dress, character, complexion, and feature were changed with wonderful ingenuity by the more accomplished leaders; and women were employed in various ways requiring tact and finesse. The more numerous members of the band, rude and brutal, did the violent work which these leaders planned for them. Many, called *apprentices*, inhabited their own houses, worked at their own trades, but yet held themselves in readiness, at a given signal understood only by themselves, to leave their homes, and execute the behests of the leaders. They were bound by oaths, which were rarely disregarded, an assassin's poniard being always ready to avenge any violation. Most of these apprentices were sent to districts far removed from their homes when lawless work was to be done. A Jewish spy was generally concerned in every operation of magnitude: his vocation was to pick up information that would be useful to the robber-chief, concerning the amount and locality of obtainable booty. For his information, he received a stipulated fee, and then made a profit out of his purchase from the robbers of the stolen property.

Schinderhannes, or 'John the Scorcher,' was the most famous of all the leaders of these robbers. His real name was Johann Buckler; but his practice of *chauffage*, or scorching the feet of his victims, earned for him the appellation of Schinderhannes. Born in 1779, near the Rhine, he from early years loved the society of those who habitually braved all law and control. As a boy, he joined others in stealing meat and bread from the commissariat-wagons of the French army at Kreuznach. He joined a party of bandits, and was continually engaged in robberies: he was often captured, but as frequently escaped with wonderful ingenuity, and his audacity soon led to his being chosen captain of a band. There was something in his manner which almost paralysed those whom he attacked, and rendered them powerless against him. On one occasion, when alone, he met a large party of Jews travelling together. He ordered them imperiously to stop, and to bring him their purses one by one, which they did. He then searched all their pockets; and, finding his carbine in the way, told one of the Jews to hold it for him while he rifled their pockets! This also was done, and the carbine handed to him again. Sometimes he would summon a farmer or other person to his presence, and tell him to bring a certain sum of money, as a ransom, or purchase-price of safety in advance; and such was the terror at the name of Schinderhannes, that these messages were rarely disregarded. As the French power became consolidated on the left bank of the Rhine, Schinderhannes found it expedient to limit his operations to the right bank; and the prisons of Coblentz and Cologne were filled with his adherents. Like Robin Hood, he often befriended the poor at the expense of the rich; but, unlike the hero of Sherwood Forest, he was often cruel. The career of Schinderhannes virtually terminated on the 31st of May 1802, when he was finally captured near Limburg; but his actual trial did not take place till the closing days of October 1803, when evidence sufficient was brought forward to convict him of murder, and he was condemned to death.

Mr Leitch Ritchie has made this redoubtable bandit the hero of a romance—*Schinderhannes, the Robber of the Rhine.* In his *Travelling Sketches on the Rhine, and in Belgium and Holland*, he has also given some interesting details concerning Schinderhannes himself, and the *chauffeurs* generally. Among many so-called wives, one named Julia was especially beloved by him, and she and a brother-robber named Fetzer, were with him when captured. 'At his trial,' says Mr Ritchie in the second of the above-named works, 'he was seen frequently to play with his young infant, and to whisper to his wife, and press her hands. The evidence against him was overpowering, and the interest of his audience rose to a painful pitch. When the moment of judgment drew near, his fears for Julia shook him like an ague. He frequently cried out, clasping his hands: "She is innocent! The poor young girl is innocent! It was I who seduced her!" Every eye was wet, and nothing was heard in the profound silence of the moment, but the sobs of women. Julia, by the humanity of the court, was sentenced first; and Schinderhannes embraced her with tears of joy when he heard that her punishment was limited to two years' confinement. His father received twenty-two years' of fetters; and he himself, with nineteen of his band, was doomed to the guillotine. The execution took place on the 21st of November 1803, when twenty heads were cut off in twenty-six minutes. The bandit-chief preserved his intrepidity to the last.'

Concerning the chauffeurs or bandits generally, it may suffice to say that when Bonaparte became First Consul, he determined to extirpate them. One by one the miscreants fell into the hands of justice. For many years the alarmists in France had been in the habit of insinuating that the bandits were prompted by the exiled royalists, or

by the English; but it was perfectly clear that they needed no external stimulus of this kind. After the death of Schinderhannes, the bands quickly disappeared.

'RIDING THE STANG;' OR 'ROUGH MUSIC.'

Punishments for minor offences were formerly designed to produce shame in the delinquents by exposing them to public ridicule or indignation. With this view, the execution of the punishment was left very much in the hands of the populace. Such was the practice in the case of the branks, the cucking-stool, the whirligig, the drunkard's cloak, the stocks, the pillory, &c., all of which have been either legally abolished or banished by the progress of civilisation. There is, however, one species of punishment belonging to the above category, which the people seem determined to retain in their own hands, and enforce whenever they judge it expedient so to do. It was exercised, to the knowledge of the writer, on the 28th of October, and ten following days, Sunday excepted, in the year 1862. The punishment in question, called in the north of England 'Riding the Stang,' and in the south 'Rough Music,' is not noticed in the *Popular Antiquities* by Bourne and Brand, but is of frequent occurrence in most of our English counties. If a husband be known to beat his wife, or allow himself to be hen-pecked—if he be unfaithful to her, or she to him—the offending party, if living in a country village, will probably soon be serenaded with a concert of rough music. This harmonious concert is produced by the men, women, and children of the village assembling together, each provided with a suitable instrument. These consist of cows' horns, frying-pans, warming-pans, and tea-kettles, drummed on with a large key; iron pot-lids, used as cymbals; fire-shovels and tongs rattled together; tin and wooden pails drummed on with iron pokers or marrow-bones—in fact, any implement with which a loud, harsh, and discordant sound can be produced. Thus provided, the rustics proceed to the culprit's house, and salute him or her with a sudden burst of their melodious music, accompanied with shouts, yells, hisses, and cries of 'Shame! shame! Who beat his wife? I say, Tom Brown, come out and shew yourself!' and all such kind of taunts and ridicule as rustic wit or indignation can invent. The village humorist, often with his face blacked, or coloured with chalk and reddle, and his bod grotesquely clothed and decorated, acts the part herald, and, in all the strong savour of rustic w and drollery, proclaims the delinquencies of th unhappy victim or victims. The proclamation, course, is followed by loud bursts of laughte shouts, yells, and another tremendous serenade 'rough music,' to the melody of which the whol party march off, and proceed through the villag proclaiming in all the most public parts th 'burden of their song.' This hubbub is generall repeated every evening, for a week or a fortnigh and seldom fails to make a due impression on th principal auditor; for

'Music hath charms to soothe the savage breast;'

and the writer can testify that, at least in on instance, where police and magistrates had tried i vain to reform a brutal husband who had beate and ill-treated his wife, his savage breast wa tamed by the magic strains of 'rough music.' H was never know to beat his wif again, and acknow ledged that th sound of tha music never cease to 'charm' hi waking thought and too ofte formed 'the melod of his dreams.'

A SERENADE OF 'ROUGH MUSIC.'

In the norther counties, this cus tom, as before men tioned, is calle 'riding the stang because there, i addition to roug music, it is th practice to carr the herald astrid on a stang—th north-countr word for pole—o in a chair fastene on two poles, t make him mor conspicuous. H is, too, always pro vided with a large frying-pan and key or hammer and, after beating them together very vigorously makes his proclamation in rhyme, using the fol lowing words, varied only to suit the nature of th offence:

'Ran, tan, tan; ran, tan, tan,
To the sound of this pan;
This is to give notice that Tom Trotter
Has beaten his good wo-man!
For what, and for why?
'Cause she ate when she was hungry,
And drank when she was dry.
Ran, tan, ran, tan, tan;
Hurrah—hurrah! for this good wo-man!
He beat her, he beat her, he beat her indeed,
For spending a penny when she had need.
He beat her black, he beat her blue;
When Old Nick gets him, he'll give him his due;
Ran, tan, tan; ran, tan, tan;
We'll send him there in this old frying-pan;
Hurrah—hurrah! for his good wo-man.'

The 'ran-tan' chorus is shouted by the whole crowd, and repeated after every line. The practice is varied in different places by the addition of an effigy of the culprit riding on an ass, with his face towards the tail, and by other freaks of local humour, suggested perhaps by some peculiarity of the occasion.

This mode of manifesting the popular feeling was in vogue when *Hudibras* was written; and though then often including additions better omitted, was observed in other respects much as at the present day:

'And now the cause of all their fear
By slow degrees approached so near,
They might distinguish different noise
Of horns and pans, and dogs and boys,
And kettle-drums, whose sullen dub
Sounds like the hooping of a tub;
* * * *
And followed with a world of tall-lads,
That merry ditties troll'd, and ballads.
* * * *
Next pans and kettles of all keys,
From trebles down to double base;
* * * *
And at fit periods the whole rout
Set up their throats with clamorous shout.'

Such ceremonies as we have above described are known on the continent by the name of the *Charivari*, and also of *Katzenmusik* (Anglicè, *caterwauling*). Latterly, in France, the *charivari* took a political turn, and gave name to a satirical publication established in Paris in 1832. The same title, as all our readers know, was adopted as an accessory designation by the facetious journalist, Mr Punch.

OCTOBER 29.

St Narcissus, bishop of Jerusalem, 2d century. St Chef or Theuderius, abbot, about 575.

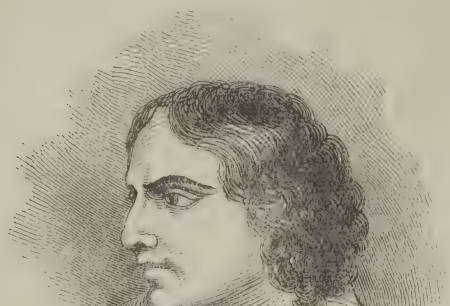
Born.—George Abbot, archbishop of Canterbury, 1562, *Guildford;* Edmund Halley, astronomer, 1656, *Haggerston, near London;* James Boswell, biographer of Johnson, 1740, *Edinburgh;* William Hayley, poet and biographer of Cowper, 1745, *Chichester;* John Keats, poet, 1796, *Moorfields, London.*

Died.—Sir Walter Raleigh, beheaded in Old Palace Yard, 1618; Henry Welby, eccentric character, 1636, *London;* James Shirley, dramatist, 1666, *London;* Edmund Calamy, eminent Puritan divine, 1666, *London;* Admiral Edward Vernon, naval commander, 1757; Jean le Rond d'Alembert, mathematician and encyclopædist, 1783, *Paris;* George Morland, animal-painter, 1806, *London;* Allan Cunningham, poet and miscellaneous writer, 1842, *London.*

JOHN KEATS.

It is a satisfaction to know that the well-worn story about John Keats being killed by the *Quarterly Review*—a story endorsed by Shelley, and by Byron in *Don Juan:*

'Poor fellow! His was an untoward fate;
'Tis strange the mind, that very fiery particle,
Should let itself be snuffed out by an article'—



is untrue. Croker's criticism did gall the vanity of which Keats, in common with all poets, possessed an ample share; but he was far too self-assured and pugnacious to suffer dangerously from what anybody might say of him.

Keats was the son of a livery-stable keeper, who had risen to comfort by marrying his master's daughter, and was born in Moorfields, London, in 1795. His father, who is described as an active, energetic little man, of much natural talent, was killed by a fall from a horse when John was in his ninth year. His mother, a tall woman with a large oval face and a grave demeanour, after lingering for several years in consumption, died in 1810. A fortune of two thousand pounds was inherited by John.

Keats, as a boy in Finsbury, was noted for his pugnacity. It was the time of the great French war, and children caught the martial spirit abroad. In the house, in the stables, in the streets with his brothers, or with any likely combatant, he was ready for a tussle. He was sent to a boarding-school at Enfield, kept by the father of Mr Charles Cowden Clarke, by whom he is remembered for his terrier-like character, as well as for his good-humour and love of frolic. From school he was taken, at the age of fifteen, and apprenticed for five years to a surgeon and apothecary at Edmonton; an easy distance from Enfield, so that he used to walk over whenever he liked to see the Clarkes and borrow books. He was an insatiable and indiscriminate reader, and shewed no peculiar bias in his tastes, until, in 1812, he obtained in loan Spenser's *Fairy Queen.* That poem lit the fire of his genius. He could now speak of nothing but Spenser. A world of delight seemed revealed to him. 'He ramped through the scenes of the romance,' writes Mr Clarke, 'like a young horse turned into a spring-meadow;' he got whole passages by heart, which he would repeat to any listener; and would dwell with ecstasy on fine phrases, such as that of 'the sea-shouldering whale.' This intense enjoyment soon led to his trying his own hand at verse, and the chief end of his existence became henceforward the reading and writing of poetry. With his friend Cowden Clarke, then a youth like himself, he spent long evenings in enthusiastic discussion of the English poets, shewing a characteristic preference for passages of sweet sensuous description, such as are found in the minor poems of Chaucer, Shakspeare, and Milton, and throughout Spenser, rather than for those dealing with the passions of the human heart. By Clarke he was introduced to Greek poetry, through the medium of translations. They commenced Chapman's *Homer* one evening, and read till daylight, Keats sometimes shouting aloud with delight as some passage of special energy struck his imagination. Therewith began that remarkable affiliation of his mind to the Greek mythology, which gave to his works so marked a form and colour. From Edmonton he removed to the city for the purpose of 'walking the hospitals,' and became acquainted with Leigh Hunt, Shelley, Hazlitt, Godwin, Haydon, and other literary and artistic people, in whose society his mind expanded and strengthened. At Haydon's one evening, when Wordsworth was present, Keats was induced to recite to him his *Hymn to Pan,* which Shelley had praised as 'his surest pledge of ultimate excellence.' Wordsworth listened to the end, and then grimly remarked: 'It is a pretty piece of paganism!'

In 1817, Keats published his first book of poems, which attracted no attention. Next year he tried again, and brought out *Endymion, a Poetic Romance*, for which he was ridiculed as a Cockney-poet in the *Quarterly* and *Blackwood's Magazine*, and recommended 'to go back to his gallipots,' and reminded that 'a starved apothecary was better than a starved poet.' In 1820 appeared *Lamia, the Eve of St Agnes, and other Poems;* these three small volumes, issued within three years, comprised the finished business of his literary life.

Keats was of low stature, considerably under middle size. His shoulders were very broad, and his legs so short, that they quite marred the proportion of his figure. 'His head,' says Leigh Hunt, 'was a puzzle for the phrenologists, being remarkably small in the skull—a singularity he had in common with Byron and Shelley, whose hats I could not get on.' His face was clearly cut, almost feminine in its general form, and delicately mobile; its worst feature was the mouth, which had a projecting upper lip, giving a somewhat savage and pugilistic impression. His eyes were large and blue, and his hair auburn, and worn parted down the middle. Coleridge, who once shook hands with him, when he met him with Leigh Hunt in a Highgate lane, describes him as 'a loose, slack, not well-dressed youth.' At the same time, he turned to Hunt, and whispered: 'There is death in that hand,' although Keats was then apparently in perfect health.

JOHN KEATS.

The senses of Keats were exquisitely developed. In this fact, in conjunction with a fine imagination and copious language, is discovered the mystery of his poetry, which consists mainly in a relation of luxurious sensations of sight, hearing, taste, smell, and touch. Of music he was passionately fond, and in colour he had more than a painter's joy. As to taste, Haydon tells of once seeing him cover his tongue with cayenne pepper, in order, as he said, that he might enjoy the delicious sensation of a cold draught of claret after it. 'Talking of pleasure,' he says in one of his letters, 'this moment I was writing with one hand, and with the other was holding to my mouth a nectarine;' and thereon he proceeds to describe the nectarine in a way which might cause a sympathetic mouth to water with desire. In his *Ode to the Nightingale*, these lines will be remembered:

'O for a draught of vintage, that hath been
Cool'd a long age in the deep-delvèd earth;
Tasting of Flora and the country-green,
Dance, and Provençal song, and sun-burnt mirth!
O for a beaker full of the warm South,
Full of the true, the blushful Hippocrene,
With beaded bubbles winking at the brim,
And purple-stainèd mouth;
That I might drink, and leave the world unseen,
And with thee fade away into the forest dim.'

Observe how every line turns on sensuous delight. With this key, it is truly interesting to examine the poems of Keats, and find how it opens their meaning and reveals their author. In this respect, Keats was the antipodes of Shelley, whose verse is related to mental far more than sensuous emotions.

In 1820, pulmonary consumption appeared in the hitherto healthy constitution of Keats. Getting into bed one night, he coughed, and said: 'That is blood—bring me the candle;' and after gazing on the pillow, turning round with an expression of sudden and solemn calm, said: 'I know the colour of that blood, it is arterial blood—I cannot be deceived in that colour; that drop is my death-warrant. I must die!' He passed through the alternations common to consumptive patients—sometimes better and sometimes worse. His mind, at the same time, was torn with passion and anxiety. His inheritance of £2000 was gone, and he had abandoned the idea of being a surgeon. He was deeply in love, but he had no means of maintaining a wife. A brief and futile attempt was made to earn a living by writing for the magazines. Meanwhile his disease made rapid progress. Accompanied by Mr Severn, a young friend and artist, by whom he was tended with most affectionate care, he set out to spend the winter in Italy. His sufferings, physical and mental, were intense. A keen sorrow lay in the thought that he had done nothing worthy of abiding fame. 'Let my epitaph be,' said he: 'Here lies one whose name was writ in water.' He died at Rome in the arms of Severn on the 23d of February 1821, aged twenty-five years and four months. His last words were: 'Thank God, it has come!' His body was interred in the Protestant cemetery at Rome; a beautiful spot, where violets and daisies blow the winter through, and, in the words of Shelley, 'making one in love with death, to think one should be buried in so sweet a place.' Hither, a few months later, were Shelley's own ashes brought to rest under a stone bearing the inscription: 'Cor Cordium.'

SIR WALTER RALEIGH.

To trace the career of Sir Walter Raleigh, and extricate his character from the perplexing confusion of contemporary opinion, is an undertaking of considerable difficulty. One principal cause of this is to be found in the heterogeneous qualities of the man. Soldier and poet, sailor and historian, court favourite and roving adventurer, his biographers have been at a loss under what category to place him. He was, says the writer of a little

book, printed in London in 1677, and entitled *The Life of the Valiant and Learned Sir Walter Raleigh, Knight, with his Tryal at Winchester*, statesman, seaman, soldier, chemist, chronologer. 'He seemed to be born to that only which he went about, so dexterous was he in all his undertakings, in court, in camp, by sea, by land, with sword, with pen.'

Although Raleigh exerted himself so much in the service of his country, what he did was, for the most part, so out of the way of ordinary men's doings, that even history seems perplexed to discover what to record of him. We are told how he won Elizabeth's favour at the first by laying his rich cloak in the mire to save her majesty's slippers. We are told how he wrote one line of a couplet, when growing restless with the dilatory manner which the queen had in promoting her favourites, and that the queen herself deigned to complete it. We are told how he introduced the poet Spenser to the court, and quarrelled with Essex. Such trivial glimpses as these are almost all we get of him.

The little book above mentioned, by the way, gives a different edition of the far-famed couplet to the one we have been used to. We quote the account given: 'To put the queen in remembrance, he wrote in a window obvious to her eye:

Fain would I climb, yet fear I to fall.

Which her majesty, either espying or being shewn, under-wrote this answer:

If thy heart fail thee, climb not at all.'

Raleigh feared no man and no quarrel, and stood his ground against all. He was no sycophant. He must have had a clever wit, joined with his manliness and impetuosity, for he managed to retain Elizabeth's good graces to the last; while the less fortunate Essex died on the scaffold.

Raleigh had a restless spirit, which made him at once innovator and adventurer. He was always making new discoveries. In his dress he was singular, his armour was a wonder, his creed his own concocting. He it was who introduced tobacco; which Elizabeth, strangely enough, judging merely in a commercial spirit, regarded as a useful article, but which seemed to James an execrable nuisance. The El Dorados which he went in search of were innumerable; and as he joined with these mine-finding expeditions a large amount of carrack-stopping, he won himself at last the characteristic appellation of *The Scourge of Spain*, and for this Spain, relentless, had his head in the end.

The day of Elizabeth's death was the birthday of Raleigh's misfortunes. He never was a favourite with James from the first. It is not long before we find him brought up for trial for high treason, in what has always been called *Raleigh's Conspiracy*—so called, it may be, because Raleigh had the least to do with it of any of those involved; or perhaps, which is more likely, because it was a puzzle to every one how such a man as Raleigh could have been connected with it.

Having been previously examined in July, Raleigh was brought to trial at Winchester, on November 17, 1603. Throughout the whole, he is described as conducting himself with spirit, as 'rather shewing love of life than fear of death,' and replying to the insulting language of Sir Edward Coke, the king's attorney, with a dignity which remains Coke's lasting reproach.

Coke's unprovoked insults were abominable. He called Raleigh, for instance, 'the absolutest traitor that ever was.' To which Raleigh only rejoined: 'Your phrases will not prove it, Mr Attourney.' What a speech was this for the king's advocate: 'Thou hast a Spanish heart, and thyself art a spider of hell!' The following is a specimen of the style of bickering which went on on the occasion:

'*Raleigh.* I do not hear yet that you have spoken one word against me; here is no treason of mine done. If my Lord Cobham be a traitor, what is that to me?

Coke. All that he did was by thy instigation, thou viper; for I *thou* thee, thou traitor.

Raleigh. It becometh not a man of quality and virtue to call me so: but I take comfort in it, it is all you can do.

Coke. Have I angered you?

Raleigh. I am in no case to be angry.'

Here Lord-Chief Justice Popham seems ashamed, and puts in an apology for his friend on the king's side: 'Sir Walter Raleigh, Mr Attourney speaketh out of the zeal of his duty for the service of the king, and you, for your life: *be valiant on both sides.*' [A curious observation!]

In one instance, Coke was so rude that Lord Cecil rose and remarked: 'Be not so impatient, Mr Attourney, give him leave to speak.' And so we are informed: 'Here Mr Attourney sat down in a chafe, and would speak no more, until the commissioners urged and entreated him. After much ado he went on,' &c.

Raleigh had but one real witness against him, and that was Lord Cobham, the head of the plot, and Raleigh's personal friend. It seems that Cobham, in a temporary fit of anger—Raleigh seems to have inculpated him in the first instance—described Raleigh as the instigator of the whole business. Coke produced a letter, written by Cobham, which seemed to enclose the matter in a nut-shell, for it was very explicit against Raleigh. Raleigh pleaded to have Cobham produced in court, but this was refused. Raleigh had his reasons for this, for at the last minute he pulled out a letter, which Cobham had written to him since the one to Coke, in which that lord begged pardon for his treachery, and declared his friend innocent. And so it appeared that he was, although he evidently had more knowledge of matters than was good for his safety. But a minor point, which was brought forward at last, was like the springing of a mine, and spoiled Raleigh's case. It affirmed that Sir Walter Raleigh had been dealt with to become a spy of Spain, at a pension of £1500 per annum. This might have been a trap set by Spain, but, at anyrate, Raleigh did not deny the fact, and so the evidence turned against him. He was sentenced, with disgraceful severity, to be hanged, drawn, and quartered.

Raleigh wrote a letter to his wife, while in expectation of death. A private communication like this letter gives us a better insight into his conscience, and also into his so-called 'atheism,' than could be got from any other source—

'I sued for my life, but (God knows) it was for you

and yours that I desired it: for know it, my dear wife, your child is the child of a true man, who, in his own respect, despiseth death and his misshapen and ugly forms. I cannot write much. God knows how hardly I steal this time when all sleep, and it is also time for me to separate my thoughts from the world. Beg my dead body, which living was denied you, and either lay it in Sherburn or in Exeter Church, *by my father and mother.*' [Is not this the last wish of all rovers?] 'I can say no more, time and death calleth me away. The everlasting God, powerful, infinite, and inscrutable God Almighty' [Has this an *atheistic* sound?], 'who is goodness itself, the true Light and Life, keep you and yours, and have mercy upon me, and forgive my persecutors and false-accusers' [Why, this is very Christianity!], 'and send us to meet in his glorious kingdom! My dear wife, farewell, bless my boy, pray for me, and let my true God hold you both in his arms.—Yours that was, but now not my own, WALTER RALEIGH.'

After all, Raleigh was not executed. He lived yet a dozen years a prisoner in the Tower, his wife with him, and wrote his famous *History of the World.* When he could no longer rove over the whole earth, he set himself to write its history. He won the friendship of Prince Henry, who could never understand how his father could keep so fine a bird in a cage; and had the young prince lived, he would have set the bird at liberty, but he died. At length James released Raleigh, and sent him on one more mining expedition to South America, with twelve ships and abundance of men. But secretly, out of timidity, James informed Spain of the whole scheme, and the expedition failed. A town was burned, and the Spanish ambassador, Gondomar, became furious. Raleigh knew what to expect; but, having bound himself to return, he did return. He was immediately seized; and, without any new trial, was beheaded on his old condemnation, all to appease the anger of Spain, upon Thursday, the 29th of October 1618, in Old Palace Yard, Westminster.

Raleigh died nobly. The bishop who attended him, and the lords about him, were astonished to witness his serenity of demeanour. He spoke to the Lord Arundel to desire the king to allow no scandalous writings, defaming him, to be written after his death—the only one which was written, strange to say, was James's *Apology*—and he observed calmly: 'I have a long journey to go, therefore must take leave!' He fingered the axe with a smile, and called it 'a sharp medicine,' 'a sound cure for all diseases;' and laid his head on the block with these words in conclusion: 'So the heart be right, it is no matter which way the head lies.'

'Thus,' says our little book, 'died that knight who was Spain's scourge and terror, and Gondomar's triumph; whom the whole nation pitied, and several princes interceded for; Queen Elizabeth's favourite, and her successor's sacrifice. A person of so much worth and so great interest, that King James would not execute him without an apology; one of such incomparable policy, that he was too hard for Essex, was the envy of Leicester, and Cecil's rival, who grew jealous of his excellent parts, and was afraid of being supplanted by him.'

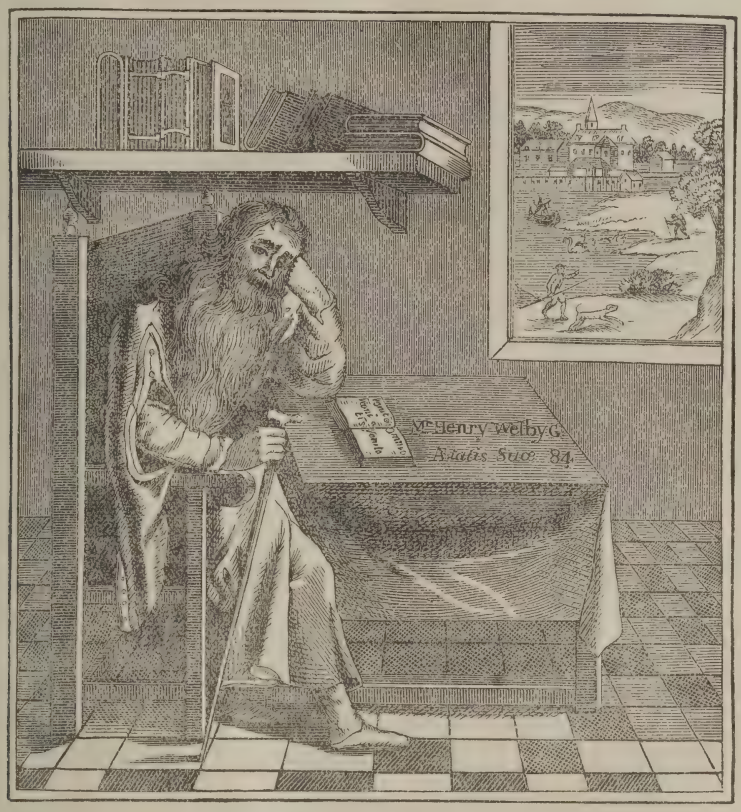
The following is Raleigh's last poem, written the night before his death, and found in his Bible, in the Gate-house, at Westminster:

SIR W. RALEIGH THE NIGHT BEFORE HIS DEATH.

'Even such is time, which takes in trust
Our youth, our joys, and all we have,
And pays us nought but age and dust;
Which in the dark and silent grave,
When we have wandered all our ways,
Shuts up the story of our days!
And from which grave, and earth, and dust,
The Lord shall raise me up, I trust.'

THE HERMIT OF GRUB STREET.

Amongst the many histories of extraordinar characters, who from various motives have seclude themselves from the world, probably few hav created more interest than Mr Henry Welby, th individual about to be recorded. He was a nativ of Lincolnshire, where, in the neighbourhood o Grantham, his descendants still live. The famil is ancient, and of high position, as may be inferre from several of its members having sat in parlia ment for the county of Lincoln, in the times of th Henrys and the Edwards, and from others havin filled the post of sheriff—an office in those day held only by men of the highest status.



About the time of the accession of Queen Eliza beth, we find Mr Henry Welby residing at Goxhil an ancient village near the Lincolnshire bank o the river Humber, nearly opposite to Kingston upon-Hull. He was the inheritor of a considerabl fortune, and all accounts that have been publishe concerning him, represent him as a highly-accom plished, benevolent, and popular gentleman. I this neighbourhood, he seems to have lived for number of years, and then to have quitted it t reside in London, under the singular circumstance now to be detailed, as related in a curious work published in 1637, under the following title: *Th Phœnix of these late Times; or the Life of Henr Welby, Esq., who lived at his House, in Grub Stree Forty-four years, and in that Space was never see by any: And there died, Oct.* 29, 1636, *aged Eighty four. Shewing the first Occasion and Reason thereo With Epitaphs and Elegies on the late Decease Gentleman; who lyeth buried in St Giles' Churc near Cripplegate, London.*

In the preface to this singular pamphlet, th following passage occurs: 'This Gentleman, Maste Henry Welby, was Forty Years of Age before h took this solitary Life. Those who knew him, an were conversant with him in his former Time, d report, that he was of a middle Stature, a Brow Complexion, and of a Pleasant Chearful Counte nance. His Hair (by reason no Barber came nea him for the Space of so many Years) was muc overgrown; so that he, at his Death, appeare rather like a Hermit of the Wilderness, tha Inhabitant of a City. His Habit was plain, an without Ornament; of a sad-coloured Cloth, onl to defend him from the Cold, in which there coul be nothing found either to express the leas Imagination of Pride or Vain-Glory.'

The various accounts which have been publishe of this remarkable man, agree in the main, bu differ in one or two particulars. For instance, i one it is stated that it was his *brother*, whose con duct led to the strange results recorded; and, i another, that it was merely *a kinsman.* In th present notice, we have adhered to the narrativ

given to the world in 1637. It thus records the history of Mr Welby's eccentricities.

'The Occasion was the Unkindness, or the Unnaturalness and Inhumanity of a younger Brother, who, upon some Discontent or Displeasure conceived against him, rashly and resolutely threatened his Death. The two Brothers meeting Face to Face, the younger drew a Pistol, charged with a double Bullet, from his Side, and presented upon the Elder, which only gave Fire, but by the

HENRY WELBY, THE GRUB-STREET HERMIT.

miraculous Providence of God, no farther Report. At which the Elder, seizing him, disarmed him of his tormenting Engine, and so left him; which, bearing to his Chamber, and desiring to find whether it was merely a false Fire to frighten him, or a Charge speedily to dispatch him, he found Bullets, and thinking of the danger he had escaped, fell into many deep Considerations. He then grounded his irrevocable Resolution to live alone. He kept it to his dying day.

'That he might the better observe it, he took a very fair House in the lower end of *Grub-street*, near unto *Cripplegate*, and having contracted a numerous Retinue into a small and private Family, having the House before prepared for his purpose, he entered the Door, chusing to himself, out of all the Rooms, three private Chambers best suiting with his intended Solitude; the First for his Diet, the Second for his Lodging, and the Third for his Study—one within another. While his Diet was set on the table by one of his servants—an old Maid—he retired into his Lodging-chamber; and while his Bed was making, into his Study; and so on, till all was clear. And there he set up his Rest, and in *forty-four years* never, upon any Occasion how great soever, issued out of those Chambers, till he was borne thence upon Men's shoulders; neither in all that time did Son-in-law, Daughter, Grandchild, Brother, Sister, or Kinsman, Stranger, Tenant, or Servant, Young or Old, Rich or Poor, of what Degree or Condition soever, look upon his Face, saving the ancient Maid, whose Name was Elizabeth, who made his Fire, prepared his Bed, provided his Diet, and dressed his Chamber; which was very seldom, or upon an extraordinary Necessity that he saw her; which Maid-servant died not above Six Days before him.

'In all the Time of his Retirement he never tasted Fish nor Flesh. He never drank either Wine or Strong Water. His chief Food was Oatmeal boiled with Water, which some People call Gruel; and in Summer, now and then, a Sallad of some cool, choice Herbs. For Dainties, or when he would feast himself, upon a High Day, he would eat the Yoke of a Hen's Egg, but no part of the white; and what Bread he did eat, he cut out of the middle part of the Loaf, but of the Crust he never tasted; and his continual Drink was Four-shilling Beer, and no other; and now and then, when his Stomack served him, he did eat some

kind of Suckets;* and now and then drank Red Cow's Milk, which Elizabeth fetched for him out of the Fields, hot from the Cow; and yet he kept a bountiful Table for his Servants, with Entertainment sufficient for any Stranger, or Tenant, who had occasion of Business at his House.

'In Christmas holidays, at Easter, and upon other Festival days, he had great Cheer provided, with all Dishes seasonable with the Times, served into his own Chamber, with Store of Wine, which his Maid brought in; when he himself would pin a clean Napkin before him, and putting on a pair of white Holland Sleeves, which reached to his Elbows, called for his Knife, and cutting Dish after Dish up in Order, send one to one poor Neighbour, the next to another, &c., whether it were Brawn, Beef, Capon, Goose, &c., till he had left the Table quite empty. Then would he give thanks, lay by his Linnen, put up his Knife again, and cause the Cloth to be taken away; and this would he do, Dinner and Supper, without tasting one Morsel himself; and this Custom he kept to his dying Day! Indeed, he kept a kind of continual Fast, so he devoted himself unto continual Prayer, saving those Seasons which he dedicated to his Study; For you must know that he was both a Scholar and a Linguist; neither was there any Author worth the Reading, either brought over from beyond the Seas, or published here in the Kingdom, which he refused to buy, at what dear Rate soever; and these were his Companions in the Day, and his Counsellors in the Night; insomuch that the Saying may be verified of him—*Nunquam minus solus, quam cum solus*—He was never better accompanied, or less alone, than when alone. Out of his private Chamber, which had a prospect into the Street, if he spied any Sick, Weak, or Lame, would presently send after them, to Comfort, Cherish, and Strengthen them; and not a Trifle to serve them for the present, but such as would relieve them many Days after. He would, moreover enquire what Neighbours were industrious in their Callings, and who had great Charge of Children; and if their Labour or Industry could not sufficiently supply their Families, to such he would liberally send, and relieve them according to their Necessities.'

Taylor, the 'Water Poet,' thus commemorates the recluse of Grub Street:

'Old *Henry Welby—well be*† thou for ever,
Thy Purgatory 's past, thy Heaven ends never.
Of eighty-four years' life, full forty-four
Man saw thee not, nor e'er shall see thee more.
'Twas Piety and Penitance caus'd thee
So long a Pris'ner (to thyself) to be:
Thy bounteous House within express'd thy Mind;
Thy Charity without, the Poor did find.
From Wine thou wast a duteous *Rechabite*,
And Flesh so long Time shunn'd thy Appetite:
Small-Beer, a Caudle, Milk, or Water-gruel,
Strengthen'd by Grace, maintain'd thy daily Duell
'Gainst the bewitching World, the Flesh, the Fiend,
Which made thee live and die well: there's an End.'

A more recent work gives us the information, that Mr Welby had an only child, a daughter, who was married to Sir Christopher Hildyard, Knight of Winstead, in Yorkshire, and left three sons: 1. Henry, who married Lady Anne Leke, daughter of Francis, first Earl of Scarsdale; and of this marriage the late Right Hon. Charles Tennyson D'Eyncourt is a descendant. 2. Christopher. 3. Sir Robert Hildyard, an eminent royalist commander, who, for his gallant services, was made a knight-banneret, and afterwards a baronet.

* *Suckets*, dried sweet-meats or sugar-plums—in the Scottish dialect, *sunkets*.

† Old Taylor would appear, by these words, to have been a punster.

BURNING OF THE TOWER OF LONDON.

On the night of Saturday the 30th of October 1841, the great armory or storehouse, a large and imposing range of buildings, forming part of the Tower of London, and situated on the north side of its precincts, to the east of St Peter's Chapel, was entirely consumed by fire, which had broken out in the Round or Bowyer Tower immediately adjoining. The cause of this calamitous event appears to have been the overheating of the flue of a stove, the prolific origin of so many conflagrations. The edifice destroyed had been founded by James II., and completed in the reign of William and Mary, their majesties celebrating the conclusion of the work by visiting the Tower and partaking of a splendid banquet in the great hall of the new building. This magnificent apartment, occupying the whole of the first-floor, was afterwards employed as a storehouse for small-arms, 150,000 stand of which were destroyed by the fire. On the ground-floor a number of cannon and other trophies, taken in the field, were deposited. Though a loss, estimated at upwards of £200,000, was sustained, it was matter for congratulation that the older portions of the Tower, so interesting by their historical associations, escaped almost uninjured. The Great, or White Tower, was for a time in imminent danger, and the Jewel Tower was so exposed to the flames, that it was believed impossible to avert its destruction. But fortunately both buildings were preserved.

In connection with the Jewel Tower, an interesting incident, as well as a remarkable instance of personal bravery, ought not to be forgotten. We refer to the removal of the Regalia, which, for a

second time in their history, though in different circumstances, made as narrow an escape from destruction as when, upwards of a century and a half previously, they were rescued from the fangs of Blood and his associates. On the intelligence of a fire having broken out, Mr W. F. Pierse, superintendent of one of the divisions of the metropolitan police, proceeded with a detachment of constables to the Tower. Shortly after his arrival, the flames made such rapid advances in the direction of the Jewel House, that it was deemed expedient at once to remove the Regalia and crown-jewels to a place of safety. Accompanied by Mr Swifte, the keeper of the Jewel House, and other officials, including several of the Tower warders, Mr Pierse entered the building in question. To get hold of the jewels was now the difficulty, as these treasures were secured by a strong iron grating, the keys of which were in the possession of the lord chamberlain, or elsewhere deposited at a distance, and not a moment was to be lost. Crow-bars were procured, and a narrow aperture made in the grating so as barely to admit one person. Through this opening Mr Pierse contrived, with much difficulty, to thrust himself, and hand through from the inside the various articles of the Regalia. One of these, a silver font, was too large thus to be passed, and it consequently became necessary to break away an additional bar of the grating. While the warders were employed in effecting this, repeated cries were heard from outside, calling to the party within the Jewel House to leave the building as the fire was close upon them. Determined, however, to accomplish the behest which he had undertaken, Mr Pierse unflinchingly retained his post within the grating, and at last succeeded in rescuing the font. The precious articles were all conveyed safely to the governor's house, and a most extraordinary spectacle presented itself in the warders carrying the crowns and other appurtenances of royalty between groups of soldiers, policemen, and firemen.

The heat endured by the party in the Jewel House was such as almost to reduce their garments to a charred state. Some public reward to Mr Pierse, who had thus so gallantly imperilled himself to save the Regalia of the United Kingdom, would, we should imagine, have been a fitting tribute to his bravery. But no such recompense was ever bestowed.

THE RHYNE TOLL, OR THE CUSTOM OF CHETWODE MANOR.

Many ancient rights and customs, which have long since lost much of their significance, and perhaps now appear to modern notions ridiculous, are nevertheless valuable when viewed in connection with history. For they often confirm and illustrate historic facts, which, from the altered state of the country, would otherwise be unintelligible, and perhaps discredited at the present day. Such a custom or privilege is still possessed and exercised in connection with the manor of Chetwode, in Bucks, which, although very curious both in its origin and observance, has escaped the notice of Blount and other writers on the 'jocular customs of some mannors.'

The manor of Chetwode—a small village about five miles from Buckingham—has been the property of the Chetwode family from Saxon times. Though of small extent, it is the paramount manor of a liberty or district embracing several other manors and villages which are required to do suit and service at the Court-Leet held at Chetwode every three years. The Lord of Chetwode Manor has also the right to levy a yearly tax, called the 'Rhyne Toll,' on all cattle found within this liberty, between the 30th of October and the 7th of November, both days inclusive. The commencement of the toll, which is proclaimed with much ceremony, is thus described in an old document of Queen Elizabeth's reign:

'In the beginning of the said Drift of the Common, or Rhyne, first at their going forth, they shall blow a welke-shell, or horne, immediately after the sunrising at the mansion-house of the manor of Chetwode, and then in their going about they shall blow their horne the second time in the field between Newton Purcell and Barton Hartshorne, in the said county of Bucks; and also shall blow their horne a third time at a place near the town of Finmere, in the county of Oxford; and they shall blow their horne the fourth time at a certain stone in the market of the town of Buckingham, and there to give the poor sixpence; and so, going forward in this manner about the said Drift, shall blow the horne at several bridges called Thornborough Bridge, King's Bridge, and Bridge Mill. And also they shall blow their horne at the Pound Gate, called the Lord's Pound, in the parish of Chetwode. . . . . And also (the Lord of Chetwode) has always been used by his officers and servants to drive away all foreign cattle that shall be found within the said parishes, fields, &c., to impound the same in any pound of the said towns, and to take for every one of the said foreign beasts twopence for the mouth, and one penny for a foot, for every one of the said beasts.' All cattle thus impounded at other places were to be removed to the pound at Chetwode; and if not claimed, and the toll paid, within three days, 'then the next day following, after the rising of the sun, the bailiff or officers of the lord for the time being, shall blow their horne three times at the gate of the said pound, and make proclamation that if any persons lack any cattle that shall be in the same pound, let them come and shew the marks of the same cattle so claimed by them, and they shall have them, paying unto the lord his money in the manner and form before-mentioned, otherwise the said cattle that shall so remain, shall be the lord's as strays.' This toll was formerly so rigidly enforced, that if the owner of cattle so impounded made his claim immediately after the proclamation was over, he was refused them, except by paying their full market price.

Though the custom is still regularly observed, it has undergone some changes since the date of the above document. The toll now begins at nine in the morning instead of at sunrise, and the horn is first sounded on the church-hill at Buckingham, and gingerbread and beer distributed among the assembled boys, the girls being excluded. The officer then proceeds to another part of the liberty on the border of Oxfordshire, and there, after blowing his horn as before, again distributes gingerbread and beer among the assembled boys. The toll is then proclaimed as begun, and collectors are stationed at different parts to enforce it, at the rate of two shillings a score upon all cattle and swine

passing on any road within the liberty, until twelve o'clock at night on the 7th of November, when the 'Rhyne' closes.

The occupiers of land within the liberty have long been accustomed to compound for the toll by an annual payment of one shilling. The toll has sometimes been refused, but has always been recovered with the attendant expenses. It realised about £20 a year before the opening of the Buckinghamshire Railway; but now, owing to Welsh and Irish cattle being sent by trains, it does not amount to above £4, and is let by the present lord of the manor for only £1, 5s. a year.

The existence of this toll may be traced to remote antiquity, but nothing is known of its origin except from local tradition, which, however, in this case, has been so remarkably confirmed, that it may safely be credited. The parish of Chetwode, as its name implies, was formerly thickly wooded; indeed, it formed a part of an ancient forest called Rookwoode, which is supposed to have been conterminous with the present liberty of Chetwode. At a very early period, says our tradition, this forest was infested with an enormous wild-boar, which became the terror of the surrounding country. The inhabitants were never safe from his attacks; and strangers, who heard of his ferocity, were afraid to visit, or pass through, the district; so that traffic and friendly intercourse were seriously impeded, as well as much injury done to property, by this savage monster. The Lord of Chetwode, like a true and valiant knight, determined to rid his neighbourhood from this pest, or to die in the attempt. Bent on this generous purpose, he sallied forth into the forest, and, as the old song has it—

'Then he blowed a blast full north, south, east, and west—
Wind well thy horn, good hunter;
And the wild-boar then heard him full in his den,
As he was a jovial hunter.

Then he made the best of his speed unto him—
Wind well thy horn, good hunter;
Swift flew the boar, with his tusks smeared with gore,
To Sir Ryalas, the jovial hunter.

Then the wild-boar, being so stout and so strong—
Wind well thy horn, good hunter;
Thrashed down the trees as he ramped him along,
To Sir Ryalas, the jovial hunter.

Then they fought four hours in a long summer day—
Wind well thy horn, good hunter;
Till the wild-boar fain would have got him away
From Sir Ryalas, the jovial hunter.

Then Sir Ryalas he drawed his broad-sword with might—
Wind well thy horn, good hunter;
And he fairly cut the boar's head off quite,
For he was a jovial hunter.'

Matters being thus settled, the neighbourhood rung with the praises of the gallant deed of the Lord of Chetwode, and the news thereof soon reached the ears of the king, who 'liked him so well of the achievement,' that he forthwith made the knight tenant *in capite*, and constituted his manor paramount of all the manors within the limits and extent of the royal forest of Rookwoode. Moreover, he granted to him, and to his heirs for ever, among other immunities and privileges the full right and power to levy every year th Rhyne Toll, which has already been described.

Such is the purport of the Chetwode tradition which has descended unquestioned from time im memorial, and received, about forty years ago, remarkable confirmation. Within a mile of Chet wode manor-house there existed a large mound surrounded by a ditch, and bearing the name o the 'Boar's Pond.' It had long been overgrow with gorse and brushwood, when, about the yea 1810, the tenant, to whose farm it belonged, wish ing to bring it into cultivation, began to fill up th ditch by levelling the mound. Having lowere the latter about four feet, he came on the skeleto of an enormous boar, lying flat on its side, and a full length. Probably this was the very spo where it had been killed, the earth around havin been heaped over it, so as to form the ditch an mound. The space formerly thus occupied ca still be traced. It extends about thirty feet i length, and eighteen in width, and the field con taining it is yet called the 'Boar's Head Field The jaw and other portions of the skeleton are no in the possession of Sir John Chetwode, Bart., th present lord of the manor. There is a somewha similar tradition at Boarstall, which stands withi the limits of Bernewood Forest, as Chetwode doe within those of Rookwoode. These forests formerl adjoined, and formed a favourite hunting-distric of Edward the Confessor and his successors, wh had a palace or hunting-lodge at Burghill (Brill) where the two forests met.*

That the mere killing of a boar should be s richly rewarded, may appear incredible. But man a wild-boar of old was so powerful and ferocious that he would even attack a lion; while such wa his stubborn courage that he would never yield til actually killed or disabled. The classic reader ma here recall to mind the celebrated tale, in Gree mythology, of the Calydonian boar that ravage the fields of Ætolia, and was ultimately slain b Meleager, with the help of Theseus, Jason, an other renowned heroes. Such, indeed, was th nature of the wild-boar, that most of the earl poets have chosen it as the fittest animal to illus trate the indomitable courage of their heroes: thu Homer:

'Forth from the portals rushed the intrepid pair,
Opposed their breasts, and stood themselves the wa
So two wild-boars spring furious from their den,
Roused with the cries of dogs and voice of men;
On every side the crackling trees they tear,
And root the shrubs, and lay the forest bare;
They gnash their tusks, with fire their eyeballs roll
Till some wide wound lets out their mighty soul.'

And Spenser, perhaps not without the charge o plagiarism, has the same illustration:

'So long they fight, and fell revenge pursue,
That fainting, each themselves to breathen let,
And oft refreshed, battle oft renew;
As when two boars with rankling malice met,
Their gory sides fresh bleeding fiercely fret,
Till breathless both, themselves aside retire,
Where foaming wrath their cruel tusks they whet,
And trample the earth the while they may respire
Then back to fight again, new breathed and entire

Such animals were most dangerous, not only t

* See vol. i., 768.

travellers and unarmed rustics, but to the hunting-expeditions of the king and his nobles. It need not, therefore, surprise us to find that the destruction of a wild-boar ranked, in the middle ages, among the deeds of chivalry, and won for a warrior almost as much renown as the slaying an enemy in the open field. So dangerous, indeed, was the hunting of wild-boars, even when the hunter was armed for the purpose, that Shakspeare represents Venus as dissuading Adonis from the practice:

O be advis'd! thou know'st not what it is
With javelin's point a churlish swine to gore,
Whose tushes never-sheath'd he whetteth still,
Like to a mortal butcher, bent to kill.
His brawny sides, with hairy bristles arm'd,
Are better proof than thy spear's point can enter;
His short thick neck cannot be easily harm'd;
Being ireful on the lion he will venture.'

Such hunting-expeditions were generally fatal to some of the dogs, and occasionally to one or more of the hunters. Such was the case with Robert de Vere, ninth Earl of Oxford, who was killed in 1395 by the boar he was pursuing.

The knight of Chetwode, then, who from benevolent motives encountered and slew the boar that ravaged his neighbourhood, deserved to be richly rewarded; and what reward could be more appropriate than the privilege of claiming a yearly toll over those roads which he had thus rendered secure? Perhaps, too, the exacting of toll for nine days was to commemorate the period during which the gallant knight persisted before he achieved his object.

Such a custom, as the Rhyne Toll, is not without its use. It is a perpetual memorial, perhaps more convincing than written history, of the dangers which surrounded our ancestors, and from which our country has happily been so long delivered, that we can now scarcely believe they ever existed.

OCTOBER 31.

St Quintin, martyr, 287. St Foillan, martyr, 655. St Wolfgang, bishop of Ratisbon, 994.

Hallowe'en.

There is perhaps no night in the year which the popular imagination has stamped with a more peculiar character than the evening of the 31st of October, known as All Hallow's Eve, or Halloween. It is clearly a relic of pagan times, for there is nothing in the church-observance of the ensuing day of All Saints to have originated such extraordinary notions as are connected with this celebrated festival, or such remarkable practices as those by which it is distinguished.

The leading idea respecting Halloween is that it is the time, of all others, when supernatural influences prevail. It is the night set apart for universal walking abroad of spirits, both of the visible and invisible world; for, as will be afterwards seen, one of the special characteristics attributed to this mystic evening, is the faculty conferred on the immaterial principle in humanity to detach itself from its corporeal tenement and wander abroad through the realms of space. Divination is then believed to attain its highest power, and the gift asserted by Glendower of calling spirits 'from the vasty deep,' becomes available to all who choose to avail themselves of the privileges of the occasion.

There is a remarkable uniformity in the fireside-customs of this night all over the United Kingdom. Nuts and apples are everywhere in requisition, and consumed in immense numbers. Indeed the name of *Nutcrack Night*, by which Halloween is known in the north of England, indicates the predominance of the former of these articles in making up the entertainments of the evening. They are not only cracked and eaten, but made the means of vaticination in love-affairs. And here we quote from Burns's poem of *Halloween:*

'The auld guidwife's well-hoordit nits
Are round and round divided,
And mony lads' and lasses' fates
Are there that night decided:
Some kindle, couthie, side by side,
And burn thegither trimly;
Some start awa wi' saucy pride,
And jump out-owre the chimly
Fu' high that night.
Jean slips in twa wi' tentie e'e;
Wha 'twas, she wadna tell;
But this is Jock, and this is me,
She says in to hersel':
He bleezed owre her, and she owre him,
As they wad never mair part;
Till, fuff! he started up the lum,
And Jean had e'en a sair heart
To see 't that night.'

Brand, in his *Popular Antiquities*, is more explicit: 'It is a custom in Ireland, when the young women would know if their lovers are faithful, to put three nuts upon the bars of the grate, naming the nuts after the lovers. If a nut cracks or jumps, the lover will prove unfaithful; if it begins to blaze or burn, he has a regard for the person making the trial. If the nuts named after the girl and her lover burn together, they will be married.'

As to apples, there is an old custom, perhaps still observed in some localities on this merry night, of hanging up a stick horizontally by a string from the ceiling, and putting a candle on the one end, and an apple on the other. The stick being made to twirl rapidly, the merry-makers in succession leap up and snatch at the apple with their teeth (no use of the hands being allowed), but it very frequently happens that the candle comes round before they are aware, and scorches them in the face, or anoints them with grease. The disappointments and misadventures occasion, of course, abundance of laughter. But the grand sport with apples on Halloween, is to set them afloat in a tub of water, into which the juveniles, by turns, duck their heads with the view of catching an apple. Great fun goes on in watching the attempts of the youngster in the pursuit of the swimming fruit, which wriggles from side to side of the tub, and evades all attempts to capture it; whilst the disappointed aspirant is obliged to abandon the chase in favour of another whose turn has now arrived. The apples provided with stalks are generally caught first, and then comes the tug of war to win those which possess no such appendages. Some competitors will deftly *suck up* the

apple, if a small one, into their mouths. Others plunge manfully overhead in pursuit of a particular apple, and having forced it to the bottom of the tub, seize it firmly with their teeth, and emerge, dripping and triumphant, with their prize. This venturous procedure is generally rewarded with a hurrah! by the lookers-on, and is recommended, by those versed in Halloween-aquatics, as the only sure method of attaining success. In recent years, a practice has been introduced, probably by some tender mammas, timorous on the subject of their offspring catching cold, of dropping a fork from a height into the tub among the apples, and thus turning the sport into a display of marksmanship. It forms, however, but a very indifferent substitute for the joyous merriment of ducking and diving.

It is somewhat remarkable, that the sport of ducking for apples is not mentioned by Burns, whose celebrated poem of *Halloween* presents so graphic a picture of the ceremonies practised on

DUCKING FOR APPLES ON HALLOWEEN.

that evening in the west of Scotland, in the poet's day. Many of the rites there described are now obsolete or nearly so, but two or three still retain place in various parts of the country. Among these is the custom still prevalent in Scotland, as the initiatory Halloween ceremony, of pulling *kail-stocks* or stalks of colewort. The young people go out hand-in-hand, blindfolded, into the *kailyard* or garden, and each pulls the first stalk which he meets with. They then return to the fireside to inspect their prizes. According as the stalk is big or little, straight or crooked, so shall the future wife or husband be of the party by whom it is pulled. The quantity of earth sticking to the root denotes the amount of fortune or dowry; and the taste of the pith or *custoc* indicates the temper. Finally, the stalks are placed, one after another, over the door, and the Christian names of the persons who chance thereafter to enter the house are held in the same succession to indicate those of the individuals whom the parties are to marry.

Another ceremony much practised on Halloween, is that of the Three Dishes or *Luggies*. Two of these are respectively filled with clean and foul water, and one is empty. They are ranged on the hearth, when the parties, blindfolded, advance in succession, and dip their fingers into one. If they dip into the clean water, they are to marry a maiden; if into the foul water, a widow; if into the empty dish, the party so dipping is destined to be either a bachelor or an old maid. As each person takes his turn, the position of the dishes is changed. Burns thus describes the custom:

> 'In order, on the clean hearth-stane,
> The luggies three are ranged,
> And every time great care is ta'en
> To see them duly changed:
> Auld uncle John, wha wedlock's joys
> Sin' Mar's year did desire,
> Because he gat the toom dish thrice,
> He heaved them on the fire
> In wrath that night.

The ceremonies above described are all of a light sportive description, but there are others of a more weird-like and fearful character, which in this enlightened incredulous age have fallen very much into desuetude. One of these is the celebrated spell of eating an apple before a looking-glass, with the view of discovering the inquirer's

future husband, who it is believed will be seen peeping over her shoulder. A curious, and withal, cautious, little maiden, who desires to try this spell, is thus represented by Burns:

'Wee Jenny to her granny says:
"Will ye go wi' me, granny?
I 'll eat the apple at the glass,
I gat frae uncle Johnny."'

A request which rouses the indignation of the old lady:

'She fuff't her pipe wi' sic a lunt,
In wrath she was sae vap'rin',
She notic't na, an aizle brunt
Her braw new worset apron
Out through that night.

"Ye little skelpie-limmer's face!
I daur you try sic sportin',
As seek the foul thief ony place,
For him to spae your fortune:
Nae doubt but ye may get a sight!
Great cause ye hae to fear it;
For mony a ane has gotten a fright,
And lived and died deleeret,
On sic a night."'

Granny's warning was by no means a needless one, as several well-authenticated instances are related of persons who, either from the effects of their own imagination, or some thoughtless practical joke, sustained such severe nervous shocks, while essaying these Halloween-spells, as seriously to imperil their health.

Another of these, what may perhaps be termed *unhallowed*, rites of All-Hallows' Eve, is to wet a shirt-sleeve, hang it up to the fire to dry, and lie in bed watching it till midnight, when the apparition of the individual's future partner for life will come in and turn the sleeve. Burns thus alludes to the practice in one of his songs:

'The last Halloween I was waukin',
My droukit sark-sleeve, as ye ken;
His likeness cam' up the house staukin',
And the very gray breeks o' Tam Glen!'

Other rites for the invocation of spirits might be referred to, such as the sowing of hemp-seed, and the winnowing of three *wechts* of nothing, i.e., repeating three times the action of exposing corn to the wind. In all of these the effect sought to be produced is the same—the appearance of the future husband or wife of the experimenter. A full description of them will be found in the poem of Burns, from which we have already so largely quoted. It may here be remarked, that popular belief ascribes to children born on Halloween, the possession of certain mysterious faculties, such as that of perceiving and holding converse with supernatural beings. Sir Walter Scott, it will be recollected, makes use of this circumstance in his romance of *The Monastery*.

In conclusion, we shall introduce an interesting story, with which we have been favoured by a lady. The leading incidents of the narrative may be relied on as correct, and the whole affair forms matter of curious thought on the subject of Halloween divination.

Mr and Mrs M—— were a happy young couple, who, in the middle of the last century, resided on their own estate in a pleasant part of the province of Leinster, in Ireland. Enjoying a handsome competence, they spent their time in various rural occupations; and the birth of a little girl promised to crown their felicity, and provide them with an object of perpetual interest. On the Halloween following this last event, the parents retired to rest at their usual hour, Mrs M—— having her infant on her arm, so that she might be roused by the slightest uneasiness it might exhibit. From teething or some other ailment, the child, about midnight, became very restless, and not receiving the accustomed attention from its mother, cried so violently as to waken Mr M——. He at once called his wife, and told her the baby was uneasy, but received no answer. He called again more loudly, but still to no purpose; she seemed to be in a heavy uneasy slumber, and when all her husband's attempts to rouse her by calling and shaking proved ineffectual, he was obliged to take the child himself, and try to appease its wailings. After many vain attempts of this sort on his part, the little creature at last sobbed itself to rest, and the mother slept on till a much later hour than her usual time of rising in the morning. When Mr M—— saw that she was awake, he told her of the restlessness of the baby during the night, and how, after having tried in vain every means to rouse her, he had at last been obliged to make an awkward attempt to take her place, and lost thereby some hours of his night's rest. 'I, too,' she replied, 'have passed the most miserable night that I ever experienced; I now see that sleep and rest are two different things, for I never felt so unrefreshed in my life. How I wish you had been able to awake me—it would have spared me some of my fatigue and anxiety! I thought I was dragged against my will into a strange part of the country, where I had never been before, and, after what appeared to me a long and weary journey on foot, I arrived at a comfortable-looking house. I went in longing to rest, but had no power to sit down, although there was a nice supper laid out before a good fire, and every appearance of preparations for an expected visitor. Exhausted as I felt, I was only allowed to stand for a minute or two, and then hurried away by the same road back again; but now it is over, and after all it was only a dream.' Her husband listened with interest to her story, and then sighing deeply, said: 'My dear Sarah, you will not long have me beside you; whoever is to be your second husband played last night some evil trick of which you have been the victim.' Shocked as she felt at this announcement, she endeavoured to suppress her own feelings and rally her husband's spirits, hoping that it would pass from his mind as soon as he had become engrossed by the active business of the day.

Some months passed tranquilly away after this occurrence, and the dream on Halloween night had well-nigh been forgotten by both husband and wife, when Mr M——'s health began to fail. He had never been a robust man, and he now declined so rapidly, that in a short time, notwithstanding all the remedies and attentions that skill could suggest, or affection bestow, his wife was left a mourning widow. Her energetic mind and active habits, however, prevented her from abandoning herself to the desolation of grief. She continued, as her husband had done during his life, to farm the estate, and in this employment, and the education of her little girl, she found ample and salutary

occupation. Alike admired and beloved for the judicious management of her worldly affairs, and her true Christian benevolence and kindliness of heart, she might easily, had she been so inclined, have established herself respectably for a second time in life, but such a thought seemed never to cross her mind. She had an uncle, a wise, kind old man, who, living at a distance, often paid a visit to the widow, looked over her farm, and gave her useful advice and assistance. This old gentleman had a neighbour named C——, a prudent young man, who stood very high in his favour. Whenever they met, Mrs M——'s uncle was in the habit of rallying him on the subject of matrimony. On one occasion of this kind, C—— excused himself by saying that it really was not his fault that he was still a bachelor, as he was anxious to settle in life, but had never met with any woman whom he should like to call his wife. 'Well, C——,' replied his old friend, 'you are, I am afraid, a saucy fellow, but if you put yourself into my hands, I do not despair of suiting you.' Some bantering then ensued, and the colloquy terminated by Mrs M——'s uncle inviting the young man to ride over with him next day and visit his niece, whom C—— had never yet seen. The proffer was readily accepted; the two friends started early on the following morning, and after a pleasant ride, were approaching their destination. Here they descried, at a little distance, Mrs M—— retreating towards her house, after making her usual matutinal inspection of her farm. The first glance which Mr C—— obtained of her made him start violently, and the more he looked his agitation increased. Then laying his hand on the arm of his friend, and pointing his finger in the direction of Mrs M——, he said: 'Mr ——, we need not go any further, for if ever I am to be married, there is my wife!' 'Well, C——,' was the reply, 'that is my niece, to whom I am about to introduce you; but tell me,' he added, 'is this what you call love at first sight, or what do you mean by your sudden decision in favour of a person with whom you have never exchanged a word?' 'Why, sir,' replied the young man, 'I find I have betrayed myself, and must now make my confession. A year or two ago, I tried a Halloween-spell, and sat up all night to watch the result. I declare to you most solemnly, that the figure of that lady, as I now see her, entered my room and looked at me. She stood a minute or two by the fire and then disappeared as suddenly as she came. I was wide awake, and felt considerable remorse at having thus ventured to tamper with the powers of the unseen world; but I assure you, that every particular of her features, dress, and figure, have been so present to my mind ever since, that I could not possibly make a mistake, and the moment I saw your niece, I was convinced that she was indeed the woman whose image I beheld on that never-to-be-forgotten Halloween.' The old gentleman, as may be anticipated, was not a little astonished at his friend's statement, but all comments on it were for the time put a stop to by their arrival at Mrs M——'s house. She was glad to see her uncle, and made his friend welcome, performing the duties of hospitality with a simplicity and heartiness that were very attractive to her stranger-guest. After her visitors had refreshed themselves, her uncle walked out with her to look over the farm, and took opportunity, in the absence of Mr C——, to recommend him to the favourable consideration of his niece. To make a long story short, the impression was mutually agreeable. Mr C——, before leaving the house, obtained permission from Mrs M—— to visit her, and after a brief courtship, they were married. They lived long and happily together, and it was from their daughter that our informant derived that remarkable episode in the history of her parents which we have above narrated.

Born.—John Evelyn, author of *Sylva*, *Memoirs*, &c., 1620, *Wotton*, *Surrey*; Pope Clement XIV., 1705; Christopher Anstey, author of *The New Bath Guide*, 1724.

Died.—John Palæologus, Greek emperor, 1448; John Bradshaw, presiding judge at trial of Charles I., 1659; Victor Amadeus, first king of Sardinia, 1732; William Augustus, Duke of Cumberland, 1765; Jean Pierre Brissot, distinguished Girondist, guillotined, 1793.

The Luck of Edenhall.

At Edenhall, the seat of the ancient family of Musgrave, near Penrith, in Cumberland, the curious drinking-cup, figured below, is preserved as one of the most cherished heir-looms. It is composed of very thin glass, ornamented on the outside with a variety of coloured devices, and will hold about an

THE LUCK OF EDENHALL.

English pint. The legend regarding it is, that the butler of the family having gone one night to draw water at the well of St Cuthbert, a copious spring in the garden of the mansion of Edenhall, surprised a group of fairies disporting themselves beside the well, at the margin of which stood the drinking-glass under notice. He seized hold of it, and a struggle for its recovery ensued between him and the fairies. The elves were worsted, and, thereupon took to flight, exclaiming:

'If this glass do break or fall,
Farewell the luck of Edenhall!'

The extreme thinness of the glass rendering it very liable to breakage, was probably the origin of

the legend, which has been related of this goblet from time immemorial. Its real history cannot now be ascertained, but from the letters I.H.S. inscribed on the top of the case containing it, it has been surmised to have been originally used as a chalice. In the preceding drawing, fig. 1 represents the glass, fig. 2 its leathern case, and fig. 3 the inscription on the top of the latter.

The wild and hair-brained Duke of Wharton is said, on one occasion, to have nearly destroyed the Luck of Edenhall, by letting it drop from his hands; but the precious vessel was saved by the presence of mind of the butler, who caught it in a napkin. The same nobleman enjoys the credit of having composed a burlesque poem in reference to it, written as a parody on *Chevy Chase*, and which commences thus:

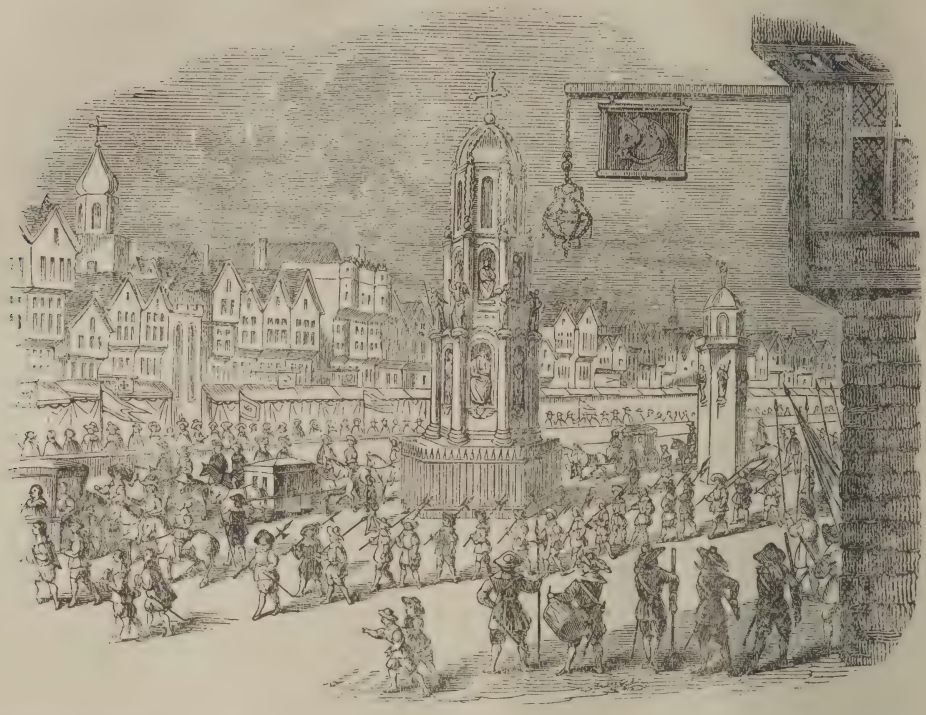
'God prosper long from being broke
The Luck of Edenhall!'

The real author, however, was Lloyd, a boon-companion of the duke. Uhland, the German poet, has also a ballad, *Das Glück von Edenhall*, based on this celebrated legend.

VISIT OF MARIE DE MEDICI TO ENGLAND.

On the 31st of October 1638, Marie de Medici arrived in the city of London, on a visit to the English court. Though she was received with all the honours due to the queen-dowager of France, and the mother of Henrietta, queen of England, yet both court and people considered the visit ill-timed, and the guest unwelcome. Bishop Laud, in his private diary, noticing her arrival, says that he has 'great apprehensions on this business. For indeed,' he continues, 'the English people hate or suspect her, for the sake of her church, her country, and her daughter; and having shifted her residence in other countries, upon calamities and troubles which still pursue her, they think it her fate to carry misfortunes with her, and so dread her as an ill-boding meteor.'

Daughter of the Grand Duke of Tuscany, Marie de Medici, for mere reasons of state, was married to Henry IV., king of France. Henry gained by her the heir he desired, but her unsociable, haughty, and intractable disposition, rendered his life miserable, and it is still considered a doubtful question, whether she were not privy to the plot which caused his death by assassination in 1610. On this event taking place, she attained the height of her power, in acquiring the regency of France; but fully as feeble-minded as she was ambitious, she suffered herself to be ruled by the most unworthy favourites, and the inevitable results quickly followed. She secured, however, for her service, one person of conduct and abilities, who cannot be passed over without notice. Attracted by the eloquent sermons of a young Parisian ecclesiastic, named Armand de Plessis, Marie appointed him to be her almoner, and afterwards made him principal secretary of state; but this man, better known by his later title of Cardinal Richelieu, was fated to become her evil genius and bitterest enemy. During the seven years in which the regency of Marie de Medici lasted, France was convulsed with broils, cabals, and intrigues. At length her son, Louis XIII., assuming the government, caused his mother's unworthy favourite, the Marshal d'Ancre, to be murdered, and his wife to be tried and executed for the alleged crime of sorcery; the wretched woman to the last asserting, that the influence of a strong mind over a weak one was the only witchcraft she had used.



Marie would have contended against her son in open war, but Richelieu joining the king, and threatening to imprison her for life, she was forced, in 1631, to take refuge at Brussels, where she lived for seven years, supported by a pension from the Spanish court, her daughter Elizabeth being wife of Philip IV. of Spain. Restlessly intriguing, but ever foiled by the superior diplomacy of Richelieu, she fled from Brussels to Holland, greatly to the indignation of Philip, who at once stopped her allowance, refusing even to pay the arrears then due to her. It seems as if the fates had combined to punish this miserable old woman, for, besides the popular commotions excited by her intrigues, disasters not attributable to her presence—namely, pestilence, famine, and war—ever dogged her footsteps. Richelieu would have allowed her a liberal annuity, if she would only return to Italy; but this her pride would not permit her to do; moreover, it would be giving up the field to an enemy and rival, whom she still hoped to overcome. So she begged her son-in-law, Charles I., to receive her in England, a request he, with his usual imprudence, generously granted; for he had been forced, by repeated remonstrances of parliament, a few years previous, to dismiss his own queen's foreign chaplains and servants; and it was not likely that her mother, who brought over a new train, should escape unnoticed. There were, indeed, strong reasons for Laud's forebodings and the people's fears. She had a grand reception, however. Waller, the court-poet, dedicated a poem to her, commencing thus:

'Great Queen of Europe! where thy offspring wears
All the chief crowns; where princes are thy heirs:
As welcome thou to sea-girt Britain's shore,
As erst Latona, who fair Cynthia bore,
To Delos was.'

St James's Palace was given to her as a residence, where she kept a petty court of her own, Charles, it is said, allowing her the large sum of £40,000 per annum. But evil days were at hand. The populace ever regarded her as an enemy, and in the excitement caused by Strafford's trial, she was mobbed and insulted, even in the palace of St James's. She applied to the king for protection, but he, being then nearly powerless, could do no more than refer her to parliament. The Commons allowed her a temporary guard of one hundred men, petitioning the king to send her out of the country; and not ungenerously offering, if she went at once, to vote her £10,000, with an intimation that they might send more to her, if she were well out of England. The question was, where could she go? seeing that no country would receive her. At last having secured a refuge in the free city of Cologne, she left England in August 1641, the Earl of Arundel, at the king's request, accompanying her. Lilly, with a feeling one would scarcely have expected, thus notices her departure. 'I beheld the old queen-mother of France departing from London. A sad spectacle it was, and produced tears from my eyes, and many other beholders, to see an aged, lean, decrepit,

poor queen, ready for her grave, necessitated to depart hence, having no place of residence left her, but where the courtesy of her hard fate assigned. She had been the only stately magnificent woman of Europe, wife to the greatest king that ever lived in France, mother unto one king and two queens.'

The misfortunes of this woman attended her to

CHEAPSIDE, WITH THE PROCESSION OF MARIE DE MEDICI ON HER VISIT TO CHARLES I. AND HIS QUEEN. FROM LA SERRES'S 'ENTRÉE ROYALE DE REGNE MERE DU ROI,' 1638.

the last. Her friends, under the circumstances, thought it most advisable to invest the £10,000 given her by parliament in an English estate, and as the civil war broke out immediately after, she never received the slightest benefit from it. She died the year following at Cologne, in a garret, destitute of the common necessaries of life. Chigi, the pope's legate, attended her when dying, and induced her to express forgiveness of Richelieu's ingratitude. But when further pressed to send the cardinal, as a token of complete forgiveness, a valued bracelet, that never was allowed to leave her arm, she muttered: 'It is too much!' turned her face to the wall, and expired.

The illustration representing Marie's public entrance into London is considered peculiarly interesting; the engraving from which it is taken being one of the only two street-views extant of the city previous to the great fire. The scene depicted is about the middle of Cheapside; the cross, which stood near the end of Wood Street, forming a conspicuous feature. This was one of the crosses erected by Edward I., in memory of his beloved queen, Eleanor of Castile. It had been frequently repaired and furbished up for various public occasions. Towards the end of Elizabeth's reign, it received some injuries from the ultra-Protestant party; but these were repaired, the iron railing put round the base (as seen in the engraving) and the upper part gilded, in honour of James I.'s first visit to the city. Those were the last repairs it ever received. After sustaining several petty injuries from the Puritans, the House of Commons decreed that it should be destroyed; and in May 1643, the order was carried into effect amid the shouts of the populace.

The building to the right, eastward of the Cross, represents the Standard, which, with a conduit attached, stood nearly opposite the end of Milk Street. Stow describes it exactly as represented in the engraving—a square pillar, faced with statues, the upper part surrounded by a balcony, and the top crowned with an angel or a figure of Fame, blowing a trumpet. The numerous signs seen in the illustration, exhibit a curious feature of old London. The sign on the right is still a not uncommon one, 'the Nag's Head,' and the bush or garland suspended by it, shews that it was the sign of a tavern. When every house had a sign, and the shop-windows were too small to afford any index of the trade carried on within, publicans found it convenient to exhibit the bush. But when a tavern was well established, and had acquired a name for the quality of its liquors, the garland might be laid aside; for, as the old proverb said, 'Good wine needs no bush.'

Next was November; he full grosse and fat
As fed with lard, and that right well might seeme;
For he had been a fatting hogs of late,
That yet his browes with sweat did reek and steem,
And yet the season was full sharp and breem;
In planting eeke he took no small delight:
Whereon he rode, not easie was to deeme;
For it a dreadful Centaure was in sight,
The seed of Saturne and fair Nais, Chiron hight.

SPENSER.

(DESCRIPTIVE.)

NOVEMBER WHAT an uproar there is in the old forests and woods when the November winds lift up their mighty voices, and the huge trees clashing together, like the fabled giants battling with knotted clubs against the invisible assailant, whose blows they feel but cannot see struck, so wage war on one another! On every hand we hear the crash and fall of mighty branches, and sometime a large tree torn up by the roots comes down, quick as an avalanche, levelling all it falls upon, where it lies with its blackening leaves above the crushed underwood like some huge mammoth that has perished. The sky is low and gloomy and leaden-coloured, and a disheartening shadow seems to fall on everything around. We see swine rooting in the desolate cornfields, among the black and rotten stubble, while the geese come draggled and dirty from the muddy pond, which is half-choked up with fallen leaves. On the cold naked hedge a few ears, which the birds have long since emptied, hang like funeral-wreaths over the departed harvest. The rain raineth every day on the heps and haws

and autumn-berries, and beats the brown seed-vessels of the dead-flowers into the earth, while the decayed leaves come rolling up to make a covering for their graves. In some low-lying dank corner a few blackened bean-sheaves, that never ripened, are left to rot; and if you walk near them, you see the white mould creeping along the gaping pods. There is a deathly smell from slimy water-flags and rotting sedge beside the stagnant meres, and at every step your footprint is filled up with the black oozing of the saturated soil the moment it is made. You see deserted sheds in the fields where the cattle sheltered, rent and blown in; and if you enter one to avoid the down-pouring torrent, the dull gray November sky is seen through the gaping thatch, even in the puddle on the floor where the water has lodged. The morsel of hay in the corner you would fain sit down upon is mouldy, and as you look at the beam which spans across, you fancy some one must have hanged himself on it, and hurry out again into the pouring rain.

November is the pioneer of Winter, who comes, with his sharp winds and keen frosts, to cut down every bladed and leafy bit of green that is standing up, so as to make more room for the coming snow-flakes to fall on the level waste, and form a great bed for Winter to sleep upon. He blows all the decaying leaves into dreary hollows, to fill them up, so that when Winter is out on the long dark nights, or half-blinded with the great feathery flakes, he may not fall into them. If a living flower still stands above its dead companions, it bends its head like a mourner over a grave, and seems calling on our mother-earth to be let in. The swollen streams roar and hurry along, as if they were eager to bury themselves in the great rivers, for they have no flowers to mirror, no singing of birds to tempt them to linger among the pebbles and listen, no green bending sprays to toss to and fro, and play with on their way, and they seem to make a deep complaining as they rush along between the high brimming banks. The few cattle that are out, stand head to head, as if each tried to warm the other with its breath, or turned round to shut out the gloomy prospect that surrounds them, laying down their ears at every whistle of the wind through the naked hedges. Even the clouds, when they break up, have a ragged and vagrant look, and appear to wander homeless about the sky, for there is no golden fire in the far west now for them to gather about, and sun themselves in its warmth: they seem to move along in doubt and fear, as if trying to find the blue sky they have lost. The woodman returns home at night with his head bent down, feeling there is nothing cheerful to look round upon, while his dog keeps close behind, seeming to avail himself of the little shelter his master affords from the wind, while they move on together. The pleasantest thing we see is the bundle or fagots he carries on his shoulders, as it reminds us of home—the crackling fire, the clean-swept hearth, and the cozy-looking kettle, that sits 'singing a quiet tune,' on the hob. We pity the poor fellow with the bundle under his arm, who stands looking up at the guide-post where three roads meet, and hope he has not far to go on such a stormy and moonless night.

But amid all these images of desolation, which strike the eye more vividly through missing the richly-coloured foliage that threw such beauty over the two preceding months, November has still its berries which the early frosts have ripened to perfection. Turn the eye wheresoever we may during our walks, heps and haws abound on the hawthorn-hedges, and where the wild-roses of summer hang swaying in the wind. The bramble berries, which cottage-children love to gather besmearing their pretty faces with the fruit, have now their choicest flavour, and melt in the mouth when eaten, looking like beautiful ornaments carved in jet as they rock in the autumn winds. Many a poor village-housewife brings a smile to the children's faces as she places her blackberry pie or pudding on the table, for it is a fruit that requires but little sugar, and is a cheap luxury added to the usual scanty meal. Then there are the sloes and bullaces, almost always to be found in old hedges, which at this season have a misty blue bloom on them, equal to any that we see on the grape. These the country-people gather and keep sound through all the long winter, and they are equal in flavour to the finest damsons our orchards can produce. Though many varieties of plum-trees have been brought to England at different times, yet it is to the sloe and bullace we are indebted for our serviceable plums, as these shrubs are indigenous, and have been brought to perfection by cultivation through many centuries. The dewberry bears so close a resemblance to the blackberry when ripe, that it is not easy to distinguish the difference. When in flower, it is as beautiful as the blossoms of the wild-rose, the fruit has also a blue bloom on it like the plum, which is never found on the blackberry; the divisions of the berry are also larger, and not so numerous. Often, is seen growing among the ling, the pretty cloudberry, only just overtopping the heather, for it is seldom more than a foot high, and its fruit is of a splendid orange colour when ripe, though rather too acid to please every taste. But of all the little berry-bearing beauties, none beat the bilberry when in bloom, for it is then covered with rosy-coloured wax-like flowers, which few of our choice green-house plants excel, and for which we marvel it has not been more cultivated. Birds are partial to this berry, which bears a grape-like bloom, and game fed upon it is said to be as superior in flavour as mutton, fed on pastures abounding in wild-thyme, is to that fattened only on grass. But the fairy of our shrubs—which may rank with the harvest-mouse among animals, and the humming-birds among the feathered race—is the tiny cran-berry, which you must bend the back to find, as it only grows three or four inches high. Whether our grandmother had some secret art of preserving these delicious berries, which is now lost—or the fruit has deteriorated in flavour—we cannot tell, but somehow we fancy that cranberries have not the delicious taste now which they had in our boyish days.

The most wonderful plant that bears berries, is the butcher's broom, which may be seen covered with fruit as large as cherries, in the very depth of winter. Both flower and berry grow out of the very middle of the leaf, and it would make a pleasant change in our Christmas decoration, as it is an evergreen, and quite as beautiful as the holly. The black berries of the privet remain on the branches all winter long, and are found there when the sprays are covered with the fresh green leaves of

spring. These berries are much harder than our heps and haws, and retain their fulness when all the other hedge-fruits are withered and tasteless, though the birds generally seem to leave them till the last, as if they only ate them when nothing else could be got. They make a grand show with their large clusters amid the nakedness of winter, though almost failing to attract the eye now if seen beside the wild-cornel or dogwood-berries. Autumn has nothing more beautiful than the wild-cornel, with its deep-purple berries hanging on rich red-coloured branches, and surrounded with golden, green, and crimson foliage, as if all the richest hues of autumn were massed together to beautify it, and wreath the black purple of the berries. Another tree, which scarcely arrests the eye in summer, now makes a splendid show, for the seed-vessels appear like roses, the capsules separating like the petals of the Queen of Flowers, for such is the appearance of the spindle-tree. The woody nightshade, whose purple petals and deep golden anthers enriched the hedge-row a few weeks ago, is now covered with clusters of scarlet berries, not unlike our red garden currants; while both the foliage and berries of the guelder-rose seem kindled into a red blaze. But the bird-cherry is the chameleon of shrubs in autumn, its bunches of rich-looking fruit changing from a beautiful green to a rich red, and then to the colour of the darkest of black-heart cherries, and looking equally as luscious to the eye, though it would be dangerous to eat so many as we might of the real cherries without harm. Beside all these, and many other beautiful berries, we have now the ferns all ablaze with beauty—vegetable relics of an old world—and many of them as pleasing to the eye as our choicest flowers. Where is there a grander sight than a long moorland covered with bracken at the close of autumn?—the foliage of the trees is not to be compared with that outspread land of crimson and gold. And there is such a forest smell about it too—that real country aroma, which we get a sniff of in villages where they have only wood-fires—for there is nothing else to compare with the smell of fern where it covers long leagues of wild moorland.

Many little animals are busy, during the autumn, in laying up stores for winter; for though some of them sleep away the greater portion of the cold season, a change in the weather often causes them to awaken, when they have recourse to the provision they have saved; and as soon as the mild warm weather is again succeeded by cold, they coil themselves up, and sleep again. The hibernation of the squirrel is shorter than that of any of our winter-sleeping animals, for he is up and away as soon as he is awakened by a mild atmosphere, and as he has generally more than one larder, enjoys himself until slumber again overtakes him; for we can imagine, from his active habits, that he is not likely to remain in his nest while there is a glimpse of warm sunshine to play in. The hedge-hog is a sound sleeper, and stores up no provision, though its hibernation is sometimes broken during a very mild winter, when it may at times be found in the night, searching for food under the sheltered hedges. The pretty dormouse coils itself up like a ball of twine in its winter-nest, curling the tail round the head to the other side of its back, as if tying itself together before going to sleep. Should it awake, there is store of food at hand, which it holds in its forepaws like the squirrel, while sitting up to munch an acorn, hep, or haw, or whatever is stored up, and it is a great hoarder of various kinds of seeds. But few of these torpid animals store their granaries better than the long-tailed field-mouse; considering its smallness, the quantity of corn that has been found in a single nest is amazing. Even if we reckon it to have carried from the harvest-field a full ripe ear at a time, it must have made many journeys to accumulate so much food. Nothing seems to come amiss to it, for if there has been no cornfield at hand, its hoard has been found to consist of nuts, and acorns, gathered from the neighbouring wood, which has sometimes been five or six hundred yards from its nest. Above five hundred nuts and acorns have been taken out of its storehouse; and as it can hardly be supposed that so small an animal could carry more than one at a time, we have proof of its industry in the hoard it must have laboured so hard to get together. One might suppose that, early in autumn, when the weather is fine, these little animals would give themselves up to enjoyment, instead of carrying the many loads they do to their nests, did we not find proof to the contrary. The ant lays up no store at all, though it has so often supplied an image of industry in poetry. It is not only one of the sleepiest of insects in winter, but when applied as chloroform, soon steeps the senses in forgetfulness. The ancient Greeks were acquainted with its drowsy properties, and availed themselves of it. Some naturalists say that the hibernating animals we have glanced at, spread out their provisions in the sun to dry and ripen before carrying them into their nests. That this may be the case, we can hardly doubt, having seen ears of corn, nuts, acorns, and seeds, about the roots of trees, at a considerable distance from the spots where they were grown, and in such positions as they could not have fallen into, even had they been shaken down by the wind. The foresight of these hibernating mammals is proved through their laying up provision against the time they may awaken, long weeks before they retire to their winter-sleep. Nor is it less wonderful to note the going out and coming in of the migrating-birds in autumn; for though all our songsters that are migratory have long since gone, we now hear the screaming of coming flocks in the still night—the clamour of voices high overhead, which is sometimes startling in the star-lighted silence. Most of our aquatic birds land in the night, though long strings of wild-geese are often seen forming a V-like figure in the air, as they wing their way to our fenny and marshy lands in the daytime. If flying low enough, the leader of the van, forming the point of V or A, who seems to cleave the air, to make a passage for his followers, will be seen after a time to fall into the rear, when another bird takes his place, until he in time also falls back, as if through fatigue; nor can there be any doubt that the leader, who first pierces the air, through which the whole flock passes, has to exert himself more than his followers. Though the heron may now and then be seen, standing as motionless as if sculptured in marble, at some bend of a river or stream, it is now rather a scarce bird, for there are not more than four or five heronries in England, in which they build and breed close together like rooks. The heron shifts

from place to place in search of food, but, like several other of our birds, is not migratory, though it may be seen in some parts of our island at this season, where it rarely appears during any other portion of the year. It flies very high, and in dull weather may often be heard, while on the wing, far beyond the reach of the eye. At first there appears something strange and mysterious in birds coming over to winter with us, and migrating again at the first appearance of spring, and never, or very rarely, staying to breed with us. One of our celebrated naturalists argues that the sun is the great moving-power; that they are again forced northward in spring by the same impulse which brings back again our summer singing-birds; 'all seeking again those spots where they first saw the light, there to rear their young;' and that a failure of temperature and food causes them to follow the sun in autumn. Some think that from the time a bird remains with us, a calculation might be made as to the distance it goes after leaving our shores; that, because some remain a month or so longer with us than others, they do not fly so far away as those which migrate earlier. But the rapidity of the flight of a bird, and its power of remaining on the wing, are objects of consideration; and though the swallow is among the last to leave us, it would fly treble the distance in a few hours than many other birds that leave us earlier, and have neither its strength nor stretch of wing to carry them a great distance. As to the time of departure or arrival of our passenger-birds, that must always depend upon the state of the season at the point of departure; for, as we have before remarked, they can know nothing of the backwardness or forwardness of the autumn or spring in the countries they visit, no more than they can tell before they arrive here whether our April is green, or has had all its buds bitten off by a killing frost, such as we well remember to have seen. Take the dates of the departures and arrivals of our birds from the calendars of some of the most celebrated English naturalists, and they will be found to vary at times a month or more in different years, especially the arrivals. A summer abounding in insect-food will cause birds to leave us earlier, after a forward spring, because their young were sooner hatched, and are stronger and better able to accompany their parents than they would have been had they left the shell later, and been pinched while fed by the parent-birds, through a scarcity of food. The sky-lark, which has long been silent, may now be heard in open sunny places; and we find, from a note made four years ago, that we heard it singing on the downs in Surrey in December.

The poetry of home, which we carry with us unconsciously whithersoever we go, was never more beautifully illustrated than in the poor emigrant's sky-lark, which he carried with him when he left this country for America. Crowds of English settlers used to collect round his hut to hear it sing, and one of them offered all he had in the world—his horse and cart—for the bird, but the owner refused to part with it. We are indebted to the Rev. J. G. Wood for this anecdote, which shews how the hearts of the rudest class of men are touched at times by some trifle which brings back again home with all its old boughs rustling before the 'inward eye.' No matter in what form it appears, but anything which causes us to turn to nature with an affectionate feeling, elevates both mind and heart, inspires love, and makes us better, for we can hardly do so without catching some glimpse of the Great Creator, which carries the mind far beyond the objects that surround us, to the thoughts of those higher destinies which the soul is heir to, and may be ours if we do not sell our godlike birthright.

By the end of this month our gardens look desolate. The few chrysanthemums that have survived have a draggled and dirty look after the frost and rain, and nothing out of doors, excepting the evergreens, remind us of the green flush of departed summer. There is the tapping of rain on our windows, and the roaring of the wind through the long dark nights. The country-roads are soft, and we stick in the mire at every step if we traverse those rutted lanes, which were so delightful to walk along only a few short weeks ago. Even the heart of a brave man beats quicker, who, after passing a treeless and houseless moor, hears the rattling of the bones and irons of the murderer on the gibbet-post, as he turns to enter the high dark wood, which, when he has groped through, still leaves him a long league from the solitary toll-gate—the only habitable spot he will pass before reaching home. For now, in the solemn language of the Holy Bible, we have many a day 'of darkness and of gloominess, of clouds and of thick darkness, even very dark, and no brightness in it, for the land is darkened.'

(HISTORICAL.)

November was styled by the ancient Saxons *Wint-monat*, or the *wind-month*, from the gales of wind which are so prevalent at this season of the year, obliging our Scandinavian ancestors to lay up their keels on shore, and refrain from exposing themselves on the ocean till the advent of more genial weather in the ensuing year. It bore also the name of *Blot-monath*, or the *bloody-month*, from the circumstance of its being customary then to slaughter great numbers of cattle, to be salted for winter use. The epithet had possibly also reference to the sacrificial rites practised at this time.

CHARACTERISTICS OF NOVEMBER.

On the 22d of this month, the sun enters the sign of *Sagittarius* or *The Archer*, an emblem said to express the growing predominance of cold which now *shoots* into the substance of the earth, and suspends the vegetative powers of nature. The average temperature of the British Islands for the middle of November is about 43°. On the 1st of the month, the sun rises in the latitude of London at 7.11, and sets at 4.49.

November is generally regarded as the gloomiest month of the year, and it is perhaps true that less enjoyment is derivable in it from external objects than in any other of the twelve divisions of the calendar. It is popularly regarded as the month of blue devils and suicides. Leaden skies, choking fogs—more especially in London—and torrents of rain, combined frequently with heavy gusts of wind, which shake down the last remaining leaves from the trees, are phenomena of normal occurrence in November, and certainly by no means

conducive to buoyancy and cheerfulness of spirits. Summer and autumn, with their exhilarating influences, have fairly departed, and winter, in its gloomiest phases, is approaching, whilst the hilarity and joyousness of the Christmas-season are still far off. The *negative* character of November, as exemplified in a foggy day of that month in London, is very happily depicted in the following lines, by the prince of modern humorists, Thomas Hood—

'No sun—no moon!
No morn—no noon—
No dawn—no dusk—no proper time of day—
No sky—no earthly view—
No distance looking blue—
No road—no street—no "t'other side the way"—
No end to any row—
No indications where the crescents go—
No top to any steeple—
No recognitions of familiar people—
No courtesies for shewing 'em—
No knowing 'em!
No travelling at all—no locomotion,
No inkling of the way—no notion—
"No go"—by land or ocean—
No mail—no post—
No news from any foreign coast—
No park—no ring—no afternoon gentility—
No company—no nobility—
No warmth, no cheerfulness, no healthful ease—
No comfortable feel in any member—
No shade, no shine, no butterflies, no bees,
No fruits, no flowers, no leaves, no birds,
November!'

First of November.

The Festival of All-Saints. St Benignus, apostle of Burgundy, martyr, 3d century. St Austremonius, 3d century. St Cæsarius, martyr, 300. St Mary, martyr, 4th century. St Marcellus, bishop of Paris, confessor, beginning of 5th century. St Harold, king of Denmark, martyr, 980.

All-Saints-Day.

This festival takes its origin from the conversion, in the seventh century, of the Pantheon at Rome into a Christian place of worship, and its dedication by Pope Boniface IV. to the Virgin and all the martyrs. The anniversary of this event was at first celebrated on the 1st of May, but the day was subsequently altered to the 1st of November, which was thenceforth, under the designation of the Feast of All Saints, set apart as a general commemoration in their honour. The festival has been retained by the Anglican Church.

Born.—Benvenuto Cellini, celebrated silversmith and sculptor in metal, 1500, *Florence;* Denzil Hollis, reforming patriot, 1597, *Haughton, Northamptonshire;* Sir Matthew Hale, eminent judge, 1609, *Alderley, Gloucestershire;* Nicolas Boileau, poetical satirist, 1636, *France;* Bishop George Horne, biblical expositor, 1730, *Otham, near Maidstone;* Lydia Huntley Sigourney, American poet, 1791, *Norwich, United States.*

Died.—Charles II. of Spain, 1700; Dr John Radcliffe, founder of the Radcliffe Library, Oxford, 1714; Dean Humphrey Prideaux, author of *Connection of the History of the Old and New Testament*, 1724, *Norwich;* Louisa de Kerouaille, Duchess of Portsmouth, mistress of Charles II., 1734; Alexander Cruden, author of the *Concordance*, 1770, *Islington;* Edward Shuter, comedian, 1776; Lord George Gordon, originator of the No-Popery Riots of 1780, 1793, *Newgate, London.*

SIR MATTHEW HALE: DRINKING OF HEALTHS.

The illustrious chief-justice left an injunction or advice for his grandchildren in the following terms: 'I will not have you begin or pledge any health, for it is become one of the greatest artifices of drinking, and occasions of quarrelling in the kingdom. If you pledge one health, you oblige yourself to pledge another, and a third, and so onwards; and if you pledge as many as will be drank, you must be debauched and drunk. If they will needs know the reason of your refusal, it is a fair answer: "That your grandfather that brought you up, from whom, under God, you have the estate you enjoy or expect, left this in command with you, that you should never begin or pledge a health."'

Sir Matthew might well condemn health-drinking, for in his days it was used, or rather abused, for the encouragement of excesses at which all virtuous people must have been appalled. The custom has, however, a foundation and a sanction in the social feelings, and consequently, though it has had many ups and downs, it has always hitherto, in one form or another, maintained its ground. As far back as we can go amongst our ancestors, we find it established. And, notwithstanding the frowns of refinement on the one hand, and tee-totalism on the other, we undoubtedly see it occasionally practised.

Among the earliest instances of the custom may be cited the somewhat familiar one of the health, said to have been drunk by Rowena to Vortigern, and which is described by Verstegan after this fashion: 'She came into the room where the king and his guests were sitting, and making a low obedience to him, she said: "*Waes heal, hlaford Cyning*" (Be of health, Lord King). Then, having drunk, she presented it [the cup] on her knees to the king, who, being told the meaning of what she said, together with the custom, took the cup, saying: "*Drink heal*" [Drink health], and drank also.'

William of Malmesbury adverts to the custom thus: 'It is said it first took its rise from the death of young King Edward (called the Martyr), son to Edgar, who was, by the contrivance of Elfrida, his step-mother, traitorously stabbed in the back as he was drinking.' The following

curious old delineation, from the Cotton Manuscript, seems to agree with the reported custom. The centre figure appears to be addressing himself to his companion, who tells him that he pledges him, holding up his knife in token of his readiness to assist and protect him:

PLEDGING HEALTHS—NO. 1.

In another illustration of the same period, the custom of individuals pledging each other on convivial occasions is more prominently represented:

PLEDGING HEALTHS—NO. 2.

The following account of a curious custom in connection with the drinking of healths, is from a contribution to *Notes and Queries*, by a Lichfield correspondent, who says, that in that ancient city, it has been observed from time immemorial, at dinners given by the mayor, or at any public feast of the corporation. The first two toasts given are 'The Queen,' and 'Weale and worship,' both which are drunk out of a massive embossed silver cup, holding three or four quarts, presented to the corporation in 1666, by the celebrated Elias Ashmole, a native of the city. The ceremony itself is by the same writer thus more particularly described: 'The mayor drinks first, and on his rising, the persons on his right and left also rise. He then hands the cup to the person on his right side, when the one next to him rises, the one on the left of the mayor still standing. Then the cup is passed across the table to him, when *his* left-hand neighbour rises; so that there are always three standing at the same time—one next to the person who drinks, and one opposite to him.' From the curious old letter of thanks for this cup we quote the following lines: 'Now, sir, give us leave to conclude by informing you that, according to your desire (upon the first receipt of your *Poculum Charitatis*, at the sign of the *George for England*), we filled it with Catholic wine, and devoted it a sober health to our most gracious king, which (being of so large a continent) pass the hands of thirty to pledge; nor did we forget yourself in the next place, being our great *Mecœnas*.' This letter of thanks is dated, 'Litchfield, 26th January 1666.' The whole of the original letter appears in *Harwood's Lichfield*.

The custom as practised in the passing of the

renowned 'loving-cup,' at the lord mayor's feasts in London, is too well known to require further notice. Another writer in *Notes and Queries* says, that the same observance always had place at the parish meetings, and churchwardens' dinners, at St Margaret's, Westminster: the cover of the loving-cup being held over the head of the person drinking by his neighbours on his right and left hand.'

It appears from *Barrington's Observations on the Ancient Statutes* (1766), that the custom prevailed at Queen's College, Oxford, where the scholars who wait upon their fellows place their *two thumbs* on the table. The writer adds: 'I have heard that the same ceremony is used in some parts of Germany, whilst the superior drinks the health of the inferior. The inferior, during this, places his two thumbs on the table, and therefore is incapacitated from making any attempt upon the life of the person who is drinking.' The writer on the Lichfield custom also adverts to this, by the by, when he says that, 'he presumes that though the ceremony is different, the object is the same as that at Queen's College—viz., to prevent injury to the person who drinks.'

The practice would appear to have had its origin at the time when the Danes bore sway in this country. Indeed, some authors deduce the expression, 'I'll pledge you,' in drinking, from this period. It seems that the Northmen, in those days, would occasionally stab a person while in the act of drinking. In consequence, people would not drink in company, unless some one present would be their pledge, or surety, that they should come to no harm whilst thus engaged. Nay, at one time, the people became so intimidated that they would not dare to drink until the Danes had actually pledged their honour for their safety!

In Beaumont and Fletcher's days, it was the custom for the young gallants to stab themselves in their arms, or elsewhere, in order to 'drink the healths' of their mistresses, or to write their names in their own blood! The following passage occurs in Pepys's *Diary* relative to 'health-drinking:' 'To the Rhenish wine-house, where Mr Moore shewed us the French manner, when a health is drunk, to bow to him that drunk to you, and then apply yourself to him, whose lady's health is drunk, and then to the person that you drink to, which I never knew before: but it seems it is now the fashion.'

The following remarkable and solemn passage is found in *Ward's Living Speeches of Dying Christians* (in his Sermons): 'My Saviour began to mee in a bitter cup; and *shall I not pledge him?* i. e., drink the same.'

Records of the custom in many countries, and in many ages, might be multiplied *ad infinitum*. It is beyond our present purpose, however, to give any further illustrations, beyond the following curious extract from *Rich's Irish Hvbbvb, or the English Hve and Crie* (1617). After a long and wholesome, though severe, tirade against drunkenness, the quaint old writer says: 'In former ages, they had no conceits whereby to draw on drunkennes; their best was, I drinke to you, and I pledge yee; till at length some shallow-witted drunkard found out the carouse, which shortly after was turned into a hearty draught: but now it is ingined [enjoined] to the drinking of a health, an invention of that worth and worthinesse, as it is pitty the first founder was not hanged, that wee might haue found out his name in the ancient record of the Hangman's Register! The institution in drinking of a health is full of ceremonie, and obserued by tradition, as the papists doe their praying to saints.' The singular writer then adds this description of the performance of the custom: 'He that begins the health, hath his prescribed orders; first vncouering his head, he takes a full cup in his hand, and setling his countenance with a graue aspect, he craues for audience. Silence being once obtained, hee begins to breath out the name, peraduenture of some honorable personage that is worthy of a better regard than to have his name pollvted at so vnfitting a time, amongst a company of drunkards; but his health is drunke to, and hee that pledgeth must likewise of [off] with his cap, kisse his fingers, and bowing himselfe in signe of a reuerent acceptance. When the leader sees his follower thus prepared, he soupes [sups] up his broath, turnes the bottom of the cuppe vpward, and in ostentation of his dexteritie, giues the cup a phylip [fillip], to make it cry *tynge* [a sort of ringing sound, denoting that the vessel was emptied of its contents]. And thus the first scene is acted.—The cup being newly replenished to the breadth of a haire, he that is the pledger must now begin his part, and thus it goes round throughout the whole company, prouided alwaies by a canon set downe by the first founder, there must be three at the least still vncouered, till the health hath had the full passage; which is no sooner ended, but another begins againe, and he drinkes a health to his *Lady of little worth*, or, peraduenture, to his *Light-heel'd mistris*.'

The caustic old writer just referred to, adds the following remarks in a marginal note: 'He that first inuented that vse of drinking healths, had his braines beat out with a pottle-pot: a most iust end for inventers of such notorious abuses. And many in pledging of healths haue ended their liues presently [early], as example lately in London.'

A few notices may be appended of the anathemas which have been hurled at the custom of drinking healths. The first of these is a singular tract published in 1628, 'by *William Prynne, Gent.*, proving the drinking and pledging of Healths to be sinful, and utterly unlawful unto Christians.' At the Restoration, this work had become scarce, and 'it was judged meet that Mr William Prynne's notable book should be reprinted, few of them being to be had for money.' The loyalty of the English to Charles II., was shewn by such a frequency of drinking his health, as to threaten to disturb the public peace, and occasion a royal proclamation, an extract from which is subjoined.

'C. R.

OUR dislike of those, who under pretence of affection to us, and our service, assums to themselves a Liberty of Reviling, Threatning, and Reproaching of others. There are likewise another sort of men, of whom we have heard much, and are sufficiently ashamed, who spend their time in Taverns, Tipling-houses, and Debauches, giving no other evidence of their affection to us, but in *Drinking* our HEALTH.'

The following is from a work published about this period:

'*Of Healths drinking, and Heaven's doom thereon: Part of a Letter from* Mr Ab. Ramsbotham.

'Within four or five miles of my house, the first of *July* (as I take it), at a town called *Geslingham*,* there were three or four persons in a shopkeeper's house, drinking of *Strong waters*, and of HEALTHS, as 'tis spoken. And all of a sudden there came a flame of fire down the chimney with a great crack, as of thunder, or of a canon, or granado; which for the present struck the men as dead.

'But afterwards they recovered; and one of them was, as it were, shot in the knee, and so up his Breeches and Doublet to his shoulder; and there it brake out, and split and brake in pieces the window, and set the house on fire; the greater part of which burned down to the ground.

'This hath filled the Country with wonder, and many speak their judgements both on it, and of the persons. ABR. RAMSBOTHAM.'

DR RADCLIFFE.

John Radcliffe, whose name is perpetuated in so many memorials of his munificence, was born at Wakefield, in Yorkshire, February 7, 1650, and educated in the university of Oxford, where he studied medicine. His books were so few in number, that on being asked where was his library, he pointed to a few vials, a skeleton, and a herbal, in one corner of his room, and exclaimed, with emphasis: 'There, sir, is Radcliffe's library!' In 1675, he took his degree of M.B., and began to practise in Oxford, where, by some happy cures (especially by his cooling treatment of the small-pox), he soon acquired a great reputation. In 1682, he took the degree of M.D., and went out a Grand Compounder; an imposing ceremony in those days, and for a century afterwards, all the members of the college walking in procession, with the candidate himself, bareheaded, to the Convocation House. Radcliffe now removed to London, and settled in Bow Street, Covent Garden, where he soon received daily, in fees, the sum of twenty guineas, through his vigorous and decisive method of practice, as well as his pleasantry and ready wit—many, it is said, even feigning themselves ill, for the pleasure of having a few minutes' conversation with the facetious doctor. The garden in the rear of his house, in Bow Street, extended to the garden of Sir Godfrey Kneller, who resided in the Piazza, Covent Garden. Kneller was fond of flowers, and had a fine collection. As he was intimate with the physician, he permitted the latter to have a door into his garden; but Radcliffe's servants gathering and destroying the flowers, Kneller sent him notice that he must shut up the door. Radcliffe replied peevishly: 'Tell him he may do anything with it but paint it.' 'And I,' answered Sir Godfrey, 'can take anything from him but physic.'

Radcliffe shewed great sagacity in resisting the entreaties of the court-chaplains to change his religion and turn papist; and when the Prince of Orange was invited over, Radcliffe took care that no imputation of guilt could, by any possibility, attach to him afterwards, had the Revolution not succeeded. He had, two years previously, been appointed physician to the Princess Anne; and when King William came, Radcliffe got the start of his majesty's physicians, by curing two of his favourite foreign attendants; for which the king gave him five hundred guineas out of the privy-purse. But Radcliffe declined the appointment of one of his majesty's physicians, considering that the settlement of the crown was then but insecure. He nevertheless attended the king, and for the first eleven years of his reign, received more than 600 guineas annually. In 1689, he succeeded in restoring William sufficiently to enable him to join his army in Ireland, and gain the victory of the Boyne. In 1691, when the young Prince William, Duke of Gloucester, was taken ill of fainting fits, and his life was despaired of, Radcliffe was sent for, and restored the little patient, for which Queen Mary ordered her chamberlain to present him with a thousand guineas. He was now the great physician of the day; and his neighbour, Dr Gibbons, received £1000 per annum from the overflow of patients who were not able to get admission to Radcliffe.

In 1692, he sustained a severe pecuniary loss. He was persuaded by his friend Betterton, the famous tragedian, to risk £5000 in a venture to the East Indies; the ship was captured by the enemy, with her cargo, worth £120,000. This ruined the poor player; but Radcliffe received the disastrous intelligence at the Bull's Head Tavern, in Clare Market (where he was enjoying himself with several persons of rank), with philosophic composure; desiring his companions not to interrupt the circulation of the glass, for that 'he had no more to do but go up so many pair of stairs, to make himself whole again.'

Towards the end of 1694, Queen Mary was seized with small-pox, and the symptoms were most alarming; her majesty's physicians were at their wits' end, and the privy-council sent for Radcliffe. At the first sight of the prescriptions, he rudely exclaimed, that 'her majesty was a dead woman, for it was impossible to do any good in her case, where remedies were given that were so contrary to the nature of the distemper; yet he would endeavour to do all that lay in him to give her ease.' There were some faint hopes for a time, but the queen died. Some few months after, Radcliffe's attendance was requested by the Princess Anne. He had been drinking freely, and promised speedily to come to St James's; the princess grew worse, and a messenger was again despatched to Radcliffe, who, on hearing the symptoms detailed, swore by his Maker, 'that her highness' distemper was nothing but the vapours, and that she was in as good a state of health as any woman breathing, could she but believe it.' No skill or reputation could excuse this rudeness and levity; and he was, in consequence, dismissed. But his credit remained with the king, who sent him abroad to attend the Earl of Albemarle, who had a considerable command in the army; Radcliffe remained in the camp only a week, succeeded in the treatment of his patient, and received from King William £1200, and from Lord Albemarle 400 guineas and a diamond ring. In 1697, after the king's return from Loo, being much indisposed at Kensington Palace, he sent for Radcliffe; the symptoms were dropsical, when the physician, in his odd way, promised to try to lengthen the king's days, if he would forbear making long visits to the Earl of Bradford, with whom the king was wont to drink very hard. Radcliffe left behind him a recipe, by following which the king was enabled to go abroad, to his palace at Loo, in Holland.

* Probably Gislingham, in Suffolk.

In 1699, the Duke of Gloucester, heir-presumptive to the crown, was taken ill, when his mother, the Princess Anne, notwithstanding her antipathy, sent for Radcliffe, who pronounced the case hopeless, and abused the two other physicians, telling them that 'it would have been happy for this nation had the first been bred up a basket-maker (which was his father's occupation), and the last continued making a havock of nouns and pronouns, in the quality of a country schoolmaster, rather than have ventured out of his reach, in the practice of an art which he was an utter stranger to, and for which he ought to have been whipped with one of his own rods.'

At the close of this year, the king, on his return from Holland, where he had not been abstemious, being much out of health, again sent for Radcliffe to Kensington Palace; when his majesty, shewing his swollen ankles, exclaimed: 'Doctor, what think you of these?' 'Why, truly,' said Radcliffe, 'I would not have your majesty's two legs for your three kingdoms.' With this ill-timed jest, though it passed unnoticed at the moment, his professional attendance at court terminated.

Anne sent again for Radcliffe in the dangerous illness of her husband, Prince George. His disease was dropsy, and the doctor, unused to flatter, declared that 'the prince had been so tampered with, that nothing in the art of physic could keep him alive more than six days'—and his prediction was verified.

When, in July 1714, Queen Anne was seized with the sickness which terminated her life, Radcliffe was sent for; but he was confined by a fit of gout to his house at Carshalton. He was accused of refusing to give his professional advice to his sovereign, and in consequence of this report, durst scarcely venture out of doors, as he was threatened with being pulled to pieces if ever he came to London.

Radcliffe died November 1, 1714, 'a victim to the ingratitude of a thankless world, and the fury of the gout.' By his will he left his Yorkshire estate to University College, Oxford, and £5000 for enlargement of the building; to St Bartholomew's Hospital, the yearly sum of £500 towards mending their diet, and £100 yearly for the buying of linen; and £40,000 for the building of a library at Oxford, besides £150 a year for the librarian's salary, £100 a year for the purchase of books, and another £100 for repairs. The smallness of the annual sum provided for the purchase of books is remarkable, and gave occasion to the animadversion, that the main object of the testator was to erect a splendid monument to himself. The bulk of the remainder of his property he left in trust for charitable purposes. The Radcliffe Library is one of the noblest architectural adornments of Oxford. It was designed by Gibbs, and is built on a circular plan, with a spacious dome. It was originally called the Physic Library, and the books which it contains are principally confined to works on medicine and natural science.

ALEXANDER CRUDEN.

This persevering and painstaking compiler, who was appointed by Sir Robert Walpole bookseller to the queen of George II., died at his lodgings in Camden Street, Islington, November 1, 1770. The Concordance, which has conferred celebrity on his name, was published and dedicated to Queen Caroline in 1737. He was permitted to present a copy of it in person to her majesty, who, he said, smiled upon him, and assured him she was highly obliged to him. The expectations he formed of receiving a solid proof of the queen's appreciation of the work, were disappointed by her sudden death within sixteen days of his reception. Twenty-four years afterwards, he revised a second edition, and dedicated it to her grandson, George III. For this, and a third edition issued in 1769, his booksellers gave him £800.

He was often prominently before the public as a very eccentric enthusiast. Three times, during his life, he was placed in confinement by his friends. On the second of these occasions, he managed to escape from a private lunatic asylum in which he was chained to his bedstead; when he immediately brought actions against the proprietor and physician. Unfortunately for his case, he stated it himself, and lost it. On his third release, he brought an action against his sister, from whom he claimed damages to the amount of £10,000, for authorising his detention. In this suit also he was unsuccessful. In the course of his life, he met with many rebuffs in the prosecution of projects in which he restlessly embarked, as he considered, for the public good; for all of which he solaced himself with printing accounts of his motives, treatment, and disappointments.

One of his eccentricities consisted in the assumption of the title of *Alexander the Corrector*. In the capacity implied by this term, he stopped persons whom he met in public places on Sundays, and admonished them to go home and keep the Sabbath-day holy; and in many other ways addressed himself to the improvement of the public morals. He spent much of his earnings in the purchase of tracts and catechisms, which he distributed right and left; and gave away some thousands of handbills, on which were printed the fourth commandment. To enlarge, as he thought, his sphere of usefulness, he sighed for a recognition of his mission in high-places; and, to attain this end, succeeded, after considerable solicitation, in obtaining the signatures of several persons of rank to a testimonial of his zeal for the public good. Armed with this credential, he urged that the king in council, or an act of legislature, should formally constitute him *Corrector of Morals*. However, his chimerical application was not entertained.

Another eccentricity arose out of the decided part he took against Mr Wilkes, when that demagogue agitated the kingdom. He partly expressed his intense feeling in his usual mode—by pamphlet; but more especially evinced his aversion by effacing the offensive numeral No. 45, wherever he found it chalked up. For this purpose, he carried in his pockets a large piece of sponge. He subsequently included in this obliteration all the obscene inscriptions with which idle persons were permitted at that time to disgrace blank walls in the metropolis. This occupation, says his biographer Blackburn, from its retrospective character, made his walks very tedious.

His erratic benevolence prompted him to visit the prisoners in Newgate daily, instruct them in the teachings of the gospel, and encourage them to pay attention, by gifts of money to the most

diligent. This good work he was, however, induced to relinquish, by finding that his hardened pupils, directly he had turned his back, spent these sums in intoxicating liquors. While so engaged, he was able to prevail upon Lord Halifax to commute a sentence of death against Richard Potter, found guilty of uttering a forged will, to one of transportation.

Still animated with a desire to regenerate the national morals, he besought the honour of knighthood—not, he declared, for the value of the title, but from a conviction that that dignity would give his voice more weight. In pursuit of the desired distinction, he seems to have given a great deal of trouble to the lords in waiting and secretaries of state, and probably exceeded the bounds of their patience, for, in a commendation of Earl Paulett, he admits that less-afflicted noblemen got quit of his importunities by flight. This earl, he says, in an account of his attendance at court, 'being goutish in his feet, could not run away from the Corrector as others were apt to do.' In 1754, he offered himself as a candidate to represent the city of London in parliament. In this contest, he issued the most singular addresses, referring the sheriffs, candidates, and liverymen to consider his letters and advertisements published for some time past, and especially the appendix to *Alexander the Corrector's Adventures*. 'If there is just ground to think that God will be pleased to make the Corrector an instrument to reform the nation, and particularly to promote the reformation, the peace, and prosperity of this great city, and to bring them into a more religious temper and conduct, no good man, in such an extraordinary case, will deny him his vote. And the Corrector's election is believed to be the means of paving the way to his being a Joseph, and an useful and prosperous man.' He also presented his possible election in the light of the fulfilment of a prophecy. But the be-wigged, and buttoned, and knee-breeched, and low-shoed electors only laughed at him. He consoled himself for the disappointment with which this new effort was attended, as in former ones, by issuing a pamphlet.

The most singular of Cruden's pamphlets detailed his love adventures. He became enamoured of Miss Elizabeth Abney. The father of this lady, Sir Thomas Abney, was a successful merchant, who was successively sheriff, alderman, lord mayor of London, and one of the representatives of the city in parliament. He was a person of considerable consequence, having been one of the founders of the Bank of England, of which he was for many years a director; but his memory is especially honoured from the fact of its being interwoven with that of Dr Watts, who resided with him at Stoke-Newington. His daughter inherited a large fortune; and to become possessed of both, became the Corrector's sanguine expectation. Miss Abney was deaf to his entreaties. For months he pestered her with calls, and persecuted her with letters, memorials, and remonstrances. When she left home, he caused 'praying-bills' to be distributed in various places of worship, requesting the prayers of the minister and congregation for her preservation and safe return; and when this took place, he issued further bills to the same congregations to return thanks. Finding these peculiar attentions did not produce the desired effect, he drew up a long paper, which he called a Declaration of War, in which he declared he should compass her surrender, by 'shooting off great numbers of bullets from his camp; namely, by earnest prayer to Heaven day and night, that her mind might be enlightened and her heart softened.' His grotesque courtship ended in defeat: the lady never relented.

The precision and concentration of thought required in his literary labours, the compilation and several revisings of his *Concordance*, his verbal index of Milton's works, his *Dictionary of the Holy Scriptures*, his *Account of the History and Excellency of the Holy Scriptures*, and his daily employment on the journal in which the letters of Junius appeared, as corrector of the press, render Cruden's aberrations the more remarkable. And a still more curious circumstance, consists in the fact that his vagaries failed to efface the esteem in which he was regarded by all who knew him, more especially by his biographers, Blackburn and Chalmers; the latter of whom said of him, that he was a man to whom the religious world lies under great obligation, 'whose character, notwithstanding his mental infirmities, we cannot but venerate; whom neither infirmity nor neglect could debase; who sought consolation where only it could be found; whose sorrows served to instruct him in the distresses of others; and who employed his prosperity to relieve those who, in every sense, were ready to perish.' Are there many men more worthy of a column in the *Book of Days?*

EXPULSION OF THE JEWS FROM ENGLAND.

In the course of the year of grace, 1290, three daughters of Edward I. were married. The old chroniclers relate wondrous stories of the prodigal magnificence of those nuptials; nor are their recitals without corroboration. Mr Herbert, a late librarian of the city of London, discovered in the records of the Goldsmiths' Company the actual list of valuables belonging to Queen Eleanor, and it reads more like an extract from the *Arabian Nights*, than an early English record. Gold chalices, worth £292 each, an immense sum in those days, figure in it; small silver cups are valued at £118 each—what were the large ones worth, we wonder!—while diamonds, sapphires, emeralds, and rubies, sparkle among all kinds of gold and silver utensils. Modern historians refer to the old chroniclers, and this astounding catalogue of manufactured wealth, as a proof of the attainments in refinement and art which England had made at that early period. But there is a reverse to every medal, and it is much more probable that these records of valuables are silent witnesses to a great crime—the robbery and expulsion of the Jews, proving the general barbarity and want of civilisation that then prevailed.

Not long before this year of royal marriages, Edward, moaning on a sick-bed, made a solemn vow, that if the Almighty should restore him to health, he would undertake another crusade against the infidels. The king recovered; but as the immediate pressure of sickness was removed, and Palestine far distant, he compromised his vow by driving the Jews out of his French province of Guienne, and seizing the wealth and possessions of the unfortunate Israelites.

It may be supposed, from the wandering nature

of the Jewish race, that many members of it had been in England from a very early period; but their first regular establishment in any number dates from the Norman Conquest, William having promised them his protection. The great master of romance has, in *Ivanhoe*, given a general idea how the Jews were treated; but there were particular horrors perpetrated on a large scale, quite unfit for relation in a popular work. In short, it may be said that when the Jews were most favoured, their condition was to our ideas intolerable; and yet it should be recorded in favour of our ancestors, that even then the Jews were rather more mildly treated in England than in the other countries of Europe.

When Edward returned from despoiling and banishing the Jews of Guienne, his subjects received him with rapturous congratulations. The constant drain of the precious metals created by the Crusades, the almost utter deficiency of a currency for conducting the ordinary transactions of life, had caused the whole nation—clergy, nobility, gentry, and commoners—to become debtors to the Jews. If the king, then, would graciously banish them from England as he had from Guienne, his subjects' debts would be sponged out, and he, of course, would be the most glorious, popular, and best of monarchs. Edward, however, did not see the affair exactly in that light. Though, in case of an enforced exodus, he would become entitled to the Jewish possessions, yet his subjects would be greater gainers by the complete abolition of their debts. In fact, the king, besides his own part of the spoil, claimed a share in that of his subjects, but after considerable deliberation the matter was thus arranged. The clergy agreed to give the king a tenth of their chattels, and the laity a fifteenth of their lands; and so the bargain was concluded to the satisfaction and gain of all parties, save the miserable beings whom it most concerned.

On the 31st of August 1290, Edward issued a proclamation commanding all persons of the Jewish race, under penalty of death, to leave England before the 1st of November. As an act of gracious condescension on the part of the king, the Jews were permitted to take with them a small portion

JEW'S HOUSE AT LINCOLN.

of their movables, and as much money as would pay their travelling expenses. Certain ports were appointed as places of embarkation, and safe-conduct passes to those ports were granted to all who chose to pay for them. The passes added more to the royal treasury than to the protection of the fugitives. The people—that is to say, the Christians—rose and robbed the Jews on all sides, without paying the slightest respect to the dearly-purchased protections. All the old historians relate a shocking instance of the treatment the Jews received when leaving England. Holinshed thus quaintly tells the story:

'A sort of the richest of them being shipped with their treasure, in a mighty tall ship which they had hired, when the same was under sail, and got down the Thames, towards the mouth of the river, the master-mariner bethought him of a wile,

and caused his men to cast anchor, and so rode at the same, till the ship, by ebbing of the stream, remained on the dry sand. The master herewith enticed the Jews to walk out with him on land, for recreation; and at length, when he understood the tide to be coming in, he got him back to the ship, whither he was drawn up by a cord. The Jews made not so much haste as he did, because they were not aware of the danger; but when they perceived how the matter stood, they cried to him for help, howbeit he told them that they ought to cry rather unto Moses, by whose conduct their fathers passed through the Red Sea; and, therefore, if they would call to him for help, he was able to help them out of these raging floods, which now came in upon them. They cried, indeed, but no succour appeared, and so they were swallowed up in the water. The master returned with his ship, and told the king how he had used the matter, and had both thanks and rewards, as some have written.'

Nearly all over the world this cruel history is traditionally known among the Jews, who add a myth to it; namely, that the Almighty, in execration of the deed, has ever since caused a continual turmoil among the waters over the fatal spot. The disturbance in the water caused by the fall, on ebb-tide, at old London Bridge, was said to be the place; and when foreign Jews visited London, it was always the first wonderful sight they were taken to see. The water at the present bridge is now as unruffled as at any other part of the river, yet Dr Margoliouth, writing in 1851, says that most of the old Jews still believe in the legend regarding the troubled waters.

There are few relics of the Jews thus driven out of England. The rolls of their estates, still among the public records, shew that the king profited largely by their expulsion. Jewry, Jew's Mount, Jew's Corner, and other similarly named localities in some of our towns, denote their once Hebrew occupants. The Jew's House at Lincoln can be undoubtedly traced to the possession of one Belaset, a Jewess, who was hanged for clipping coin, a short time previous to the expulsion. The house being forfeited to the crown by the felony, the king gave it to William de Foleteby, whose brother bequeathed it to the Dean and Chapter of Lincoln, the present possessors. Passing through so few hands, in the lapse of so many years, its history can be easier traced, perhaps, than any other of the few houses of the same age in England. The head of the doorway of this remarkable edifice, as will be seen by the illustration on the preceding page, forms an arch to carry the fireplace and chimney of the upper room. There seems to have been no fireplace in the lower room, there being originally but two rooms—one above, the other below.

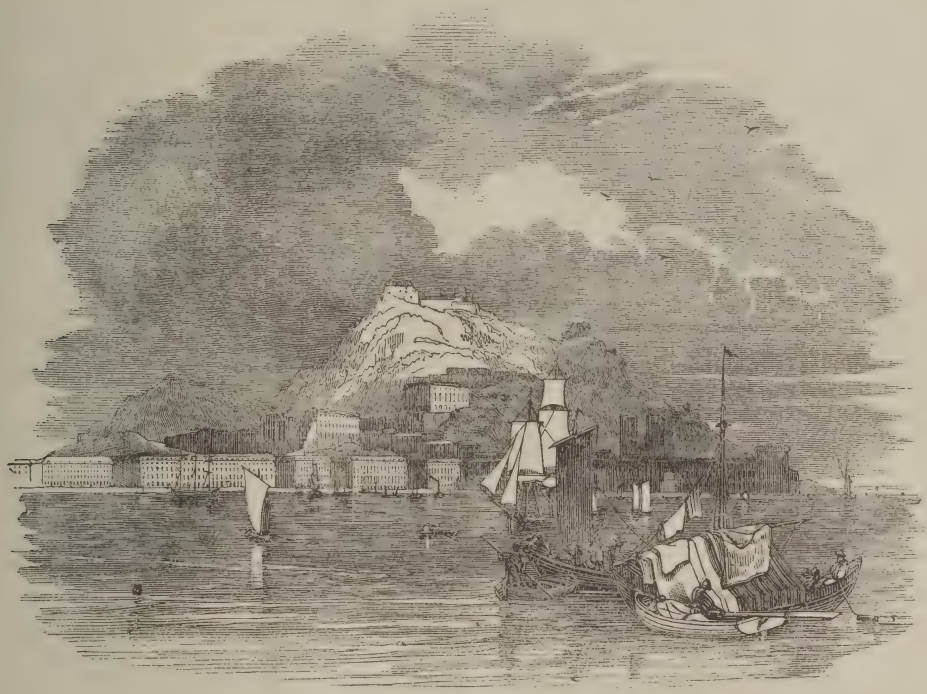
The number of banished Jews comprised about 15,000 persons of all ages. English commerce, then in its infancy, received a severe shock by the impolitic measure; nor did learning escape without loss. One of the expelled was Nicolaus de Lyra, who, strange to say in those bigoted days, had been admitted a student at Oxford. He subsequently wrote a commentary on the Old and New Testaments, a work that prepared the way for the Reformation. Both Wickliffe and Luther acknowledged the assistance they had received from it. And though Pope, when describing the Temple of Dulness, says:

'De Lyra there a dreadful front extends,'

both parties, at the period of the Reformation, agreed in saying:

'Si Lyra non lyrasset,
Lutherus non saltasset'—

'If Lyra had not piped, Luther would not have danced.'



From the expulsion down to the period of the Commonwealth, the presence of a few Jews was always tolerated in England, principally about the court, in the capacity of physicians, or foreign agents. Early in 1656, the wise and tolerant Protector summoned a council to deliberate on the policy of allowing Jews to settle once more in England. That all parties might be represented, Cromwell admitted several lawyers, clergymen, and merchants, to aid the council in its deliberation. The lawyers declared that there was no law to prevent Jews settling in England; the clergy asserted that Christianity would be endangered thereby; and the merchants alleged that they would be the ruin of trade. Many of the arguments employed on this discussion were again used in the late debates on the admission of Jews into parliament. The council sat four days without coming to any conclusion: at last Cromwell closed it by saying, that he had sent for them to consider a simple question, and they had made it an intricate one. That he would, therefore, be guided by Providence, and act on his own responsibility. A few days afterwards, he announced to his parliament that he had determined to allow Jews to settle in England, and the affair was accomplished. In May and June 1656, a number of Jews arrived in London, and their first care was to build a synagogue, and lay out a burial-ground. The first interment on their burial-register is that of one Isaac Britto, in 1657.

THE GREAT EARTHQUAKE AT LISBON IN 1755.

One of the most awful earthquakes ever recorded in history, for the loss of life and property thereby occasioned, was that at Lisbon on the 1st of November 1755. Although equalled, perhaps, in the New World, it has had no parallel in the Old. About nine o'clock in the morning, a hollow thunder-like sound was heard in the city, although the weather was clear and serene. Almost immediately afterwards, without any other warning, such an upheaval and overturning of the ground occurred as destroyed the greater part of the houses, and buried or crushed no less than 30,000 human beings. Some of the survivors declared that the shock scarcely exceeded three minutes in duration. Hundreds of persons lay half-killed under stones and ruined walls, shrieking in agony, and imploring aid which no one could render. Many of the churches were at the time filled with their congregations; and each church became one huge catacomb, entombing the hapless beings in its ruins. The first two or three shocks, in as many minutes, destroyed the number of lives above mentioned; but there were counted twenty-two shocks altogether, in Lisbon and its neighbourhood, destroying in the whole very nearly 60,000

lives. In one house, 4 persons only survived out of 38. In the city-prison, 800 were killed, and 1200 in the general hospital.

The effects on the sea and the sea-shore were scarcely less terrible than those inland. The sea retired from the harbour, left the bar dry, and then rolled in again as a wave fifty or sixty feet high. Many of the inhabitants, at the first alarm, rushed to a new marble quay which had lately been constructed; but this proceeding only occasioned additional calamities. The quay sank down into an abyss which opened underneath it, drawing in along with it numerous boats and small vessels. There must have been some actual closing up of the abyss at this spot; for the poor creatures thus engulfed, as well as the timbers and other wreck,

LISBON.

disappeared completely, as if a cavern had closed in upon them. The seaport of Setubal, twenty miles south of Lisbon, was engulfed and wholly disappeared. At Cadiz, the sea rose in a wave to a height of sixty feet, and swept away great part of the mole and fortifications. At Oporto, the river continued to rise and fall violently for several hours; and violent gusts of wind were actually forced up through the water from chasms which opened and shut in the bed beneath it. At Tetuan, Fez, Marocco, and other places on the African side of the Mediterranean, the earthquake was felt nearly at the same time as at Lisbon. Near Marocco, the earth opened and swallowed up a village or town with 8000 inhabitants, and then closed again. The comparisons which scientific men were afterwards able to institute, shewed that the main centre of the disturbance was far out in the Atlantic, where the bed of the ocean was convulsed by up-and-down heavings, thereby creating enormous waves on all sides. Many of the vessels out at sea were affected as if they had struck suddenly on a sand-bank or a rock; and, in some instances, the shock was so violent as to overturn every person and everything on board. And yet there was deep water all round the ships.

Although the mid-ocean may have been the focus of one disturbance which made itself felt as far as Africa in one direction, England in another, and America in a third, Lisbon must unquestionably have been the seat of a special and most terrible movement, creating yawning gaps in various parts of the city, and swallowing up buildings and people in the way above described. Many mountains in the neighbourhood, of considerable elevation, were shaken to their foundations; some were rent from top to bottom, enormous masses of rock were hurled from their sides, and electric flashes issued from the fissures. To add to the horrors of such of the inhabitants as survived the shocks, the city was found to be on fire in several places. These fires were attributed to various causes—the domestic fires of the inhabitants igniting the furniture and timbers that were hurled promiscuously upon them; the large wax-tapers which on that day (being a religious festival) were lighted in the churches; and the incendiary mischief of a band of miscreants, who took advantage of the terror around them by setting fire to houses in order to sack and pillage. The wretched inhabitants were either paralysed with dismay, or were too much engaged in seeking for the mangled corpses of their friends, to attend to the fire; the flames continued for six days, and the

half-roasted bodies of hundreds of persons added to the horrors.

Mr Mallet, in his theory of earthquakes (which traces them to a kind of earth-wave propagated with great velocity), states that the earthquake which nearly destroyed Lisbon was felt at Loch Lomond in Scotland. 'The water, without any apparent cause, rose against the banks of the loch, and then subsided below its usual level: the greatest height of the swell being two feet four inches. In this instance, it seems most probable that the amplitude of the earth-wave was so great, that the entire cavity or basin of the lake was nearly at the same instant tilted or canted up, first at one side and then at the other, by the passage of the wave beneath it, so as to disturb the level of the contained waters by a few inches—just as one would cant up a bowl of water at one side by the hand.'

ALL-HALLOW-TIDE CUSTOMS AT THE MIDDLE TEMPLE.

In the reign of Charles I., the young gentlemen of the Middle Temple were accustomed at All-Hallow-Tide, which they considered the beginning of Christmas, to associate themselves for the festive objects connected with the season. In 1629, they chose Bulstrode Whitelocke as Master of the Revels, and used to meet every evening at St Dunstan's Tavern, in a large new room, called 'The Oracle of Apollo,' each man bringing friends with him at his own pleasure. It was a kind of mock parliament, where various questions were discussed, as in our modern debating societies; but these temperate proceedings were seasoned with mirthful doings, to which the name of Revels was given, and of which dancing appears to have been the chief. On All-Hallows-Day, 'the master [Whitelocke, then four-and-twenty], as soon as the evening was come, entered the hall, followed by sixteen revellers. They were proper handsome young gentlemen, habited in rich suits, shoes and stockings, hats and great feathers. The master led them in his bar gown, with a white staff in his hand, the music playing before them. They began with the old masques; after which they danced the *Brawls*,* and then the master took his seat, while the revellers flaunted through galliards, corantos, French and country dances, till it grew very late. As might be expected, the reputation of this dancing soon brought a store of other gentlemen and ladies, some of whom were of great quality; and when the ball was over, the festive-party adjourned to Sir Sydney Montague's chamber, lent for the purpose to our young president. At length the court-ladies and grandees were allured—to the contentment of his vanity it may have been, but entailing on him serious expense—and then there was great striving for places to see them on the part of the London citizens. . . . To crown the ambition and vanity of all, a great German lord had a desire to witness the revels, then making such a sensation at court, and the Templars entertained him at great cost to themselves, receiving in exchange that which cost the great noble very little—his avowal that "dere was no such nople gollege in Ghristendom as deirs."'—*Memoirs of Bulstrode Whitelocke, by R. H. Whitelocke*, 1860, p. 56.

* Erroneously written *Brantes* in the authority quoted.

NOVEMBER 2.

All Souls, or the Commemoration of the Faithful Departed. St Victorinus, bishop and martyr, about 304. St Marcian, anchoret and confessor, about 387. St Vulgan, confessor, 7th century.

All-Souls-Day.

This is a festival celebrated by the Roman Catholic Church, on behalf of the souls in purgatory, for whose release the prayers of the faithful are this day offered up and masses performed. It is said to have been first introduced in the ninth century by Odilon, abbot of Cluny; but was not generally established till towards the end of the tenth century. Its observance was esteemed of such importance, that in the event of its falling on a Sunday, it was ordered not to be postponed till the Monday, as in the case of other celebrations, but to take place on the previous Saturday, that the souls of the departed might suffer no detriment from the want of the prayers of the church. It was customary in former times, on this day, for persons dressed in black to traverse the streets, ringing a dismal-toned bell at every corner, and calling on the inhabitants to remember the souls suffering penance in purgatory, and to join in prayer for their liberation and repose. At Naples, it used to be a custom on this day to throw open the charnel-houses, which were lighted up with torches and decked with flowers, while crowds thronged through the vaults to visit the bodies of their friends and relatives, the fleshless skeletons of which were dressed up in robes and arranged in niches along the walls. At Salerno, also, we are told, that a custom prevailed previous to the fifteenth century, of providing in every house on the eve of All-Souls-Day, a sumptuous entertainment for the souls in purgatory who were supposed then to revisit temporarily, and make merry in the scene of their earthly pilgrimage. Every one quitted the habitation, and after spending the night at church, returned in the morning to find the whole feast consumed, it being deemed eminently inauspicious if a morsel of victuals remained uneaten. The thieves who made a harvest of this pious custom, assembling, then, from all parts of the country, generally took good care to avert any such evil omen from the inmates of the house by carefully carrying off whatever they were unable themselves to consume. A resemblance may be traced in this observance, to an incident in the story of *Bel and the Dragon*, in the *Apocrypha*.

Born.—Dr William Vincent, scholar and miscellaneous writer, 1739; Marie Antoinette, queen of Louis XVI., 1755, *Vienna;* Field-Marshal Radetzky, celebrated Austrian commander, 1766, *Castle of Trebnitz, Bohemia;* Edward, Duke of Kent, father of Queen Victoria, 1767.

SIR SAMUEL ROMILLY.

The revocation in 1685, by Louis XIV., of Henry IV.'s Edict of Nantes, by which for nearly a hundred years Protestants had enjoyed at least toleration, cost France dearly, but greatly enriched England by the immigration of a multitude of skilful artisans, who introduced to the land of their adoption many forms of useful and elegant industry. Nor did these noble exiles profit England only by their manual skill. The names of their descendants appear with distinction in almost every department of our national life, but few with a more radiant glory than encircles the head of Sir Samuel Romilly.

His grandfather came from Montpellier, and settled in the neighbourhood of London as a wax-bleacher. His father was a jeweller, and in Frith Street, Soho, he was born on the 1st of March 1757. As a boy, he received an indifferent education at the French Protestant school, but as soon as he had left it, he diligently applied himself to self-culture. What business he should follow, he could not decide. A solicitor's was thought of, a merchant's office was tried, and then his father's shop, but none pleased him. Meanwhile, he studied hard and became a good Latin scholar. Eventually, he was articled for five years to one of the sworn clerks in Chancery. In his leisure, he read extensively, but with method, governing himself with a strict rein. At the expiration of the five years, it had been his intention to purchase a seat in the Six Clerks' Office, and there quietly settle for life; but his father needed the requisite funds in his business, and Romilly, deprived of this resource, determined to qualify himself for the bar. Severe mental application brought on ill health, and to recruit his strength he made a journey to Switzerland. In Paris, he formed the acquaintance of D'Alembert, Diderot, and other thinkers of their school, and their influence had considerable effect in moulding his opinions towards liberalism and reform.

In 1783, Romilly was called to the bar, but he had to wait long ere he was rewarded with any practice. When briefs did at last fall to his lot, it very soon became manifest that they were held by a master; he gave his conscience to all he undertook, and wrought out his business with efficiency. Solicitors who trusted him once were in haste to trust him again, and a start in prosperity being made, success came upon him like a flood. His income rose to between £8000 and £9000 a year, and in his diary, he congratulates himself that he did not press his father to buy him a seat in the Six Clerks' Office. Lord Brougham says: 'Romilly, by the force of his learning and talents, and the most spotless integrity, rose to the very heights of professional ambition. He was beyond question or pretence of rivalry the first man in the courts of equity in this country.'

Mirabeau visited London in 1784, and introduced Romilly to the Marquis of Lansdowne, who was so impressed with the young man's genius, that he twice offered him a seat in parliament; but Romilly was too proud to sit under even such liberal patronage. Not until 1806 did he enter the House of Commons, and then as Solicitor General in the Whig government, styled 'All the Talents,' formed after the death of Pitt. That administration lasted little more than a year, but Romilly remained a member of the House for one borough or another to the end of his life. In parliament, he was felt as a great power, and his speeches and votes were invariably on the Whig and progressive side. His oratory, which some competent judges pronounced the finest of his age, was usually listened to with rapt attention; a passage in his speech in favour of the abolition of the slave-trade received the singular honour of three distinct rounds of applause from the House.

Romilly's grand claim to remembrance, however, rests on his humane efforts to mitigate the Draconic code of English law. Nearly three hundred crimes, varying from the most frightful atrocity to keeping company with gipsies, were indiscriminately punishable with death. As a consequence, vice flourished, for, as Lord Coke long ago observed, 'too severe laws are never executed.' He had long meditated over the matter, and after discussing various schemes of procedure, he cautiously ventured, in 1808, to bring in a bill to repeal the statute of Elizabeth, which made it a capital offence to steal privately from the person of another. This he succeeded in getting passed. He next, in 1810, tried a bolder stroke, and introduced three bills to repeal several statutes, which punished with death the crimes of stealing privately in a shop goods to the value of 5*s.*, and of stealing to the amount of 40*s.* in dwelling-houses, or in vessels in navigable rivers. All three were lost! He did not despair, however, but kept agitating, and renewed his motions session after session. He did not live to reap success, but he cleared the way for success after him.

Romilly had married, in his forty-first year, Miss Garbett, a lady of rare intelligence, whom he first met at the Marquis of Lansdowne's, and their union proved eminently happy. After twenty years of conjugal felicity, she fell into delicate health. In 1818 there was a dissolution of parliament, and as an evidence of the respect in which Romilly was held, the electors of Westminster placed his name at the head of the poll, although he declined to spend a shilling or solicit a vote. Never, alas! was he destined to sit for Westminster. Public honours were vapid whilst his beloved partner lay nigh unto death. On the 29th of October she died. The shock was dreadful to Romilly. In his agony he fell into a delirium, and in a moment, when unwatched, he sprang from his bed, cut his throat, and expired in a few minutes. The sad event took place in his house, Russell Square, London, 2d November 1818. When Lord Eldon, next morning, took his seat on the bench, and saw the vacant place within the bar where for years Romilly had pleaded before him, iron man though he was, his eyes filled with tears. 'I cannot stay here!' he exclaimed, and rising in great agitation, broke up his court.

In one grave the bodies of husband and wife were laid at Knill, in Herefordshire. It is a singular circumstance, that in the parish church of St Bride, Fleet Street, there is a tablet on the wall with an inscription to the memory of Isaac Romilly, F.R.S., who died in 1759 *of a broken heart*, seven days after the decease of a beloved wife.

Romilly's style of speech was fluent, yet simple, correct and nervous, and without ornament of any kind. His reasoning was clear and accurate, and seemed to the hearer intelligible without an effort. His voice was deep and sonorous, and his presence full of severe and solemn dignity. To these oratorical powers he brought great earnestness; whatever he undertook, he fulfilled with all his might. The cause of his client he made his own, and he was reckoned to run the fairest chance of victory who had Romilly for his advocate.

FUNERAL OF A JEWISH RABBI.

There are not often opportunities, in England, of witnessing the funeral obsequies of the great priests or rabbis among the Jews; because that peculiar people do not form so large a ratio to the whole population here as in many continental countries, and consequently do not comprise so many sacerdotal officers. One of the few instances that have occurred, took place on the 2d of November 1842. Dr Herschel, who had been chief rabbi of England for forty-two years, was buried on this day. At ten o'clock in the morning, the body, in a plain deal-coffin covered with a black cloth, was removed from his residence in Bury Court, St Mary Axe, to the chief synagogue in Duke's Place, Houndsditch. It was supported and followed by twenty-four leading members of the Hebrew persuasion, including Sir Moses Montefiore. During the progress from the door of the synagogue to the ark, a special service was chanted by the Rev. Mr Asher, the principal reader; and after the bier had been placed before the ark, an impressive ceremonial took place. The ark was covered with black cloth; the whole of the windows were darkened; the synagogue was illuminated by wax-tapers; and the whole place assumed a sombre and imposing aspect. This portion of the religious ceremony having been completed, a procession was formed to convey the remains of the venerable rabbi to their last resting-place, the Jews' burial-ground, at Mile End. In the procession were the boys and girls of the German, Spanish, and Portuguese Jewish schools; the youths training up for the priesthood; the readers of the various metropolitan synagogues; and the carriages of the principal Jewish laity. There were nearly a hundred carriages in all. In accordance with a wish expressed by the deceased, there were no mourning-coaches. On arriving at the burial-ground, at Heath Street, Mile End, the body was carried into a sort of hall, in the centre of which it was placed. The reader, then, taking his position at the head of the coffin, repeated a burial-service. At the conclusion of the prayers, the coffin was borne to the grave. Several brown-paper parcels, sealed with wax, containing papers and documents, were thrown into the grave, in obedience to instructions left by the deceased; and a large box, containing one of the laws of Moses, written by Rabbi Herschel himself on parchment, was also, at his special request, consigned to the grave with him. The shops of the Jewish tradesmen along the line of route were closed as the procession passed, the ceremony altogether occupying five hours.

NOVEMBER 3.

St Papoul or Papulus, priest and martyr, 3d century. St Flour, bishop and confessor, about 389. St Rumald or Rumbald, confessor, patron of Brackley and Buckingham. St Wenefride or Winifred,* virgin and martyr, in Wales. St Hubert, bishop of Liege, confessor, 727. St Malachy, archbishop of Armagh, confessor, 1148.

ST RUMALD.

They who have read Foxe's Martyrology, will perhaps remember that several Lollards who, to save their bodies from the stake, renounced the 'new doctrine,' were nevertheless required to walk to Buckingham, and present an offering at the shrine of St Rumald. Now this St Rumald, whose name is also written Rumbald, and Grumbald, was a very remarkable saint. According to Leland, who copies from a monkish life of him, he was the son of the king of Northumbria by a Christian daughter of Penda, king of Mercia. He was born at Sutton, in Northamptonshire, but not far from the town of Buckingham. Immediately he came into the world, he exclaimed: 'I am a Christian! I am a Christian! I am a Christian!' He then made a full and explicit confession of his faith; desired to be forthwith baptized; appointed his own godfathers; and chose his own name. He next directed a certain large hollow stone to be fetched for his font; and when some of his father's servants attempted to obey his orders, but found the stone far too heavy to be removed, the two priests, whom he had appointed his godfathers, went for it, and bore it to him with the greatest ease. He was baptized by Bishop Widerin, assisted by a priest named Eadwold, and immediately after the ceremony he walked to a certain well near Brackley, which now bears his name, and there preached for three successive days; after which he made his will, bequeathing his body after death to remain at Sutton for one year, at Brackley for two years, and at Buckingham ever after. This done, he instantly expired. After this three-days' existence, the miraculous infant was buried at Sutton by Eadwold the priest; the next year he was translated by Bishop Widerin to Brackley; and the third year after his death, his remains were carried to Buckingham, and deposited in a shrine, in an aisle of the church which afterwards bore his name. Shortly before the year 1477, Richard Fowler, Esq., chancellor to Edward IV., began to rebuild this aisle, but died before its completion. In his will, therefore, he made this bequest: 'Item, I wolle that the aforesaid Isle of St Rumwold, in the aforesaid church prebendal of Bucks, where my body and other of my friends lyen buried, the which isle is begonne of new to be made, be fully made and performed up perfitely in all things att my costs and charge; and in the same isle that there be made of new a toumbe or shrine for the said saint where the old is now standing, and that it be made curiously with marble in length and breadth as shall be thought by myn executors most convenient, consideration had to the rome, and upon the same tombe or shrine I will that there be sett a coffyn or a chest

* See notice of St Winifred at p. 6 of this volume.

curiously wrought and gilte, as it appertaynith for to lay in the bones of the same saint, and this also to be doan in all things at my cost and charge.'* This extreme care for the relics of the infant saint clearly shews that they were held in high veneration at this period, and they continued to be the object of pilgrimages till the middle of the sixteenth century.

There was also a famous image of St Rumald at Boxley, in Kent. This statue or image was very small and hollow, and light, so that a child of seven years old might easily lift it, but, for some reason or other, it occasionally appeared so heavy that persons of great strength were unable to move it. 'The moving hereof,' says Fuller, 'was made the conditions of women's chastity. Such who paid the priest well, might easily remove it, whilst others might tug at it to no purpose. For this was the contrivance of the cheat—that it was fastened with a pin of wood by an invisible stander behind. Now, when such offered to take it who had been bountiful to the priest before, they bare it away with ease, which was impossible for their hands to remove who had been close-fisted in their confessions. Thus it moved more laughter than devotion, and many chaste virgins and wives went away with blushing faces, leaving (without cause) the suspicion of their wantonness in the eyes of the beholders; whilst others came off with more credit (because with more coin) though with less chastity.' Fuller concludes the Legend of St Rumald with this remark: 'Reader, I partly guess by my own temper how thine is affected with the reading hereof, whose soul is much divided betwixt several actions at once:—1. To *frown* at the impudency of the first inventors of such improbable untruths.—2. To *smile* at the simplicity of the believers of them.—3. To *sigh* at that well-intended devotion abused with them.—4. To thank God that we live in times of better and brighter knowledge.'

A memorial of the saint is still preserved at Buckingham in the names of *Well Street* and *St Rumbald's Lane;* and a well at Brackley bears his name.

It is not unworthy of observation, that Butler, in his *Lives of the Saints*, gives but a brief account of Rumald; and though acquainted with Leland's account of him, passes lightly over the miraculous story, only saying: 'He died *very young* on the 3d of November, &c.'

Born.—Lucan, Latin poet, 39 A.D., *Cordova.*

Died.—Constantius, Roman emperor, 361, *Mopsucrene, Cilicia;* Pope Leo the Great, 461; James II., king of Aragon, 1327, *Barcelona;* Thomas de Montacute, Earl of Salisbury, killed in France, 1428; Bishop Robert Lowth, biblical writer, 1787, *Fulham;* Theophilus Lindsey, Unitarian divine, 1808; Dr Felix Mendelssohn Bartholdy, musical composer, 1847, *Leipsic.*

SPURS AND SPUR-MONEY.

Among the privy-purse expenses of Henry VII., in the year 1495, appears the following item: 'To the children for the king's spurs, 4*s*.' And between June 1530 and September 1532, no less than three payments of 6*s*. 8*d*. are recorded as made by his successor's paymaster 'to the Coristars of Wyndesor in rewarde for the king's spurres.'

* Lipscomb's *Buckinghamshire*, ii. 578.

Apropos of these entries, Mr Markland quotes a note from Gifford's edition of Ben Jonson, stating that from the disturbance of divine service in the cathedrals (more especially in St Paul's) by the jingling of the spurs of persons walking in their precincts, a trifling fine was imposed upon offenders in this way, called 'spur-money,' the collection of which was left to the beadles and singing-boys. It seems to us that the connection between the text and note is rather doubtful—indeed, Mr Markland himself says, 'it must first be shewn that it prevailed at so early a period.' Nicholas supposed that in the above cases the money was paid to redeem the royal spurs from the choristers, who claimed them as their perquisites at installations, or at the annual feast in honour of St George.

Spur-money, as a penalty to be paid for wearing spurs in a cathedral, seems to have been thoroughly established in the seventeenth century. In the *Gull's Horn-Book*, Decker, advising his readers how they should behave in St Paul's, says: 'Be sure your silver spurs clog your heels, and then the boys will swarm about you like so many white butterflies; when you in the open quire, shall draw forth a perfumed embroidered purse—the glorious sight of which will entice many countrymen from their devotion to wondering—and quoit silver into the boy's hands, that it may be heard above the first lesson, although it be read in a voice as big as one of the great organs.' That the custom was not confined to St Paul's, is proved by a passage in *Ray's Second Itinerary*—'July 26, 1661. We began our journey northwards from Cambridge, and that day, passing through Huntingdon and Stilton, we rode as far as Peterborough, twenty-five miles. There I first heard the cathedral service. The choristers made us pay money for coming into the quire with our spurs on.' Another old writer complains that the boys neglect their duties to run about after spur-money. Modern choristers are not so bad as that, but they look sharply after their rights. Some few years ago, a visitor to Hereford Cathedral declined to satisfy the demands of the boys, who thereupon seized his hat, and decamped with it. The indignant despiser of old customs, instead of redeeming his property, laid a complaint before the bench; but the magistrates astonished him by dismissing the case on the grounds that the choristers were justified in keeping the hat as a lien for the payment of the customary fine. There was one way of escaping the tax, the spur-wearer being held exempt if the youngest chorister present failed to repeat his gamut correctly upon being challenged to do so. This curious saving-clause is set forth officially in a notice issued by the dean of the chapel-royal in 1622:

'If any knight or other person entitled to wear spurs, enter the chapel in that guise, he shall pay to the quiristers the accustomed fine; but if he command the youngest quirister to repeat his gamut, and he fail in the so doing, the said knight or other shall not pay the fine.'

By enforcing this rule, the Iron Duke once baffled the young assailants of his purse. When a similar claim was made against the Duke of Cumberland (afterwards king of Hanover) in Westminster Abbey, he ingeniously evaded it by insisting that he was privileged to wear his spurs in the place in which he had been invested with them.

On the belfry-wall of All Saints Church,

Hastings, hangs a rhymed notice, declaring the belfry free to 'all those that civil be,' with a proviso—

'If you ring in spur or hat,
Sixpence you pay be sure of that.'

The debtors of Lancaster jail demand largess of any visitor wearing spurs within the castle-walls, and the doorkeeper of the Edinburgh Court of Session is privileged to demand five shillings from any one appearing in that court so accoutred.

Lord Colchester records in his diary (1776), that having inadvertently gone into the House of Commons booted and spurred, he was called to order by an old member for assuming a privilege only accorded to county members. This parliamentary rule is noticed by Sir James Lawrence in his *Nobility of the British Gentry*. 'Though the knights condescended to sit under the same roof with the citizens and burgesses, they were summoned to appear *gladio cincti*, and they always maintained the dignity of the equestrian order. The most trifling distinction suffices to destroy the idea of equality, and the distinction of the spur is still observed. The military members appear no longer in armour, but they alone may wear spurs as a mark of knighthood. The citizen or burgess, who, after a morning-ride, should inadvertently approach the chamber with his spurs on, is stopped by the usher, and must return to divest himself of this mark of knighthood. And to this humiliation any gentleman of the first quality, any Irish peer, nay, the Chancellor of the Exchequer himself, who, whatever might be his authority or dignity elsewhere, should sit in the House in the humble character of citizen or burgess, must submit.'

The first spur worn was merely a sharp goad, afterwards improved by bending the shank to suit the ankle. In the reign of Henry III., the rowelled spur made its first appearance; the rowel was gradually lengthened till it reached its maximum of seven inches and a half, in the time of Henry VI. Then came a change of fashion, and only spurs with close star-shaped rowels were in favour. At this time Ripon, in Yorkshire, was especially famous for the manufacture of spurs: 'As true steel as Ripon rowels,' became a proverbial expression. It was said that Ripon rowels would strike through a shilling, and rather break than bend. When James I. passed through the town in 1617, he was presented with a pair of spurs valued at five pounds. The knights of old, proud of their spurs, were not content with simple steel. Brass and silver were pressed into service, and spurs were chased, gilt, decorated with jewels, and adorned with such mottoes as—

'A true knight am I,
Anger me and try.'

Lady-equestrians adopted spurs at a very early period; Chaucer's wife of Bath is described by him as having 'on her feet a pair of spurs sharp.'

The fops of Shakspeare's day, delighted to hear their spurs jingle as they strutted through the streets:

'If they have a tatling spur and bear,
Heads light as the gay feathers which they wear,
Think themselves are the only gentlemen.'

So, fastidious Brisk in *Every Man out of his Humour*, praises his horse as 'a fiery little slave he runs like a—— Oh, excellent, excellent!—with the very sound of the spur!' And when an explanation of the latter phrase is demanded, replies: 'Oh it's your only humour now extant, sir—a good jingle, a good jingle.'

NOVEMBER 4.

Saints Vitalis and Agricola, martyrs, about 304. St Joannicius, abbot, 845. St Clarus, martyr, 894. St Brinstan, bishop of Winchester, 934. St Emeric Hungarian prince, 11th century. St Charles Borromeo cardinal, archbishop of Milan, and confessor, 1584.

ST EMERIC.

On this day was honoured St Emeric, the pious son of the pious St Stephen, king of Hungary in the eleventh century. Emeric was a very promising man, both as a prince and an apostle of Christianity and he might have attained greater eminence if he had not been carried off by death in the lifetime of his father. As it is, this somewhat obscure Hungarian saint has been a person of some consequence in the world, for from his name has come that of one of the great divisions of the earth. Through his celebrity, his name became a popular one: it was conferred, in the fifteenth century, in the Italian form of Amerigo, upon an Italian surnamed Vespucci. Vespucci did the world some service in extending the knowledge of the continent which Columbus had discovered; and by a strange current of circumstances, this continent came to be recognised by the name America, in honour of Signor Vespucci. When St Stephen was choosing a name for his first-born son, how little could he have imagined that the one he chose was to be the parent of the noted word *America!*

In an article on surnames derived from Christian names, which appeared in the *Gentleman's Magazine* for July 1772, *Amory* and *Emery* are set down as derived from Emeric.

Born.—William III., king of England, 1650, *Hague*; James Montgomery, poet, 1771, *Irvine, Ayrshire.*

Died.—John Benbow, British admiral, 1702, *Jamaica*; Charles Churchill, satirical poet, 1764, *Boulogne-sur-Mer*; Josiah Tucker, D.D., dean of Gloucester, political economist, 1799; Paul Delaroche, celebrated painter, 1856, *Paris.*

'OLD BENBOW.'

Benbow occupies a place in the naval literature of England which is likely to be permanent. Not because he was a better admiral than many who have lived in later days, but because he had much of that personal daring which is so dear to popular notions. A coarse rough man he was, anything but a gentleman in external demeanour; and as we shall see, this roughness had something to do with the disaster which cost him his life. Sea story-tellers and sea song-writers, however, are never frightened by such characteristics. Benbow's last fight figures in the *Deeds* o

Naval Daring. Dibdin, in his song of *Jervis for ever*, begins—

'You 've heard, I s'pose, the people talk
Of Benbow and Boscawen,
Of Anson, Pococke, Vernon, Hawke,
And many more then going.'

The immediate object of the song is to praise Jervis, whose great victory in Dibdin's day earned for him the earldom of St Vincent; but the name of Benbow occurs in this and many other sea-songs as that of an unquestioned hero of old times. Born in 1650, he entered the naval service so early that almost his whole life was spent on ship-board; and he was known generally as a rough and ready officer to whom nothing came amiss. On one occasion, when a naval service of some peril was suggested for an aristocratic officer, whose friends expressed apprehension of the result, the king (William III.) laughingly replied: 'Send for honest Benbow!'

The enterprise which is especially associated with Benbow's name was the following. During the war with France in 1702, Admiral Ducasse, with a French squadron of five large ships, threatened one of our West India Islands. Benbow sailed after him with seven ships, and overtook him on the 19th of August. On giving the signal for his ships to engage, there was soon evidence that something was wrong; the ships held back, and Benbow was unable to commence his fight with the enemy. It afterwards appeared that Benbow's offensive manners had led to a rupture between him and most of his captains; and that those officers took the indefensible course of shewing their hostility just when the honour of the country demanded their prompt obedience to orders. Next morning the admiral again put forth the signal to advance; but five out of the seven ships were three or four miles astern of him, as if the captains had agreed that they *could* not assist him. Vexed and irritated, but undaunted as usual, Benbow went into action, two ships against five, and maintained the contest during the whole day. His one coadjutor, the *Ruby*, becoming disabled, he sent that ship to Jamaica to refit. Again he signalled to the five captains, and received some equivocal excuse that the enemy were too strong, and that he had better not attack them. Left still more to his own resources, he renewed the fight on the 21st with one ship, the *Breda*, against five. Three different times did Benbow in person board the French admiral's ship, and three times was he driven back. He received a severe wound in the face, another in the arm, and his right leg was shattered by a chain-shot. Still the heroic man would not give in. He caused his cot to be brought up upon deck; and there he lay, giving orders while his shattered limbs were bleeding. When one of his lieutenants expressed regret at the leg being broken, Benbow replied: 'I am sorry for it too; but I had rather have lost them both than have seen the dishonour brought upon the English nation. But—do you hear?—if another shot should take me off, behave like brave men, and fight it out.' At this time, all the other English ships being inactive and at a distance, most of the French ships concentrated their fire on the *Breda;* and Benbow was only just able to extricate her, and sail to Jamaica. Admiral Ducasse knew very well that his squadron had been saved through the disgraceful conduct of Benbow's captains, and he was too true a sailor to regard it in any but the proper light. He sent the following letter to Benbow:

'Sir—I had little hope on Monday last but to have supped in your cabin;* but it pleased God to order it otherwise, and I am thankful for it. As for those cowardly captains who deserted you, hang them up; for, by God, they deserve it! Yours, &c.,

Ducasse.'

When Benbow reached Jamaica, he ordered the captains into arrest, and caused a court-martial to be held on them, under the presidency of Rear-Admiral Whetstone. Captain Hudson, of the *Pendennis*, died before the trial; Captains Kirby and Wade were convicted and shot; Captain Constable was cashiered and imprisoned. Two others had signed a paper engaging not to fight under the admiral; but there were extenuating circumstances which led to their acquittal. One of these two was Captain Walton of the *Ruby;* he had signed the paper when drunk (naval captains were often drunk in those days); but he repented when sober, and rendered good service to the admiral. He was the officer who, sixteen years afterwards, wrote a despatch that is regarded as the shortest and most fitting in which a naval victory was ever announced:

'Canterbury, off Syracuse,
16*th August* 1718.

Sir—We have taken and destroyed all the Spanish ships and vessels that were upon the coast; the number as per margin. Yours, &c.,

G. Walton.

To Sir George Byng,
Commander-in-chief.'

Poor Benbow sank under his mortification. The evidence elicited at the court-martial was sufficient to shew that *he* was not to blame for the escape of the French squadron; but the rough sailor could not bear it; the disgrace to the nation fretted him, and increased the malignancy of his wounds; he dragged on a few weeks, and died on November 4. No monument, we believe, records the fame of 'Old Benbow;' his deeds are left to the writers of naval song and story.

CHURCHILL.

A short life, a busy, and a notorious, was Churchill's. In a day he found himself famous; for less than four years, from 1761 to 1764, he was one of the most prominent figures in London, and then he died.

The son of a clergyman, he was born in Westminster in 1731, and was destined by his father for his own profession. Educated at Westminster school, he had for companions Warren Hastings; two poets, William Cowper and Robert Lloyd; and two dramatists, George Colman and Richard Cumberland. Ere Churchill was out of his boyhood he marred his life: at the age of seventeen, he married a girl within the rules of the Fleet. For the church he had no inclination, but in addition to pleasing his father, it was now necessary for him to earn a living for himself and family. As soon, therefore,

* That is, to have been taken prisoner.

as he was of canonical age, he was ordained and entered on a country curacy; and, as he says, 'prayed and starved on forty pounds a year.' In 1758, his father died, and out of respect for his memory, his parishioners elected his son to succeed him. At the age of twenty-seven, Churchill returned to London, and was installed as curate and lecturer of St John the Evangelist, Westminster. There he had a better income, but in his duties he had no joy or even satisfaction. He wrote, and wrote truly:

'I kept those sheep,
Which, for my curse, I was ordain'd to keep,
Ordain'd, alas! to keep through need, not choice....
Whilst sacred dulness ever in my view,
Sleep at my bidding crept from pew to pew.'

In London, Churchill met his school-fellow Robert Lloyd, who was serving as usher in Westminster school. Lloyd was a wild fellow, and was as sick of the drudgery of his calling as was Churchill of his. To literary tastes, they both united a passion for conviviality, and together committed many excesses. Mrs Churchill, it is said, was as imprudent as her husband. Their free style of life soon involved them in pecuniary difficulties, and Churchill had to settle with his creditors for 5*s.* in the pound. About the same time, Lloyd threw up his situation as usher, and resolved to seek his living in authorship, and Churchill determined to follow his example.

He first tried his fortune with two poems, with which no bookseller would have anything to do, but he was not to be beaten. For two months he closely attended the theatres, and made the leading actors the theme of a critical and satirical poem, entitled *The Rosciad.* No bookseller would buy it, even for five guineas; but not to be baffled this time, Churchill printed it at his own expense. In March 1761, the *Rosciad* appeared anonymously as a shilling pamphlet, and a few days sufficed to prove that 'a hit' had been made. Who was the author, became the problem of the town. The poor players ran about like so many stricken deer. The reviewers were busy with guesses as to the authorship, and, in self-defence, Colman disowned it, and Lloyd disowned it. Churchill soon put an end to the mystery. In an advertisement, he announced himself as the satirist, and promised a second poem, *An Apology Addressed to the Critical Reviewers.* The *Apology* struck as great terror among the authors as the *Rosciad* among the actors. On every side he was assailed in *Churchilliads, Anti-Rosciads,* and such like. In a few months, it is asserted, he cleared a thousand pounds. The money he used well. To his wife, from whom he was now separated, he made a handsome allowance; every man from whom he had borrowed money he repaid with interest; and his creditors, to their glad surprise, received the remaining fifteen shillings in the pound.

His habits now became openly licentious. He doffed the clerical costume, and walked abroad in a blue coat with metal buttons, a gold-laced waistcoat, a gold-laced hat and ruffles. He seduced a young woman, and lived with her as his wife. His parishioners remonstrated, and he resigned his curacy. He published *Night,* a poem, as an apology for his nocturnal orgies, maintaining, as if any excuse could be entertained for his own misdemeanours, that open licentiousness was bette than hypocrisy. *Night* was followed by *The Ghos* a satire on the Cock-Lane spirit-rappings, in whic Dr Johnson, who had called Churchill a shallo fellow, was ridiculed as Pomposo.

Satire is a dangerous business. Little Pope ha a tall Irishman to attend him when he publishe the *Dunciad,* but Churchill was well able to tak care of himself. Of himself he wrote:

'Broad were his shoulders,
Vast were his bones, his muscles twisted strong,
His face was short, but broader than 'twas long....
His arms were two twin oaks, his legs so stout,
That they might bear a mansion-house about,
Nor were they, look but at his body there,
Design'd by fate a much less weight to bear.'

He stalked about the streets with a bludgeon, an parties who had met to devise retaliation, and wh were observed talking loud against the 'Satirica Parson' in the Bedford Coffee-house, quietly dis persed when a brawny figure appeared, an Churchill, drawing off his gloves with a parti cularly slow composure, called for a dish of coffe and the *Rosciad.*

John Wilkes was in those days at the outset o his career, when it was hard to tell whether h was a patriot or a knave. He sought Churchill' acquaintance, and they became fast friends. Lor Bute was ruler of England under the young king George III., and a popular cry arose that th revenue had become the prey of Scotchmen. Unde the inspiration of Wilkes, Churchill commenced a satire on Scotland, and as he advanced with th work, Wilkes praised it exultingly. 'It is personal it is poetical, it is political,' cried the delighte demagogue. 'It must succeed!' In January 1763, the *Prophecy of Famine* appeared. It con veyed a thoroughly Cockney idea of Scotland, bu in spite, or perhaps because, of its extravagance, i was intensely popular, and spread dismay among the ranks of Scottish place-hunters. It was a new seal of Churchill's power, and his exuberant delight took an odd form. 'I remember well,' says D Kippis, 'that Churchill dressed his younger son i a Scottish plaid, like a little Highlander, an carried him everywhere in that garb. The boy being asked by a gentleman with whom I was in company, why he was clothed in such a manner answered with great vivacity: "Sir, my fathe hates the Scotch, and does it to plague them!"'

Churchill was associated with Wilkes in the publication of the *North Briton,* and when, in consequence of No. 45 charging the king with falsehood, a general warrant was issued for the apprehension of its authors, printers, and publishers Churchill was included. He chanced to call on Wilkes whilst he was debating with the officers who had come to arrest him. With much presence of mind, Wilkes addressed him as Mr Thomson saying: 'Good-morrow, Mr Thomson. How does Mrs Thomson do to-day? Does she dine *in the country?*' Churchill was sharp enough to take the hint. He thanked Wilkes, said Mrs Thomson then waited for him, that he had only come to ask how Mr Wilkes was, and took his leave. He hurried home, secured his papers, and retired to the country whither no attempt was made to follow him.

To Hogarth's pencil, Churchill owes somewhat of his fame. Hogarth had published a caricature of

Wilkes with his squint, by which the demagogue is better known to posterity than by all the busts and pictures by which his admirers sought to glorify his name. Churchill thereon addressed *An Epistle to William Hogarth*, which appeared in July 1763, and which Garrick described as 'the most bloody performance of my time.' Ere the month was out, Hogarth took his revenge in a shilling print, entitled 'The Bruiser, C. Churchill (once the Rev.), in the character of a Russian Hercules, regaling himself after having killed the monster Caricatura, that so sorely galled his virtuous friend, the heaven-born Wilkes.' All who have turned over Hogarth, will remember the bear in torn clerical bands, and with paws in ruffles, holding a pot of porter and a knotted club with *Lyes* and *North Briton* graven over it, and a pug-dog treating his poems with gross indignity.

Whatever Churchill wrote, sold, and sold for good prices, and he kept publishing pamphlet after pamphlet as occasion moved him. He wrote hastily, and not a little of his work was commonplace and mean, but ever and anon occurred a line or a passage of extraordinary vigour and felicity; and for these he will probably be read as long as English literature endures.

A sudden desire to see Wilkes induced Churchill to set off for Boulogne in October 1764. On the 29th of that month he was seized there with fever. Feeling the hand of death was on him, he sat up in bed and dictated a brief will, leaving to his wife an annuity of £60, and another of £50 to the girl he had seduced, and providing for his two boys. On the 4th of November he died. His body was brought over to Dover, where in the Church of St Martin it lies buried. The news of his death reached Robert Lloyd as he was sitting down to dinner. He sickened, and thrust away his plate untouched. 'I shall follow poor Charles,' was all he said, as he went to the bed from which he never rose again. Churchill's favourite sister, Patty, to whom Lloyd was betrothed, sank next under the double blow, and in a few weeks joined her brother and lover. Thus tragically ended Churchill's brief and boisterous career.

MARRIAGE OF WILLIAM AND MARY.

Not the least important of the collateral causes, which led to the downfall of the Stuart dynasty in these kingdoms, was the marriage of William Prince of Orange to his fair cousin, the Princess Mary of York, on the 4th of November 1677. William arrived in England on the 19th of October previous, to seek the hand of the princess, and conclude a treaty with England, by which the war between France and Holland could be terminated, and peace restored to Europe. Charles II. was in favour of the marriage; his brother James, the bride's father, was not: both, however, were equally anxious to commit the prince to a treaty before the nuptials were solemnised. But the wise hero of Nassau would not speak of politics till he saw the princess, nor enter into any engagement until the marriage was finally settled. Such being his determination, little time was wasted in diplomacy. Whatever dark forebodings the Duke of York might have entertained, were overruled by the king; and the royal pair were married in St James's Palace, then the residence of the duke, at nine o'clock on a quiet Sunday evening; a passage leading from the bedroom of the princess being fitted up as a temporary chapel for the occasion. The royal etiquette of the day permitted few spectators; those present were the king and queen, the Duke of York and his young wife Mary of Modena, with their pages and personal attendants. Compton, bishop of London, performed the ceremony, the king giving away the bride. On the question being asked, 'Who giveth this woman?' Charles exclaimed, 'I do;' a reply not to be found in the matrimonial service of the church. At the words, 'With all my worldly goods I thee endow,' William, in accordance with the Dutch custom, placed a handful of gold coin on the prayer-book, at which the king cried out to the bride: 'Pick it up—pick it up! it is all clear gain!' Immediately after the ceremony, the royal party received the congratulations of the chief officers of state and foreign ambassadors; and at eleven o'clock the bride and bridegroom retired to rest. All the absurd and indelicate wedding-customs of the olden time were observed on this occasion: the cake was eaten, the bride-posset drunk, the stocking thrown, and the curtain drawn, the last by the king himself, who, as he did it, shouted, 'St George for England!' Indeed, the marriage of the Third George with Queen Charlotte, was the first royal wedding in this country at which those customs, 'more honoured in the breach than in the observance,' were finally dispensed with.

This 'Protestant Alliance,' as it was termed, diffusing a general satisfaction over the land, was celebrated with great rejoicing. At Edinburgh, the Duke of Lauderdale announced the welcome intelligence from the Cross, which was hung with tapestry, and decorated with arbours formed of many hundreds of oranges. Then the duke, several of the nobility, the lord provost and civic magistrates, drank the healths of the royal family; the conduits ran with wine, and sweetmeats were thrown among the crowd; while the guns of the castle thundered in unison with the huzzas of the populace.

William was anxious to return to Holland immediately after his marriage, the more so because small-pox had broken out in St James's Palace, and his wife's beloved sister, the Princess Anne, was lying dangerously ill of it. But the queen's birthday falling on the 15th of November, he was induced to wait for the festivities of that occasion, intended to be celebrated with extra pomp on account of the wedding. On the evening of that day, the following Epithalamium, composed by Waller, was sung by the royal musicians before the assembled company at Whitehall.

'As once the lion honey gave,
Out of the strong such sweetness came,
A royal hero, no less brave,
Produced this sweet, this lovely dame.

To her, the prince that did oppose
Such mighty armies in the field,
And Holland from prevailing foes
Could so well free himself, does yield.

Not Belgia's fleet (his high command),
Which triumphs where the sun does rise;
Not all the force he leads by land,
Could guard him from her conqu'ring eyes.

Orange with youth experience has;
In action young, in council old:
Orange is what Augustus was—
Brave, wary, provident, and bold.

On that fair tree, which bears his name,
Blossoms and fruit at once are found;
In him we all admire the same,
His flowery youth with wisdom crowned.'

An easterly wind, much against his inclination, detained William in London four days longer. On the morning of the 19th November, the wind veering to the westward, immediate advantage was taken of the change. At the last moment, previous to her departure, the Princess of Orange took leave of Queen Catherine. Seeing her niece in tears, the queen, by way of consolation, said: 'When I came hither from Portugal, I had not even seen King Charles.' To which the princess replied: 'Remember, however, you came to England, but I am going out of it.' The king, Duke of York, and a large party, taking boats at Whitehall, accompanied the newly-married couple to Erith, where they all dined; then travelling by land to Gravesend, the prince and princess went on board the yacht provided to convey them to Holland. Nat Lee, the more than half-crazy dramatist, saw the embarkation, which he thus describes:

'I saw them launch; the prince the princess bore,
While the sad court stood crowding on the shore.
The prince still bowing on the deck did stand,
And held his weeping consort by the hand,
Which waving oft, she bade them all farewell,
And wept, as if she would the briny ocean swell.'

The wind again becoming unfavourable, William landed at Sheerness, and, accompanied by his bride and four attendants, made an excursion to Canterbury. Here he put up at an inn, and his cash falling short, he despatched his favourite Bentinck to the mayor and corporation, requesting a supply of money. The municipal authorities were taken by surprise. Strongly suspecting that the self-styled royal party were impostors, some of the council advised their immediate arrest and committal to prison; others, with more prudence, recommended less stringent measures; but all agreed not to part with one farthing of money; and so the evasive reply was given to Bentinck, that the corporation had no funds at disposal. In the meantime, Dean Tillotson of the Cathedral, the sharp-witted son of a shrewd Yorkshire clothier, heard of the strange affair, and making his way to the inn, saw and recognised the princess. Rushing back to the deanery, he collected all his ready money and plate, and returning to the inn, presented it to the prince. Twelve years afterwards, when William and Mary were king and queen of England, this service of the far-seeing dean was not forgotten. He was made Clerk of the Closet to their majesties, and soon after consecrated Archbishop of Canterbury.

The dean's interposition made a magical change in the state of affairs. The suspicious landlord, who had been inconveniently pressing his foreign guests for the amount of his bill, became in a moment the most obsequious of mortals. The gentlemen of Kent, now knowing who it was they had among them, crowded with their congratulations, and more substantial presents, to the prince and princess. William remained at the inn four days longer, and then left for Margate, where he embarked on the 28th of November; and after a short but stormy passage, the only lady on board unaffected by sea-sickness being the princess, he arrived safely in Holland.

Died.—Maria Angelica Kaufmann, portrait-painter, 1807, *Rome.*

THE GUNPOWDER PLOT.

The 5th of November marks the anniversary of two prominent events in English history—the discovery and prevention of the gunpowder treason, and the inauguration of the Revolution of 1688 by the landing of William III. in Torbay. In recent years, an additional interest has been attached to the date, from the victory at Inkerman over the Russians, in the Crimea, being gained on this day in 1854.

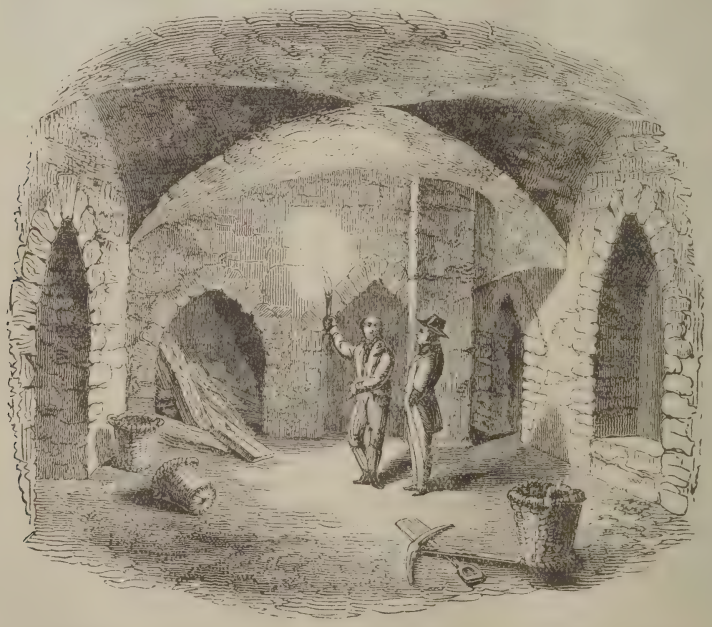
Like the Bartholomew massacre at Paris in 1572, and the Irish massacre of 1641, the Gunpowder Plot of 1605, standing as it were midway, at a distance of about thirty years from each of these events, has been the means of casting much obloquy on the adherents of the Roman Catholic religion. It would, however, be a signal injustice to connect the Catholics as a body with the perpetration of this atrocious attempt, which seems to have been solely the work of some fanatical members of the extreme section of the Jesuit party.

The accession of James I. to the throne had raised considerably the hopes of the English Catholics, who, relying upon some expressions which he had made use of while king of Scotland, were led to flatter themselves with the prospect of an unrestricted toleration of the practice of their faith, when he should succeed to the crown of England. Nor were their expectations altogether disappointed. The first year of James's reign shews a remarkable diminution in the amount of fines paid by popish recusants into the royal exchequer, and for a time they seem to have been comparatively unmolested. But such halcyon-days were not to be of long continuance. The English parliament was determined to discountenance in every way the Roman Catholic religion, and James, whose pecuniary necessities obliged him to court the good-will of the Commons, was forced to comply with their importunities in putting afresh into execution the penal laws against papists. Many cruel and oppressive severities were exercised, and it was not long till that persecution which is said to make 'a wise man mad,' prompted a few fanatics to a scheme for taking summary vengeance on the legislature by whom these repressive measures were authorised.

The originator of the Gunpowder Plot was Robert Catesby, a gentleman of ancient family, who at one period of his life had become a Protestant, but having been reconverted to the Catholic religion, had endeavoured to atone for his apostasy by the fervour of a new zeal. Having revolved in his own mind a project for destroying, at one blow, the King, Lords, and Commons, he communicated it to Thomas Winter, a Catholic gentleman of Worcestershire, who at first expressed great horror, but was afterwards induced to co-operate in

the design. He it was who procured the co-adjutorship of the celebrated Guido or Guy Fawkes, who was not, as has sometimes been represented, a low mercenary ruffian, but a gentleman of good family, actuated by a spirit of ferocious fanaticism. Other confederates were gradually assumed, and in a secluded house in Lambeth, oaths of secrecy were taken, and the communion administered to the conspirators by Father Gerard, a Jesuit, who, however, it is said, was kept in ignorance of the plot. One of the party, named Thomas Percy, a distant relation of the Earl of Northumberland, and one of the gentleman-pensioners at the court of King James, agreed to hire a house adjoining the building where the parliament met, and it was resolved to effect the purpose of blowing the legislature into the air by carrying a mine through the wall. This was in the spring of 1604, but various circumstances prevented the commencement of operations till the month of December of that year.

THE GUNPOWDER CONSPIRATORS—FROM A PRINT PUBLISHED IMMEDIATELY AFTER THE DISCOVERY.



In attempting to pierce the wall of the Parliament House, the conspirators found that they had engaged in a task beyond their strength, owing to the immense thickness of the barrier. With an energy, however, befitting a better cause, they continued their toilsome labours; labours the more toilsome to them, that the whole of the confederates were, without exception, gentlemen by birth and education, and totally unused to severe manual exertion. To avert suspicion while they occupied the house hired by Percy, they had laid in a store of provisions, so that all necessity for going out to buy these was obviated. Whilst in silence and anxiety they plied their task, they were startled one day by hearing, or fancying they heard, the tolling of a bell deep in the ground below the Parliament House. This cause of perturbation, originating perhaps in a guilty conscience, was removed by an appliance of superstition. Holy-water was sprinkled on the spot, and the tolling ceased. Then a rumbling noise was heard directly over their heads, and the fear seized them that they had been discovered. They were speedily, however, reassured by Fawkes, who, on going out to learn the cause of the uproar, ascertained that it had been occasioned by a dealer in coal, who rented a cellar below the House of Lords, and who was engaged in removing his stock from that place of deposit to another. Here was a golden opportunity for the conspirators. The cellar was forthwith hired from the coal merchant, and the working of the mine abandoned. Thirty-six barrels of gunpowder, which had previously been deposited in a house on the opposite side of the river, were then secretly conveyed into this vault. Large stones and bars of iron were thrown in, to increase the destructive effects of the explosion, and the whole was carefully covered up with fagots of wood.

These preparations were completed about the month of May 1605, and the confederates then separated till the final blow could be struck. The time fixed for this was at first the 3d of October, the day on which the legislature should meet; but the opening of parliament having been prorogued by the king to the 5th of November, the latter date was finally resolved on. Extensive preparations had been made during the summer months, both towards carrying the design into execution, and arranging the course to be followed after the

destruction of the king and legislative bodies had been accomplished. New confederates were assumed as participators in the plot, and one of these, Sir Everard Digby, agreed to assemble his Catholic friends on Dunsmore Heath, in Warwickshire, as if for a hunting-party, on the 5th of November. On receiving intelligence of the execution of the scheme, they would be in full readiness to complete the revolution thus inaugurated, and settle a new sovereign on the throne. The proposed successor to James was Prince Charles, afterwards Charles I., seeing that his elder brother Henry, Prince of Wales, would, it was expected, accompany his father to the House of Lords, and perish along with him. In the event of its being found impossible to gain possession of the person of Prince Charles, then it was arranged that his sister, the Princess Elizabeth, should be seized, and carried off to a place of security. Guy Fawkes was to ignite the gunpowder by means of a slow-burning match, which would allow him time to escape before the explosion, and he was then to embark on board a ship waiting in the river for him, and proceed to Flanders.

The fatal day was now close at hand, but by this time several dissensions had arisen among the conspirators on the question of giving warning to some special friends to absent themselves from the next meeting of parliament. Catesby, the prime mover in the plot, protested against any such communications being made, asserting that few Catholic members would be present, and that, at all events, 'rather than the project should not take effect, if they were as dear unto me as mine own son, they also must be blown up.' A similar stoicism was not, however, shared by the majority of the confederates, and one of them at least made a communication, by which the plot was discovered to the government, and its execution prevented.

Great mystery attaches to the celebrated anonymous letter received on the evening of 26th October by Lord Mounteagle, a Roman Catholic nobleman, and brother-in-law of Francis Tresham, one of the conspirators. Its authorship is ascribed, with great probability, to the latter, but strong presumptions exist that it was not the only channel by which the king's ministers received intelligence of the schemes under preparation. It has even been surmised that the letter was merely a blind, concerted by a previous understanding with Lord Mounteagle, to conceal the real mode in which the conspiracy was unveiled. Be this as it may, the communication in question was the only avowed or ascertained method by which the king's ministers were guided in detecting the plot. It seems also now to be agreed, that the common story related of King James's sagacity in deciphering the meaning of the writer of the letter, was merely a courtly fable, invented to flatter the monarch and procure for him with the public the credit of a subtle and far-seeing perspicacity. The enigma, if enigma it really was, had been read by the ministers Cecil and Suffolk, and communicated by them to various lords of the council, several days before the subject

VAULT BENEATH THE OLD HOUSE OF LORDS—FROM AN ORIGINAL DRAWING.

was mentioned to the king, who at the time of the letter to Lord Mounteagle being received was absent on a hunting-expedition at Royston.

Though the conspirators were made aware, through a servant of Lord Mounteagle, of the discovery which had been made, they nevertheless, by a singular infatuation, continued their preparations, in the hope that the true nature of their scheme had not been unfolded. In this delusion it seems to have been the policy of the government to maintain them to the last. Even after Suffolk, the lord chamberlain, and Lord Mounteagle had

actually, on the afternoon of Monday the 4th November, visited the cellar beneath the House of Lords, and there discovered in a corner Guy Fawkes, who pretended to be a servant of Mr Percy, the tenant of the vault, it was still determined to persist in the undertaking. At two o'clock the following morning, a party of soldiers under the command of Sir Thomas Knevett, a Westminster magistrate, visited the cellar, seized Fawkes at the door, and carried him off to Whitehall, where, in the royal bedchamber, he was interrogated by the king and council, and from thence was conveyed to the Tower.

It is needless to pursue further in detail the history of the Gunpowder Plot. On hearing of Fawkes's arrest, the remaining conspirators, with the exception of Tresham, fled from London to the place of rendezvous in Warwickshire, in the desperate hope of organising an insurrection. But such an expectation was vain. Pursued by the civil and military authorities, they were overtaken at the mansion of Holbeach, on the borders of Staffordshire, where Catesby and three others, refusing to surrender, were slain. The remainder, taken prisoners in different places, were carried up to London, tried, and condemned with their associate Guy Fawkes, who from having undertaken the office of firing the train of gunpowder, came to be popularly regarded as the leading actor in the conspiracy. Leniency could not be expected in the circumstances, and all the horrid ceremonies attending the deaths of traitors were observed to the fullest extent. The executions took place on the 30th and 31st of January, at the west end of St Paul's Churchyard.

Some Catholic writers have maintained the whole Gunpowder Plot to be fictitious, and to have been concocted for state purposes by Cecil. But such a supposition is entirely contrary to all historical evidence. There cannot be a shadow of a doubt, that a real and dangerous conspiracy was formed; that it was very nearly successful; and that the parties who suffered death as participators in it, received the due punishment of their crimes. At the same time, it cannot be denied that a certain amount of mystery envelops the revelation of the plot, which in all probability will never be dispelled.

Guy Fawkes's Day.

Till 1859, a special service for the 5th of November formed part of the ritual of the English Book of Common Prayer; but by a special ordinance of the Queen in Council, this service, along with those for the Martyrdom of Charles I., and the Restoration of Charles II., has been abolished. The appointment of this day, as a holiday, dates from

PROCESSION OF A GUY.

an enactment of the British parliament passed in January 1606, shortly after the narrow escape made by the legislature from the machinations of Guy Fawkes and his confederates.

That the gunpowder treason, however, should pass into oblivion is not likely, as long as the well-known festival of Guy Fawkes's Day is observed by English juveniles, who still regard the 5th of November as one of the most joyous days of the year. The universal mode of observance through all parts of England, is the dressing up of a scarecrow figure, in such cast-habiliments as can be procured (the head-piece, generally a paper-cap, painted and knotted with paper strips in imitation

of ribbons), parading it in a chair through the streets, and at nightfall burning it with great solemnity in a huge bonfire. The image is supposed to represent Guy Fawkes, in accordance with which idea, it always carries a dark lantern in one hand, and a bunch of matches in the other. The procession visits the different houses in the neighbourhood in succession, repeating the time-honoured rhyme—

'Remember, remember!
The fifth of November,
The Gunpowder treason and plot;
There is no reason
Why the Gunpowder treason
Should ever be forgot!'

Numerous variations and additions are made in different parts of the country. Thus in Islip, Oxfordshire, the following lines, as quoted by Sir Henry Ellis in his edition of *Brand's Popular Antiquities*, are chanted.

'The fifth of November,
Since I can remember,
Gunpowder treason and plot:
This is the day that God did prevent,
To blow up his king and parliament.
A stick and a stake,
For Victoria's sake;
If you won't give me one,
I'll take two:
The better for me,
And the worse for you.'

One invariable custom is always maintained on these occasions—that of soliciting money from the passers-by, in the formula, 'Pray remember Guy!' 'Please to remember Guy!' or 'Please to remember the bonfire!'

In former times, in London, the burning of the effigy of Guy Fawkes on the 5th of November was a most important and portentous ceremony. The bonfire in Lincoln's Inn Fields was conducted on an especially magnificent scale. Two hundred cart-loads of fuel would sometimes be consumed in feeding this single fire, while upwards of thirty 'Guys' would be suspended on gibbets and committed to the flames. Another tremendous pile was heaped up by the butchers in Clare Market, who on the same evening paraded through the streets in great force, serenading the citizens with the famed 'marrow-bone-and-cleaver' music. The uproar throughout the town from the shouts of the mob, the ringing of the bells in the churches, and the general confusion which prevailed, can but faintly be imagined by an individual of the present day.

The ferment occasioned throughout the country by the 'Papal Aggression' in 1850, gave a new direction to the genius of 5th of November revellers. Instead of Guy Fawkes, a figure of Cardinal Wiseman, then recently created 'Archbishop of Westminster' by the pope, was solemnly burned in effigy in London, amid demonstrations which certainly gave little evidence of any revolution in the feelings of the English people towards the Romish see. In 1857, a similar honour was accorded to Nana Sahib, whose atrocities at Cawnpore in the previous month of July, had excited such a cry of horror throughout the civilised world. The opportunity also is frequently seized by many of that numerous class in London, who get their living no one exactly knows how, to earn a few pence by parading through the streets, on the 5th of November, gigantic figures of the leading celebrities of the day. These are sometimes rather ingeniously got up, and the curiosity of the passer-by, who stops to look at them, is generally taxed with the contribution of a copper.

THE REVOLUTION OF 1688: POLITICAL SERVILITY.

On 5th November 1688, William, Prince of Orange, landed in Torbay, an event which, if we consider the important results by which it was followed, may perhaps be regarded as the most critical of any recorded in English history. It forms the boundary, as it were, between two great epochs—those of arbitrary and constitutional government—for the great Civil War, in the middle of the seventeenth century, can scarcely be regarded as more than a spasmodic effort which, carried to excess, overshot the mark, and ended by the re-establishment, for a time, of a sway more odious and intolerable, in many respects, than that whose overthrow had cost so much destruction and bloodshed.

We hear much of the folly of King James, and of all the other causes of his dethronement, but nothing of the culpable conduct of large official bodies, and of many individual subjects, who made it their business to encourage him in his sadly erroneous course, and to flatter him into the conviction that he might go any lengths with impunity. About a month before the landing of the Prince of Orange, the lord mayor, aldermen, sheriffs, &c., of the city of London sent the infatuated monarch an address, containing these words: 'We beg leave to assure your majesty that we shall, with all duty and faithfulness, cheerfully and readily, to the utmost hazard of our lives and fortunes, discharge the trust reposed in us by your majesty, according to the avowed principles of the Church of England, in defence of your majesty and the established government.'

The lieutenancy of London followed in the same strain: 'We must confess our lives and fortunes are but a mean sacrifice to such transcendent goodness; but we do assure your majesty of our cheerful offering of both against all your majesty's enemies, who shall disturb your peace upon any pretence whatever.'

The justices of peace for the county of Cumberland said: 'The unexpected news of the intended invasion of the Dutch fills us with horror and amazement, that any nation should be so transcendently wicked as groundlessly to interrupt the peace and happiness we have enjoyed; therefore, we highly think it our duty, chiefly at this juncture, to offer our lives and fortunes to your majesty's service, not doubting but a happy success will attend your majesty's arms. And if your majesty shall think fit to display your royal standard, which we heartily wish and hope you'll never have occasion to do, we faithfully do promise to repair to it with our persons and interest.'

The privy-council of Scotland express themselves thus: 'We shall on this, as on all other occasions, shew all possible alacrity and diligence in obeying your majesty's commands, and be ready to expose our lives and fortunes in the defence of your sacred majesty, your royal consort, his Royal Highness the Prince of Scotland, &c.' Nor were the Scottish peers, spiritual and temporal, behindhand on this occasion,

concluding their declaration as follows: 'Not doubting that God will still preserve and deliver you, by giving you the hearts of your subjects, and the necks of your enemies.'

To the like effect, there were addresses from Portsmouth, Carlisle, Exeter, &c. Nay, so fond was James of this sort of support to his government, that he was content to receive an address from the company of cooks, in which they applaud his 'Declaration of Indulgence' to the skies: declaring that it 'resembled the Almighty's manna, which suited every man's palate, and that men's different gustos might as well be forced as their different apprehensions about religion.'

A very short period elapsed before James was made to comprehend, by fatal experience, the value of such addresses, and to discriminate between the voice of the majority of a nation and the debasing servility of a few trimmers and time-servers.

ABANDONMENT OF ONE OF THE ROYAL TITLES.

On the 5th of November 1800, it was settled by the privy-council, that in consequence of the Irish Union, the royal style and title should be changed on the 1st of January following—namely, from 'George III., by the grace of God, of Great Britain, France, and Ireland, King, Defender of the Faith;' to 'George III., by the grace of God, of the United Kingdom of Great Britain and Ireland, King, Defender of the Faith.' And thus the title of king of France, which had been borne by the monarchs of this country for four hundred and thirty-two years—since the forty-third year of the reign of the Third Edward—was ultimately abandoned. It was the Salic law which excluded Edward from the inheritance of France; but Queen Elizabeth claimed the title, nevertheless, asserting, as it is said, that if she could not be queen, she would be king of France. And it is the more singular that Elizabeth should have retained the title, for, in the second year of her reign, it was agreed, in a treaty made between France and England, that the king and queen of France [Francis II. and his consort Mary of Scotland] should not, for the future, assume the title of king or queen of England or Ireland.

The abandonment of the title of 'King of France' led to our foreign official correspondence being carried on in the English language instead of in French, as previously had been the custom. A droll story, in connection with this official regulation, is told by an old writer. During the war between England and Spain, in the time of Queen Elizabeth, commissioners were appointed on both sides to treat of peace. The Spanish commissioners proposed that the negotiations should be carried on in the French tongue, observing sarcastically, that 'the gentlemen of England could not be ignorant of the language of their fellow-subjects, their queen being queen of France as well as of England.' 'Nay, in faith, gentlemen,' drily replied Dr Dale, one of the English commissioners, 'the French is too vulgar for a business of this importance; we will therefore, if you please, rather treat in Hebrew, the language of Jerusalem, of which your master calls himself king, and in which you must, of course, be as well skilled as we are in French.'

One of the minor titles held by the kings of England, who were also Electors of Hanover, was very enigmatical to Englishmen, particularly when expressed by the following initials, S.R.I.A.T. Nor even when it was extended thus, *Sacri Romani Imperii Archi-Thesaurus*, and translated into English as, 'Arch-Treasurer of the Holy Roman Empire,' was it less puzzling to the uninitiated. The arch-treasurership of the German empire, was an office settled upon the electors of Hanover, in virtue of their descent from Frederick, Elector Palatine; but its duties were always performed by deputy. Nor had the deputy any concern in the ordinary administration of the imperial treasury, his duties being confined to processions, coronations, and other great public ceremonies, when he carried a golden crown before the emperor, and distributed money and gold and silver medals among the populace.

NOVEMBER 6.

St Iltutus, abbot. St Leonard, hermit and confessor, 6th century. St Winoc, abbot, 8th century.

Born.—Julian, Roman emperor, 331, *Constantinople;* James Gregory, inventor of the reflecting-telescope, 1638, *Aberdeen;* Colley Cibber, dramatist, 1671, *London.*

Died.—Caliph Omar, assassinated at Jerusalem, 644; Pope Innocent VII., 1406; Sir John Falstaff, English knight, 1460, *Norwich;* Prince Henry, son of James I. of England, 1612; Gustavus Adolphus, king of Sweden, killed at battle of Lutzen, 1632; John IV., the Fortunate, king of Portugal, 1656; Bernard de Jussieu, distinguished botanist, 1777, *Paris;* Louis Joseph Philip, Duke of Orleans, guillotined at Paris, 1793; Princess Charlotte of England, daughter of George IV., 1817, *Claremont.*

GUSTAVUS ADOLPHUS.

Napoleon, than whom there could be no more capable judge, placed Gustavus Adolphus among the eight great captains of the world, a list of warriors which commenced with Alexander and ended with himself. With small means Gustavus was called to do much, and genius eked out the deficiency. By the sternest discipline, by original organisation, tactics, and strategy, he made a little host perform the service of a mighty one, and in the process reconstructed the art of war. Medieval routine vanished under his blows, and modern military science may be said to date from his practice.

He was born in 1594, and, ere he was seventeen, he inherited the Swedish throne by the death of his father, Charles IX. There was a law which pronounced the sovereign a minor until he had attained his twenty-fourth year, but Gustavus had shewn so many signs of manliness, that it was set aside in his favour. It is told of Charles IX., that when abandoning in council designs to which he felt himself unequal, he would, as if in a spirit of prescience, lay his hand on the fair head of his boy Gustavus, and say: 'He will do it; he will!'

Into an inheritance of trouble the young man entered. Denmark, Russia, and Poland were at active enmity with Sweden. First, he beat off the Danes; then he attacked the Russians, and took from them all the territory by which they had access to the Baltic. He next invaded Poland, with which he carried on an eight years' war, and closed the contest with the acquisition of a great part of

Livonia, and the town of Riga. In these conflicts he acquired a rare stock of experience, and trained an army of veterans to his hand. Meanwhile, his home-government was well conducted by his chancellor or prime minister, the sage Oxenstiern —he who wrote to his son when perplexed in some diplomatic entanglement: 'You do not know yet, my son, with how little wisdom mankind is governed.' Gustavus once said to his minister: 'You are too phlegmatic, and if somewhat of my heat did not mingle with your phlegm, my affairs would not succeed so well as they do;' to which Oxenstiern answered: 'Sire, if my phlegm did not mingle some coolness with your heat, your affairs would not be so prosperous as they are;' whereon both laughed heartily. A temper, which on provocation rose to fury, was one of the characteristics of Gustavus. In his wrath against pillage by his followers, it is related that he dragged forth a delinquent soldier by the hair of his head, exclaiming: 'It is better that I should punish thee, than that God should punish thee, and me, and all of us on thy account;' and ordered him off to instant execution. His proneness to anger he confessed. All commanders, he said, had their weaknesses; such a one his drunkenness; such a one his avarice; his own was choler, and he prayed men to forgive him.

That most dreadful war, which lasted for thirty years, from 1618 to 1648, and devastated and depopulated Germany, was raging. Tilly, and the imperial troops, were committing frightful atrocities on the Protestants of Bohemia. Austria, moreover, had menaced and insulted Sweden. Gustavus was not only a Protestant, but a zealous one, and, naturally, the eyes of suffering Protestantism turned to him for help, whose fame as a warrior filled Europe. After fair consideration he determined to intervene, and on the 29th of May 1630, when all his measures were arranged, he appeared in the Diet at Stockholm, to bid its members farewell. Taking his daughter, Christina, in his arms, he presented her as their future queen, amidst the sobs and tears of the assembly. 'Not lightly, or wantonly,' he said, 'am I about to involve myself and you in this new and dangerous war; God is my witness that *I* do not fight to gratify my ambition. The emperor has wronged me most shamefully in the person of my ambassador; he has supported my enemies, persecuted my friends and brethren, trampled my religion in the dust, and even stretched his revengeful arm against my crown. The oppressed states of Germany call loudly for aid, which, by God's help, we will give them. I am fully sensible of the dangers to which my life will be exposed. I have never shrunk from dangers, nor is it likely that I shall escape them all. Hitherto, Providence has wonderfully protected me, but I shall at last fall in defence of my country.' Then adjuring all to do their duties in his absence, he bade them 'a sincere —it may be—an eternal farewell.'

Gustavus led over to Germany an army of 15,000 men, in which were many volunteers from Scotland, and among them David Leslie, one of his ablest officers—he whom Cromwell, in after-years, miraculously defeated at Dunbar. As soon as Gustavus got to work, the fortune of the cause he had espoused began to mend. The courtiers of Vienna consoled themselves in saying, he was a snow-man, and would surely melt as he advanced southwards! Tilly, his antagonist—the ugly, little, Jesuit turned soldier, and esteemed the first general of his age—took his measures more wisely: not to be beaten by Gustavus, he said, was as creditable as to be victorious over other commanders. Tilly soon furnished evidence of the truth of his estimate. Gustavus carried all before him in north Germany, and on the 7th of September 1631, he met Tilly himself before Leipsic, and in a hard-fought field utterly defeated him. A second time, in April 1632, he encountered Tilly on the borders of Bavaria, and again defeated him. In this battle Tilly lost his life by a cannon-ball, which broke his thigh.

The Germans were astonished at the strict discipline which distinguished the Swedish army. All disorders were punished with the utmost severity, particularly impiety, theft, gambling, and duelling. Every regiment assembled round its chaplain for morning and evening prayer. The hardships of the war he shared with his soldiers. The peasants of Bavaria would long tell the tale, how, as he forced them to drag his artillery, he would come among them with kind words, and instructions how to place the lever, accompanied by occasional florins. His attention to trifles, his free intercourse with his men, he used to defend in saying: 'Cities are not taken by keeping in tents; as boys, in the absence of the schoolmaster, shut their books; so my troops, without my presence, would slacken their blows.' In all his actions, he moved under profound religious feeling. 'Pray constantly: praying hard is fighting hard,' was his favourite appeal to his soldiers. 'You may win salvation under my command, but hardly riches,' was his encouragement to his officers. He was often wounded, for he exposed himself freely in battle, and by no entreaty could he be persuaded to be more careful. 'My hour,' he would say, 'is written in heaven, and cannot be reversed on earth.'

Tilly being gone, Wallenstein was appointed to command the Imperialists. The opposing armies met on the field of Lützen, and on the 6th of November 1632, Gustavus opened the battle. In the morning, he knelt in front of his lines and offered up a prayer. Then he gave out Luther's Hymn, and a well-known hymn, said to be his own, beginning—

'Fear not, thou little chosen band.'

'God with us!' was the battle-word. All being ready, he cried aloud: 'Now, in God's name, let us at them! Jesus, Jesus, Jesus, let us fight for the honour of thy holy name!' and dashed at the enemy. A pistol-shot broke his arm. 'It is nothing: follow me!' he exclaimed; but his strength failing, he turned his horse's head, and muttered to the Duke of Lauenburg by his side: 'Cousin, take me hence, for I am wounded.' As he turned, an Austrian trooper shouted: 'Art thou here? I have long sought for thee!' and discharged his carbine into the king's shoulder. Gustavus fell from his horse, with the last words, 'My God!' The tidings flew through the army that the king was slain; that he was taken prisoner; and in revenge and in despair his men fought, as Schiller says, 'with the grim fury of lions,' until victory crowned the day. Defaced with wounds, trodden under

eet of horses, the body of Gustavus was drawn rom beneath a heap of slain, and laid, amid weep-ng, with his fathers in Sweden. The neighbour-ıood of the place where he fell is marked to this ay by a porphyritic boulder, with the simple nscription, 'G. A.—1632.'

Thus died Gustavus Adolphus, in his thirty-ighth year, and in the third of his championship f Protestantism. His success had begun to awaken larms among his allies, who feared in him a ossible Protestant emperor; yet of this ambition ıe gave no signs. 'The devil,' he told his chaplain, vho found him reading his Bible—'the devil is ery near at hand to those who are accountable to ıone but God for their actions.' What might be ıis dreams we can never know, but he has left one f the noblest and purest memories in history. Had he lived, it is likely he would have ended uickly that awful war which afflicted Germany or sixteen years after him. Oxenstiern lived o look after the interests of Sweden, and at the peace succeeded in annexing the Baltic province of Pomerania, held by Sweden until 1815, when it was ceded to Prussia.

DEATH OF THE PRINCESS CHARLOTTE.

The sensation excited throughout the country by this melancholy event was of no ordinary description, and even at the present day it is still vividly remembered. It was indeed a most unexpected blow, the shining virtues, as well as the youth and beauty of the deceased, exciting an amount of affectionate commiseration, such as probably had never before attended the death of any royal personage in England. A parallel to the feeling thus excited has only appeared in recent years on the occasion of the demise of the consort of our beloved sovereign—the good Prince Albert.

In the Princess Charlotte, the whole hopes of the nation were centered. The only child of the Prince Regent and Caroline of Brunswick, she was

PRINCESS CHARLOTTE.

garded as the sole security for the lineal trans-ission to posterity of the British sceptre, her ncles, the Dukes of Clarence, Kent, Cumberland, ıd Cambridge being then all unmarried. Well-ounded fears were entertained that through her eath the inheritance of the crown might pass from ıe reigning family, and devolve on a foreign and despotic dynasty. These apprehensions were dispelled by the subsequent marriage of the Duke of Kent, and the birth of the Princess Victoria, who, in her actual occupancy of the throne, has realised all the expectations which the nation had been led to entertain from the anticipated accession of her cousin.

In May 1816, the Princess Charlotte was married to Prince Leopold of Saxe-Coburg. Their union had been the result of mutual attachment, not of political expediency, and in the calm tranquillity of domestic life, they enjoyed a degree of happiness such as has not often been the lot of royal personages. The princess's approaching confinement was looked forward to by the nation with affectionate interest, but without the least apprehensions as to the result. Early in the morning of Tuesday the 4th of November, she was taken ill, and expresses were sent off to the great officers of state, including the Archbishop of Canterbury and the Lord Chancellor, who immediately attended. Everything seemed to go on favourably till the evening of the following day (Wednesday), when at nine o'clock the princess was delivered of a still-born child. This melancholy circumstance, however, did not appear to affect the princess so seriously as to give any cause for alarm, and about midnight it was deemed expedient to leave her to repose, and the attentions of the nurse, Mrs Griffiths. Ere half an hour elapsed, the latter observed such an alarming change in her patient, that she at once summoned Prince Leopold and the medical attendants, who hurried to the chamber. The princess became rapidly worse, and in about two hours expired.

After the grief of the nation had somewhat subsided, the feeling of sorrow was succeeded by one of anger. It was said that the medical attendants of the princess had mismanaged the case, and a carelessness and neglect, it was affirmed, had been shewn which would have been scandalous had the fate of the humblest peasant-woman been concerned. Extreme caution must be observed in dealing with these popular reports, considering the general propensity in human nature to slander, and the tendency to find in the deaths of eminent personages food for excitement and marvel. There really appears to have been some blundering in the case, but that this was the occasion of the princess's death, we have no warrant for believing. It is a curious circumstance, that Sir Richard Croft, the physician against whom the public odium was chiefly directed, committed suicide ere many months had elapsed.

A SAILOR'S LETTER.

When Louis XVIII., under the title of the Count de Lille, was obliged to quit the continent after the peace of Tilsit, and take refuge in England, he landed at Yarmouth from the Swedish frigate, *Freya*, and was rowed ashore by a boat's crew from H.M.S. *Majestic*. Pleased with the attention shewn him, the royal exile left fifteen guineas as a guerdon to the men to drink his health. The honest tars, in obedience to an order which had formerly been issued on the subject of taking money from strangers, refused to avail themselves of this munificence. The present case, however, being rather an exceptional one, the men held 'a talk' on the matter, when they resolved to transmit to Admiral Russell the letter, of which the following is a literal copy:

'MAJESTIC, 6*th day of November* 1807.

PLEASE YOUR HONOUR,

We holded a talk about that there £15 that was sent us, and hope no offence, your honour. We don't like to take it, because, as how we knows fast enuff, that it was the true king o France that went with your honour in the boat, an that he and our own noble king, God bless 'em both and give every one his right, is good friends now and besides that, your honour gived an order, lon ago, not to take any money from no body, and w never did take none; and Mr Leneve, that steere your honour and that there king, says he won't hav no hand in it, and so does Andrew Young, the prope coxen; and we hopes no offence—so we all, one an all, begs not to take it at all. So no more at present

From your honour's dutiful servants.'

(SIGNED) 'Andrew Young, *Coxen;* James Mann Lewis Bryan; James Lord; James Hood; W Edwards; Jan. Holshaw; Thomas Laurie Thomas Siminers; Thomas Kesane; Simon Duft W. Fairclough; John Cherchil; Thomas Laur ence; Jacob Gabriel; William Muzzy.'

How the admiral responded to this communication we are not informed, but it is to be hoped that th worthy tars were eventually permitted to shar among them the gift from Louis. As a specime of blunt and unadorned honesty, the above com position is perhaps unrivalled.

THE LITTLECOTE LEGEND.

Aubrey appears to have been the first to pu into circulation a romantic story of Elizabeth' time regarding Littlecote Hall, in Wiltshire which at that period was acquired by the Lor Chief-Justice Popham, in the possession of whos family it has since remained. The account give by Aubrey states that Dayrell, the former pro prietor, called a midwife, blindfolded, to his hous one night, by whom one of his serving-women wa delivered of a child, which she saw him immediatel after throw upon the fire; that the poor woma was afterwards able to discover and identify th house where this horrid act had been committed and that Dayrell, being tried for murder befor Chief-Justice Popham, only saved his life b giving Littlecote, and money besides, to the judg as a bribe.*

When Lord Webb Seymour was living i Edinburgh, in the early years of the presen century, he communicated a traditionary versio of this story to Sir Walter Scott, who wrought u a sketch of it as a ballad in his romance of *Rokeby* and printed it in full in the notes to that poem Though Lord Webb's story has thus been brough well into notice, we are induced to have it repeate here.

'It was on a dark rainy night in November that an old midwife sat musing by her cottage fireside, when on a sudden she was startled by loud knocking at the door. On opening it, sh found a horseman, who told her that her assistanc

* William, Prince of Orange, tarried for a day or two i his advance upon London, November 1688, at Littlecot Hall, which Lord Macaulay speaks of as 'renowned dow to our own times, not more on account of its venerabl architecture and furniture, than on account of a horribl and mysterious crime which was perpetrated there in th days of the Tudors.' William entertained King James' commissioners in the old hall of the mansion, 'hung says Lord Macaulay, 'with coats of mail which had see the wars of the Roses, and with portraits of gallants wh had adorned the court of Philip and Mary.'

was required immediately by a person of rank, and that she should be handsomely rewarded; but that there were reasons for keeping the affair a strict secret, and, therefore, she must submit to be blindfolded, and to be conducted in that condition to the bedchamber of the lady. With some hesitation the midwife consented; the horseman bound her eyes, and placed her on a pillion behind him. After proceeding in silence many miles through rough and dirty lanes, they stopped, and the midwife was led into a house, which, from the length of her walk through the apartments, as well as the sounds about her, she discovered to be the seat of wealth and power. When the bandage was removed from her eyes, she found herself in a bedchamber, in which were the lady on whose account she had been sent for, and a man of a haughty and ferocious aspect. The lady was delivered of a fine boy. Immediately the man commanded the midwife to give him the child, and, catching it from her, he hurried across the room, and threw it on the back of the fire that was blazing in the chimney. The child, however, was strong, and by its struggles rolled itself upon the hearth, when the ruffian again seized it with fury, and, in spite of the intercession of the midwife, and the more piteous entreaties of the mother, thrust it under the grate, and, raking the live coals upon it, soon put an end to its life. The midwife, after spending some time in affording all the relief in her power to the wretched mother, was told that she must be gone. Her former conductor appeared, who again bound her eyes, and conveyed her behind him to her own home: he then paid her handsomely, and departed. The midwife was strongly agitated by the horrors of the preceding night, and she immediately made a deposition of the facts before a magistrate. Two circumstances afforded hopes of detecting the house in which the crime had been committed: one was, that the midwife, as she sat by the bedside, had, with a view to discover the place, cut out a piece of the bedcurtain, and sewn it in again; the other was, that as she had descended the staircase, she had counted the steps. Some suspicions fell upon one Darrell, at that time the proprietor of Littlecote House and the domain around it. The house was examined, and identified by the midwife, and Darrell was tried at Salisbury for the murder. By corrupting his judge, he escaped the sentence of the law; but broke his neck by a fall from his horse while hunting, in a few months after. The place where this happened is still known by the name of Darrell's Stile—a spot to be dreaded by the peasant whom the shades of evening have overtaken on his way.'

Scott further added a legend to much the same purport, which was current in Edinburgh in his childhood. In this case, however, it was a clergyman who was brought blindfolded to the house, the object being to have spiritual consolation administered to a lady newly delivered of an infant. Having performed his part, he was rewarded, enjoined to secrecy on pain of death, and hurried off, but in descending the stair, heard the report of a pistol, and the tragedy is presumed to have been completed when he learned next morning that the house of a family of condition, at the head of the Canongate, had been totally consumed by fire during the night, involving the death of the daughter of the proprietor, 'a young lady eminent for beauty and accomplishments.' After many years, feeling uneasy about the secret, he imparted it to some of his brethren, and it thus acquired a certain degree of publicity. 'The divine, however,' says Scott, 'had been long dead, and the story in some degree forgotten, when a fire broke out again on the very same spot where the house of **** had formerly stood, and which was now occupied by buildings of an inferior description. When the flames were at their height, the tumult, which usually attends such a scene, was suddenly suspended by an unexpected apparition. A beautiful female, in a night-dress extremely rich, but at least half a century old, appeared in the very midst of the fire, and uttered these tremendous words in her vernacular idiom: "*Anes* burned, *twice* burned, the third time I'll scare ye all!"' The narrator adds: 'The belief in this story was formerly so strong, that, on a fire breaking out, and seeming to approach the fatal spot, there was a good deal of anxiety testified lest the apparition should make good her denunciation.'

A correspondent of *Notes and Queries* (April 10, 1858), affirms that this story was current in Edinburgh before the childhood of Sir Walter Scott, and was generally credited, at least as regards the murder part of it. He mentions a person acquainted with Edinburgh from 1743, who used to tell the tale, and point out the site of the house. The present writer knew a lady older than Scott, who had heard the story as a nursery one in her young days, and she offered to point out to him the site of the burned house—which, however, death unexpectedly prevented her from doing. Keeping in view Scott's narration, which assigns the head of the Canongate as the place, it is remarkable that a great fire did happen there at the end of the seventeenth century, and the lofty buildings now on the spot date from that time.

It is not calculated to support the credit of the Littlecote legend, that there is another of the same kind localised in Edinburgh. Nor is this all. A similar tale is told by Sir Nathaniel Wraxall, in which an Irish physician, named Ogilvie, resident at Rome about 1743, is represented as taken with eyes bandaged to a house in the country, where he was called upon to bleed to death a young lady who had dishonoured her family—the family proving afterwards to be that of the Duke de Bracciano. This story was communicated to Wraxall by the celebrated Lady Hamilton, and to support its credibility he relates another incident, of the verity of which he had been assured at Vienna and other German cities. About the year 1774, some persons came to the house of the Strasburg executioner, and engaged him to accompany them on a private professional excursion across the frontier, the object being to put to death a person of high rank. 'They particularly enjoined him to bring the sword with which he was accustomed, in the discharge of his ordinary functions, to behead malefactors. Being placed in a carriage with his conductors, he passed the bridge over the river, to Kehl, the first town on the eastern bank of the Rhine; where they acquainted him that he had a considerable journey to perform, the object of which must be carefully concealed, as the person intended to be put to death was an individual of great distinction. They added that he must not

oppose their taking the proper precautions to prevent his knowing the place to which he was conveyed. He acquiesced, and allowed them to hoodwink him. On the second day, they arrived at a moated castle, the draw-bridge of which being lowered, they drove into the court. After waiting a considerable time, he was then conducted into a spacious hall, where stood a scaffold hung with black cloth, and in the centre was placed a stool or chair. A female shortly made her appearance, habited in deep mourning, her face wholly concealed by a veil. She was led by two persons, who, when she was seated, having first tied her hands, next fastened her legs with cords. As far as he could form any judgment from her general figure, he considered her to have passed the period of youth. Not a word was uttered; neither did she utter any complaints, or attempt any resistance. When all the preparations for her execution were completed, on a signal given he unsheathed the instrument of punishment; and her head being forcibly held up by the hair, he severed it at a single stroke from her body. Without allowing him to remain more than a few minutes, he was then handsomely rewarded, conducted back to Kehl by the same persons who had brought him to the place, and set down at the end of the bridge leading to Strasburg.

'I have heard the question frequently agitated, during my residence in Germany, and many different opinions stated, relative to the lady thus asserted to have been put to death. The most generally adopted belief rested on the Princess of Tour and Taxis, Augusta Elizabeth, daughter of Charles Alexander, Prince of Wirtemberg. She had been married, at a very early period of life, to Charles Anselm, Prince of Tour and Taxis. Whether it proceeded from mutual incompatibility of character, or, as was commonly pretended, from the princess's intractable and ferocious disposition, the marriage proved eminently unfortunate in its results. She was accused of having repeatedly attempted to take away her husband's life, particularly while they were walking together near the castle of Donau-Stauff, on the high bank overhanging the Danube, when she endeavoured to precipitate him into the river. It is certain, that about the year 1773 or 1774, a final separation took place between them, at the prince's solicitation. The reigning Duke of Wirtemberg, her brother, to whose custody she was consigned, caused her to be closely immured in a castle within his own dominions, where she was strictly guarded, no access being allowed to her. Of the last-mentioned fact, there is little doubt; but it may be considered as much more problematical, whether she was the person put to death by the executioner of Strasburg. I dined in the autumn of the year 1778 with the Prince of Tour and Taxis, at his castle or seat of Donau-Stauff, near the northern bank of the Danube, a few miles from the city of Ratisbon. He was then about forty-five years of age, and his wife was understood to be in confinement. I believe that her decease was not formally announced as having taken place, till many years subsequent to 1778; but this circumstance by no means militates against the possibility of her having suffered by a more summary process, if her conduct had exposed her to merit it; and if it was thought proper to inflict upon her capital punishment. The private annals of the grea houses and sovereigns of the Germanic empire, i they were divulged, would furnish numerou instances of similar severity exercised in their ow families during the seventeenth and eighteenth centuries.'*

NOVEMBER 7.

St Prosdecimus, first bishop of Padua, confessor, 2 century. St Werenfrid, priest and confessor. St Willi brord, confessor, first bishop of Utrecht, 738.

Born.—William Stukeley, antiquarian, 1687, *Holbeach Lincolnshire;* Lecpold Frederick, Count Stolberg, miscel laneous writer, 1750, *Bramstedt, Holstein.*

JOHN KYRLE, 'THE MAN OF ROSS.'

John Kyrle, an active and benevolent man, whos good deeds ought to win the admiration of all irrespective of fame derived from other sources has become notable because Pope called him *Th Man of Ross*, and wrote a poem in his praise. Few who visit the pleasant town of Ross, in Hereford shire, fail to inquire about John Kyrle; and thei interest in his kind doings mingles with the deligh which that beautiful neighbourhood always impart to strangers. The picturesque church, with th pew in which the good man sat for so many years the bust and the monumental inscription withi the church; the beautiful avenue of trees, calle the *Prospect*, or the *Man of Ross's Walk*, in the rea of the church; the house which he built for him self; his arm-chair in the club-room of the littl inn—all remain objects of interest to the presen day.

John Kyrle was a gentleman of limited means possessing a small estate in and near Ross, in th latter half of the seventeenth century. A frien from another county once called him 'The Man o Ross;' and Kyrle liked the name, because i 'conveyed a notion of plain, honest dealing an unaffected hospitality.' He formed a terrace, o pleasant walk between a field of his and the rive Wye, and planted it with trees. He was alway ready to plan walks and improvements for hi friends, who were glad to avail themselves of hi skill in such matters. Expensive undertakings h could not indulge in, for his income was limited t £500 a year. The town being insufficiently sup plied with water, Kyrle dug an oval basin of con siderable extent in his field, lined it with brick paved it with stone, and caused the water fro the river to be forced into it by an engine, an conveyed by underground pipes to fountains i

* Wraxall's *Historical Memoirs*, i. 262.

he streets. This was the work noticed by Pope n the lines:

'From the dry rock, who bade the waters flow?
Not to the skies, in useless columns tost,
Or in proud falls magnificently lost;
But clear and artless, pouring through the plain,
Health to the sick, and solace to the swain.'

Kyrle next headed a subscription for making a auseway along the low ground between the town nd the bridge. It was so well planned that the ounty authorities afterwards adopted and extended t as part of the high-road to Hereford and Mon-nouth. The beautiful spire of the church being n an insecure state, Kyrle devised a mode of trengthening it, procured an assessment to pay for he repairs, contributed himself beyond his share f the assessment, and superintended the execution f the work. Pope was wrong in attributing to im the actual building of the spire:

'Who taught that heaven-directed spire to rise;'

nd even of the church itself:

'Who builds a church to God, and not to fame.'

To the renovated church Kyrle presented a great ell, which was cast in his presence at Gloucester; e threw into the crucible his own large silver ankard, having first drunk his favourite toast of Church and King!' There was at Ross a grant, enewed by successive lords of the manor, of ertain tolls on all corn brought to market; the rant was bestowed as a weekly donation of bread o the poor. Kyrle acted as the almoner to the ords of the manor, and won golden opinions by is manner of fulfilling the duties of that office:

'Behold the market-house, with poor o'erspread;
The Man of Ross divides the weekly bread.'

A multitude of other kindly actions endeared him o his townsmen; and when he died (November , 1724), the inhabitants felt that they had indeed ost a friend. It is wonderful what he did with is £500 a year, aided by the liberality which he vas the means of developing in other persons.

Many pleasant anecdotes are told of the Man of Ross. When he was planting the elm-walk, it was is wont to sally forth with a spade on one shoulder, nd a wooden bottle of liquor for a labourer and imself. On one occasion, this labourer, drinking ut of the bottle, did not cease till he had emptied t. Kyrle said to him: 'John, why did not you top when I called to you?' 'Why, sir,' said the an, 'don't you know that people can never hear hen they are drinking?' The next time Mr Kyrle pplied himself to the bottle, the man placed him-elf opposite to him, and opened his mouth as if awling aloud, till Kyrle had finished. The raught ended, Kyrle asked: 'Well, John, what id you say?' 'Ah, you see, sir,' said the man, I was right; nobody can hear when he is drink-ng!' The Man of Ross lived and died a bachelor, nder the housekeeping care of a maiden cousin—Miss Bubb. He disliked crowds and assemblies; ut was very fond of snug social parties, and of ntertaining his friends on market-days and fair-ays. His dishes were plain and according to the eason. He liked a goose on his table, liked to rve it, and liked to repeat the well-worn old joke bout 'cooking one's goose,' and so forth. Roast-eef he always reserved for Christmas-day. Malt liquor and Herefordshire cider were his only beverages. His 'invitation dinners' comprised nine, eleven, or thirteen persons, including Miss Bubb and himself; and he did not seem satisfied unless the guests mustered one of these aggregates. At his kitchen-fire there was a large block of wood, in lieu of a bench, for poor people to sit upon; and a piece of boiled beef, with three pecks of flour made into loaves, was given to the poor every Sunday. He loved a long evening, enjoyed a merry tale, and always appeared discomposed when it was time to separate. At his death, at the age of eighty-four, he had neither debts nor money, so closely did his income and his expenditure always agree. He left £40 to the Blue Coat School of Ross, and small legacies to the old workmen who had assisted him in his numerous useful works. About a year after John Kyrle's death, a tradesman of the town came to his executor, and said privately to him: 'Sir, I am come to pay you some money that I owed to the late Mr Kyrle.' The executor declared that he could find no entry of it in the accounts. 'Well, sir,' said the tradesman, 'that I am aware of. Mr Kyrle said to me, when he lent me the money, that he did not think I should be able to repay it in his lifetime, and that it was likely you might want it before I could make it up; and so, said he, I won't have any memorandum of it besides what I write and give you with it; and do you pay my kinsman when you can; and when you shew him this paper, he will see that the money is right, and that he is not to take interest.'

TYBURN.

This celebrated place of execution, which figures so prominently in the records of crime, is said to have been first established in the reign of Henry IV., previous to which 'The Elms' at Smithfield seems to have been the favourite locality for the punishment of malefactors. The name is derived from a brook called Tyburn, which flowed down from Hampstead into the Thames, supplying in its way a large pond in the Green Park, and also the celebrated Rosamond's Pond in St James's Park. Oxford Street was, at an earlier period, known as *Tyburn Road*, and the now aristocratic locality of Park Lane, bore formerly the name of *Tyburn Lane*, whilst an iron tablet attached to the railings of Hyde Park, opposite the entrance of the Edgeware Road, informs the passer-by that here stood Tyburn turnpike-gate, so well known in old times as a landmark by travellers to and from London.

The gallows at Tyburn was of a triangular form, resting on three supports, and hence is often spoken of as 'Tyburn's triple tree.' It appears to have been a permanent erection, and there also stood near it wooden galleries for the accommodation of parties who came to witness the infliction of the last penalty of the law, such exhibitions, it is needless to state, being generally regarded by our ancestors as interesting and instructive spectacles. Considerable disputation has prevailed as to the real site of the gallows, but it now appears to be pretty satisfactorily ascertained that it stood at the east end of Connaught Place, where the latter joins the Edgware Road, and nearly opposite the entrance to Upper Seymour Street. A lane led from the Uxbridge Road to the place of execution, in the

vicinity of which, whilst excavating the ground for buildings, numerous remains were discovered of the criminals who had been buried there after undergoing their sentence.

Among remarkable individuals who suffered death at Tyburn, were the Holy Maid of Kent, in Henry VIII.'s reign; Mrs Turner, notorious as a poisoner, and celebrated as the inventress of yellow starch; John Felton, the assassin of the Duke of Buckingham; the renowned burglar Jack Sheppard, and the thief-taker Jonathan Wild; Mrs Brownrigg, rendered proverbial by her cruel usage of apprentices; and the elegant and courtly Dr Dodd, whom pecuniary embarrassments—the result of a life of extravagance and immorality—hurried into crime. The last malefactor executed here was John Austin, on 7th November 1783, for robbery with violence. At that period the place of execution for criminals convicted in the county of Middlesex, was transferred from Tyburn to Newgate, where, on the 9th of December following the date just mentioned, the first capital sentence, under the new arrangements, was carried into effect. We are informed that some opposition was made by persons residing around the Old Bailey to this abandonment of the old locality at Tyburn, but the answer returned by the authorities to their petition was, that 'the plan had been well considered; and would be persevered in.' Our readers do not require to be informed that the place thus appointed is still the scene of public executions, now happily of much less frequent occurrence than formerly.

Those curious documents, called *Tyburn Tickets*, were certificates conferred under an act passed in the reign of William III., on the prosecutors who had succeeded in obtaining the capital conviction of a criminal. The object of the enactment was to stimulate individuals in the bringing of offenders to justice; and in virtue of the privilege thus bestowed, the holder of such a document was exempted 'from all manner of parish and ward offices within the parish wherein such felony was committed; which certificate shall be enrolled with the clerk of the peace of the county on payment of 1*s.* and no more.' These tickets were transferable, and sold like other descriptions of property. The act by which they were established was repealed in 1818, but an instance is related by a contributor to *Notes and Queries* of a claim for exemption from serving on a jury being made as late as 1856 by the holder of a Tyburn ticket.

The conveyance of the criminals from Newgate to Tyburn by Holborn Hill and the Oxford Road, afforded, by the distance of space traversed, an ample opportunity to all lovers of such sights for obtaining a view of the ghastly procession. A court on the south side of the High Street, St Giles's, is said to derive its name of *Bowl Yard*, from the circumstance of criminals in ancient times on their way to execution at Tyburn, being presented at the hospital of St Giles's with a large bowl of ale, as the last refreshment which they were to partake of on this side of the grave. Different maxims came ultimately to prevail in reference to this matter, and we are told that Lord Ferrers, when on his way to execution in 1760, for the murder of his landsteward, was denied his request for some wine and water, the sheriff stating that he was sorry to be obliged to refuse his lordship, but that by recent regulations they were enjoined not to let prisoners drink when going to execution, as great indecencie had been frequently committed in these case through the criminals becoming intoxicated.

One of the most vigorous drawings by Hogart represents the execution of the Idle Apprentice Tyburn—a fitting termination to his disreputabl career. Referring to this print, and the remarkabl change which has taken place in a locality formerl associated only with the most repulsive idea Mr Thackeray makes the following observation i his *English Humorists:* 'How the times hav changed! . . . . On the spot where Tom Idle (fo whom I have an unaffected pity) made his exit fro this wicked world, and where you see the hangma smoking his pipe as he reclines on the gibbet, an views the hills of Harrow or Hampstead beyond— splendid marble arch, a vast and modern city— clean, airy, painted drab, populous with nursery maids and children, the abodes of wealth an comfort, the elegant, the prosperous, the polit Tyburnia rises, the most respectable district in th habitable globe!'

NOVEMBER 8.

The Four Crowned Brothers, martyrs, 304. St Willeha confessor, bishop of Bremen, and apostle of Saxon end of 8th century. St Godfrey, bishop of Amiens, co fessor, 1118.

Born.—Edward Pocock, oriental scholar, 1604, *Oxford* Captain John Byron, celebrated navigator, 1723, *New stead Abbey.*

Died.—Pope Boniface II., 532; Louis VIII., king France, 1226, *Montpensier;* Duns Scotus, theologian an scholar, 1308, *Cologne;* Cardinal Ximenes, governor Spain during minority of Charles V., 1517; John Milto great English poet and prose writer, 1674, *London* Madame Roland, revolutionist, guillotined at Paris, 1793 Thomas Bewick, wood-engraver, 1828, *Gateshead;* Georg Peacock, dean of Ely, mathematician, 1858, *Ely.*

MADAME ROLAND.

The terrible French Revolution brought man women as well as men into prominence—some fo their genius, some for their crimes, and some fo their misfortunes. Among the number was Madam Roland. She was born at Paris in 1756; he maiden name being Manon Philipon. Her fathe was an artist of moderate talent; her mother woman of superior understanding and great sweet ness of disposition. Manon made rapid progress i painting, music, and general literature, and becam an accomplished girl. She was very religious a first, but afterwards adopted the views then s prevalent in France, and allowed her imaginatio to get the better of her religion. Plutarch's *Live* gave her an almost passionate longing for the fam of the great men of past ages; and at the age o fourteen she is said to have wept because she wa not a Roman or Spartan woman. In 1781, sh married M. Roland, a man twenty years her senio and much respected for his ability and integrity During several years, she divided her time betwee the education of her young daughter, and assistin her husband in his duties as inspector of manu factures. Together they visited England, Switzer land, and other countries, and imbibed a taste fo

many liberal institutions and usages which were denied to France under the old Bourbon *régime*.

At length the outburst came—the French struggle for liberty in 1789—so soon to degenerate into ruthless anarchy. The Rolands accepted the new order of things with great avidity. M. Roland was elected representative of Lyon to the National Assembly; and he and his wife soon formed at Paris an intimacy with Mirabeau and other leading spirits, at a time when the Revolution was still in its best days. There was a party among the Revolutionists, called the *Girondists*, less violent and sanguinary than the *Jacobins;* and to this moderate party the Rolands attached themselves. When a Girondist ministry was formed, Roland became Minister of the Interior, or what we should call Home Secretary. He appeared at the court of the unfortunate Louis XVI. in a round hat, and with strings instead of buckles in his shoes—a departure from court-costume which was interpreted by many as symbolic of the fall of the monarchy; while his plain uncompromising language gave further offence to the court. Madame Roland assisted her husband in drawing up his official papers; and to her pen is attributed the famous warning-letter to the king, published in May 1792. It occasioned the dismissal of M. Roland from the ministry, but the dreadful doings on the 10th of August terrified the court, and Roland was again recalled to office. By this time, however, the Revolution had passed into its hideous phase; the populace had tasted blood, and, urged on by the Jacobins, had entered upon a course distasteful to the Rolands and the Girondists generally. When the massacres of the 2d of September took place, Roland boldly denounced them in the National Convention; but Robespierre, Marat, Danton, and the other Jacobins, were now becoming too powerful for him. Especially bitter was the wrath of these men towards Madame Roland, whose boldness, sagacity, and sarcasm had often thwarted them. The lives of herself and her husband were not considered safe; and arrangements were made for them to sleep away from their regular home, the Hotel of the Interior, without making the change publicly known. But this deception was little suited to the high spirit of Madame Roland. She said on one occasion: 'I am ashamed of the part I am made to play. I will neither disguise myself nor leave the house. If they wish to assassinate me, it shall be in my own house.'

The crisis came. On the 31st of May 1793, nearly forty thousand of the rabble were marched against the National Convention by the Jacobins, as the most effectual means of putting down the Girondists. In the evening of the same day, Madame Roland was cast into prison—her husband being at the time away from Paris, for his own safety. She never again obtained her liberty, or saw her husband. Her demeanour was firm and admirable; while ardently advocating what she deemed reasonable individual and national freedom, she never hesitated to denounce the men who, by their sanguinary deeds, were sending a thrill of horror through Europe; but in her more silent hours she grieved for her husband and daughter, and for the many friends who were falling under the guillotine. All her jailers she converted into friends by her fascinating manner and general amiability; but they could do nothing to avert her fate. She devoted all her leisure hours in prison to the composition of her *Mémoires;* in which she delineated, with much sprightliness and grace, the events of her happy youth, and with great judgment and mournful pathos, the fearful turmoil of her later years. At one time, during her three months' imprisonment, she almost determined to take poison, like many miserable creatures around her; but her better nature came to her aid, and she resolved to meet her fate bravely. It was a horrible time. On the 16th of October, the unfortunate Marie Antoinette was guillotined. Later in the same month, twenty of the leading Girondists—all personal friends of the Rolands—shared the same fate. And then came the turn of Madame Roland. After being successively imprisoned in the Abbaye, Sainte Pélagie, and the Conciergerie, she was brought to trial as an accomplice of the Girondists. A few days previous to this, Chauvieu, Madame Roland's advocate, visited her in prison, to confer respecting her defence. Interrupting him in his observations, she took a ring off her finger, and said: 'Do not come to-morrow to the Tribunal; you would endanger yourself without saving me. Accept this ring as a simple token of my gratitude. To-morrow, I shall cease to exist.' At the trial, she appeared dressed carefully in white, with her beautiful black hair descending to her waist. Unmoved by the insults to

MADAME ROLAND.

which she was subjected by her brutal judges, she maintained unruffled a dignity of demeanour which might have suited a Roman matron of old; but her death was a predetermined matter, and she was remorselessly condemned. On the fatal day, and at the same hour and place with herself, a man was to be guillotined. To die first on such an occasion had become a sort of privilege among the wretched victims, as a means of avoiding the agony of seeing others die. Madame Roland waived this privilege in favour of her less courageous companion. The executioner had orders to guillotine her before the man; but she entreated him not to shew the impoliteness of refusing a woman's last request. As she passed to the scaffold, she gazed on a gigantic statue of Liberty erected near it, and exclaimed: 'O Liberty! how many crimes are

committed in thy name!' The guillotine then took the life of one who was, perhaps, the most remarkable woman of the French Revolution.

The fate of M. Roland was scarcely less romantically tragical. He had lain concealed for some time in Rouen, but on hearing of his wife's death, he set out on the road to Paris, and walked as far as Baudouin. Here he quitted the highway, entered an avenue leading to a private mansion, and sitting down at the foot of a tree, passed a cane-sword through his body. A paper was found beside him with the following inscription: 'Whoever you are who find me lying here, respect my remains; they are those of a man who devoted his whole life to being useful, and who died as he had lived, virtuous and honest.'

BEWICK, THE ENGRAVER.

Thomas Bewick owes his celebrity to his knowledge of animals, and the admirable manner in which he applied this knowledge to the production of illustrated works on natural history. Born at Cherryburn, in Northumberland, in 1753, he has left us in his autobiography an interesting account of his introduction to the world of art. Exhibiting some indications of taste in this direction, he was, in 1767, apprenticed to Mr Ralph Beilby, of Newcastle-on-Tyne, an engraver of door-plates and clock-faces, and occasionally of copper-plates for illustrating books. 'For some time after I entered the business,' he says, 'I was employed in copying Copeland's Ornaments; and this was the only kind of drawing upon which I ever had a lesson given me from any one. I was never a pupil to any drawing-master, and had not even a lesson from William Beilby, or his brother Thomas, who, along with their other profession, were also drawing-masters. In the later years of my apprenticeship, my master kept me so fully employed that I never had any opportunity for such a purpose, at which I felt much grieved and disappointed. The first jobs I was put to do were blocking out the wood about the lines on the diagrams (which my master finished) for the *Lady's Diary*, on which he was employed by Charles (afterwards the celebrated Dr) Hutton; and etching sword-blades for William and Nicholas Oley, sword manufacturers, &c., at Shotley Bridge. It was not long till the diagrams were wholly put into my hands to finish. After these, I was kept closely employed upon a variety of other jobs; for such was the industry of my master that he refused nothing, coarse or fine. He undertook everything, which he did in the best way he could. He fitted up and tempered his own tools, and adapted them to every purpose; and taught me to do the same. This readiness brought him in an overflow of work; and the workplace was filled with the coarsest kinds of steel stamps, pipe moulds, bottle moulds, brass-clock faces, door-plates, coffin-plates, bookbinders' letters and stamps, steel, silver, and gold seals, mourning-rings, &c. He also undertook the engraving of arms, crests, and cyphers on silver, and every kind of job from the silversmiths; also engraving bills of exchange, bank-notes, invoices, account-heads, and cards. These last he executed as well as did most of the engravers of the time; but what he excelled in was ornamental silver engraving.' This, of course, was a strange way of introduction to the higher departments of art; but it was not a bad one for su a person as Bewick, who had the germs of a tr artist within him. 'While we were going on this way,' his narrative proceeds, 'we were occ sionally applied to by printers to execute woo cuts for them. In this branch my master was ve defective. What he did was wretched. He d not like such jobs. On this account they we given to me; and the opportunity this afforded drawing the designs on the wood was highly gra fying to me. It happened that one of these, a c of the "George and Dragon" for a bar-bill, attract so much notice, and had so many praises bestow upon it, that this kind of work greatly increase Orders were received for cuts for children's book chiefly for Thomas Saint, printer, Newcastle, a successor of John White, who had rendered hi self famous for his numerous publications of h tories and old ballads. . . . My time now becar greatly taken up with designing and cutting a s of wood-blocks for the *Story Teller*, *Gay's Fabl* and *Select Fables;* together with cuts of a simil kind for printers. Some of the Fable cuts we thought so well of by my master, that he, in n name, sent impressions of a few of them to be la before the Society for the Encouragement of Art and I obtained a premium. This I received short after I was out of my apprenticeship, and it w left to my choice, whether I would have it in gold medal or money (seven guineas). I preferr the latter; and I never in my life felt great pleasure than in presenting it to my mother.'*

Once favoured with the good opportunity th afforded to him, Bewick did not fail to make u of it. Authors and publishers found him to useful in wood engraving generally, and he earn a living at this while preparing for higher labou in art. In 1773, he engraved cuts for Dr Hutto *Mathematics*, and for Dr Horsley's edition of S Isaac Newton's works. Coming to London 1776, he executed work for various persons; b he did not like the place nor the people. 'Wherev I went,' he says in the work already quoted, 'th ignorant part of the Cockneys called me "Scotc man." At this I was not offended; but when the added other impudent remarks, I could not endu them; and this often led me into quarrels of kind I wished to avoid, and had not been used engage in. It is not worth while noticing the quarrels, but only as they served to help out m dislike to London.'

Having returned to the north, Bewick applie himself to his favourite pursuit of designing an engraving wood-cuts in natural history, and ekin out his income meanwhile by what may be terme commercial engraving. *Æsop's Fables*, *History Quadrupeds*, *History of Birds*, Hutchinson's *Histo of Durham*, Parnell's *Hermit*, Goldsmith's *Deserte Village*, Liddell's *Tour in Lapland*—all engaged h attention by turn, whilst at the same time employed himself in a totally different departme of the engraver's art—that of executing coppe plates for bank-notes.

It may be worth mentioning here, that cottage in Bewick's early days, seem to have been adorne with large wood-cuts, as they are now wit cheap coloured lithographs. 'I cannot hel lamenting,' he observes, 'that, in all the vicissitude

* *A Memoir of Thomas Bewick, written by Himself.*

which the art of wood engraving has undergone, some species of it is lost and done away. I mean the large blocks with the prints from them, so common to be seen when I was a boy, in every cottage and farmhouse throughout the country. These blocks, I suppose, from their appearance, must have been cut on the plank way on beech, or some other kind of close-grained wood; and from the immense number of impressions from them, so cheaply and extensively spread over the whole country, must have given employment to a great number of artists in this inferior department of wood-cutting; and must also have formed to them an important article of traffic. These prints, which were sold at a very low price, were commonly illustrative of some memorable exploits; or were, perhaps, the portraits of eminent men who had distinguished themselves in the service of their country, or in their patriotic exertions to serve mankind.'

Bewick has acquired a deserved reputation as well for the lifelike correctness of his drawing, as the allegorical and imaginative charm with which he has invested all his productions. His sense of humour was also remarkably strong, and manifests itself very prominently in the vignettes and tail-pieces with which his *History of Quadrupeds* is embellished, though it is to be regretted that he has not unfrequently allowed this propensity to conduct him beyond the limits of decorum. The amiability and domesticity of his temper is very pleasingly shewn in a letter, addressed to a friend in 1825, of which the following is an extract: 'I might fill you a sheet in dwelling on the merits of my young folks, without being a bit afraid of any remarks that might be made upon me, such as, "Look at the old fool, he thinks there is nobody has *sic bairns as he has!*" In short, my son and three daughters do everything in their power to make their parents happy.'

A visitor to the South Kensington Museum will find a series of Bewick's designs, illustrative of the progress of wood engraving. This reviver of the art in modern times, died in 1828, at the age of seventy-six.

NOVEMBER 9.

The Dedication of the Church of Our Saviour, or St John Lateran. St Mathurin, priest and confessor, 3d century. St Theodorus, surnamed Tyro, martyr, 306. St Benignus or Binen, bishop, 468. St Vanne or Vitonius, bishop of Verdun, confessor, about 525.

Born.—Mark Akenside, poet (*Pleasures of Imagination*), 1721, *Newcastle-on-Tyne;* William Sotheby, poetical translator, 1757, *London.*

Died.—William Camden, celebrated scholar, and author of *Britannia*, 1623, *Chiselhurst;* Archbishop Gilbert Sheldon, founder of the Sheldon Theatre, Oxford, 1677, *Croydon;* Paul Sandby, founder of English school of water-colour painting, 1809; Marshal Count de Bourmont, distinguished French commander, 1846.

The Lord Mayor's Show.

Shorn of its antique pageantry, and bereft of its ancient significance, the procession that passes through London to Westminster every 9th of November, when the mayor of London is 'sworn into' office, becomes in the eyes of many simply ludicrous. It is so, if we do not cast a retrospective glance at the olden glories of the mayoralty, the original importance of the mayor, and the utility of the civic companies, when the law of trading was little understood and ill defined. These companies guarded and enforced the best interests of the traders who composed their fraternities. The Guildhall was their grand rendezvous. The mayor was king of the city, and poets of no mean fame celebrated his election, and invented pageantry for exhibition in the streets and halls, rivalling the court masques in costly splendour. Of all this nothing remains but a few men in armour, and a few banners of the civic companies, to appeal for respect in an age of utilitarianism, already too much inclined to sneer at 'old institutions' and 'the wisdom of our ancestors.' Yet such displays are not without their use in a national as well as historical point of view. The history of trade is the true history of civilisation.

In the great struggle that overthrew feudalism, the most important combatants were the men whose lives and fortunes were endangered in the course of the difficult conduct of trade between the great continental cities. The poor nobility, and their proud and impoverished descendants, frequently lived only by rapacious tolls, exacted from merchantmen passing through their territory, or by their castles. Sometimes these traders and their merchandise were seized and detained till a large ransom was extorted; sometimes they were robbed and murdered outright. In navigating the Rhine and the Danube, the boats were continually obliged to pay toll in passing the castles, then literally dens of thieves; and 'the robber knights' of Germany were the terror of all travellers by land. The law was then powerless to punish these nobles, for they held sovereign power in their petty territories, and kings and emperors cared little to quarrel with them in favour of mere traders. The pages of Froissart narrate the contempt and hatred felt by the nobles for the commonalty, and the jealousy which they entertained of the wealth brought by trade. It became, therefore, necessary for merchantmen to band together, and pay for armed escorts, as they still do in the east; this ultimately led to trading leagues between large towns, ending in the famed Hanseatic League of the North German cities, which first established trade on a secure basis, and gave to the people wealth and municipal institutions, leading to the establishment of Hotels de Ville and Mayoralties, rivalling the chateaux and stately pomp of the old nobility.

The magistrates, chosen by popular voice to protect the municipality, were inaugurated with popular ceremonies; and these public celebrations occupied the same place in the estimation of the people, that the court ceremonies and tournaments did in that of the aristocracy. Ultimately, the wealthy townsmen became as proud as the nobles, and rivalled or outdid them upon all occasions where public display was considered needful. When sovereigns entered the cities, they were received by persons habited in classic or mythological costumes, who welcomed them in set speeches, the invention of the best poets procurable. Elaborately decorated triumphal arches spanned the streets through which they passed; pageants, arranged on prepared stages, awaited their approach

at street-corners; and on the arrival of the august guests, the characters embodied in these poured forth complimentary speeches, or sang choruses with music in their honour.

The trading companies of London imitated their continental brethren in observances of the same kind. In the thirteenth and fourteenth centuries, they rode forth in great state to meet and welcome kings or their consorts, when they came to the 'camera regis,' as they termed the city of London. Foreign potentates and ambassadors received similar honours, in order that the dignity of the city might be properly upheld. When the day came to honour their own chief magistrate, of course they were still more pleased to make public displays. Hence the mayor was inaugurated with much pomp. He went to Westminster in his gilded barge, after a noble fashion; and as he returned, he was greeted by mythological and emblematic personages stationed in pageants by the way, their speeches being prepared by civic poets-laureate, who numbered among them such men as the dramatists Peele, Dekker, Webster, Munday, and Middleton.

Giants seem to have been the most general, as they were always the most popular adjuncts, to these civic displays, at home and abroad. They were intimately connected with the old mythic

THE GIANTS IN GUILDHALL.

histories of the foundation of cities, and still appear in continental pageantry; the London giants being two ponderous figures of wood, stationary in the Guildhall. The giants of Antwerp, Douai, Ath, Lille, and other cities of the Low Countries, are from twenty to thirty feet in height, and still march in great public processions. They occasionally unite to swell the cortège in some town, on very great occasions, except the giant of Antwerp, and he is too large to pass through any gate of the city. In English records, we read of giants stationed on London Bridge, or marching in mayoralty processions; the same thing occurring in our large provincial towns, such as Chester, York, and Norwich. In 1415, when Henry V. made his triumphant entry to London, after the victory of Azincourt, a male and a female giant stood at the Southwark gate of entry to London Bridge; the male bearing the city keys, as if porter of London. In 1432, when Henry VI. entered London the same way, 'a mighty giant' awaited him, at the same place, as his champion. He carried a drawn sword, and by his side was an inscription, beginning:

> 'All those that be enemies to the king,
> I shall them clothe with confusion.'

In 1554, when Philip and Mary made their public entry into London, 'two images, representing two giants, the one named Corineus and the other Gogmagog, holding between them certain Latin verses,' were exhibited on London Bridge. When Elizabeth passed through the city, January 12, 1558—the day before her coronation—' the final exhibition was at Temple Bar, which was "finely dressed" with the two giants, who held

between them a poetic recapitulation of the pageantry exhibited.' *

The earliest printed description of the shows on Lord Mayor's Day, is that by George Peele, 1585; when Sir Wolstan Dixie was installed.† The pageants were then occupied by children, appropriately dressed, to personate London, the Thames, Magnanimity, Loyalty, &c.; who complimented the mayor as he passed. One 'apparelled like a Moor,' at the conclusion of his speech, very sensibly reminded him of his duties in these words:

'This now remains, right honourable lord,
That carefully you do attend and keep
This lovely lady, rich and beautiful,
The jewel wherewithal your sovereign queen
Hath put your honour lovingly in trust,
That you may add to London's dignity,
And London's dignity may add to yours.'

A very good general idea of these annual pageants may be obtained from that concocted by Anthony Munday in 1616, for the mayoralty of Sir John Leman, of the Fishmongers' Company. The first pageant was a fishing-boat, with fishermen 'seriously at labour, drawing up their nets, laden with living fish, and bestowing them bountifully upon the people.' These moving pageants were placed on stages, provided with wheels, which were concealed by drapery, the latter being painted to resemble the waves of the sea. This ship was followed by a crowned dolphin, in allusion to the mayor's arms, and those of the company, in which dolphins appear; and 'because it is a fish inclined much by nature to musique, Arion, a famous musician and poet, rideth on his backe.' Then followed the king of the Moors, attended by six tributary kings on horseback. They were succeeded by 'a lemon-tree richly laden with fruit and flowers,' in punning allusion to the name of the mayor; a fashion observed whenever the name allowed it to become practicable. Then came a bower adorned with the names and arms of all members of the Fishmongers' Company who had served the office of mayor; with their great hero, Sir William Walworth, inside; an armed officer, with the head of Wat Tyler, on one side, and the Genius of London, 'a crowned angel with golden wings,' on the other. Lastly, came the grand pageant drawn by mermen and mermaids, 'memorizing London's great day of deliverance,' when Tyler was slain; on the top sat a victorious Angel, and King Richard was represented beneath, surrounded by impersonations of royal and kingly virtues.*

There is still preserved, in Fishmongers' Hall, a very curious contemporary drawing of this show; a portion of it is here copied, depicting the lemon-tree; it will be perceived that the pelican (emblematic of self-sacrificing piety) is in front. 'At the

PAGEANT EXHIBITED ON LORD MAYOR'S DAY IN 1616.

foote of the tree sit five children, resembling the five senses,' according to the words written upon the original; to which is added the information, that this pageant 'remaineth in the Fishmongers' Hall for an ornament' during the mayoralty.

Throughout the reign of James I., the inventive faculty of the city poet continued to be thus taxed for the yearly production of pageantry. When the great civil war broke out, men's minds became too seriously occupied to favour such displays; and the gloomy puritanism of the Cromwellian era put a stop to them entirely. For sixteen years no record is given of them; in 1655, the mayor, Sir John Dethick, attempted a restoration of the old shows, by introducing the crowned Virgin on horseback; in allusion to the arms of the Mercers' Company, of which he was a member. In 1657, Sir R. Chiverton restored the galley, two leopards led by Moors, a giant who walked on stilts; and a pageant, with Orpheus, Pan, and the satyrs.

With the Restoration came back the old city-shows in all their splendour. In 1660, the Royal Oak was the principal feature in compliment to Charles II., and no expense was spared to make a good display of other inventions, 'there being twice

* We quote from a small volume devoted to the history of *The Giants in Guildhall, with an Account of other Civic Giants, at Home and Abroad*, by F. W. Fairholt, F.S.A.; to which we must refer the reader who may take an interest in a subject that demands larger space than we have at command. We may here merely add, that the names Gog and Magog, applied to the Guildhall Giants, are comparatively modern, formed by breaking one name into two. The old legendary history of London relates that Gogmagog was an ancient British giant, overcome by Corineus, a gigantic follower of Brutus of Troy, who invaded England, and first founded London, under the name of Troynovant, or New Troy. The oldest figure in the Guildhall is supposed to represent Gogmagog, the younger Corineus. They were carved by the civic carpenter, Richard Saunders, in 1707.

† It may be curious to many readers if we here note the rarity and consequent value of these old pamphlets. The copy bought for the Guildhall Library of Peele's pageant cost £20; it consists of four leaves only, thus valued at £5 each!

* Abridged from Fairholt's *History of Lord Mayors' Pageants*, privately printed by the Percy Society, 1843. In these volumes a succinct account (with extracts) is given of each year's display, as far as it can be ascertained from the examination of the rare descriptive pamphlets, in the Bodleian, Guildhall, and British Museum libraries; or those of private collectors, as well as from notices gleaned from our historians.

as many pageants and speeches as have formerly shewn,' says the author, John Tatham, who was for many years afterwards employed in this capacity. He was succeeded by Thomas Jordan, who enlivened his pageantry with humorous songs and merry interludes, suited to Cavalier tastes. The king often came to the mayor's feast, and when Sir Robert Viner, the great banker (as related in *Spectator*, 462), entertained the king in 1674, both got so merry at the feast, that the mayor lost all notion of rank; followed the king, who was about to depart, and insisted on his returning 'to take t'other bottle.' Charles good-humouredly allowed himself to be half-dragged back to the banqueting hall, humming the words of the old song:

'The man that is drunk is as great as a king!'

A loose familiarity was indulged in by the citizens, rather startling to modern ideas. Thus, when the mayor went in his barge, accompanied by all the civic companies in their barges, as far as Chelsea, in 1662, to welcome and accompany the king in his progress down the river from Hampton Court to Whitehall, their majesties were thus addressed by the speaker in the waterman's barge:—'God blesse thee, King Charles, and thy good woman there; and blest creature she is, I warrant thee, and a true. Go thy ways for a wag! thou hast had a merry time on't in the west; I need say no more! But do'st hear me, don't take it in dudgeon that I am so familiar with thee; thou may'st rather take it kindly, for I am not alwayes in this good humour; though I *thee* thee and *thou* thee, I am no Quaker, take notice of that.'

The Plague, and the Great Fire, were the only causes of interruption to the glories of the lord mayor's show during the reign of Charles, until the quarrel broke out between court and city, which ended in the abrogation of the city charter, and the nomination of mayor and aldermen by the king. When Charles was morally and magisterially at his worst, a song was composed for the inauguration of one of his creatures (Sir W. Pritchard, 1682), declaring him to be a sovereign—

'In whom all the graces are jointly combined,
Whom God as a pattern has set to mankind.'

The citizens were insulted in their own hall when the king was 'pleased to appoint' Sir H. Tulse the following year, and a 'new Irish song' was composed for the occasion, one verse running thus:

'Visions, seditions, and railing petitions,
The rabble believe and are wondrous merry;
All can remember the fifth of November,
But no man the thirtieth of January.
Talking of treason, without any reason,
Hath lost the poor city its bountiful charter;
The Commons haranguing will bring them to hanging,
And each puppy hopes to be Knight of the Garter.'

In 1687, James II. dined with the lord mayor, and introduced the pope's nuncio at the foreign ministers' table. The pageants for the day were got up, as the city poet declares, to express 'the many advantages with which his majesty has been pleased so graciously to indulge all his subjects, though of different persuasions.' The value of this author's flattery may be judged from the fact, that the song he composed in praise of James, was used in praise of William III. two years afterwards, when he and his queen honoured the civic feast.

In 1691, Elkanah Settle succeeded to the post of city-laureate, and contributed the yearly pageants until 1708, when the printed descriptions cease. Settle once occupied an important position in the court of Charles II., and his wretched plays and poems were preferred to those of Dryden; more from political than poetic motives. He occupies a prominent position in Pope's *Dunciad*, where the glories of the mayoralty shows are said to

'Live in Settle's numbers one day more.'

This last of the city bards ultimately wrote drolls for Bartholomew Fair, and in his old age was obliged, for a livelihood, to roar in the body of a painted dragon, which he had invented for one of these shows. His works display 'a plentiful lack of wit;' but he had a sense of gorgeous display, that much pleased the populace. The pamphlet descriptive of his inventions for 1698 contains a spirited engraving (see the next page) of the Chariot of Justice, in which the goddess sits, accompanied by Charity, Concord, and other Virtues; the chariot being drawn by two unicorns, guided by Moors, 'sounding forth the fame of the honourable Company of Goldsmiths.' Settle generally contrived to compliment, however absurdly, the company to which the mayor belonged; and on one occasion, when a grocer was elected, introduced Diogenes in *a currant-butt!*

The last great show was in 1702. The mayor was then a member of the Vintners' Company, and their patron, St Martin, appeared, and divided his cloak among the beggars, according to the ancient legend; an Indian galleon followed, which was rowed by bacchanals, and carried Bacchus on board; then came the Chariot of Ariadne; a Scene at a Tavern; and an 'Arbour of Delight,' with Satyrs carousing. It was a costly and stupid display. An entertainment was prepared for the following year, but the death of Prince George of Denmark, the husband of Queen Anne, frustrated it. The altered taste of the age, and the inutility of such displays, led to their abandonment; the land-procession being restricted to a few occasional impersonations, a few men in armour, and some banner-bearers.

In 1706, the lord mayor's feast was held a few days before Christmas, and is thus described by a contemporary. 'The Duke of Marlborough sat on the right hand of the Lord Mayor, in the middle of an oval table, and the Lord High Treasurer on his left, and the rest of the great men according to their deserts and places. The Queen, Prince, Emperor, Duke of Savoy, and other princes allies' healths were drunk; and when the Lord Mayor offered to begin that of the Duke of Marlborough, his Grace rose up twice at table, and would not permit it till that of Prince Eugene was drunk. His Grace and the rest of the great men, so soon as dinner was over (which was about eight o'clock), took coach and returned to court. The claret that was drunk cost 1*s.* 6*d.* a bottle, and the music 50 libs.'*

The mayor rode on horseback in the civic

* Hearne's *Reliquiæ*, i. 115.

procession until 1712, when a coach was provided for his use. In 1757, the gorgeous fabric which is still used on these occasions was constructed at a cost of £1065, 3*s.*; the panels were painted by Cipriani. Royalty generally viewed the show from a balcony at the corner of Paternoster Row, as depicted in the concluding plate of Hogarth's 'Industry and Idleness,' which gives a vivid picture of this 'gaudy day' in the city. Afterwards Mr Barclay's house, opposite Bow Church, was chosen for the same purpose.

Some few modern attempts have been made to resuscitate the old pageants. In 1837, two colossal figures of the Guildhall Giants walked in the procession. In 1841, a ship fully rigged and manned was drawn through the streets on wheels;

CHARIOT OF JUSTICE IN THE LORD MAYOR'S PAGEANT, 1698.

the sailors were personated by boys from the naval school at Greenwich. But the most ambitious, and the last of these attempts, was made in 1853, when Mr Fenton, the scenic artist of Sadler's Wells Theatre, and Mr Cooke of Astley's, under the superintendence of Mr Bunning, the city architect, reproduced the old allegorical cars, with modern improvements. First came a 'Chariot of Justice,' drawn by six horses; followed by standard-bearers of all nations on horseback; an Australian cart drawn by oxen, and containing a gold-digger employed in washing quartz; then came attendants carrying implements of industry; succeeded by an enormous car drawn by nine horses, upon which was placed a terrestrial globe, with a throne upon its summit, on which sat Peace and Prosperity, represented by two young ladies from Astley's. Good as was the intention and execution of this pageant, it was felt to be out of place in this modern age of utilitarianism; and this 'turning of Astley's into the streets,' will probably never be again attempted. Soon after this the city barges were sold, and the water-pageant abolished. The yearly procession to Westminster is now shorn of all dignity or significance.

The banquet in Guildhall is now the great feature of the day. The whole of the cabinet ministers are invited, and their speeches after dinner are expected to explain the policy of their government. The cost of this feast is estimated at £2500. Half of this sum is paid by the mayor, the other half is divided between the two sheriffs. The annual expense connected with the office of mayor is over £25,000. To meet this there is an income of about £8000; other sums accrue from fines and taxes; but it is expected, and is indeed necessary, that the mayor and sheriffs expend considerable sums from their own purses during their year of office; the mayor seldom parting with less than £10,000.

NOVEMBER 10.

Saints Trypho and Respicius, martyrs, and Nympha, virgin, 3d and 5th centuries. Saints Milles, bishop of Susa, Arbrosimus, priest, and Sina, deacon, martyrs in Persia, 341. St Justus, archbishop of Canterbury, confessor, 627. St Andrew Avellino, confessor, 1608.

Born.—Mahomet, or Mohammed, Arabian prophet, founder of Islamism, 570, *Mecca;* Martin Luther, German reformer, 1483, *Eisleben, Saxony;* Robert Devereux, Earl of Essex, favourite of Queen Elizabeth, 1567, *Netherwood, Herefordshire;* Oliver Goldsmith, poet and dramatist, 1728, *Pallasmore, Ireland;* Granville Sharp, slavery abolitionist and miscellaneous writer, 1734, *Durham;* Friedrich Schiller, poet and dramatist, 1759, *Marbach, Würtemberg.*

Died.—Ladislaus VI. of Hungary, killed at Varna, 1444; Pope Paul III. (Alexander Farnese), 1549; Marshal Anne de Montmorency, killed at St Denis, 1567; Gideon Algernon Mantell, geologist, 1852, *London;* Isidore Geoffroy St Hilaire, zoologist, 1861; Prince Leopold George Frederick, King of the Belgians, 1865.

RALPH ALLEN: FIELDING'S 'ALLWORTHY.'

For his public usefulness in improving the national means of epistolary correspondence, the name of Ralph Allen is entitled to rank with those of John Palmer and Sir Rowland Hill; yet we may in vain search for his name in the biographical dictionaries. But for the notice which Pope has taken of him in his verses, it almost appears as if we should have known nothing whatever of one of the noblest characters of any age or country.

To give the reader an idea of the services which Allen rendered to the postal institutions of the country, it will only be necessary to state that in the reign of Queen Anne (1710), all previous acts relating to the post-office were abrogated, and the entire establishment was remodelled under what is officially spoken of as 'the act of settlement.' Under this new statute, increased powers were given to the post-office authorities, and the entire service rapidly improved; while each year saw considerable sums added to the available revenue of the country. This progress, however, arose from improvements which had been effected on post-roads alone; and although the new act gave facilities for the establishment of 'cross-posts,' they were not attempted till the year 1720, when a private individual undertook to supply those parts of the country, not on the line of the great post-roads, with equal postal facilities. That individual was Mr Ralph Allen, who, at the time, filled the office of deputy-postmaster of Bath. Mr Allen, who, from his position, must have been well aware of the defects of the existing system, proposed to the government to establish cross-posts between Exeter and Chester, going by way of Bristol, Gloucester, and Worcester; connecting, in this way, the west of England with the Lancashire districts and the mail route to Ireland, and giving independent postal inter-communication to all the important towns lying in the direction to be taken. Previous to this proposal, letters passing between neighbouring towns were conveyed by strangely circuitous routes; for instance, letters from Cheltenham or Bath for Worcester or Birmingham, required to go first to the metropolis, and then to be sent back again by another post-road. This manner of procedure, in those days of slow locomotion, caused serious delays, and frequently great inconvenience. Mr Allen's proposition necessitated a complete reconstruction of the mail-routes; but he proved to the Lords of the Treasury that this was a desideratum—that it would be productive to the revenue and beneficial to the country. By his representations, he succeeded in inducing the executive to grant him a lease for life of all the cross-posts that should be established. His engagements bound him to pay a fixed rental of £6000 a year, and to bear all the costs of the new service. In return, the surplus revenue was to belong to him. The enterprise was remunerative from the first. From time to time the contract was renewed, always at the same rental; each time, however, the government required Allen to include other branches of road in his engagement (the new districts were never burdens to him for more than a few weeks), till at his death the cross-posts had extended to all parts of the country. Towards the last, this private project had become so gigantic as to be nearly unmanageable, and the time was anxiously awaited when it should become merged in the general establishment. Mr Allen died in 1764, when the post-office authorities absorbed his department, and managed it so as to quadruple the amount of proceeds in two years.

Mr Allen had reaped golden harvests. In an account which he left at his death, he estimated the net profits of his contract at £10,000 annually—a sum which, during his term of office, amounted, on his own shewing, to nearly half a million sterling! Whilst in official quarters his success was greatly envied, he commanded, in his private capacity, universal respect. In the only short account of this estimable man which we have seen, a contemporary writer states, that he 'was not more remarkable for the ingenuity and industry with which he made a very great fortune, than for the charity, generosity, and kindness with which he spent it.' It is certain that he bestowed a considerable part of his income in works of charity, and in supporting needy men of letters. He was a great friend and benefactor of Fielding; and in *Tom Jones*, the novelist has gratefully drawn Mr Allen's character in the person of Allworthy. He enjoyed the friendship of Chatham; and Pope, Warburton, and other men of literary distinction, were his familiar companions. Pope has celebrated one of his principal virtues, unassuming benevolence, in the well-known lines:

> 'Let humble *Allen*, with an awkward shame,
> Do good by stealth, and blush to find it fame.'

Mr Allen divided his time between the literary society of London and his native city of Bath, near which city stood his elegant villa of Prior Park. A codicil to his will, dated November 10, a short time before his death, contains the following bequest: 'For the last instance of my friendly and grateful regard for the best of friends, as well as for the most upright and ablest of ministers that has adorned our country, I give to the Right Honourable William Pitt the sum of one thousand pounds, to be disposed of by him to any of his children that he may be pleased to appoint.'

THE *TIMES* TESTIMONIAL.

A remarkable instance was afforded, a few years ago, of the power of an English newspaper, and its appreciation by the commercial men of Europe. It is known to most readers at the present day, that the proprietors and editors of the daily papers make strenuous exertions to obtain the earliest possible information of events likely to interest the public, and take pride in insuring for this information all available accuracy and fulness; but it is not equally well known how large is the cost incurred by so doing. None but wealthy proprietors could venture so much, for an object, whose importance and interest may be limited to a single day's issue of the paper.

In 1841, Mr O'Reilly, the *Times* correspondent at Paris, received secret information of an enormous fraud that was said to be in course of perpetration on the continent. There were fourteen persons—English, French, and Italian—concerned, headed by a French baron, who possessed great talent, great knowledge of the continental world, and a most polished exterior. His plan was one by which European bankers would have been robbed of at least a million sterling; the conspirators having reaped about £10,000, when they were discovered. The grand *coup* was to have been this—to prepare a number of forged letters of credit, to present them simultaneously at the houses of all the chief bankers in Europe, and to divide the plunder at once. How Mr O'Reilly obtained his information, is one of the secrets of newspaper management; but as he knew that the chief conspirator was a man who would not scruple to send a pistol-shot into any one who frustrated him, he wisely determined to date his letter to the *Times* from Brussels instead of Paris, to give a false scent. This precaution, it is believed, saved his life. The letter appeared in the *Times* on 26th May. It produced a profound sensation, for it revealed to the commercial world a conspiracy of startling magnitude. One of the parties implicated, a partner in an English house at Florence, applied to the *Times* for the name of its informant; but the proprietors resolved to bear all the consequences. Hence the famous action, *Bogle* v. *Lawson*, brought against the printer of the *Times* for libel, the proprietors, of course, being the parties who bore the brunt of the matter. As the article appeared on 26th May, and as the trial did not come on till 16th August, there was ample time to collect evidence. The *Times* made immense exertions, and spent a large sum of money, in unravelling the conspiracy throughout. The verdict was virtually an acquittal, but under such circumstances that each party had to pay his own costs.

The signal service thus rendered to the commercial world, the undaunted manner in which the *Times* had carried through the whole matter from beginning to end, and the liberal way in which many thousands of pounds had been spent in so doing, attracted much public attention. A meeting was called, and a subscription commenced, to defray the cost of the trial, as a testimonial to the proprietors. This money was nobly declined in a few dignified and grateful words; and then the committee determined to perpetuate the memory of the transaction in another way. They had in their hands £2700, which had been subscribed by 38 public companies, 64 members of the city corporation, 58 London bankers, 120 London merchants and manufacturers, 116 county bankers and merchants, and 21 foreign bankers and merchants. In November, the committee made public their mode of appropriating this sum: namely, £1000 for a '*Times* Scholarship' at Oxford, for boys in Christ's Hospital; £1000 for a similar scholarship at Cambridge, for boys of the city of London School; and the remainder of the money for four tablets, to bear suitable inscriptions—one to be put up at the Royal Exchange, one at Christ's Hospital, one at the City of London School, and one at the *Times* printing-office.

NOVEMBER 11.

St Mennas, martyr, about 304. St Martin, bishop of Tours, confessor, 397.

Martinmas.

St Martin, the son of a Roman military tribune, was born at Sabaria, in Hungary, about 316. From his earliest infancy, he was remarkable for mildness of disposition; yet he was obliged to become a soldier, a profession most uncongenial to his natural character. After several years' service, he retired into solitude, from whence he was withdrawn, by being elected bishop of Tours, in the year 374. The zeal and piety he displayed in this office were most exemplary. He converted the whole of his diocese to Christianity, overthrowing the ancient pagan temples, and erecting churches in their stead. From the great success of his pious endeavours, Martin has been styled the Apostle of the Gauls; and, being the first confessor to whom the Latin Church offered public prayers, he is distinguished as the father of that church. In remembrance of his original profession, he is also frequently denominated the Soldier Saint.

The principal legend, connected with St Martin, forms the subject of our illustration, which

ST MARTIN DIVIDING HIS CLOAK WITH A BEGGAR.

represents the saint, when a soldier, dividing his cloak with a poor naked beggar, whom he found perishing with cold at the gate of Amiens. This cloak, being most miraculously preserved, long

formed one of the holiest and most valued relics of France; when war was declared, it was carried before the French monarchs, as a sacred banner, and never failed to assure a certain victory. The oratory in which this cloak or cape—in French, *chape*—was preserved, acquired, in consequence, the name of *chapelle*, the person intrusted with its care being termed *chapelain:* and thus, according to Collin de Plancy, our English words chapel and chaplain are derived. The canons of St Martin of Tours and St Gratian had a lawsuit, for sixty years, about a sleeve of this cloak, each claiming it as their property. The Count Larochefoucauld at last put an end to the proceedings, by sacrilegiously committing the contested relic to the flames.

Another legend of St Martin is connected with one of those literary curiosities termed a palindrome. Martin, having occasion to visit Rome, set out to perform the journey thither on foot. Satan, meeting him on the way, taunted the holy man for not using a conveyance more suitable to a bishop. In an instant the saint changed the Old Serpent into a mule, and jumping on its back, trotted comfortably along. Whenever the transformed demon slackened pace, Martin, by making the sign of the cross, urged it to full speed. At last, Satan utterly defeated, exclaimed:

'Signa te Signa: temere me tangis et angis:
Roma tibi subito motibus ibit amor.'

In English—'Cross, cross thyself: thou plaguest and vexest me without necessity; for, owing to my exertions, thou wilt soon reach Rome, the object of thy wishes.' The singularity of this distich, consists in its being palindromical—that is, the same, whether read backwards or forwards. *Angis*, the last word of the first line, when read backwards, forming *signa*, and the other words admitting of being reversed, in a similar manner.

The festival of St Martin, happening at that season when the new wines of the year are drawn from the lees and tasted, when cattle are killed for winter food, and fat geese are in their prime, is held as a feast-day over most parts of Christendom. On the ancient clog almanacs, the day is marked by the figure of a goose; our bird of Michaelmas being, on the continent, sacrificed at Martinmas. In Scotland and the north of England, a fat ox is called a mart, clearly from Martinmas, the usual time when beeves are killed for winter use. In Tusser's *Husbandry*, we read:

'When Easter comes, who knows not then,
That veal and bacon is the man?
And Martilmass beef doth bear good tack,
When country folk do dainties lack.'

Barnaby Googe's translation of *Neogeorgus*, shews us how Martinmas was kept in Germany, towards the latter part of the fifteenth century—

'To belly chear, yet once again,
Doth Martin more incline,
Whom all the people worshippeth
With roasted geese and wine.
Both all the day long, and the night,
Now each man open makes
His vessels all, and of the must,*
Oft times, the last he takes,
Which holy Martin afterwards
Alloweth to be wine,
Therefore they him, unto the skies,
Extol with praise divine.'

*New wine not fully fermented.

A genial saint, like Martin, might naturally be expected to become popular in England; and there are no less than seven churches in London and Westminster, alone, dedicated to him. There is certainly more than a resemblance between the Vinalia of the Romans, and the Martinalia of the medieval period. Indeed, an old ecclesiastical calendar, quoted by Brand, expressly states under 11th November: 'The Vinalia, a feast of the ancients, removed to this day. Bacchus in the figure of Martin.' And thus, probably, it happened, that the beggars were taken from St Martin, and placed under the protection of St Giles; while the former became the patron saint of publicans, tavern-keepers, and other dispensers of good eating and drinking. In the hall of the Vintners' Company of London, paintings and statues of St Martin and Bacchus reign amicably together side by side. On the inauguration, as lord mayor, of Sir Samuel Dashwood, an honoured vintner, in 1702, the company had a grand processional pageant, the most conspicuous figure in which was their patron saint, Martin, arrayed, *cap-à-pie*, in a magnificent suit of polished armour; wearing a costly scarlet cloak, and mounted on a richly plumed and caparisoned white charger: two esquires, in rich liveries, walking at each side. Twenty satyrs danced before him, beating tambours, and preceded by ten halberdiers, with rural music. Ten Roman lictors, wearing silver helmets, and carrying axes and fasces, gave an air of classical dignity to the procession, and, with the satyrs, sustained the bacchanalian idea of the affair. A multitude of beggars, 'howling most lamentably,' followed the warlike saint, till the procession stopped in St Paul's Churchyard. Then Martin, or his representative at least, drawing his sword, cut his rich scarlet cloak in many pieces, which he distributed among the beggars. This ceremony being duly and gravely performed, the lamentable howlings ceased, and the procession resumed its course to Guildhall, where Queen Anne graciously condescended to dine with the new lord mayor.

Born.—John Albert Fabricius, scholar and editor, 1668, *Leipsic;* Firmin Abauzit, celebrated man of learning, 1679, *Uzès, in Languedoc;* Earl of Bridgewater, founder of the Bridgewater Treatise Bequest, 1758; Marie François Xavier Bichat, eminent French anatomist, 1771, *Thoirette;* Dr John Abercrombie, physician and author, 1781, *Aberdeen.*

Died.—Canute the Dane, king of England, 1035, *Shaftesbury;* Thomas, Lord Fairfax, Parliamentary general, 1671; Jean Sylvain Bailly, eminent astronomer, guillotined at Paris, 1793; Joshua Brookes, eccentric clergyman, 1821, *Manchester.*

A FATHER AND SON: SINGULAR SPECIMEN OF A MANCHESTER CLERGYMAN.

On 11th November 1821, died the Rev. Joshua Brookes, M.A., chaplain of the Collegiate Church, Manchester. He was of humble parentage, being the son of a shoemaker or cobbler, of Cheadle Hulme, near Stockport, and he was baptized, May 19, 1754, at Stockport. His father, Thomas

Brookes, was a cripple, of uncouth mien, eccentric manners, and great violence of temper, peculiarities which gained him the sobriquet of 'Pontius Pilate.' Many stories are told of his rude manners and impetuous disposition. He removed to Manchester while Joshua was yet a child, and, in his later years, occupied a house in a passage in Long Millgate, opposite the house of Mr Lawson, then high-master of the Manchester Grammar School. At that school Joshua received his education, and, being a boy of quick parts, was much noticed by the Rev. Thomas Aynscough, one of the Fellows of the Collegiate Church, by whose assistance, and that of some of the wealthier residents of Manchester, his father was enabled to send him to Oxford, where he was entered at Brasenose College. The father went round personally to the houses of various rich inhabitants, to solicit pecuniary aid to send his son to college. Joshua took his degree of M.A. in 1771. In 1789, he was nominated by the warden and fellows of Manchester to the perpetual curacy of the chapelry of Chorlton-cum-Hardy, which he resigned in December 1790, on being appointed to a chaplaincy in the Manchester Collegiate Church, which he held till his death. During his chaplaincy of thirty-one years, he is supposed to have baptized, married, and buried more persons than any other clergyman in the kingdom. He inherited much of his father's mental constitution, especially his rough manners and extreme irascibility; but the influence of education, and a sense of what his position demanded, tended somewhat to temper his eccentricities. It is curious to mark the reflection of the illiterate father's temperament and disposition in the educated son. The father was fond of angling, and having once obtained permission to fish in the pond of Strangeway's Hall, he had an empty hogshead placed in the field, near the brink of the pond, and in this cask—a sort of vulgar Diogenes in his tub—he frequently spent whole nights in his favourite pursuit. In his later years, while sitting at his door, as was his custom, his strange appearance and figure, with a red night-cap on his head, attracted the notice of a market-woman, who, in passing, made some rude remark. Eager for revenge, and yet unable to follow her by reason of his lameness, old Brookes despatched his servant for a sedan-chair, wherein he was conveyed to the market-place; and, having singled out the object of his indignation, he belaboured her with his crutch with such fury, that she had to be rescued by a constable. He was of intemperate habits and extreme coarseness in speech, and was always getting involved in disputes and scrapes. Joshua, to his honour, always treated the old man with respect and forbearance; and, after getting the chaplaincy, he maintained his father for many years till the latter's death. Such was the father. A few traits of the son will complete this strange picture of a pair of Manchester originals in the last century. Young Brookes was at one time an assistant-master at the Grammar School, where he made himself very unpopular with the boys, especially the senior classes, being constantly involved in warfare with them, physical and literary. Sometimes he would singly defy the whole school, and be forcibly ejected from the school-room, fighting with hand and foot against his numerous assailants, and hurling reproaches at them as 'blockheads.' On one occasion, the arrival on the spot of the head-master alone saved him from being pitched over the school-yard parapet-wall, into the river Irk, many feet below. The upper-scholars not only ridiculed him in lampoons, but fathered verses upon him, as that celebrated wit, Bishop Mansel, did upon old Viner. He was sadly vexed by a mischievous rascal writing on his door: 'Odi profanum *Bruks'* [the Lancashire pronunciation of his name] 'et arceo.' Nor was he less annoyed by a satirical effusion occasioned by his inviting a friend to dine with him, and entertaining him only with a black-pudding. The lampoon in question commenced with—

'O Jotty, you dog!
Your house, we well know,
Is head-quarters of prog.'

'Jotty Bruks,' as he was usually called, may be regarded as a perpetual cracker, always ready to go off when touched or jostled in the slightest degree. He was no respecter of persons, but warred equally and indifferently with the passing chimney-sweep, the huxtress, the mother who came too late to be churched, and with his superiors, the warden and fellows. The last-mentioned parties, on one occasion, for some trivial misbehaviour, expelled him from the chapter-house, until he should make an apology. This he sturdily refused to do; but would put on his surplice in an adjoining chapel, and then, standing close outside the chapter-house door, in the south aisle of the choir, would exclaim to those who were passing on to attend divine service: 'They won't let me in. They say I can't behave myself.' At another time, he was seen, in the middle of the service, to box the ears of a chorister-boy, for coming late. Sometimes, while officiating, he would leave the choir during the musical portion of the service, go down to the side-aisles, and chat with any lounger till the time came for his clerical functions being required in person. Once, when surprise was expressed at this unseemly procedure, he only replied: 'Oh! I frequently come out while they're singing *Ta Daum.*' Talking in this strain to a very aged gentleman, and often making use of the expression, 'We old men,' Mr Johnson (in the dialect then almost universal in Manchester) turned upon him with the question: 'Why, how owd art ta?' 'I'm sixty-foive,' says Jotty. 'Sixty-foive!' rejoined his aged interlocutor; 'why t'as a lad; here's a penny for thee. Goo, buy thysel' a penny-poye [pie].' So Jotty returned to the reading-desk, to read the morning-lesson, a penny richer. A child was once brought to him to be christened, whose parents desired to give it the name of Bonaparte. This designation he not only refused to bestow, but entered his refusal to do so in the register of baptisms. In the matter of marriages his conduct was peremptory and arbitrary. He so frightened a young wife, a parishioner of his, who had been married at Eccles, by telling her of consequent danger to the rights of her children, that, to make all right and sure, she was re-married by Joshua himself at the Collegiate Church. Once, when marrying a number of couples, it was found, on joining hands, that there was one woman without any bridegroom. In this dilemma, instead of declining to marry this luckless bride, Joshua

required one of the men present to act as bridegroom both to her and his own partner. The lady interested, objecting to so summary a mode of getting over the difficulty, Joshua replied: 'I can't stand talking to thee; prayers' [that is, the daily morning-service] 'will be in directly, thou must go and find him after.' After the ceremony, the defaulter was found drunk in the 'Ring of Bells' public-house, adjoining the church. The churchyard was surrounded by a low parapet-wall, with a sharp-ridged coping, to walk along which required nice balancing of the body, and was one of the favourite 'craddies' [feats] of the neighbouring boys. The practice greatly annoyed Joshua; and one day, whilst reading the burial-service at the grave-side, his eye caught a chimney-sweep walking on the wall. This caused the eccentric chaplain, by abruptly giving an order to the beadle, to make the following interpolation in the solemn words of the funeral-service: 'And I heard a voice from heaven, saying'—— 'Knock that black rascal off the wall!' This *contretemps* was made the subject of a caricature by a well-known character of the day, 'Jack Batty;' who, on a prosecution for libel being instituted, left Manchester. After a long absence he returned, and on his entreating Joshua to pardon him, he was readily forgiven. Another freak of this queer parson was to leave a funeral in which he was officiating, cross the churchyard to the adjacent Half Street, and enter a confectioner's shop, kept by a widow, named Clowes, where he demanded a supply of horehound-lozenges for his throat. Having obtained these, which were never refused, though he never paid for them, he would composedly return to the grave, and resume the interrupted service. In his verbal encounters, he sometimes met with his match. One day, 'Jemmy Watson,' better known by his sobriquet of 'Doctor,' having provoked Joshua by a pun at his expense, the chaplain exclaimed: 'Thou 'rt a blackguard, Jemmy!' The Doctor retorted: 'If I be not a blackguard, Josse, I'm next to one.' On another occasion, he said to Watson: 'This churchyard, the cemetery of the Collegiate Church, must be enclosed; and we shall want a lot of railing.' The Doctor archly replied: 'That can't be, Josse; there's *railing enough* in the church daily.' In his last illness, the parish-clerk came to see him. Joshua had lost the sight of one eye, and the clerk venturing to say that he thought the other eye was also gone, the dying man (who had remained silent and motionless for hours), with a flash of the old fire, shouted twice: 'Thou 'rt a liar, Bob!' A few days afterwards, both eyes were closed in death. He died unmarried, in the sixty-eighth year of his age, and was buried at the south-west end and corner of the Collegiate Church. Poor Joshua! a very 'Ishmael' all his life, he found rest and peace at last. A man of many foibles and failings, he was free from the grosser vices, and in all the private relations of life he was exemplary.

THE DAY OF DUPES:

TRIUMPH OF CARDINAL RICHELIEU.

This whimsical title has been given to the 11th of November 1630, on the occasion of the triumph of Cardinal Richelieu over his enemies, who imagined that they had succeeded in casting him to the ground, never again to rise. The intriguing and ambitious Marie de' Medici had prevailed on her son, the fickle and weak-minded Louis XIII., to dismiss Richelieu from the office of prime-minister, and raise to that dignity the latter's mortal enemy, the Marshal de Marillac. The wily priest appears to have been fairly rendered prostrate, and unable to avert the ruin which seemed ready to fall on him, when he was persuaded by his friends to make one last effort to recover the favour of the king. With this view he proceeded to Versailles, then only a small hunting-lodge, which Louis XIII. had recently purchased, and had an interview with his sovereign. The result of this memorable visit was that Louis surrendered himself again into the cardinal's hands, with a feebleness similar to what he had previously shewn in dismissing him from his presence. But Richelieu, by this *coup de main*, succeeded in riveting the chains on Louis more firmly than they had been before, and established for himself an absolute sway, which he retained till his death. As may be expected, he did not fail to confirm his power by taking signal vengeance on his enemies, and among others, on the Marshal de Marillac, whom he caused ere long to be brought to the scaffold.

BURNING OF THE 'SARAH SANDS.'

One of the finest examples on record, of the saving of human life by the maintenance of high discipline, during trying difficulties, was afforded during the burning of the *Sarah Sands*, a transport steamer employed by the government in 1857. She was on her passage from England to India, with a great part of the 54th Regiment of Foot on board, intended to assist in the suppression of the Indian mutiny; the number of persons was about 400, besides the ship's crew. The vessel, an iron steamer of 2000 tons burthen, arrived at a spot about 400 miles from Mauritius; when, at three in the afternoon on the 11th of November, the cargo in the hold was found to be on fire. Captain Castle, commanding the ship, and Lieutenant-Colonel Moffatt, commanding the troops, at once concerted plans for maintaining discipline under this terrible trial. Some of the men hauled up bale after bale of government stores from the hold; some took in sail, and brought the ship before the wind; some ran out lengths of hose from the fire-engine, and poured down torrents of water below. It soon became evident, however, that this water would not quench the flames, and that the smoke in the hold would prevent the men from longer continuing below. The colonel then ordered his men to throw overboard all the ammunition in the starboard magazine. But the larboard or port magazine was so surrounded with heat and smoke, that he hesitated to command the men to risk their lives there; and he therefore called for volunteers. A number of brave fellows at once stepped forward, rushed to the magazine, and cleared out all its contents, except a barrel or two of powder; several of them, overpowered with heat and smoke, fell by the way, and were hauled up senseless. The fire burst up through the decks and cabins, and was intensified by a fierce gale which happened to be blowing at the time. Captain Castle then resolved to lower the boats, and to provide for as many as he could. This was admirably done. The boats

were launched without accident, the troops were mustered on deck, there was no rush to the boats, and the men obeyed the word of command with as much order as if on parade—the greater number of them embarking in the boats. A small number of women and children who were on board, were lowered into the life-boat. All these filled boats were ordered to remain within reach of the ship till further orders. The sailors then set about constructing rafts of spare spars, to be ready in case of emergency. Meanwhile the flames had made terrible progress; the whole of the cabins and saloons were one body of fire; and at nine in the evening the flames burst through the upper deck and ignited the mizzen rigging. During this fearful suspense, the barrel or two of powder left in one of the magazines exploded, and blew out the port-quarter of the ship—shewing what would have been the awful result had not the heroic men previously removed the greater part of the ammunition. As the iron bulk-head of the after-part of the vessel continued to resist the flames, Captain Castle resolved to avail himself of this serviceable aid as long as possible; to which end the men were employed for hours in dashing water against the bulk-head, to keep it cool. When fire seized the upper-rigging, soldiers as well as sailors rushed up with wet blankets, and allayed its fearful progress. This struggle between human perseverance and devastating flames continued until two o'clock in the morning, when, to the inexpressible delight of all, the fire was found to be lessening; and by daylight it was extinguished. The horrors of the situation were, however, not yet over. The after-part of the ship was a mere hollow burned shell; and as the gale still continued, the waves poured in tremendously. Some of the men were set to the pumps, some baled out water from the flooded hold with buckets; while others sought to prevent the stern of the ship from falling out by passing hawsers around and under it, and others tried to stop the leak in the port-quarter with spare sails and wet blankets. The water-tanks in the hold, having got loose, were dashed from side to side by the violence of the gale, and battered the poor ship still further. At two in the afternoon (twenty-three hours after the fire had been discovered), the life-boat was hauled alongside, and the women and children taken on board again. All the other boats, except the gig, were in like manner brought alongside, and the soldiers re-embarked; the gig had been swamped, but all the men in her were saved. During thirty-six hours more, nearly all the soldiers were assisting the sailors in working the pumps, and clearing the ship of water; while the captain succeeded at length in getting the ill-fated ship into such trim as to be manageable. He then steered towards the Mauritius, which he reached in eight days. The achievement was almost unparalleled, for the vessel was little else than a burned and battered wreck. Not a single person was lost; the iron bulk-head was the main *material* source of safety; but this would have been of little avail had not discipline and intrepidity been shewn by those on board.

The sense of the 'honour of the flag' came out strikingly during the peril. When the ship was all in a blaze, it was suddenly recollected that the colours of the 54th were in the aft-part of the saloon. Quartermaster Richmond rushed down, snatched the Queen's colours, brought them on deck, and fainted with the heat and smoke; when recovered, he made another descent, accompanied by Private Wills, brought up the regimental colours, and again fainted, with a result which proved nearly fatal.

CUSTOM OF KNIGHTLOW CROSS.

To the philosophical student of history, and all who feel an interest in the progressive prosperity of our country, and the often slow and painful steps by which that prosperity has been reached, any custom, however insignificant in itself, which tends to throw light upon the doings of our ancestors, is of great interest.

But in our search after such landmarks, as it were, of our country's history, we are too apt to overlook what is most patent to us all, and so it is that a custom which, in all probability, obtained in the days of our Saxon forefathers, long before William of Normandy set foot upon our land, is at the present day carried on close to us, unheeded and unknown to the majority of our readers. The custom to which we refer is the payment to the Lord of the Hundred of Knightlow of Wroth or Ward money for protection, and probably also in lieu of military service.

The scene of these payments is Knightlow Cross, Stretton-on-Dunsmore, near Rugby, Warwickshire. Here, at the northern extremity of the village, in a field by what used to be the Great Holyhead Road, stands a stone, the remains of Knightlow Cross. The stone now to be seen is the mortice-stone of the ancient cross, and is similar to the stone still in existence at St Thomas's Cross, between Clifton-upon-Dunsmore and Newton. The stone stands on a knoll or tumulus, having a fir-tree at either corner, and from it a fine view of the surrounding country is obtained; the spires of the ancient city of Coventry being plainly visible in the distance.

It is a singular circumstance, that the field in which it stands is a freehold belonging to a Mr Robinson of Stretton, but the mound upon which the stone stands belongs to the Lord of the Hundred, his Grace the Duke of Buccleuch and Queensberry. The mound is an ancient British tumulus, one of a chain (still or very lately) to be traced from High Cross—the ancient Roman station Benonis—southward down the Foss Road. The intermediate links are at Wolston Brinklow, near Wittingbrook and Cloudesley Bush, but the latter, we regret to say, has been removed.

Monday morning, the 11th of November 1862, was the day for the payment of this Wroth Silver, as it is called, and a drive in the gray light of a November morning, took us to the spot half an hour before sunrise, but not before groups of villagers and others had begun to collect to witness or take part in this curious old custom. The land-agent of the lord of the hundred arrived soon after, and proceeded at once to read the notice requiring the payment to be made, proclaiming that in default of payment, the forfeit would be 'twenty shillings for every penny, and a white bull with red ears and a red nose.' The names of the parishes and persons liable were then read out, and the amounts were duly thrown into the large basin-like cavity in the stone, and taken from thence by the attendant bailiff. After the ceremony, the

actors in the scene—that is, those persons, numbering about forty, who paid the money into the stone—proceeded to the Frog Hall, where a substantial breakfast was provided for them at the expense of the Duke of Buccleuch. There is a tradition in the neighbourhood of the forfeiture of a white bull having been demanded and actually made. Of this, however, there is no record, and it is certain that, of late years, the pecuniary part of the forfeit only has been insisted upon.

Respecting this custom, Dugdale, in his history of Warwickshire, gives the following account:

'There is also a certain rent due unto the Lord of this Hundred, called *Wroth*-money, or *Warth*-money, or *Swarff*-penny, probably the same with *Ward*-penny. Denarii vicecomiti vel aliis castellanis persoluti ob castrorum præsidium vel excubias agendas,* says Sir H. Spelman in his *Glossary*, (fol. 565—566). This rent must be paid every Martinmas-day, in the morning, at Knightlow Cross, before the sun riseth: the party paying it must go thrice about the cross, and say, "The Wrath Money," and then lay it in the hole of the said cross before good witness, for if it be not duly performed, the forfeiture is 30s. and a white bull.'

Altogether, this custom forms a singular and interesting instance of a usage or rite surviving for centuries amidst revolutions, and civil wars, and changes of rulers and circumstances. Though its real origin has been lost, it still remains as a relic of feudal government, and may possibly be handed down to generations yet to come, as a memorial of a state of chronic warfare and depredation.

NOVEMBER 12.

St Nilus, anchoret, father of the church, and confessor, 5th century. St Martin, pope and martyr, 655. St Livin, bishop and martyr, 7th century. St Lebwin, patron of Daventer, confessor, end of 8th century.

Born.—Richard Baxter, eminent nonconformist divine, 1615, *Rowdon, Shropshire;* Admiral Edward Vernon, naval commander, 1684, *Westminster;* Amelia Opie, novelist, 1769, *Norwich.*

Died.—Pope Boniface III., 606; Stephen Gardiner, bishop of Winchester, 1555; Peter Martyr, distinguished reformer, 1562, *Zurich;* Sir John Hawkins, eminent navigator, 1595; William Hayley, biographer of Cowper, 1820, *Felpham;* John M'Diarmid, miscellaneous writer, 1852; Charles Kemble, eminent actor, 1854.

The Order of Fools.

On 12th November 1381, the above association is said to have been founded by Adolphus, Count of Cleves, under the title of '*D'Order van't Gecken Gesellschaft.*' Though bearing a designation savouring so strongly of absurdity and contempt, the members of which this order was composed were noblemen and gentlemen of the highest rank and renown, who thus formed themselves into a body for humane and charitable purposes. We should be doing these gallant knights a grievous injustice were we to connect them with the *Feast of Fools*, and similar absurdities of medieval times. They were, in fact, not greatly dissimilar to the 'Odd Fellows,' 'Foresters,' and similar associations of the present day, which include within their sphere of operations benevolent and useful as much as convivial and social objects.

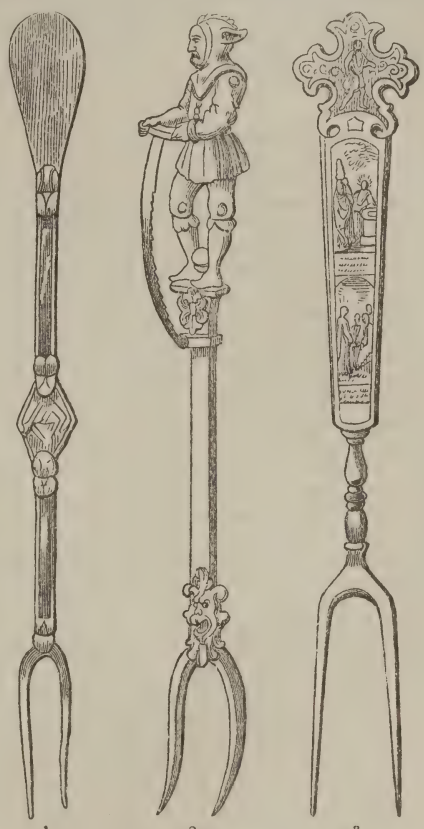
The insignia borne by the knights of this order consisted of the figure of a fool or jester, embroidered on the left side of their mantles, and depicted dressed in a red and silver vest, with a cap and bells on his head, yellow stockings, a cup filled with fruits in his right hand, and in his left a gold key, as symbolical of the affection which ought to subsist between the members of the society.

A yearly meeting of the brotherhood of Fools took place at Cleves on the first Sunday after Michaelmas-day, when a grand court was held, extending over seven days, and all matters relating to the welfare and future conduct of the order were revolved and discussed. Each member had some special character assigned to him, which he was obliged to support, and the most cordial equality everywhere prevailed, all distinctions of rank being laid aside.

The Order of Fools appears to have existed down to the beginning of the sixteenth century, but the objects for which it was originally founded seem, as in the case of the Knights Templars, to have gradually been lost sight of, and ultimately became almost wholly forgotten. The latest allusion to it occurs in some verses prefixed to a German translation of Sebastian Brand's celebrated *Navis Stultifera*, or Ship of Fools, published at Strasburg in 1520.

Akin to the Order of Fools was the 'Respublica Binepsis,' which was founded by some Polish noblemen about the middle of the fourteenth century, and derived its name from the estate of its principal originator. Its constitution was modelled after that of Poland, and, like that kingdom, it too had its sovereign, its council, its chamberlain, its master of the chase, and various other offices. Any member who made himself conspicuous by some absurd or singular propensity, received a recognition of this quality from his fellows by having assigned to him a corresponding appointment in the society. Thus the dignity of master of the hunt was conferred on some individual who carried to an absurd extreme his passion for the chase, whilst another person given to gasconading and boasting of his valorous exploits, was elevated to the post of field-marshal. No member could decline acceptance of any of these functions, unless he wished to make himself an object of still greater ridicule and animadversion. At the same time, all persons given to lampooning or personal satire were excluded from admission to the association. The order rapidly increased in numbers from the period of its formation, and at one time comprised nearly all the individuals attached to the Polish court. Like the German association, its objects were the promotion of charity and good-feeling, and the repression of immoral and absurd habits and practices.

PLAYGOING-HOURS IN THE OLDEN TIME.



By a police regulation of the city of Paris, dated 12th November 1609, it is ordered that the players at the theatres of the Hôtel de Bourgogne and the Marais shall open their doors at one o'clock in the

* Pence paid to a viscount (or smaller lord) or to other lords of castles, for—that is, instead of—keeping garrison-duty, or keeping watch.

afternoon, and at two o'clock precisely shall commence the performance, whether there are sufficient spectators or not, so that the play may be over before half-past four. This ordinance, it was enacted, should be in force from the Feast of St Martin to the 15th of the ensuing month of February. Such hours for visiting the playhouse seem peculiarly strange at the present day, when the doors of theatres are seldom opened before half-past six in the evening, or shut before midnight. But our ancestors both closed and opened the day much earlier than we do now, and observed much more punctually the old recipe for health and strength, 'to rise with the lark and lie down with the lamb.' The same early hours for theatrical representations that seem thus to have prevailed in Paris were, during the seventeenth century, no less common in England, where, as we learn from the first playbill issued from the Drury Lane Theatre in 1663, the hour for the commencement of the representation was three o'clock in the afternoon. The badness of the streets, and the danger of traversing them in dark nights from the defective mode of lighting, combined with the absence of an efficient police and the dangers from robbery and violence, all had their influence in rendering it very undesirable to protract public amusements beyond nightfall in those times.

ANCIENT FORKS.

From a passage in that curious work, Coryate's *Crudities*, it has been imagined that its author, the strange traveller of that name, was the first to introduce the use of the fork into England, in the beginning of the seventeenth century. He says that he observed its use in Italy only 'because the Italian cannot by any means endure to have his dish touched with fingers, seeing all men's fingers are not alike clean.' These 'little forks' were usually made of iron or steel, but occasionally also of silver. Coryate says he 'thought good to imitate the Italian fashion by this forked cutting of meat,' and that hence a humorous English friend, 'in his merry humour, doubted not to call me *furcifer*, only for using a fork at feeding.' This passage is often quoted as fixing the earliest date of the use of forks; but they were, in reality, used by our Anglo-Saxon forefathers, and throughout the middle ages. In 1834, some labourers found, when cutting a deep drain at Sevington, North Wilts, a deposit of seventy Saxon pennies, of sovereigns ranging from Cœnwulf, king of Mercia (796 A.D.), to Ethelstan (878–890 A.D.); they had been packed in a box of which there were some decayed remains, and which also held some articles of personal ornament, a spoon, and *the fork*, which is first in the group here engraved. The fabric and ornamentation of this fork and spoon would, to the practised eye, be quite sufficient evidence of the approximate era of their manufacture, but their juxtaposition with the coins confirms it. In Akerman's *Pagan Saxondom*, another example of a fork, from a Saxon tumulus, is given: it has a bone-handle, like those still manufactured for common use. It must not, however, be imagined that they were frequently used; indeed, throughout the middle ages, they seemed to have been kept as articles of luxury, to be used only by the great and noble in eating fruits and preserves on state occasions. A German fork, believed to be a work of the close of the sixteenth century, is the second of our examples. It is surmounted by the figure of a fool or jester, who holds a saw. This figure is jointed like a child's doll, and tumbles about as the fork is used, while the saw slips up

1. 2. 3.

ANCIENT FORKS.

and down the handle. It proves that the fork was treated merely as a luxurious toy. Indeed, as late as 1652, Heylin, in his *Cosmography*, treats them as a rarity: 'the use of silver forks, which is by some of our spruce gallants taken up of late,' are the words he uses. A fork of this period is the third of our selected examples; it is entirely of silver, the handle elaborately engraved with subjects from the New Testament. It is one of a series so decorated, the whole of our engraved examples being at present in the collection of Lord Londesborough. In conclusion, we may observe that the use of the fork became general by the close of the seventeenth century.

NOVEMBER 13.

St Mitrius, martyr, beginning of 4th century. St Brice, bishop and confessor, 444. St Chillen or Killian, priest, 7th century. St Constant, 777. St Homobonus, merchant, confessor, 1197. St Didacus, confessor, 1463. St Stanislas Kostka, confessor, 1568.

Born—St Augustine, bishop of Hippo, and father of the Church, 354, *Tagaste, Numidia;* Pelagius, celebrated antagonist of St Augustine, 354; Edward III., king of England, 1312, *Windsor;* Philip Beroaldus, the Elder, scholar and critic, 1450, *Bologna.*

Died.—Justinian, Roman emperor, 565; Malcolm Canmore, king of Scotland, 1093, *Alnwick, Northumberland;* Thomas Erpenius, celebrated orientalist, 1624, *Leyden;* William Etty, painter, 1849, *York;* Sir John Forbes, eminent physician and medical writer, 1861, *Whitchurch, near Reading.*

THE STAMFORD BULL-RUNNING.

From time immemorial down to a late period, the 13th of November was annually celebrated, at the town of Stamford, in Lincolnshire, by a public amusement termed a Bull-running. The sport was latterly conducted in the following manner: About a quarter to eleven o'clock, on the festal-day, the bell of St Mary's commenced to toll as a warning for the thoroughfares to be cleared of infirm persons and children; and precisely at eleven, the bull was turned into a street, blocked up at each end by a barricade of carts and wagons. At this moment, every post, pump, and 'coigne of vantage' was occupied, and those happy enough to have such protections, could grin at their less fortunate friends, who were compelled to have recourse to flight; the barricades, windows, and house-tops being crowded with spectators. The bull, irritated by hats being thrown at him, and other means of annoyance, soon became ready to run; and then, the barricades being removed, the whole crowd, bull, men, boys, and dogs, rushed helter-skelter through the streets. One great object being to 'bridge the bull,' the animal was, if possible, compelled to run upon the bridge that spans the Welland. The crowd then closing in, with audacious courage surrounded and seized the animal; and, in spite of its size and strength, by main force tumbled it over the parapet into the river. The bull then swimming ashore, would land in the meadows, where the run was continued; the miry, marshy state of the fields at that season of the year, and the falls and other disasters consequent thereon, adding greatly to the amusement of the mob. The sport was carried on till all were tired; the animal was then killed, and its flesh sold at a low rate to the people, who finished the day's amusement with a supper of bull-beef.

A local historian thus informs us how the sport was conducted in the seventeenth century. 'The butchers provide the bull, and place him overnight in a stable belonging to the alderman; the next morning, proclamation is made by the bellman that each one shut up his shop-door and gate, and none, under pain of imprisonment, do any violence to strangers; for the preventing whereof (the town being a great thoroughfare), a guard is appointed for the passing of travellers through the same without hurt. None to have any iron upon their bull-clubs, or other staves, which they pursue the bull with; which proclamation being made, and the gates all shut up, the bull is turned out of the alderman's house, and then hivie-skivy, tag-rag, men, women, and children of all sorts and sizes, with all the dogs in the town, running after him, spattering dirt in each other's faces, that one would think them to be so many furies started out of the infernal regions for the punishment of Cerberus, as when Theseus and Perillus conquered the place, as Ovid describes it:

> 'A ragged troop of boys and girls
> Do follow him with stones,
> With clubs, with whips, and many nips,
> They part his skin from bones.'

According to tradition, the origin of the custom dates from the time of King John; when, one day, William, Earl of Warren, standing on the battlements of the castle, saw two bulls fighting in the meadow beneath. Some butchers coming to part the combatants, one of the bulls ran into the town, causing a great uproar. The earl, mounting his horse, rode after the animal, and enjoyed the sport so much, that he gave the meadow, in which the fight began, to the butchers of Stamford, on condition that they should provide a bull, to be run in that town annually, on the 13th of November, for ever after. There is no documentary evidence on the subject, but the town of Stamford undoubtedly holds certain common rights in the meadow specified, which is still termed the Bull-meadow.

Bull-running was, for a long period, a recognised institution at Stamford. A mayor of the town, who died in 1756, left a sum of money to encourage the practice; and, as appears by the vestry accounts, the church-wardens annually gave money to aid the bull-running. In 1788, the first attempt was made by the local authorities to stop the custom, the mayor issuing a curious proclamation, stating that bull-running was contrary to religion, law, and nature, and punishable with the penalty of death. The Earl of Exeter, who lived

> 'At Burleigh House, by Stamford town,'

lent his personal influence to the mayor on this occasion; but the bull was run, and both the earl and mayor were insulted by the mob. In 1789, the mayor having obtained the aid of a troop of dragoons, met the bull at St George's Gate, as it was being driven into the town by the bull-woman—a virago dressed in blue ribbons, who officiated on these occasions, and followed by the *bullards*, a name given to the admirers and supporters of bull-running. On the mayor appealing to the officer of dragoons to stop the procession, the latter refused to interfere, alleging that the people were peaceably walking on the highway. 'In that case,' replied the mayor, 'your men are of no use here.' 'Very well,' said the officer, 'I shall dismiss them.' The dismissed dragoons, to their great glee, joined the bullards, and the bull was run as usual. For a long time afterwards, the bullards received no opposition. The towns-people, delighted with the sport, subscribed for a second annual bull-running, which took place on the Monday after Christmas Day; and there were several occasional bull-runnings every year, the candidates for representing Stamford in parliament being always found willing to give a bull for the purpose.

In 1831, the Conservative party canvassed the borough under a flag bearing the representation of a bull. Several clergymen and others remonstrated against this mode of obtaining popular support, distinctly declaring they would not vote, if the

obnoxious banner were not laid aside. But many persons of station, and well-known humanity, defended the practice of bull-running, alleging that it was an old-fashioned, manly, English sport; inspiring courage, agility, and presence of mind under danger; and, as regards inhumanity, it was not by any means so cruel to the brute creation, nor so perilous to the life and limb of man, as fox-hunting.

In 1833, the Society for Prevention of Cruelty to Animals made its first public appearance as an opponent of the practice. One of its officers was sent to Stamford on bull-running day, and, being more bold than prudent, was roughly hustled by the crowd. This interference of the society, however well-meant, had a very different effect to that desired; instead of discountenancing the practice, the people of Stamford were thereby stimulated to support it. 'Who or what is this London Society,' they asked, 'that, usurping the place of constituted authorities, presumes to interfere with our ancient amusement?'

In 1836, the society sent several of its officers and agents to Stamford. The 13th falling that year on Sunday, the bull was run on the following day; in the evening, the populace resented the interference of the society's officers, by assaulting them, and breaking some windows. At the following Lent Assizes for Lincolnshire, the society preferred bills of indictment before the Grand Jury, against eight persons, for 'conspiring to disturb the peace by riotously assembling to run and torment a bull' at Stamford, on the 14th of November previous. True bills being found against the men, bench-warrants were obtained, and they were arrested to take their trials at the ensuing mid-summer assizes. As is well known, this mode of proceeding behind a man's back, as it were, which deprives the accused of the fair advantage allowed by law, in giving him a copy of the depositions of the witnesses against him, is looked upon with deserved disfavour by both the judges and people of England. Moreover, the conduct of the society in putting the expensive machinery of the higher courts of law in operation against poor labouring-men, for a trumpery street squabble, created a strong feeling in Stamford and its neighbourhood. A subscription was immediately opened, to raise a defence-fund for the prisoners, many subscribing who utterly detested bull-running, but considered the society's proceedings to be over-officious, unjust, and arbitrary. The manager of Stamford theatre, to his immense popularity, gave a benefit in aid of the defence-fund, the piece selected being Colman's comedy of *John Bull;* and altogether, a considerable sum was collected. At the trial, Sergeant Goulbourn, and the leading barristers on the circuit, were retained for the prosecution. The council for the defence could not deny the riot, but pleaded use and custom, and the ignorance of the prisoners, who believed that valuable common rights were preserved to the town by the act of bull-running. Judge Park, when summing up, told the jury that no use or custom could justify a riot. Five of the prisoners were acquitted, three only being found guilty; these last were discharged on giving bail to appear to receive judgment, at the Court of Queen's Bench, when called upon.

The bullards, accepting the result of the trial as a victory, determined to have a grand run in 1837. Influence, however, had been brought to bear on the Home Secretary, who wrote to the mayor of Stamford, impressing upon him the necessity of taking active measures to prevent a proceeding so illegal and disgraceful as bull-running. The mayor, accordingly, swore in more than two hundred special constables to his assistance; but their opposition being lukewarm, the bull was run with greater *éclat* than ever. In 1838, the Home Secretary determined to put down the custom. Several days before the 13th, a troop of the 14th Dragoons, and a strong force of metropolitan police, were sent to Stamford, and a considerable body of special constables were sworn in. The commanders of the military and police, having viewed the field of action, consulted with the mayor. As prevention was better than cure, and there could be no bull-run without a bull, measures were taken accordingly. The town was strictly searched, and two bulls being found, the animals were taken and confined in an inn-yard, under a picket of dragoons. Sentries were then placed on all the outlets of the town, and parties patrolled the roads night and day, to prevent a bull from being brought in. The eventful 13th arrived, and though the streets were crowded with bullards, the authorities were perfectly at their ease. They even heard with complacency the bell of St Mary's toll the time-honoured bull-warning. But at the last stroke of the bell, their fancied security was rudely dissipated by the well-known shouts of 'Hoy! bull! hoy!' from a thousand voices; a noble bull having appeared, as if by magic, in the principal street. There never was such a run! The wild excitement of the scene was enhanced by the bewildered dragoons galloping thither and hither, in vain attempts to secure the animal. The metropolitan police, with greater valour than discretion, formed in a compact phalanx on the bridge; but the bull, followed by the bullards, dashed through them as an eagle might through a cobweb. After a run of some hours, the bull came to bay in the river, and was then captured by the authorities. An attempt was then made to rescue one of the bulls confined in the inn-yard. This led to a collision between the military and the people, stones and brickbats were thrown, and sabre cuts returned in exchange; but, on the dragoons being ordered to load with ball-cartridge, the mob dispersed. Where did the strange bull, a very valuable animal, so miraculously spring from? This enigma was soon solved by its being claimed by a certain noble lord. He had been sending it, in a covered wagon, from one of his estates to another, and, by a 'curious coincidence,' it happened to pass through Stamford on the very day and hour its presence was required by the bullards, who, seizing the wagon, released the animal. Whether the coincidence were accidental or designed, the preceding explanation, if not quite satisfactory, produced a great deal of good-humoured laughter.

In 1839, a stronger force of military and police was sent to Stamford; every precaution was taken, yet some treacherous special constables smuggled a bull into the town, and the bullards had their last run. The animal, however, being young and docile, did not afford much sport, being soon captured by the authorities. In the following year, as bull-running day drew near, the people of Stamford began to count the cost of their amusement. The

military, metropolitan police, and special constables of the two previous years, had cost them more than £600—a sum which might, with greater fitness, have been laid out on certain town improvements, then much wanted. So the townsmen forwarded a memorial to the mayor, to be laid before the Home Secretary, pledging themselves that, if no extraneous force of military or police were brought into the town, nor expense incurred by appointing special constables, they, the subscribers, would prevent bull-running from taking place in Stamford during that year. The townsmen were wisely taken at their word, and there never has been a bull-run in Stamford since that time.

The highly-exciting nature of the amusement gave bull-running a charm to vulgar minds, that can scarcely now be understood or appreciated. For weeks before and after the 13th of November, the bullard's song might be heard re-echoing through all parts of Stamford. As a curious and almost forgotten relic of an ancient sport, it cannot be entirely unworthy of a place in these columns.

THE BULLARD'S SONG.

'Come all you bonny boys,
Who love to bait the bonny bull,
Who take delight in noise,
And you shall have your bellyful.
On Stamford's town Bull-running Day,
We 'll shew you such right gallant play,
You never saw the like, you'll say,
As you shall see at Stamford.

Earl Warren was the man,
That first began this gallant sport;
In the castle he did stand,
And saw the bonny bulls that fought.
The butchers with their bull-dogs came,
These sturdy stubborn bulls to tame,
But more with madness did inflame,
Enraged, they ran through Stamford.

Delighted with the sport,
The meadows there he freely gave,
Where these bonny bulls had fought,
The butchers now do hold and have;
By charter they are strictly bound,
That every year a bull be found;
Come, dight your face, you dirty clown,
And stump away to Stamford!

Come, take him by the tail, boys—
Bridge, bridge him if you can;
Prog him with a stick, boys;
Never let him quiet stand;
Through every street and lane in town,
We'll Chevy-chase him up and down,
You sturdy bung-straws* ten miles round,
Come, stump away to Stamford.'

The old bullards are now nearly all dead; but the song, with various additions and variations, may still be occasionally heard. Mr Burton, writing in 1846, says: 'Every incident that calls to the mind of the lower classes their ancient holiday, is seized with enthusiasm, and the old bull-tune is invariably demanded, when anything in the shape of music attracts the attention. At the theatre, whenever there is a full house, "Bull! bull!" is invariably pealed from some corner of the gallery. The magic word immediately fills the mouth of every occupant of that part of the building; it is echoed from the pit, and order and quiet is out of the question till the favourite tune has been played.'

* Threshers.

SHOOTING-STARS.

During three successive years, from 1831 to 1833, the 13th of November was marked by a magnificent display of shooting or falling stars, those mysterious visitants to our globe respecting whose real nature and origin science is still so perplexed. The first of these brilliant exhibitions was witnessed off the coasts of Spain, and in the country bordering on the Ohio. The second is thus described by Captain Hammond of H.M.S. *Restitution*, who beheld it in the Red Sea, off Mocha. 'From one o'clock A. M. till after daylight, there was a very unusual phenomenon in the heavens. It appeared like meteors bursting in every direction. The sky at the time was clear, the stars and moon bright, with streaks of light, and thin white clouds interspersed in the sky. On landing in the morning, I inquired of the Arabs if they had noticed the above. They said they had been observing it most of the night. I asked them if ever the like had appeared before. The oldest of them replied that it had not.' The area over which this phenomenon was seen extended from the Red Sea westwards to the Atlantic, and from Switzerland to the Mauritius.

But the most imposing display of shooting-stars on record occurred on the third of these occasions—that is, on 13th November 1833. It extended chiefly over the limits comprised between longitude 61° in the Atlantic, and 100° in Central Mexico, and from the latitude of the great lakes of North America, to the West Indies. From the appearance presented, it might be regarded as a grand and portentous display of nature's fireworks. Seldom has a scene of greater or more awful sublimity been exhibited than at the Falls of Niagara on this memorable occasion, the two leading powers in nature, water and fire, engaging, as it were, in an emulative display of their grandeur. The awful roar of the cataract filled the mind of the spectator with an infinitely heightened sense of sublimity, when its waters were lightened up by the glare of the meteoric torrent in the sky. In many parts of the country, the people were terror-struck, imagining that the end of the world was come; whilst those whose education and vigour of mind prevented them from yielding to such terrors, were, nevertheless, vividly reminded of the grand description in the Apocalypse, 'The stars of heaven fell unto the earth, even as a fig-tree casteth her untimely figs, when she is shaken of a mighty wind.'

The most probable theory as to the nature of shooting-stars is, that they form part of the solar system, revolving round the sun in the same manner as the planetoids, but both infinitely smaller in size, and subject to great and irregular perturbations. The latter cause brings them not unfrequently within the limits of the earth's atmosphere, on entering which they become luminous from the great heat produced by the sudden and violent compression which their transit occasions. Having thus approached the earth with great

velocity, they are as rapidly again withdrawn from it into the realms of space. It is very possible, moreover, that the fiery showers which we have just described, may be the result of a multitude of these meteors encountering each other, whilst the aërolites, or actual meteoric substances, which

SHOWER OF FALLING STARS AT NIAGARA IN NOVEMBER 1833.

occasionally fall to the surface of the earth, may be such of those bodies as have been brought so far within the influence of terrestrial gravity as to be rendered subject to its effects.

NOVEMBER 14.

St Dubricius, bishop and confessor, 6th century. St Laurence, confessor, archbishop of Dublin, 1180.

Born.—Benjamin Hoadly, bishop of Bangor, eminent Whig prelate, 1676, *Westerham, Kent;* Adam Gottlob Oehlenschläger, Danish poet, 1779, *Copenhagen;* Sir Charles Lyell, geologist, 1797, *Kinnordy, Forfarshire.*

Died.—Gottfried Wilhelm Leibnitz, mathematician and moral philosopher, 1716, *Hanover;* George William Frederick Hegel, German philosopher, 1831, *Berlin;* Dr John Abercrombie, physician and moral writer, 1844, *Edinburgh.*

LEIBNITZ.

Leibnitz is one of the great names of literature:

'A man so various that he seemed to be
Not one, but all mankind's epitome.'

Nevertheless, though his title to fame is everywhere confessed, few at this day, with the exception of some arduous students, are practically conversant with its grounds. Leibnitz was one of the chief intellectual forces of his age, but as a force he was more remarkable for quantity than intensity. He busied himself in a multitude of pursuits and he excelled in all, but he produced no master-piece —nothing of which it could be said, It is the best of its kind. He was a universal genius; his intellect was as capacious as harmonious, and a storehouse for all knowledge; but his mind was lost by reason of its universal sympathies. To be remembered for ever by some work requires that the whole energy, at least for a time, be given to one work. 'Even great parts,' says Locke, writing of Leibnitz in 1697, 'will not master any subject without great thinking.'

Leibnitz was the son of a professor of jurisprudence in the university of Leipsic, in which city he was born in 1646. He was a precocious child, and from his boyhood displayed that love of learning and speculation which distinguished him through life. He gives an amusing account of his efforts when a youth of fifteen, during long solitary walks in the wood of Rosenthal, near Leipsic, to adjust the claims of the Ancients and Moderns—of Aristotle and Descartes, and the reluctance with which, when conciliation was impossible, he was compelled to make an election. His talents, as manifested at the university, and his publications, early brought him into notice, and found him patrons among the princes of Germany. He travelled over the continent, visited England, and everywhere made the acquaintance of men of science and letters. An amusing anecdote is told of him when at sea in a tempest off the Italian coast. The sage captain attributed the storm to the presence of the heretical German, and presuming him ignorant of the Italian language, began to deliberate with the crew on the propriety of throwing the Lutheran Jonah overboard. Leibnitz, with much presence of mind, got hold of a rosary and began to tell his beads with vehement devotion. The ruse saved him. At Nürnberg, he heard of a society of alchemists who were prosecuting a search for the philosopher's stone. He wished to join them, and compiled a letter from the writings of the most celebrated alchemists and sent it to them. The letter consisted of the most obscure terms he could find, and of which, he says, he did not understand

a syllable. The illuminati, afraid to be thought ignorant, invited him to their meetings and made him their secretary. Though Leibnitz could thus quiz the alchemists, he believed, to the end of his life, in the reality of the object of their labours.

In the leisure which various pensions secured him, he followed his versatile inclinations with incessant assiduity. Metaphysics, physics, mathematics, jurisprudence, theology, philology, history, antiquities, the classics, all shared his attention, and in all of these branches of knowledge the world heard his voice with respect. The ancient languages he knew well, and was tolerably acquainted with more than half-a-dozen of the modern. He had notions about calculating machines, about improved watches, about a universal alphabet, about hydraulic engines, about swift carriages, by which the journey of one hundred and fifty miles, between Amsterdam and Hanover, might be done in twenty-four hours; and about a hundred other things. He dabbled in medicine, in everything; there was nothing, in fact, in which he could not be interested. In his *Protogena*, he throws out thoughts, which, Dean Buckland observes, contain the germ of some of the most enlightened speculations in geology. His memory was quick and tenacious; he made notes as he read, but he had seldom to refer to them, for he seemed to forget nothing. George I. used to call him his living dictionary. At the age of seventy, he could recite hundreds of lines of Virgil without an error.

In mathematics, if anywhere, his genius shewed itself supreme, and between him and Sir Isaac Newton a bitter controversy broke out as to the credit of the invention of the differential calculus. The question has been thoroughly and tediously debated, but the following points are now considered as tolerably clear: 1st, That the system of fluxions invented by Newton is essentially the same as the differential calculus invented by Leibnitz, differing only in notation; 2d, That Newton possessed the secret of fluxions as early as 1665, nineteen years before Leibnitz published his method, and eleven years before he communicated it to Newton; 3d, That both Leibnitz and Newton discovered their methods independently of each other, but that Newton had priority; and 4th, That although the honour belongs to both, yet, as in every other great invention, they were but the individuals who combined the scattered rays of their predecessors, and gave a method, a notation, and a name to the doctrine of infinitesimal quantities.

As a theologian and metaphysician, Leibnitz was eclectic rather than original. His temper was truly catholic; he differed from others with reluctance; and it seemed to be one of his keenest delights to reconcile apparent contraries. Hence one of his schemes was the incorporation of the various sects of Protestantism, preparatory, if possible, to the inclusion of Rome, with concessions, in one grand Christian community. In philosophy, he had a doctrine called Pre-established Harmony, by which he professed to explain the relations between Deity, the Human Mind, and Nature. It met with wide discussion and some acceptance in the lifetime of Leibnitz, but Pre-established Harmony has long passed out of memory except in histories of philosophy.

One of the warmest admirers of Leibnitz was Sophia Charlotte, wife of Frederick, the first king of Prussia, a great lover of show and ceremony, for which his consort had a quiet contempt. Leibnitz called her 'one of the most accomplished princesses of earth,' and by the world she was known as the republican and philosophic queen. To Leibnitz, '*le grand Leibnitz*,' as she styled him, she resorted for counsel in all her theological and philosophical difficulties, and not seldom to his perplexity, wanting to know, he said: 'le pourquoi du pourquoi' (the why of the why). Wearied with the emptiness of courtiers, she wrote on one occasion: 'Leibnitz talked to me about the infinitely little; *mon Dieu*, as if I did not know enough of that!' This bright soul died at thirty-six, to the great grief of Leibnitz. On her death-bed she said she was very happy; that the king would have a fine opportunity for display at her funeral; and, above all, that now she was going to satisfy her curiosity about a great many things of which Leibnitz could tell her nothing. With many other crowned heads Leibnitz held intercourse more or less intimate. Peter the Great consulted him as to the best means for the civilisation of Russia, and rewarded his suggestions with the title of Councillor of State, and a pension of a thousand roubles.

Leibnitz was only able to get through his multiform business by persistent assiduity. He carried on a most extensive correspondence, and wrote his letters with great care, sometimes three or four times over, and made them the repositories of his most valued ideas and conjectures. His life was sedentary almost beyond example. Sometimes for weeks together he would not go to bed, but sat at his desk till a late hour, then took two or three hours of sleep in his chair, and resumed work at early dawn. He was a bachelor, and had no fixed hours for his meals; but sent to a tavern for food, when hungry and at leisure. His head was large and bald, his hair fine and brown, his face pale, his sight short, his shoulders broad, and his legs crooked and ungainly. He was spare and of middle height, but in walking, he threw his head so far forward as to look from behind like a hunchback. His neglect of exercise told severely on him as he advanced in life. He became plagued with rheumatic gout, his legs ulcerated, and he aggravated his ailment by compressing afflicted parts with wooden vices to stop the circulation of the blood, and dull the sense of pain. He died in Hanover in 1716, in his seventieth year, from the effects, it is said, of an untried medicine of his own concoction. He was buried on the esplanade of his native city of Leipsic, where a monument, in the form of a temple, with the simple inscription, 'Ossa Leibnitii,' marks the spot.

DISCOVERY OF THE SOURCES OF THE NILE.

It is curious to look back to the days when Bruce the traveller published his celebrated work on Africa, and claimed to have discovered the true sources of the mysterious river which flows so many hundreds of miles through that continent. Comparing that narrative with one which has appeared in 1863, we see that Bruce was in the wrong; that he may have discovered *a* source but not *the* source; and that a long series of intermediate investigations was needed to arrive at a true solution of the interesting problem. No blame to James Bruce

for all this. He was really a sagacious and enterprising man; and although some doubt was thrown upon his truthfulness during his life, he is now believed to have been veracious to the extent of his knowledge. His error concerning the sources of the Nile may well be excused, considering the harassing difficulties of the problem.

Glancing at a map of Africa, we see that the Nile is formed by several branches, which meet in Nubia, and flow northward through Egypt into the Mediterranean. The puzzle has been to determine which of the branches ought to be considered as the true Nile, and which mere affluents or tributaries. The easternmost of the chief or important branches, the *Atbara*, rises in about 12° N. lat., 40° E. long; and joins the main river near 18° N. lat., 34° E. long. It was visited by Salt and by Pearce, and has been often noticed by travellers in Abyssinia. The middle, or second of the three branches, known as the *Bahr-el-Azrek*, or *Blue Nile*, is, *par excellence*, the river of Abyssinia, winding through and about that country in a very remarkable way. Bruce traced it upwards until it became a mere streamlet in 11° N. lat., 37° E. long., near the village of Geesh, whence it flows by Sennaar to its junction with the greater Nile at Khartoum. The westernmost, and largest branch, the *Bahr-el-Abiad*, or *White Nile*, is extremely circuitous in its route, winding through the countries of Darfur and Kordofan in a very intricate way.

Now it is the Bahr-el-Azrek, or Blue Nile, which Bruce considered to be the true or original river, and which, on the 14th of November 1770, he believed himself to have traced up to its source. In the preface to his Travels (written in 1790, and, as is supposed, not so accurately as if he had allowed less than twenty years to elapse) he said: 'I hope that what I have said will be thought sufficient to convince all impartial readers that these celebrated sources have, by a fatality, remained to our days as unknown as they were to antiquity; no good or genuine voucher having yet been produced capable of proving that they were before discovered, or seen by the curious eye of any traveller, from the earliest ages to this day. And it is with confidence I propose to my reader, that he will consider me as still standing at the fountain, and patiently hear from me the recital of the origin, course, nature, and circumstances of this the most famous river in the world, which he will in vain seek from books, or from any other human authority whatever, and which by the care and attention I have paid to the subject, will, I hope, be found satisfactory here.'

Bruce was all the more proud of his achievement, because the ancients had believed that the Bahr-el-Abiad was the true Nile, an opinion which he claimed to have shewn fallacious. The ancients were right, however, and Bruce wrong. Step by step the White Nile has been traced to points nearer and nearer to the equator, and therefore nearer to its source. Linant, in 1827, ascended as far as Aleis, in 15° N. lat. In 1842, Werne, heading an expedition sent out by the pacha of Egypt, reached to 5° N. lat., and was told by the natives that the source was still far distant. In 1845, M. D'Abbadie thought he had reached the source of the Nile; but Beke afterwards shewed that the stream traced by D'Abbadie was only an affluent of the Bahr-el-Abiad, and expressed an opinion that the real source is even beyond the equator. M. Knoblecher, who had a missionary establishment at Khartoum, went up the White Nile as far as 4° N. lat., and saw that river still far away to the south-west.

The grand discovery of all, that the Nile really rises in south latitude, and crosses the equator, was made by Captains Grant and Speke, whose names have become thereby renowned throughout Europe. In 1858, Captain Speke reached a very beautiful lake, the *Victoria Nyanza*, while journeying westward from Zanzibar. The head of this lake is three degrees south of the equator. He found the lake to be a large sheet of fresh water, lying on a plateau or table-land, from 3000 to 4000 feet above the level of the sea. The lake, to use the language of Captain Speke, 'looked for all the world like the source of some great river; so much so, indeed, that I at once felt certain in my own mind it was the source of the Nile, and noted it accordingly.' It was the bold guess of a sagacious and experienced man. The Victoria Nyanza is really the head-water of the Nile, being fed immediately by a range of lofty mountains in the interior. Its most southern affluent is the Leewumbu or Shimeeyu. Stanley, who sailed round the lake in 1875, and who explored the head-waters of the Congo, confirmed Speke's discovery. It is thus settled that the Nile flows uninterruptedly from the lake to the Mediterranean, through no less than thirty-four degrees of latitude, and along a course exceeding 2000 miles in length, in a straight line, and perhaps 3000, allowing for windings. Captain Speke was prevented from putting his speculation to the test in 1859 or 1860; but in 1861 and 1862, accompanied by Captain Grant, he traced the course of the grand river down from the lake to the ocean—not actually keeping the stream in view the whole of the way, but touching it repeatedly here and there, in such a way as to leave no doubt that it *is* the Nile.

Thus the somewhat magniloquent terms in which Bruce announced his discoveries have not proved to be justified. The post of honour is to be given, not to the Blue Nile, but to the White Nile, and at a point nearly a thousand miles further south than was reached by Bruce.

NOVEMBER 15.

St Eugenius, martyr, 275. St Malo or Maclou, first bishop of Aleth in Brittany, 565. St Leopold, Marquis of Austria, confessor, 1136. St Gertrude, virgin and abbess, 1292.

Born.—Andrew Marvell, poet and politician, 1620, *Kingston-upon-Hull;* William Pitt, great Earl of Chatham, 1708, *Boconnoc, Cornwall;* William Cowper, poet, 1731, *Great Berkhamstead, Hertfordshire;* Sir William Herschel, astronomer, 1738, *Hanover;* John Caspar Lavater, physiognomist, 1741, *Zurich;* Rev. James Scholefield, scholar and classic editor, 1789, *Henley on Thames.*

Died.—Albertus Magnus, celebrated schoolman, 1280, *Cologne;* Mrs Anne Turner, executed as an accomplice in murder of Sir Thomas Overbury, 1615, *London;* John Kepler, great astronomer, 1630, *Ratisbon;* Henry Ireton, son-in-law of Cromwell, 1651, *Limerick;* James, Duke of Hamilton, killed in a duel in Hyde Park, 1712; Christopher Gluck, composer, 1787, *Vienna;* Bishop Tomline, author of *Refutation of Calvinism*, 1827; Count Rossi, minister of interior, Papal States, assassinated, 1848, *Rome;* Johanna Kinkel, German novelist and musician, 1858.

ANDREW MARVELL.

It is pleasant to observe how the respect for 'honest Andrew Marvell' outlives all the political changes which succeed each other at fitful intervals in England; it is a homage to manliness and probity. During his life, from 1620 to 1678, he was mixed up with many of the exciting controversies of the times; but it was in the last eighteen years of his life, when Charles II. was king, that Marvell attained his highest reputation. He acted as member of parliament for Kingston-upon-Hull; he trusted the electors, and they trusted him; and there has never been known in the history of our parliament a connection more honourable than that between him and his constituents. He used to write constantly to them about the state of public affairs; and his letters have considerable historical value, insomuch as they supply contemporary evidence of the proceedings in high places. The court-party could not be very much pleased at the publication of such a letter, as the following, from Andrew Marvell to his constitutents at Hull: 'The king having, upon pretence of the great preparations of his neighbours, demanded £300,000 for his navy (though, in conclusion, he hath not sent out any), that the parliament should pay his debts, which the ministers would never particularise to the House of Commons, our house gave several bills. You see how far things were stretched beyond reason, there being no satisfaction how those debts were contracted; and all men foreseeing that what was given would not be applied to discharge the debts, which I hear are, at this day, risen to four millions, but diverted as formerly. Nevertheless, such was the number of the constant courtiers, increased by the apostate patriots, who were bought off for that term, some at six, others at ten, one at fifteen thousand pounds in money; besides what offices, lands, and reversions to others, that it is a mercy they gave not away the whole land and liberty of England. The Duke of Buckingham is again £140,000 in debt; and by this prorogation, his creditors have time to tear all his lands to pieces. The House of Commons have run almost to the end of their line, and are grown extremely chargeable to the king and odious to the people. They have signed and sealed ten thousand a year more to the Duchess of Cleveland, who has likewise near ten thousand a year out of the new farm of the country excise of beer and ale; five thousand a year out of the post-office; and, they say, the reversion of all the king's leases, the reversion of all places in the custom-house, the green wax, and indeed, what not. All promotions, spiritual and temporal, pass under her cognizance.'

The particular incident which has stamped the name of Andrew Marvell with the impress of honesty, has been narrated under different forms; but the following is its substance, as given by one writer: 'The borough of Hull chose Andrew Marvell, a gentleman of little or no fortune, and maintained him in London for the service of the public. His understanding, integrity, and spirit were dreadful to the then infamous administration. Persuaded that he would be theirs for properly asking, the ministers sent his old school-fellow, the Lord Treasurer Danby, to renew acquaintance with him in his garret. At parting, the lord treasurer, out of pure affection, slipped into his hand an order upon the treasury for one thousand pounds, and then went into his chariot. Marvell, looking at the paper, calls after the treasurer: "My lord, I request another moment." They went up again to the garret, and Jack, the servant-boy, was called. "Jack, child, what had I for dinner yesterday?" "Don't you remember, sir? You had the little shoulder of mutton that you ordered me to bring from a woman in the market." "Very right, child. What have I for dinner to-day?" "Don't you know, sir, that you bade me lay by the blade-bone to broil?" "'Tis so; very right, child; go away. My lord, do you hear that? Andrew Marvell's dinner is provided. There 's your piece of paper; I want it not. I know the sort of kindness you intended. I live here to serve my constituents; the ministry may seek men for their purpose; I am not one."' The setting of this story is somewhat too dramatic, but there is reason to believe that the substance of it is quite true. It is further said, that, though he thus rejected the money, he was in straitened circumstances at the time, insomuch that he was obliged, as soon as Danby had departed, to send to a friend to borrow a guinea.

MRS TURNER.

The beauty of this woman, and her connection with the mysterious death of Sir Thomas Overbury, who was poisoned in the Tower through her agency, have invested her name with a species of romance in the annals of crime. Though she undoubtedly merited her fate, both she and her accomplices were merely the minor parties in this nefarious transaction, the principal criminals being the Earl and Countess of Somerset, who, though tried and condemned, received the king's pardon, and after undergoing an imprisonment of some years, were allowed to retire into the country and obscurity. The whole affair forms a singular episode in the reign of James I., and by no means reflects credit on that weak monarch.

When Robert Carr or Ker, a young Scottish adventurer of the border-family of Ferniherst, established himself so rapidly in the good graces of his sovereign, rising suddenly to the most influential posts in the kingdom, Sir Thomas Overbury acted as his bosom-friend and counsellor, and furnished him with most useful and judicious advice as to the mode of comporting himself in the new and unwonted sphere in which he was thus placed. Carr unfortunately, however, cast his eyes on the Countess of Essex, the beautiful and fascinating daughter of the Earl of Suffolk, who had been married when a girl of thirteen to the Earl of Essex, son of the unfortunate favourite of Queen Elizabeth, and who himself afterwards became so noted in the reign of Charles I. as the commander of the parliamentary army. This object of illicit love was but too ready to respond to the addresses of Carr, now created Viscount Rochester, having, it is believed, owed much of the depravity of her disposition to the pernicious lessons of Mrs Turner, who lived as a dependent and companion to his daughter in the house of the Earl of Suffolk. This abandoned Mentor afterwards became the wife of a physician, at whose death, owing to the extravagant manner in which both she and her husband had lived, she was left in very straitened circumstances,

and was only too glad to become again the confidante and adviser of the Countess of Essex in her amour with Rochester. Not content with the gratification of their unlawful passion, the guilty pair sought to legalise their connection by a marriage, to effect which it was of course necessary that the countess should, in the first place, obtain a divorce from her husband. Sir Thomas Overbury, who had hitherto concurred with and aided Rochester in his amour, now opposed the marriage-scheme, knowing the odium his pupil would excite by contracting such a union, and dreading also the influence which the countess's relations, the Howards, would thereby obtain. He counselled Rochester strongly against thus committing himself, and enlarged, in rather emphatic terms, on the depraved character of his proposed wife. These speeches were reported by the infatuated favourite to the countess, who thereupon vowed the destruction of Overbury. First, she offered £1000 to Sir John Wood to murder the object of her resentment in a duel. Then Rochester and she concocted a scheme by which, on the favourite's representation to King James, Overbury, on the ground of having shewn contempt for the royal authority, was committed to the Tower, where he was detained a close prisoner under the guardianship of a new lieutenant, wholly in the interest of his enemies, who had procured the removal of the former governor of the fortress.

Meantime a divorce had been instituted by the Countess of Essex against her husband, and a majority of the commission of divines and lawyers, appointed by the king to try the cause, was found servile enough to pronounce sentence of dissolution. The day before this deliverance was given, Sir Thomas Overbury died in the Tower, from an infectious disease, as was alleged, and was hastily and clandestinely buried. No doubt was entertained by the public that he had been poisoned; but the matter was passed over without investigation, and for some months Rochester, now Earl of Somerset, basked with the partner of his guilt in all the sunshine of fashion and royal favour. But the king's fickle temper ere long caused his downfall. The presentation at court of a new minion, George Villiers, afterwards the celebrated Duke of Buckingham, effected such a change in the affections of the king as completely to supplant the old favourite, who was accordingly exposed unshielded to the machinations of his enemies, and the just indignation of the people. On a warrant from the Lord Chief-justice Coke, he and his wife were arrested for having occasioned the death of Sir Thomas Overbury, and along with them the parties of inferior rank who had acted as their accomplices. These were Mrs Turner; Elwes, the lieutenant of the Tower; Weston, the warder who had been intrusted with the immediate custody of the prisoner; and Franklin, an apothecary. The proofs adduced against them were sufficiently strong to insure their condemnation, and their own confessions left subsequently no doubt of their guilt. It appeared that Mrs Turner and the Countess of Somerset had had frequent consultations with a certain Dr Forman, a celebrated conjurer in Lambeth, who enjoyed a high reputation as a compounder of love-philtres, and was consulted in that capacity by many of the most fashionable ladies of the day. He died before the proceedings under notice were instituted, and it does not appear that he had any active concern in the murder of Overbury; but the fact of two of the accused parties having had dealings with a *soi-disant* wizard increased immensely the popular horror. As regards the perpetration of the murder, it was shewn that Mrs Turner procured the poison from Franklin the apothecary, and handing it to the warder, Weston, the latter, under her instructions, and with the complicity of Elwes, the lieutenant of the Tower, administered it to the prisoner in small doses, in various kinds of food, and at different times, extending over a period of some months.

The criminals were all executed at Tyburn. The enduring of the last penalty of the law by Mrs Turner, which took place on 15th November 1615, excited an immense interest. She had made herself famous in the fashionable world as the inventress of a yellow starch, and, in allusion to this circumstance, Lord Chief-justice Coke, who had already addressed her in sufficiently contumelious terms, telling her, categorically, that she had been guilty of the seven deadly sins, declared that as she was the inventor of yellow-starched ruffs and cuffs, so he hoped that she would be the last by whom they would be worn. He, accordingly, gave strict orders that she should be hanged in that attire, which she had rendered so fashionable. This addition to the sentence was fully carried out; and the fair demon, Mrs Turner, on the day of her execution, came to the scaffold arrayed as if for some festive occasion, with her face rouged, and a ruff stiffened with yellow starch round her neck. Numerous persons of quality, ladies as well as gentlemen, went in their coaches to Tyburn to see the last of Mrs Turner. She made a very penitent end, and the object contemplated by the Lord Chief-justice was fully attained, as the yellow ruff was never more worn from that day.

As already mentioned, the principal criminals, the Earl and Countess of Somerset, experienced no further penalty than an imprisonment of some years in the Tower. The partial pardon thus accorded to Carr, seems to have been extorted by fear from the king, who dreaded the revelation, by his former favourite, of some discreditable secret.

'OLD PARR.'

Though several sceptical individuals, denying the possibility of the life of man being protracted beyond the period of a hundred years, have maintained that no such instance of longevity can be produced, there is abundant and satisfactory evidence to confute this statement, and establish indisputably the fact of the existence of numerous centenarians both in ancient and modern times One of these instances, that of 'Old Parr,' whose extreme and almost antediluvian age has become proverbial, rests on such well-authenticated grounds, that no reasonable doubt can be entertained as to its truth.

The Christian name of this venerable patriarch was Thomas, and he was born at Winnington, in the parish of Alberbury, Shropshire, in 1483. His father, John Parr, was an agricultural labourer, and Thomas throughout his long life followed the same occupation. Till the age of eighty, he continued a bachelor, and then married his first

wife, with whom he lived for thirty-two years. About eight years after her death, when he himself was a hundred and twenty years old, he married for the second time. Having, in 1635, attained the wonderful age of a hundred and fifty-two years and upwards, he was visited in that year by the Earl of Arundel, who, having gone down to see some estates of his in Shropshire, was attracted by the reports which reached him of so remarkable an old man. His lordship was greatly struck by the intelligence and venerable demeanour of Thomas Parr, who was thereupon induced to pay a visit to London; the earl, as we are informed, 'commanding a litter and two horses (for the more easy carriage of a man so enfeebled and worn with age) to be provided for him; also that a daughter-in-law of his (named Lucye), should likewise attend him, and have a horse for her owne riding with him; and to cheere up the olde man, and make him merry, there was an antique-faced fellow, called Jacke, or John the Foole, with a high and mighty no beard, that had also a horse for his carriage. These all were to be brought out of the country to London, by easie journeys, the charges being allowed by his lordship: and likewise one of his honour's own servants, named Brian Kelly, to ride on horseback with them, and to attend and defray all manner of reckonings and expenses; all which was done accordingly.'

It would have been better, however, had Lord Arundel left the old man undisturbed in his native parish. Partly owing to the fatigues of the journey, partly to the crowds of visitors who thronged to see him, and above all to the unwonted mode of life which he led, Parr, ere many months were over, fell ill and died. He was buried on 15th November 1635, in Westminster Abbey, where a monument was erected to his memory. After death his body was examined by the celebrated Dr Harvey, who found it remarkably stout and healthy, without any trace of decay or organic disease, so that had it not been for the abnormal

OLD PARR'S COTTAGE, NEAR ALBERBURY, SHROPSHIRE.

influences to which he had been subjected for a few months previous to his death, there seems little doubt that Parr might have attained even a much greater age.

The principal authority for the history of Old Parr is John Taylor, the 'Water Poet,' who, while the patriarch was residing in London, about a month before he died, published a pamphlet, entitled *The Olde, Olde, very Olde Man; or The Age and Long Life of Thomas Parr.* From the period at which this work was issued, we are warranted in placing considerable reliance on its statements, which appear never to have been controverted. In addition to those above quoted, we are informed by Taylor that, at the age of a hundred and five, Parr was obliged, in consequence of an intrigue with Catharine Milton, whom he afterwards married as his second wife, to do penance in a white sheet at the door of the parish church of Alberbury. When presented to Charles I. at court, that monarch observed to him: 'You have lived longer than other men, what have you done more than other

men?' Parr's reply was: 'I did penance when I was a hundred years old.' In the meeting of the venerable patriarch with the British sovereign, a parallel is almost suggested with the grand simplicity in which the presentation of Jacob to Pharaoh is recorded in the Book of Genesis.

Thomas Parr seems, through life, to have been of temperate and industrious habits, of which the following metrical account is given by Taylor:

'Good wholesome labour was his exercise,
Down with the lamb, and with the lark would rise:
In mire and toiling sweat he spent the day,
And to his team he whistled time away:
The cock his night-clock, and till day was done,
His watch and chief sun-dial was the sun.
He was of old Pythagoras' opinion,
That green cheese was most wholesome with an onion;
Coarse meslin bread,* and for his daily swig,
Milk, butter-milk, and water, whey and whig:
Sometimes metheglin, and by fortune happy,
He sometimes sipped a cup of ale most nappy,
Cyder or perry, when he did repair
T' Whitson ale, wake, wedding, or a fair;
Or when in Christmas-time he was a guest
At his good landlord's house amongst the rest:
Else he had little leisure-time to waste,
Or at the ale-house huff-cap ale to taste;
His physic was good butter, which the soil
Of Salop yields, more sweet than candy oil;
And garlick he esteemed above the rate
Of Venice treacle, or best mithridate.
He entertained no gout, no ache he felt,
The air was good and temperate where he dwelt;
While mavisses and sweet-tongued nightingales
Did chant him roundelays and madrigals.
Thus living within bounds of nature's laws,
Of his long-lasting life may be some cause.'

There was doubtless something peculiar in Parr's constitution which enabled him to resist so long the effects of age and natural decay. As a corroboration of the theory of the hereditary transmission of qualities, it is a curious circumstance that Robert Parr, a grandson of this wonderful old man, who was born at Kinver in 1633, died in 1757, at the age of a hundred and twenty-four. Perhaps one of the most ingenious devices in the art of quackery is that by which a well-known medicine, bearing Parr's name, is vaunted to the public as the mysterious preparation by which he was enabled to attain the extraordinary age of a hundred and fifty-two. The portrait which is frequently attached to the puffing placard advertising these drugs, is derived from a likeness of Old Parr, drawn by the celebrated painter Rubens.

In the *Gentleman's Magazine* for March 1814, a view, which we have copied (see the preceding page), is given of Old Parr's cottage, in the parish of Alberbury; Rodney's Pillar, on the Breidden Hill, appears in the distance. It is also stated in the work referred to, that the cottage has undergone very little alteration since the period when Parr himself occupied it, and that a corner beside the huge misshapen chimney is shewn as the place where the Nestor of Shropshire used to sit.

* *Meslin bread*, bread made of a mixture of several kinds of flour. The word is derived from the French *mêler* to mix, and possibly also from the German *mischen*. Other forms of the term are *mastlin*, *maslin*, and *mashlum*, the last of which is well known in Scotland as an epithet for a certain description of bannocks or cakes, made of a mixture of bear or barley and pease meal, and styled from this circumstance *mashlum bannocks*.

DUEL BETWEEN THE DUKE OF HAMILTON AND LORD MOHUN.

On 15th November 1712, a singularly ferocious and sanguinary duel was fought in Kensington Gardens. The keepers of Hyde Park, on the morning of that day, were alarmed by the clashing of swords, and rushing to the spot whence the sound proceeded, found two noblemen weltering in their blood. These were Lord Mohun, who was already dead, and the Duke of Hamilton, who expired in the course of a few minutes. Nor had the combat been limited to the principals alone. The seconds, Colonel Hamilton on the part of the duke, and General Macartney on that of Lord Mohun, had also crossed swords, and fought with desperate rancour. The former of these remained on the field, and was taken prisoner; but Macartney fled to the continent, from which, however, he afterwards returned, and submitted to a trial.

A prodigious ferment was occasioned by this duel, owing to the circumstance of the Duke of Hamilton being regarded as the head of the Jacobite party both in North and South Britain, whilst Lord Mohun was a zealous champion in the Whig interest. Neither of the men could lay claim to great admiration on the score of integrity or principle, and it is difficult, at the present day, to pronounce any decisive verdict in their case. What, however, seems to have originated merely in personal animosity was represented by the Tory party as a dastardly attempt on the part of their political opponents to inflict a vital wound on the Jacobite cause, then in the ascendant, by removing its great prop, who had just been appointed ambassador to the court of France, and was expected to leave London for Paris in the course of a few days. It was maintained that the duke had met foul-play at the hands of Macartney, by whose sword, and not that of Lord Mohun, he had been slain. But this allegation was never established by sufficient evidence, and the truth of the matter seems to be that both sets of antagonists, principals as well as seconds, were so transported by the virulence of personal enmity as to neglect all the laws both of the gladiatorial art and the duelling code, and engage each other with the fury of savages or wild beasts.

HALLEY'S COMET OF 1682.

Halley's Comet, so called, has been the means of dispelling many popular illusions concerning the influence of those mysterious bodies on worldly affairs. Before it had been ascertained that comets are *periodical* in their appearance, there was unbounded scope for speculation on the nature of this influence. The excellence of the celebrated vintage of 1811 was attributed to the great comet which appeared in that year; as was also the abundance of the crops. Nay, the number of twins born in the same year, and the fact that a shoemaker's wife in Whitechapel had four children at a birth, were in like manner laid to the charge of the comet; as likewise were the facts that wasps were few, and that flies became blind that year. The Great Plague of London was attributed by some to a comet which appeared in the spring of that year. As there was a comet in 1668, and in the same year a remarkable epidemic among *cats* in West-

phalia, some of the wiseacres of that day connected the two phenomena together as probable cause and effect. When Lima and Callao were destroyed by an earthquake in 1746, the disaster was imputed to a small comet in the absence of any more probable delinquent. A church clock, destroyed by a meteoric stone; an unusually large flock of wild pigeons in America; the disasters which were experienced by the Christians at the hands of the Turks in 1456; a fit of *sneezing* that became very prevalent in some parts of Germany; the deaths of eminent persons in various countries—all were believed to have been either produced or presaged by comets which appeared in certain years. That of two things which occurred nearly at the same time, one is the *cause* of the other, is a very popular and easy mode of philosophising. M. Arago adduces, in illustration of this point, the anecdote told by Bayle, of a lady who never looked out of the window of her apartment, situated in the greatest thoroughfare of Paris, and saw the street filled with carriages, without imagining that her appearance at the window was the cause of the crowd!

The reason why Halley's comet, or rather Halley's remarkable prediction concerning the comet, has had some influence in lessening these vague speculations, is because a regular and periodical occurrence of any event takes away from it much of a capricious or uncertain character. After Flamsteed had written down his careful observations on the comet of 1680, Sir Isaac Newton was able to determine what kind of curve it marked out in the heavens; and then Dr Halley proceeded to investigate, in a very elaborate way, whether any two recorded comets were really two successive appearances of the same celestial body. He found reason to believe that the comets of 1531, 1607, and 1682 were in fact one and the same comet, which takes about seventy-six years to perform its remarkable journey round the sun. After making corrections for a few disturbing causes, he boldly declared his belief that that comet would appear again late in 1758 or early in 1759; and, with a pardonable self-respect, he appealed to posterity not to lose sight of the fact, that if the comet should really return about that period, the prediction of such a result was due to an Englishman. As the period approached, the great French mathematicians Clairaut, D'Alembert, and Lalande calculated the probable disturbance which the planets would produce on such a comet; and they agreed that the month of April 1759 would be the probable time of re-appearance, or rather, of the perihelion of the comet—that is, its nearest approach to the sun. The comet was espied on the 25th December 1758, and passed its perihelion on March 13, 1759. This would have been a great triumph to Halley, if he could have lived to see it. All Europe agreed that this particular comet should be called *Halley's Comet*, in honour to the man who had so boldly and successfully predicted its periodicity. Then, as time passed on, arose the question—'Will this comet re-appear after another interval of about seventy-six years, say in 1835?' In 1812, Damoiseau calculated that the comet *ought* to re-appear at perihelion on 4th November in that year. In 1829, Pontécoulant, another great mathematician, explained his reasons for selecting the 14th of November as a more probable date. Two learned Germans, Rosenberger and Lehmann, also investigated the same intricate problem; the one named the 11th of November, the other the 26th, as the day of perihelion. At last, when the year 1835 arrived, all the astronomers in Europe were pointing their telescopes towards the heavens, under the belief that the comet would begin to be visible some time in August. They were right. On the 5th of August MM. Dumouchel and De Vico, at the observatory of Rome, detected the comet; it became visible to the naked eye towards the end of September, attained its greatest brilliancy about the middle of October, and passed its perihelion on 15th November—within one single day of the time calculated by Pontécoulant! All this is very wonderful to persons unskilled in astronomical mathematics; but so certain do savans now feel about it, that they decide that the recorded comets of 1378, 1456, 1531, 1607, 1682, 1759, and 1835 were only so many successive appearances of Halley's comet, at intervals of about seventy-six years apart. There is not the slightest doubt among them that Halley's comet will appear again in or about the year 1911, although possibly not one of our present astronomers will be alive in that year.

By thus substituting regularity for uncertainty, Halley's labours on the subject of comets have effectually reformed popular notions concerning those wondrous visitants.

NOVEMBER 16.

St Eucherius, bishop of Lyon, confessor, 450. St Edmund, confessor, archbishop of Canterbury, 1242.

Born.—Tiberius, Roman Emperor, 42 B. C.; John Freinshemius, scholar and critic, 1608, *Ulm;* Jean le Rond d'Alembert, encyclopædist, 1717, *Paris;* Francis Danby, artist, 1793, *Wexford.*

Died.—Aelfric, eminent Saxon prelate, 1005, *Canterbury;* Margaret, queen of Malcolm Canmore of Scotland, 1093; Henry III. of England, 1272, *Westminster;* Perkin Warbeck, pretender to English crown, executed, 1499; Pierre Nicole, logician, of Port Royal, 1695, *Chartres;* James Ferguson, astronomer, 1776, *London;* Jean Lambert Tallien, Terrorist leader, 1820; George Wombwell, celebrated menagerie proprietor, 1850, *Northallerton, Yorkshire;* James Ward, animal painter, 1859, *Cheshunt, Herts.*

ST MARGARET, QUEEN OF SCOTLAND.

Many of the saints in the Romish calendar rest their claims to the title on grounds either wholly or partially fabulous, or which at best display a merit of a very dubious order. It is, however, satisfactory to recognise in the queen of Malcolm Canmore many of those traits which contribute to form a character of sterling virtue, to whose memory persons of all creeds and predilections must pay a respectful homage. It is true that much of our information regarding her is derived from the report of her confessor Turgot, whom clerical prejudices, as well as the inducements of personal friendship and courtly policy, may have led to delineate her with too flattering a pencil. Enough, however, remains after making all due deductions on this score, to confirm the idea

popularly entertained in Scotland of the excellence of Queen Margaret. The niece of King Edward the Confessor, and the granddaughter of Edmund Ironside, the colleague of Canute, her youth was spent in exile, and under the proverbially salutary discipline of adversity. Her father and uncle narrowly escaped destruction at the hands of Canute, who, on the murder of their father, Edmund, sent the two young princes to the court of the king of Sweden, with instructions to put them to death privately. The chivalrous monarch refused to imbrue his hands in innocent blood, and sent the royal youths to Solomon, king of Hungary, by whom they were hospitably received and educated. Edmund the elder brother died, but Edward the younger married Agatha, a German princess, by whom he became the father of Edgar Atheling, Christina, and Margaret. On the death of Harold, at the battle of Hastings, Edgar Atheling made an attempt to vindicate his right to the English crown against William the Conqueror; but his unenergetic character was quite unable to cope with the vigour and resources of the latter, and Edgar and his sister Margaret were consequently obliged to fly the kingdom. They were shipwrecked on the coast of Scotland, and courteously received by King Malcolm Canmore, who was speedily captivated by the beauty and amiable character of Margaret. Her marriage to him took place in the year 1070, at the castle of Dunfermline, a place described by Fordun as surrounded with woods, rocks, and rivers, almost inaccessible to men or beasts by its situation, and strongly fortified by art. Margaret was at this time about twenty-four years of age. On her journey northwards to Dunfermline, she crossed the Firth of Forth at the well-known point where it narrows above Inverkeithing, and which since that event has been known by the designation of the *Queensferry*. A stone is also still shewn on the road, a little below Dunfermline, called *Queen Margaret's Stone*, on which she is traditionally said to have rested. Of the palace or castle where she resided at Dunfermline, a small fragment still remains enclosed within the romantic grounds of Pittencrieff, and known as *Malcolm Canmore's Tower*.

The union thus consummated was followed by a numerous offspring—six sons and two daughters. Three of the sons, Edgar, Alexander, and David ascended successively the throne of Scotland, and the elder daughter Maud or Mathildes married Henry I., king of England. To the education of her children Margaret seems to have devoted herself with the most sedulous attention. She procured for them the best preceptors and teachers that the times afforded, and is said to have been particular in inculcating on them the necessity of restraining and correcting the frowardness of youth, by a proper exercise of discipline. Her own temper, however, appears to have been of the sweetest and most placid kind, and she was beloved among her servants and dependents for her innumerable acts of generosity and complaisance. To the poor also her charity was unbounded. Whenever she walked out, she was besieged by crowds of distressed persons, widows, orphans, and others, to whom she administered relief with a liberality which often exceeded the bounds of prudence. During the various incursions made by Malcolm into England, large numbers of the inhabitants of the country were taken prisoners, and to them the beneficence of Margaret was readily extended. She inquired into, and endeavoured as far as possible to mitigate their unhappy condition, and in many instances secretly paid their ransom out of her own funds, to enable them to return to their homes. She also erected hospitals in various places. With her husband, she seems to have lived on the most affectionate terms. Some of her acts, indeed, bear the marks of that spirit of asceticism and ostentatious humiliation so highly esteemed in that age. Every morning, she prepared a breakfast for nine little orphans, whom she fed on her bended knees; and in the evening, she washed the feet of six poor persons, besides entertaining a crowd of mendicants each day at dinner. The season of Lent was observed by her with more than the wonted austerities of the Roman Catholic Church, allowing herself no food but a scanty meal of the simplest description, before retiring to rest, after a day spent in the closest exercises of devotion. One special act of hers in relation to religious ordinances deserves to be recorded. The observance of the Sabbath, which, previous to her marriage with Malcolm, had fallen greatly into desuetude, was revived and maintained by her influence and example. It is not probable, however, that the staid and decorous observance of Sunday, so characteristic of Scotland, was derived from this incident, as a relapse appears to have taken place in succeeding reigns, and the strictly devotional character of the Sabbath to have been only again established at the Reformation.

Notwithstanding the religious tendencies of Margaret, her court was distinguished by a splendour and elegance hitherto unknown in Scotland. Her own apparel was magnificent, and the feasts at the royal table were served up on gold and silver plate. Her acquaintance with the Scriptures and the writings of the fathers was extensive, and she is reported to have held numerous disputations with doctors of divinity on theological matters. An epitome of her moral excellence is presented in what is related of her, that 'in her presence nothing unseemly was ever done or uttered.'

The last days of this amiable queen were clouded by adversity and distress. The austerity of her religious practices prematurely undermined her health, and she was attacked by a tedious and painful illness, which she bore with exemplary resignation. She listened assiduously to the spiritual consolations of her faithful confessor Turgot, who thus relates her concluding words to him as quoted by Lord Hailes, 'Farewell; my life draws to a close, but you may survive me long. To you I commit the charge of my children, teach them above all things to love and fear God; and whenever you see any of them attain to the height of earthly grandeur, oh! then, in an especial manner, be to them as a father and a guide. Admonish and, if need be, reprove them, lest they be swelled with the pride of momentary glory, through avarice offend God, or by reason of the prosperity of this world, become careless of eternal life. This in the presence of Him, who is now our only witness, I beseech you to promise and to perform.' Her death at the last was accelerated by the news which she received of the death of her husband and eldest son before the castle of Alnwick, in Northumberland, an expedition in which she had vainly

endeavoured to dissuade Malcolm from taking part in person. While lying on her couch one day, after having offered up some fervent supplications to the Almighty, she was surprised by the sudden entrance of her third son Edgar, from the army in England. Divining at once that some disaster had happened, she exclaimed: 'How fares it with the king and my Edward?' and then, on no answer being returned: 'I know all, I know all: by this holy cross, by your filial affection, I adjure you, tell me the truth.' Her son then replied: 'Your husband and your son are both slain.' The dying queen raised her eyes to heaven and murmured: 'Praise and blessing be to thee, Almighty God, that thou hast been pleased to make me endure so bitter anguish in the hour of my departure, thereby, as I trust, to purify me in some measure from the corruption of my sins; and thou, Lord Jesus Christ, who through the will of the Father, hast enlivened the world by thy death, oh! deliver me.' In pronouncing the last words, she expired on the 16th of November 1093, at the comparatively early age of forty-seven. She was canonized by Pope Innocent IV. in 1251, but in the end of the seventeenth century, her festival was removed by the orders of Innocent XII., from the day of her death to the 10th of June. She was interred in the church of the Holy Trinity, at Dunfermline, which she had founded, and which, upwards of two hundred years afterwards, received the corpse of the great King Robert. At the Reformation, the remains of Queen Margaret and her husband were conveyed privately by some adherents of the old religion to Spain, and deposited in a chapel which King Philip II. built for their reception, in the palace of the Escurial. Here their tomb is said still to be seen, with the inscription: 'St Malcolm, King, and St Margaret, Queen.' The head of Queen Margaret, however, is stated to be now deposited in the church of the Scots Jesuits, at Douay.

MR WOMBWELL.

As a celebrity of his kind, George Wombwell deserves notice both for his own untiring industry and skill, and the prominence with which, for a long series of years, his name was familiar to the public, and more especially to the juvenile branches of the community. When a boy, he shewed great fondness for keeping birds, rabbits, dogs, and other animals, but the circumstance which led to his becoming the proprietor of a menagerie was for the most part accidental. A shoemaker by trade, and keeping a shop in Soho, he happened one day to pay a visit to the London Docks, where he saw some of the first boa constrictors which had been imported into England. These reptiles had then no great favour with showmen, as much from fear as ignorance of the art of managing them, and their marketable value was consequently less than it afterwards became. Wombwell purchased a pair for £75, and in the course of three weeks realised considerably more than that sum by their exhibition. He used afterwards to declare, that he entertained rather a partiality for the serpent tribe, as they had been the means of first opening his path to fame and fortune. Stimulated by the success thus achieved, he commenced his celebrated caravan peregrinations through the United Kingdom, visiting all the great fairs, such as those of Nottingham, Birmingham, Glasgow, and Donnybrook. In time, he amassed a handsome independence, but could never be prevailed on to retire to the enjoyment of ease and affluence, and he died, as he had lived, in harness. Neither did he ever abandon the closest attention to all matters

MR WOMBWELL.

connected with the menagerie, and might often be seen scrubbing and working away, as indefatigably as the humblest servant attached to the establishment.

At the time of his death, Wombwell was possessed of three huge menageries, which travelled through different parts of the country, and comprised a magnificent collection of animals, many of them bred and reared by the proprietor himself. The cost of maintaining these establishments averaged at least £35 a day. The losses accruing from mortality and disease form a serious risk in the conduct of a menagerie, and Wombwell used to estimate that from this cause he had lost, from first to last, from £12,000 to £15,000. A fine ostrich, valued at £200, one day pushed his bill through the bars of his cage, and in attempting to withdraw it, broke his neck. Monkeys, likewise, frequently entailed great loss from their susceptibility to cold, which frequently, as in the case of human beings, cut them off by terminating in consumption. As regards the commercial value of wild beasts, we are informed that tigers have sometimes been sold as high as £300, and at other times might be had for £100. A good panther is worth £100, whilst hyenas range from £30 to £40 each, and zebras from £150 to £200. We suspect that the profits of menagerie proprietors are at the present day considerably curtailed, when the establishment of zoological gardens, and the general declension of fairs and shows in the popular estimation, must have sensibly diminished the numbers of persons who used to flock to these exhibitions.

SIR JOHN MANDEVILLE.

On 17th November 1372, died at Liège the celebrated Sir John Mandeville or De Mandeville, who may be allowed to take rank as the father of English travellers, and the first in point of time, of that extended array of writers, who have made known to their countrymen, by personal inspection, the regions and peoples of the distant East. The ground traversed by him was nearly similar to that journeyed over in the previous century by the celebrated Venetian, Marco Polo, whose descriptions, however, of the countries which he visited must be admitted to be both much fuller and consonant to truth than those of his English successor. Whilst the Italian traveller restricts himself, in the main at least, to such statements as he was warranted in making, either as eye-witness of the circumstances described, or as communicated to him by trustworthy authorities, it is to be regretted that a great portion of Sir John Mandeville's work is made up of absurd and incredible stories regarding oriental productions and manners, which he has adopted without question, and incorporated into his book, from all sources of legendary information, classic, popular, and otherwise. Yet after carefully winnowing the chaff from the wheat, there remains much curious and interesting matter, which may be accepted as presenting a correct picture of Eastern Asia in the fourteenth century, as it appeared to a European and Englishman of the day. Even the purely romantic and legendary statements in the narrative have their value as illustrating the general ideas prevalent in medieval times on the subject of oriental countries. Many of these travellers' wonders, so familiar to all who have read (and who has not in his childhood?) *Sindbad the Sailor*, will be found referred to in the work of Sir John Mandeville.

Of the history of this enterprising traveller we know little beyond what he himself informs us in the introduction to his narrative. From this, and one or two other sources, we learn that he was born at St Albans, in Hertfordshire, about 1300; devoted himself to mathematics, theology, and medicine (rather a heterogeneous assemblage of studies), and for some time followed the profession of a physician. This last occupation he abandoned after pursuing it for a very short time, and in 1322, he started on an eastern tour, the motives for which seem to have been principally the love of adventure, and desire of seeing strange countries, and above all others, the Holy Land, regarding which the recent fervour of the Crusades had excited an ardent interest in Western Europe. On Michaelmas-day, 1322, he quitted England on his travels, proceeding in the first instance to Egypt, into the service of whose sultan he entered, and fought for him in various campaigns against the Bedouin Arabs. He succeeded in ingratiating himself considerably with his employer, who, according to Mandeville's account, thus testified his sense of the Englishman's merits.

'And he wolde have maryed me fulle highely to a gret princes doughter, gif that I wolde have forsaken my law and my beleve. But, I thank God, I had no wille to don it, for nothing that he behighten me.'

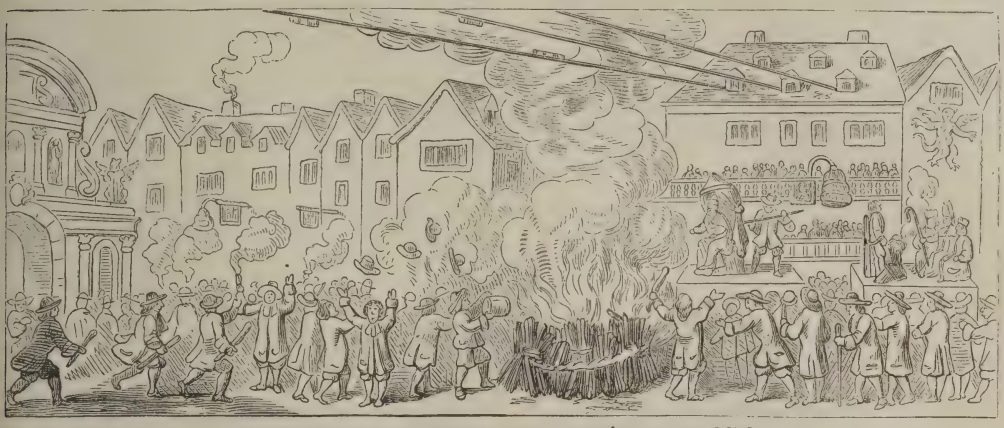
From Egypt Sir John proceeded to the Holy Land, and from thence continued his peregrinations till he reached the dominions of the great Khan of Tartary, a descendant of the celebrated Genghis, whose sovereignty extended over the greater part of Central and Eastern Asia, including the northern provinces of China or Cathay, as it was then termed by Europeans. Under his banners Mandeville took service, and fought in his wars with the king of Manci, whose territories seem to have corresponded to the southern division of the Celestial Empire. He appears subsequently to have travelled over the greater part of the continent of Asia, and also to have visited some of the East Indian Islands. The kingdom of Persia is described by him, and also the dominions of that celebrated medieval, and semi-mythical potentate, Prester John, whom from Mandeville's account we would infer to have been one of the princes of India, whilst other chroniclers seem to point to the sovereign of Abyssinia. After an absence of nearly thirty-four years, Sir John returned to his native country, and published an account of the regions visited by him in the East, which he dedicated to Edward III. It is to be regretted that in this there is so little personal narrative given, all reference to his own adventures being nearly comprised in the meagre and unsatisfactory statements which we have above furnished. Subsequently to its publication, Sir John seems to have gone again abroad on his travels, but the history of his latter days is very obscure. All that can be definitely ascertained is, that he died at Liège, in Belgium, and was buried in a convent in that town.

A manuscript of Sir John Mandeville's travels, belonging to the fourteenth century, is preserved in the Cottonian collection in the British Museum. The first printed English edition was that issued from the Westminster press in 1499, by Winkyn de Worde. During the fourteenth and fifteenth centuries, the work enjoyed a great reputation, second only to Marco Polo's, as an authority on all questions of oriental geography, and was translated into several languages.

Queen Elizabeth's Day.

Violent political and religious excitement characterised the close of the reign of King Charles II. The unconstitutional acts of that sovereign, and the avowed tendency of his brother toward the Church of Rome, made thoughtful men uneasy for the future peace of the country, and excited the populace to the utmost degree. It had been usual to observe the anniversary of the accession of Queen Elizabeth with rejoicings; and hence the 17th of November was popularly known as 'Queen Elizabeth's Day;' but after the great fire, these rejoicings were converted into a satirical saturnalia of the most turbulent kind. The Popish Plot, the Meal-tub Plot, and the murder of Sir Edmundbury Godfrey, had excited the populace to anti-papistical demonstrations, which were fostered by many men of the higher class, who were members of political and Protestant clubs. Roger North, who lived in these turbulent times, says that the Earl of Shaftesbury was the prime mover in all that opposed the court-party, and the head of the Green Ribbon Club, who held their meetings at the 'King's Head Tavern,' at the corner of Chancery Lane. They obtained their name from the green ribbon worn in their hats, to distinguish them in any street-engagement from clubbists of an opposite party. North says, that 'this copious society were a sort of executive power in and about London; and by correspondence, all over England.' They organised and paid for the great ceremonial processions and pope-burnings that characterised the years 1679–1681, and which were well calculated to keep up popular excitement, and inflame the minds of the most peaceable citizens.

From the rare pamphlet, *London's Defiance to Rome*, which describes 'the magnificent procession and solemn burning of the pope at Temple Bar, November 17, 1679,' we learn that 'the bells generally about the town began to ring about three o'clock in the morning;' but the great procession was deferred till night, when 'the whole was attended with one hundred and fifty flambeaus and lights, by order; but so many more came in volunteers, as made up some thousands. . . . . At the approach of evening (all things being in readiness), the solemn procession began, setting forth from Moorgate, and so passing first to Aldgate, and thence through Leadenhall Street, by the Royal Exchange through Cheapside, and so to Temple Bar. Never were the balconies, windows, and houses more numerously lined, or the streets closer thronged, with multitudes of people, all expressing their abhorrence of popery with continued shouts and exclamations, so that 'tis modestly computed that, in the whole progress, there could not be fewer than two hundred thousand spectators.' The way was cleared by six pioneers in caps and red waistcoats, followed by a bellman bearing his lantern and staff, and ringing his bell, crying out all the way in a loud but dolesome voice: 'Remember Justice Godfrey!' He was followed by a man on horseback, dressed like a Jesuit, carrying a dead body before him, 'representing Justice Godfrey, in like manner as he was carried by the assassins to Primrose Hill.' We copy from a very rare print of the period, this, the most exciting part of the evening's display. Godfrey was a London magistrate, before whom the notorious Titus Oates had made his first deposition; he was found murdered in the fields at the back of Primrose Hill, with a



PROCESSION ON 17TH NOV. 1679 COMMEMORATIVE OF THE MURDER OF SIR EDMUNDBURY GODFREY.

sword run through his body, to make it appear that by falling upon it intentionally, he had committed suicide; but wounds in other parts of his person, and undeniable marks of strangulation, testified the truth. There was little need for a bellman to recall this dark deed to the remembrance of the Londoners. The excitement was increased by another performer in the procession, habited as a priest, 'giving pardons very plentifully to all those that should murder Protestants, and proclaiming it meritorious.' He was followed by a train of other priests, and 'six Jesuits with bloody daggers;' then, by way of relief, came 'a consort of wind-musick.' This was succeeded by a long array of Catholic church dignitaries, ending with 'the pope, in a lofty glorious pageant, representing a chair of state, covered with scarlet, richly embroidered and fringed, and bedecked with golden balls and crosses.' At his feet were two boys with censers, 'at his back his holiness's privy-councillor (the degraded seraphim, *Anglicé*, the devil), frequently caressing, hugging, and whispering him, and ofttimes instructing him aloud to destroy his majesty, to forge a Protestant plot, and to fire the city again, to which purpose he held an infernal torch in his hand.' When the procession reached the foot of Chancery Lane, in Fleet Street, it came to a stop; 'then having entertained the thronging spectators for some time with the ingenious fireworks, a vast bonfire being prepared just overagainst the Inner Temple gate, his holiness, after some compliments and reluctances, was decently toppled from all his grandeur into the flames.' This concluding feat was greeted by 'a prodigious shout, that might be heard far beyond Somerset House,' where the Queen Catharine was lodged at that time, but the ultra-Protestant author of this pamphlet, anxious to make the most of the public lungs, declares "twas believed the echo, by continued reverberations before it ceased, reached Scotland, France, and even Rome itself, damping them all with a dreadful astonishment.'

This show proved so immensely popular, that it was reproduced next year, with additional political pageantry. Justice Godfrey, of course, was there, but Mrs Celliers and the Meal-tub figured also,

accompanied by four Protestants, 'in bipartite garments of black and white,' to indicate their trimming vacillation; followed by a man bearing a banner, on which was inscribed, 'We Protestants in Masquerade usher in Popery.' Then came a large display of priests and clerical dignitaries, winding up with the pope, represented with his foot on the neck of the Emperor Frederick of Germany. After him came Doña Olimpia, and nuns of questionable character; the procession concluding with a scene of the trial, and execution by burning, of a heretic. This procession was also 'lively represented to the eye on a copper-plate,' and we copy as much of it as depicts the doings in Fleet Street, from Temple Bar to Chancery Lane. At the corner of the lane is the King's Head Tavern, the rendezvous of the Green Ribbon Club, agreeing exactly with North's description: 'This house was doubly balconied in the front for the clubsters to issue forth in fresco, with hats and no perukes; pipes in their mouths, merry faces, and diluted throats for vocal encouragement of the *canaglia* below, at the bonfires.' From this house to the Temple Gate, lines cross the street for fireworks to pass. The scene is depicted at the moment when the effigy of the pope is pushed

DEMONSTRATIONS ON QUEEN ELIZABETH'S DAY IN 1679.

from his chair of state into the huge bonfire below, as if in judgment for the fate of the Protestant who is condemned to the stake in the pageant behind him. North speaks of 'the numerous platoons and volleys of squibs discharged' amid shouts that 'might have been a cure of deafness itself.' Dryden alludes to the popularity of the show in the epilogue to his *Œdipus;* when, after declaring he has done his best to entertain the public, he adds:

> 'We know not what you can desire or hope,
> To please you more, but *burning of a pope!*'

In the *Letters to and from the Earl of Derby,* he recounts his visit to this pope-burning, in company with a French gentleman who had a curiosity to see it. The earl says: 'I carried him within Temple Bar to a friend's house of mine, where he saw the show and the great concourse of people, which was very great at that time, to his great amazement. At my return, he seemed frighted that somebody that had been in the room had known him, for then he might have been in some danger, for had the mob had the least intimation of him, they had torn him to pieces. He wondered when I told him no manner of mischief was done, not so much as a head broke; but in three or four hours were all quiet as at other times.' In 1682, the court professed great alarm lest some serious riots should result from these celebrations, and required the mayor to suppress them; but the civic magnates declined to interfere, and the show took place as usual. The following year it was announced that the pageantry should be grander than ever, but the mayor was now the nominee of the king,* and effectually suppressed the display, patrolling all the streets with officers till midnight, and having the City trained-bands in reserve in the Exchange, and a company of Horse Guards on the other side of Temple Bar. 'Thus ended these *Diavolarias,*' says Roger North.

Under somewhat similar excitement, an attempt was made in the reign of Queen Anne to reproduce these inflammatory processions and pageants. The strong feeling engendered by the claims of the High-church party under Dr Sacheverell, and the fears entertained of the Pretender, led their opponents to this course. The pageants were constructed, and the procession arranged; but the secretary of state interfered, seized the stuffed figures, and prevented the display. It was intended to open the procession with twenty watchmen, and as many more link-boys; to be followed by bagpipers playing *Lilliburlero,* drummers with the pope's arms in mourning, 'a figure representing Cardinal Gualteri, lately made by the Pretender Protector of the English nation, looking down on the ground in a sorrowful posture.' Then came burlesque representatives of the Romish officials; standard-bearers 'with the pictures of the seven bishops who were sent to the Tower; twelve monks representing the Fellows who were put into Magdalen College, Oxford, on the expulsion of the Protestants by James II.' These were succeeded by a number of friars, Jesuits, and cardinals; lastly came 'the pope under a magnificent canopy, with

* Charles had suspended the City charter, and the mayor—Sir John Moore—was a mere tool of the court, not elected by the citizens, but placed in office by the king.

a silver fringe, accompanied by the Chevalier St George on the left, and his counsellor the Devil on the right. The whole procession clos'd by twenty men bearing streamers, on each of which was wrought these words :

"God bless Queen Anne, the nation's great defender !
Keep out the French, the Pope, and the Pretender."

'After the proper ditties were sung, the Pretender was to have been committed to the flames, being first absolved by the Cardinal Gualteri. After that, the said cardinal was to have been absolved by the Pope, and burned. And then the devil was to jump into the flames with his holiness in his arms.' The very proper suppression of all this absurd profanity was construed into a ministerial plot against the Hanoverian succession. The accession of George I., a few years afterwards, quieted the fears of the nation, and 'Queen Elizabeth's Day' ceased to be made a riotous political anniversary.

SIR HENRY LEE.

At a tournament held on the 17th November 1559, the first anniversary of the accession of Queen Elizabeth to the throne, Sir Henry Lee, of Quarendon, made a vow of chivalry, that he would, annually, on the return of that auspicious day, present himself in the tilt-yard, in honour of the queen ; to maintain her beauty, worth, and dignity, against all-comers, unless prevented by age, infirmity, or other accident. Elizabeth having graciously accepted Sir Henry as her knight and champion, the nobility and gentry of the court, incited by so worthy an example, formed themselves into an honourable society of Knights Tilters, which, yearly assembling in arms, held a grand tourney on each successive 17th of November. In 1590, Sir Henry, feeling himself overtaken by age, resigned his assumed office of Queen's Knight, having previously received her majesty's permission to appoint the famous Earl of Cumberland as his successor. The resignation was conducted with all due ceremony. The queen being seated in the gallery, with Viscount Turenne, the French ambassador, the Knights Tilters rode slowly into the tilt-yard, to the sound of sweet music. Then, as if sprung out of the earth, appeared a pavilion of white silk, representing the sacred temple of Vesta. In this temple was an altar, covered with a cloth of gold, on which burned wax candles, in rich

SIR HENRY LEE AND HIS DOG.

candlesticks. Certain princely presents were also on the altar, which were handed to the queen by three young ladies, in the character of vestals. Then the royal choir, under the leadership of Mr Hales, sang the following verses, as Sir Henry Lee's farewell to the court :

'My golden locks, time hath to silver turned
(Oh time too swift, and swiftness never ceasing),
My youth 'gainst age, and age at youth have spurned ;
But spurned in vain, youth waneth by increasing.
Beauty, strength, and youth, flowers fading bene,
Duty, faith, and love, are roots and ever green.

My helmet, now, shall make a hive for bees,
And lover's songs shall turn to holy psalms:
A man-at-arms must now sit on his knees,
And feed on prayers, that are old age's alms.
And so, from court to cottage, I depart,
My saint is sure of mine unspotted heart.

And when I sadly sit in homely cell,
I'll teach my swains this carol for a song,
Blest be the hearts, that think my sovereign well,
Cursed be the souls, that think to do her wrong.
Goddess, vouchsafe this aged man his right,
To be your beadsman, now, that was your knight.'

After this had been sung, Sir Henry took off his armour, placing it at the foot of a crowned pillar, bearing the initials E. R. Then kneeling, he presented the Earl of Cumberland to the queen, beseeching that she would accept that nobleman for her knight. Her majesty consenting, Sir Henry armed the earl and mounted him on horseback; he then arrayed himself in a peaceful garb of black velvet, covering his head with a common buttoned cap of country fashion.

At Ditchley, a former seat of the Lees, Earls of Litchfield, collateral descendants of Queen Elizabeth's knight, there was a curious painting of Sir Henry and his dog, with the môtto, 'More Faithful than Favoured.' The traditional account of this picture, a copy of which is here engraved, is that Sir Henry, on retiring to rest one night, was followed to his bedroom by the dog. The animal, being deemed an intruder, was at once turned out of the room; but howled and scratched at the door so piteously that Sir Henry, for the sake of peace, gave it readmission, when it crept underneath the bed. After midnight, a treacherous servant, making his way into the room, was seized and pinned to the ground by the watchful dog. An alarm being given, and lights brought, the terrified wretch confessed that his object was to kill Sir Henry and rob the house. In commemoration of the event, Sir Henry had the portrait painted, as a monument of the gratitude of the master, the ingratitude of the servant, and the fidelity of the dog. It is very possible that this anecdote and picture may have given rise to the well-known story of a gentleman rescued from murder, at a lonely inn, by the fidelity and intelligence of his dog, who, by preventing him from getting into bed, induced him to suspect some treacherous design on the part of his landlord, who at midnight, with his accomplices, ascended through a trap-door in the floor of the apartment, but were discomfited and slain by the gentleman, with the aid of the faithful animal.

Sir Henry died at the age of eighty, in the year 1611. About fifty years ago, his epitaph could still be deciphered in the then ruined chapel of Quarendon, in Buckinghamshire.

NOVEMBER 18.

The Dedication of the Churches of Saints Peter and Paul, at Rome. Saints Alphæus, Zachæus, Romanus, and Barulas, martyrs, about 304. St Hilda or Hild, abbess, 680. St Odo, abbot of Cluni, confessor, 942.

Born.—Pierre Bayle, celebrated critic and controversial writer, author of *Dictionnaire Historique et Critique*, 1647, *Carla-en-Comté, Foix;* Sir David Wilkie, painter, 1785, *Manse of Cults, Fifeshire.*

Died.—Cardinal Reginald Pole, eminent ecclesiastic, 1558; Cuthbert Tunstall, bishop of Durham, 1559; Jacob Böhme, or Böhm, celebrated mystical writer, 1624, *Alt-Seidenberg, Upper Lusatia;* Dr T. F. Dibdin, author of numerous bibliographical works, 1847; Charles Heath, line-engraver, 1848; Captain George William Manby, inventor of apparatus for saving life in shipwrecks, 1854, *near Yarmouth;* Professor Edward Forbes, eminent naturalist, 1854, *Edinburgh;* Frank Stone, artist, 1859.

CARDINAL POLE.

Cardinal Pole was, among many such, the most remarkable man of his time. The unyielding uprightness with which he preserved his conduct true to his convictions, made him many enemies among those he opposed. By his faithful and energetic adherence, during the reigns of Henry and Edward, to the papal see, even, as it must have seemed to many, at the expense of the liberty of his country, as well as by the active share which he took in the retrogressive measures of Mary, he rendered himself unpopular with the English people. But ever adorning the nobility of his birth, with the additional lustre of nobility of mind, he merited respect by his singular learning, his purity of conscience, his uniform consistency, his genuine piety, and the most refined and amiable manners.

Reginald Pole was the son of Richard Pole, Lord Montague, cousin-german to Henry VII.; his mother was Margaret, daughter of George, Duke of Clarence, brother to Edward IV. Born in 1500, he was educated for the church from his earliest years, first by the Carthusians, at Sheen, in Surrey, and afterwards by the Carmelites of Whitefriars. He entered Magdalen College, Oxford, as a nobleman, at the age of twelve. He early obtained various preferments, among others the Deanery of Exeter. He resided abroad several years, under Henry VIII.'s patronage; after which, returning to England, he retired into seclusion to prosecute, uninterrupted, his devotional studies.

Pole's first great trial was his rupture with Henry. After fruitless endeavours, often renewed on the king's part, to induce the churchman to acquiesce in Catharine's divorce, and the rejection of the papal supremacy, and equally vain attempts, and as often reiterated on the side of Pole, to avoid coming to any decision, he was finally induced to declare his opinion, and as he expressed it fully, with the utmost honesty, and with considerable eloquence, he was duly placed under ban, and a price set on his head. Pole kept clear of the danger, and Henry had to content himself with depriving him of all his preferments, and his two brothers and aged mother of their lives.

In the same proportion as the affections of Henry were alienated from the uncompromising counsellor, the Roman see took him into favour. He was created a cardinal, and employed on several important trusts. He actively exerted himself in the formation of a league which should have for its object the restoration of England to the Catholic faith; and, in 1546, along with two other cardinals, he represented the pope at the Council of Trent. In 1549, Pole was elected to the popedom; but as

the election was tumultuous, he refused to accept its decision. Upon this the conclave proceeded to elect him again, and this decision also, somewhat arrogantly, he set aside, saying: 'God was a God of light and not of darkness,' and bidding them wait for the morning. The Italians, disconcerted, proceeded once more to an election, and this time the friends of the cardinal were outvoted.

Soon after this, Pole obtained leave to retire from all public offices; but Mary succeeding to the English throne, he accepted the appointment of legate to her court; and being at once freed by parliament from the charge of treason, on which he had been banished, took his seat in the House of Peers. He applied himself with zeal to the furtherance of that cause to which he had always firmly clung, and saw his efforts successful. How far he was instrumental in promoting the cruel persecutions which have invested the reign of Mary with such horror, cannot now be very clearly ascertained, but the general mildness and rectitude of his character warrant us in forming the belief that these atrocities met, at least on his part, with no zealous encouragement.

Gardiner, ambitious to succeed Cranmer as archbishop of Canterbury, endeavoured to hinder Pole from obtaining the vacant office; but dying in the midst of his schemes, the cardinal was consecrated soon afterwards, in February 1556. The reigning pope opposed Pole's promotion, but the queen's support rendered the opposition futile. Brighter times seemed to await him. But falling sick, he only survived to receive the, to him, fatal news of the death of Mary, and followed his mistress in the short space of sixteen hours.

Pole was buried at Canterbury. His funeral was magnificent, but his epitaph was humble, being only: *Depositum Cardinalis Poli.*

JACOB BÖHME.

Jacob Böhme, or, as commonly written in English, Behmen, is one of the many notable men bred under the tutelage of St Crispin, and in various particulars he resembles his brother-craftsman, George Fox, the first of the Quakers. Böhme was born near Görlitz, in Upper Lusatia, in 1575. His parents being poor, and unable to give him much education, he was employed when a child to herd cattle, and in his twelfth year was apprenticed to a shoemaker. It chanced one day, he relates, when his master and mistress were from home, that a stranger in mean apparel, but with a grave and reverent countenance, came into the shop, and taking up a pair of shoes, desired to buy them. Jacob had never been trusted as a salesman, and knew not what money to ask; but as the stranger was importunate, he named a price which he felt sure would bear him harmless on the return of his master. The stranger took the shoes, and going out of the shop a little way, stood still, and with a loud and earnest voice called: 'Jacob, Jacob, come forth!' Surprised and fascinated, the boy obeyed, and the old man, taking him by his right hand, and fixing his bright and piercing eyes upon him, said: 'Jacob, thou art little, but shalt be great, and become another man, such a one as the world will wonder at; therefore be pious, fear God, and reverence His Word. Read diligently the Holy Scriptures, wherein thou hast comfort and instruction; for thou must endure much poverty, and suffer persecution; but be courageous and persevere, for God loves and is gracious unto thee!'—whereon he departed, and was by Jacob seen no more. The strange messenger and his prediction made a deep impression on the boy's mind. He grew serious beyond his years, and at one time was 'for seven days surrounded with a divine light, and stood in the highest contemplation, and in the kingdom of joys.' He was raised above all frivolity, and in his sacred zeal rebuked his master for light and profane speech. At nineteen he married, and set up as shoemaker in Görlitz on his own account.

Years passed away, four sons were born to Böhme, and he was known only in Görlitz as a pious cobbler, with a taste for reading. Meanwhile he was the subject of remarkable experiences. On one occasion, in his twenty-fifth year, when gazing on a dazzling light produced by the sun's rays breaking on a tin vessel, he fell into a trance, in which he again felt himself encompassed with celestial light, and filled with more than mortal joy. Thereafter when he walked abroad in the fields, there was opened in him a new sense whereby he discerned the essences and uses of plants. He commenced writing, but merely for his own satisfaction, living in peace and silence, and speaking to few persons of the mysteries which were opened to him. A volume, called *The Aurora*, which he had in this manner privately composed, he lent to a friend, who made a copy of the work. The treatise found its way to Richter, primate of Görlitz, who denounced it from his pulpit, and had Böhme summoned before the senate, which advised him to leave off scribbling and stick to his last. Strange to say, he took the advice, and for seven years let his pen lie idle. At the mature age of forty-two, however, the prophetic impulse came irresistibly upon him; not from any desire to speak, he says, but because the spirit was strong upon him he resumed his writing, printed *The Aurora*, and followed it up with thirty other publications, great and small. Richter again exerted his influence to silence the unlicensed shoemaker, and the magistrates begged him, for the sake of peace, to leave Görlitz, which, with much good-nature, he did. He had now many friends who recognised his genius, who encouraged him to write, and who read all he produced with avidity. Amongst these admirers was Balthasar Walter, a physician of Dresden, who had travelled through Syria, Egypt, and Arabia in search of magical lore, and after six years of fruitless wandering, had returned home to find more than he sought in the humble shoemaker's booth. He and others would bring Böhme plants, and Böhme would handle them, and instantly reveal their properties. Then they would try him with a Greek or an oriental word, and from the sound he would pronounce its signification. Once when Walter uttered the word *idea*, Jacob sprang up in transport, and declared that the sound presented to him the image of a heavenly virgin of surpassing beauty. He was cited before the Elector of Saxony, who had six doctors of divinity and two professors of mathematics to examine the poor shoemaker. They plied him with many and hard questions,

but Böhme had an answer for them all. The elector was so pleased with his demeanour, that he led Böhme aside, and sought from him some information for himself. One of the examiners, Dr Meisner, is reported to have said: 'Who knows but God may have designed him for some extraordinary work? And how can we, with justice, pass judgment against what we understand not? Certainly he seems to be a man of wonderful gifts in the Spirit, though we cannot at present, from any sure ground, approve or disapprove of many things he holds.' After this trial and charitable acquittal, Böhme returned to Görlitz, where he died on Sunday, 18th November 1624. Early in the morning of that day, he called his son Tobias, and asked him whether he did not hear sweet music. Tobias said, 'No.' Then said Böhme: 'Open the door, that you may hear it.' In the afternoon he asked the time, and was told three o'clock. 'My time,' he said, 'is not yet; three hours hence is my time.' When it was near six, he took leave of his wife and son, blessed them, and said: 'Now I go hence into paradise!' and bidding his son turn him, he heaved a sigh, and departed.

Böhme was a little man, withered, and with almost a mean aspect. His forehead was low, and his temples prominent; his nose was large and hooked, his eyes blue and quick, his beard short and scanty, his voice thin and gentle, and his speech and manners modest and pleasing. His writings are voluminous, but they were nearly all composed in the last seven years of his life. They form a wonderful *mélange* of alchemy, astrology, soothsaying, theology, and mystical conceptions concerning things supernal and infernal. He wrote slowly, but steadily, and without revision, and his style is diffuse, immethodical, and obscure. The verdict of a cursory reader of Böhme is commonly one of perplexity or disgust, yet he has never lacked patient students, who have professed to find in his pages a wisdom as profound as unique. Amongst these have been many Germans, and in latter days, Schelling, Hegel, Frederick Schlegel, Novalis, and Tieck. In England, William Law, the author of *A Serious Call to a Devout and Holy Life*, was an ardent disciple of Böhme's; and Henry More, the Platonist, and Sir Isaac Newton, were his reverent admirers. Böhme's works have been translated from the German into Dutch, French, and English, but have long ago ceased to be printed; nevertheless, there exists a demand for them, and second-hand booksellers have seldom one of his volumes long in stock.

Sir David Brewster, in his *Life of Sir Isaac Newton*, observes that Newton, at one period of his life, was a believer in alchemy, and devoted much time to the study and practice of its processes. The Rev. William Law has stated that there were found among Sir Isaac's papers large extracts from Jacob Böhme's works, written with his own hand; and that he had learned, from undoubted authority, that Newton, in the early part of his life, had been led into a search for the Philosopher's Tincture, treated of by Böhme. It would appear that Sir Isaac actually set up furnaces, and spent several months in quest of the tincture.*

* Brewster's *Newton*, vol. ii. p. 371.

NOVEMBER 19.

PATCHING AND PAINTING.

The beauties of the court of Louis-Quinze thought they had made a notable discovery, when they gummed pieces of black taffeta on their cheeks to heighten the brilliancy of their complexions; but the fops of Elizabethan England had long before anticipated them, by decorating their faces with black stars, crescents, and lozenges:

> 'To draw an arrant fop from top to toe,
> Whose very looks at first dash shew him so;
> Give him a mean, proud garb, a dapper grace,
> A pert dull grin, a black patch cross his face.'

And the fashion prevailed through succeeding reigns, for Glapthorne writes in 1640: 'If it be a lover's part you are to act, take a black spot or two; 'twill make your face more amorous, and appear more gracious in your mistress's eyes.'†

The earliest mention of the adoption of patching by the ladies of England, occurs in Bulwer's *Artificial Changeling* (1653). 'Our ladies,' he complains, 'have lately entertained a vain custom of spotting their faces, out of an affectation of a mole, to set off their beauty, such as Venus had; and it

A LADY'S FACE ADORNED WITH PATCHES (TEMP. CHARLES I.) —FROM FAIRHOLT'S 'COSTUME IN ENGLAND.'

is well if one black patch will serve to make their faces remarkable, for some fill their visages full of them, varied into all manner of shapes.' He gives a cut (which we copy) of a lady's face patched

* See notice of 'The Man in the Iron Mask' at page 60 of this volume.

† The fashion was common with the Roman dames in the latter days of the Empire.

in the then fashionable style, of which it might well be sung—

'Her patches are of every cut,
For pimples and for scars;
Here's all the wandering planets' signs,
And some of the fixed stars.'

The coach-and-horses patch was an especial favourite. The author of *England's Vanity* (1653) is goaded thereby into a kind of grim humour: 'Methinks the mourning-coach and horses all in black, and plying on their foreheads, stands ready harnessed to whirl them to Acheron, though I pity poor Charon for the darkness of the night, since the moon on the cheek is all in eclipse, and the poor stars on the temples are clouded in sables, and no comfort left him but the lozenges on the chin, which, if he please, he may pick off for his cold.'

Mr Pepys has duly recorded his wife's first appearance in patches, which seems to have taken place without his concurrence, as three months afterwards he makes an entry in his Diary: 'My wife seemed very pretty to-day, it being the first time I had given her leave to wear a black patch.' And a week or two later, he declares that his wife, with two or three patches, looked far handsomer than the Princess Henrietta. Lady Castlemaine, whose word was law, decreed that patches could not be worn with mourning; but they seem to have been held proper on all other occasions, being worn in the afternoon at the theatre, in the parks in the evening, and in the drawing-room at night. Puritanical satirists, of course, did not leave the fair patchers unmolested. One Smith printed *An Invective against Black Spotted Faces*, in which he warned them—

'Hellgate is open day and night
To such as in black spots delight.
If pride their faces spotted make,
For pride then hell their souls will take.
If folly be the cause of it,
Let simple fools then learn more wit.
Black spots and patches on the face
To sober women bring disgrace.
Lewd harlots by such spots are known,
Let harlots then enjoy their own.'

Fashion, however, as usual, was proof against the assaults of rhyme or reason, and spite of both, the ladies continued to cover their faces with black spots. When party-feeling ran high in the days of Anne, we have it on the *Spectator's* authority, that politically-minded dames used their patches as party symbols: the Whigs patching on the right, and the Tories on the left side of their faces, while those who were neutral, decorated both cheeks. 'The censorious say that the men whose hearts are aimed at, are very often the occasion that one part of the face is thus dishonoured and lies under a kind of disgrace, while the other is so much set-off and adorned by the owner; and that the patches turn to the right or to the left according to the principles of the man who is most in favour. But whatever may be the motives of a few fantastic coquettes, who do not patch for the public good so much as for their own private advantage, it is certain that there are several women of honour who patch out of principle, and with an eye to the interests of their country. Nay, I am informed that some of them adhere so steadfastly to their party, and are so far from sacrificing their zeal for the public to their passion for any particular person, that in a late draught of marriage-articles, a lady has stipulated with her husband that whatever his opinions are, she shall be at liberty to patch on which side she pleases.'

This was written in 1711, and in 1754 the patch was not only still in existence, but threatening to overwhelm the female face altogether. A writer in the *World* for that year says: 'Though I have seen with patience the cap diminishing to the size of a patch, I have not with the same unconcern observed the patch enlarging itself to the size of a cap. It is with great sorrow that I already see it in possession of that beautiful mass of blue which borders upon the eye. Should it increase on the side of that exquisite feature, what an eclipse have we to dread! but surely it is to be hoped the ladies will not give up that place to a plaster, which the brightest jewel in the universe would want lustre to supply. . . . All young ladies, who find it difficult to wean themselves from patches all at once, shall be allowed to wear them in whatever number, size, or figure they please, on such parts of the body as are, or should be, most covered from sight. And any lady who prefers the simplicity of such ornaments to the glare of her jewels, shall, upon disposing of the said jewels for the benefit of the foundling or any other hospital, be permitted to wear as many patches on her face as she has contributed hundreds of pounds to so laudable a benefaction, and so the public be benefited, and patches, though not ornamental, be honourable to see.'

This valuable suggestion was lost upon the sex, for Anstey enumerates

'Velvet patches à la grecque,'

among a fine lady's necessities in 1766; they seem, however, to have fallen from their high estate towards the beginning of the present century, for the books of fashion of that period make no allusion to them whatever, but they did not become utterly extinct even then. A writer in 1826, describing the toilet-table of a Roman lady, says: 'It looks nearly like that of our modern belles, all loaded with jewels, bodkins, false hair, fillets, ribbands, washes, and patchboxes;' and the present generation may possibly witness a revival of the fashion, as it has witnessed the reappearance of the ridiculous, ungraceful, intrusive hoop-petticoat.

Long as patching lasted, it was but a thing of a day compared with the more reprehensible custom of painting—a custom common to all ages, and pretty nearly all countries, since Jezebel 'painted her face and tired her head and looked out at a window,' as the avenging Jehu entered in at the gate. There is evidence of Englishwomen using paint as early as the fourteenth century, and the practice seems to have been common when Shakspeare tried his 'prentice hand on the drama. In his *Love's Labour's Lost*, he makes the witty Biron ingeniously defend his dark lady-love—

'If in black my lady's brow be decked,
It mourns that painting and usurping hair,
Should ravish doters with a false aspect
And therefore is she born to make black fair.
Her favour turns the fashion of the days;
For native blood is counted painting now;
And therefore red that would avoid dispraise,
Paints itself black to imitate her brow.'

And when bitter Philip Stubbs complains that his countrywomen are not contented with a face of heaven's making, but must 'adulterate the Lord's workmanship' with far-fetched, dear-bought liquors, unguents, and cosmetics, the worthy Puritan only echoes Hamlet's reproach: 'I have heard of your paintings too, well enough. God hath given you one face, and you make yourselves another.' When Sir John Harrington declared he would rather salute a lady's glove than her lip or her cheek, he justified his seeming bad taste with the rhymes—

'If with my reason you would be acquainted,
Your gloves perfumed, your lip and cheek are painted.'

Overbury describes a lady of the period as reading her face in the glass every morning, while her maid stood by ready to write 'red' here, and blot out 'pale' there, till art had done its best or worst. No wonder the *Stedfast Shepherd* exclaims:

'Shew me not a painted beauty,
Such impostures I defy!'

Court-ladies, nevertheless, continued to wear artificial red and white, till the court itself was banished from England.

As long as the Commonwealth existed, no respectable woman dared to paint her cheeks; but Charles II. had not been a year at Whitehall, before the practice was revived, to the disgust of Evelyn and the discontent of Pepys. The latter vows he loathes Nelly Gwyn and Mrs Knipp (two of his especial favourites), and hates his relative, pretty Mrs Pierce, for putting red on their faces. Bulwer says: 'Sometimes they think they have too much colour, then they use art to make them pale and fair; now they have too little colour, then Spanish paper, red-leather, or other cosmetical rubrics must be had.' A little further on he accuses the gallants of beginning 'to vie patches and beauty spots, nay, painting, with the tender and fantastical ladies.' Among these fantastical dames, we are sorry to say, Waller's Saccharissa must be numbered. The poet complains—

'Pygmalion's fate reversed is mine;
His marble took both flesh and blood;
All that I worshipped as divine,
That beauty—*now 'tis understood*,
Appears to have no more of life
Than that whereof he framed his wife.'

Saccharissa deserved the reproaches of her lover more than Mary of Modena did the rebukes of her confessor, for she rouged, contrary to her own inclination, merely to please her husband.

Painting flourished under Anne. An unfortunate husband writes to the *Spectator* in 1711, asking, if it be the law that a man marrying a woman, and finding her not to be the woman he intended to marry, can have a separation, and whether his case does not come within the meaning of the statute. 'Not to keep you in suspense,' he says; 'as for my dear, never man was so enamoured as I was of her fair forehead, neck, and arms, as well as the bright jet of her hair; but to my great astonishment, I find they were all the effect of art. Her skin is so tarnished with this practice, that when she first wakes in a morning, she scarce seems young enough to be the mother of her whom I carried to bed the night before. I shall take the liberty to part with her by the first opportunity, unless her father will make her portion suitable to her real, not her assumed countenance.' The *Spectator* enters thereupon into a description of the Picts, as he calls the painted ladies. 'The Picts, though never so beautiful, have dead, uninformed countenances. The muscles of a real face sometimes work with soft passions, sudden surprises, and are flushed with agreeable confusions, according as the object before them, or the ideas presented to them, affect their imaginations. But the Picts behold all things with the same air, whether they are joyful or sad; the same fixed insensibility appears on all occasions. A Pict, though she takes all that pains to invite the approach of lovers, is obliged to keep them at a certain distance; a sigh in a languishing lover, if fetched too near, would dissolve a feature; and a kiss snatched by a forward one, might transform the complexion of the mistress to the admirer. It is hard to speak of these false fair ones without saying something uncomplaisant, but it would only recommend them to consider how they like coming into a room newly painted; they may assure themselves the near approach of a lady who uses this practice is much more offensive.'

If Walpole is to be believed, Lady Mary Wortley Montagu not only used the cheapest white paint she could get, but left it on her skin so long, that it was obliged to be scraped off her. More than one belle of his time killed herself with painting, like beautiful Lady Coventry, whose husband used to chase her round the dinner-table, that he might remove the obnoxious colour with a napkin! Would that we could say that rouge, pearl-powder, and the whole tribe of cosmetics were strangers to the toilet-tables of our own day—a glance at the shop-window of a fashionable perfumer forbids us laying the flattering unction to our soul, that ladies no longer strive to

'With curious arts dim charms revive,
And triumph in the bloom of fifty-five;'

and tempts us, in the words of an old author, to exclaim: 'From beef without mustard, from a servant who overvalues himself, and from a woman who painteth herself, good Lord, deliver us!'

NOVEMBER 20.

St Maxentia, virgin and martyr. St Edmund, king and martyr, 870. St Humbert, bishop of the East Angles, martyr, 9th century. St Bernard, bishop of Hildesheim, confessor, 1021. St Felix of Valois, confessor, 1212.

Born.—Jean Francois de la Harpe, miscellaneous writer (*Lycée ou Cours de la Littérature*); Thomas Chatterton, poet, 1752, *Bristol;* Louis Alexandre Berthier, Prince of Wagram, general of Napoleon, 1753, *Versailles.*

Died.—Sir Christopher Hatton, statesman and courtier of Queen Elizabeth, 1591; Caroline, queen of George II. of England, 1737; Cardinal de Polignac, statesman and man of letters, 1741, *France;* Abraham Tucker, author of *The Light of Nature Pursued*, 1774, *Betchworth Castle, near Dorking;* Roger Payne, celebrated bookbinder, 1797; Mountstuart Elphinstone, Indian diplomatist, &c., 1859, *Hookward Park, Surrey.*

THE CAPE OF GOOD HOPE DOUBLED BY VASCO DA GAMA.

The doubling of the Cape of Good Hope by Vasco da Gama, on the 20th of November 1497, was a notable event in the world's history—not on account of the actual discovery of that cape, which had been made some years earlier, but from the solution of an important question, whether or not India could be reached from Europe by sea. Columbus, we know, sought to reach that far-famed land of gold and diamonds, perfumes and spices, by a western route across the Atlantic. He discovered America instead, and those islands, which we now call the *West Indies*, owe their name to the geographical error which formerly prevailed regarding their position. The Spanish monarchs, who first fostered and then neglected Columbus, countenanced those projects which led to the discovery, conquest, and settlement of various parts of America; but the kings of Portugal were the great promoters of the enterprises by which South Africa and India were laid open to Europeans.

With the assistance of a map of Africa, the reader can easily trace the steps by which these discoveries were effected. In the year 1412, Prince Henry of Portugal, a man gifted far beyond the average intelligence of his age, determined to send out a ship to explore the west coast of Africa, by sailing southward from the Straits of Gibraltar. The first voyage was not attended with much success; but the prince pursued the scheme at intervals for many years. In 1415, one of the exploring vessels thus sent out reached as far as Cape Non. In 1418, John Gonzales Zano and Tristam Vaz Texeira, two gentlemen of Prince Henry's court, made a voyage which enabled them to discover the island of Madeira. After a period of several years, marked by discoveries of a minor character, Gillianez doubled Cape Bojador in 1433—an event which led Pope Martin V., in the plenitude of liberality and inadvertence, to bestow on the king of Portugal *all* that might be afterwards discovered in Africa and India; a papal concession that gave rise to serious international disputes in after-days. In 1441, Antonio Gonzales and Nuno Tristan advanced as far south as Cape Blanco; a progress which was followed up by Vicente de Lagos and Aloisio de Cada Mosto, who, in 1444, advanced to the river Gambia, and by Cada Mosto, who, in 1446, reached Senegal and Cape de Verde. A long interval now ensued, unmarked by any discoveries of importance on the west African coast. In 1470, the Portuguese discoveries recommenced with a voyage by Fernando Gonaz nearly as far south as the equator. Some years after this, the northern limit of the kingdom of Congo was reached; and in 1484 the river of the same name was attained by Diego Cano. Then came discoveries of a far more important description. King John of Portugal, in 1486, sent out two expeditions to discover an eastern route to India, and likewise the whereabouts of the mysterious potentate known as Prester John. The latter eluded all search, but India did not. One of the expeditions proceeded through Egypt and down the Red Sea, and, amid many difficulties, crossed the Arabian Sea or Indian Ocean to Calicut, in India. The other, under Bartholomew Diaz, comprising two caravals and a small store-ship, proceeded southward beyond the latitude of the Cape of Good Hope; and Diaz doubled it, or went round it from west to east without knowing it. He coasted a thousand miles of the African shores never before seen by Europeans; and though difficulties prevented him from crossing over to India, he had the joy of finding, on his return, that he had really reached and passed the cape which forms the southern extremity of Africa. He called it *Cabo Tormentoso*, the Cape of Torments, or Tempests, on account of the rough weather which he experienced there; but the king said: 'No, it shall be the *Cape of Good Hope*, for the discovery is one of great promise.' At last came the expedition of Vasco da Gama, to which all the above were preliminary. King Emanuel of Portugal (King John's son) sent him out in 1497, in command of three vessels, with 160 men. He doubled the cape on 20th November, sailed northward, and discovered Sofala, Mozambique, and Melinda; and then, guided by an Indian pilot, he crossed the ocean from Melinda to Calicut in twenty-three days. All that followed was a mere finishing of the great problem: Vasco da Gama was the first who made the entire voyage from Western Europe to India, so far as records enable us to judge.

ROGER PAYNE.

In the last century, when the pursuit of book-collecting was almost approaching to the nature of a mania, a great want was felt of an artist capable of providing suitable habiliments for the treasures of literature—of constructing caskets worthy of the jewels which they enshrined. When the demand comes to be made, the means of supply are seldom far distant; so, at this eventful crisis, as Dr Dibdin informs us, 'Roger Payne rose like a star, diffusing lustre on all sides, and rejoicing the hearts of all true sons of bibliomania.' The individual who could excite such lively enthusiasm was simply a bookbinder, but of such eminence in his art, as to render all his works exceedingly valuable. For taste, judicious choice of ornament, and soundness of workmanship, Payne was unrivalled in his day, and some maintain that he has never been equalled in subsequent times. But whatever lustre Roger may have diffused, it was by his handiwork alone; in person he was a filthy, ragged, ale-sodden creature, with a foolish, and even fierce indifference to the common decencies of life. His workshop was a deplorable filthy den, unapproachable by his patrons; yet, when he waited on his distinguished employers, he made no alteration in his dress. The Countess of Spencer's French maid fainted when she saw such a specimen of humanity in conversation with her mistress. Payne, like others of this kind of temper, thought he thus shewed his manliness, for a Quixotic spirit of independence was one of his failings, though in speech and writing he ever displayed the greatest possible humility.

In spite of his eccentric habits, Payne might have made a fortune by his business, and ridden in a carriage, as finely decorated as the books he bound. The rock on which he split was the excessively ardent devotion which he cherished for strong ale. In one of his account-books, still preserved, we find one day's expenditure thus recorded: 'For bacon, one halfpenny; for liquor

one shilling;' reminding us of a snatch of a song, in the old comedy of *Gammer Gurton's Needle:*

'When I saw it booted not,
Out of doors, I hied me,
And caught a slip of bacon,
When I thought that no one spied me.
Which I intended not far hence,
Unless my purpose fail,
Shall serve for a shoeing-horn,
To draw on two pots of ale.'

Ale may be said to have been meat, drink, washing, and lodging for the wretched Roger. When remonstrated with by his friends and patrons, and told that sobriety, like honesty, was the best policy, and the only road that led to health and wealth, he would reply by chanting a verse of an old song in praise of his favourite beverage, thus:

'All history gathers
From ancient forefathers,
That ale 's the true liquor of life;
Men lived long in health,
And preserved their wealth,
Whilst barley-broth only was rife.'

Payne could rhyme on his darling theme; his trade-bills are preserved as great curiosities, for they mostly contain unbusiness-like remarks by this eccentric original. On one, delivered for binding a copy of Barry's work on the Wines of the Ancients, he wrote:

'Homer the bard, who sung in highest strains,
Had, festive gift, a goblet for his pains;
Falernian gave Horace, Virgil fire,
And barley-wine my British muse inspire,
Barley-wine first from Egypt's learned shore,
Be this the gift to me from Calvert's store.'

Payne's chef-d'œuvre is a large paper copy of the famous folio *Æschylus*, known to collectors as the Glasgow *Æschylus*, being printed, with the same types as the equally famous Glasgow *Homer*, by Foulis, in that city in 1795. This book, bound for Lord Spencer, contains the original drawings executed by Flaxman, and subsequently engraved and dedicated to the mother of the earl. Dibdin, in the *Ædes Althorpianæ*, describes it as the most splendid and interesting work in Europe. Payne's bill for binding it is *verbatim, literatim,* and *punctuatim,* as follows:

'*Æschylus* Glasguæ. MDCCXCV. Flaxman Illustravit. Bound in very best manner, sewd with strong Silk, every Sheet round every Band, not false Bands; The Back lined with Russia Leather, Cutt Exceeding Large; Finished in the most Magnificent Manner, Em-borderd with ERNAINE expressive of The High Rank of The Noble Patroness of the Designs, The other Parts Finished in the most elegant Taste with small Tool Gold Borders Studded with Gold; and small Tool Plates of the most exact Work, Measured with the Compasses. It takes a great deal of Time, marking out the different Measure-ments; preparing the Tools, and making out New Patterns. The Book finished in compartments with parts of Gold Studded Work. All the Tools except Studded points are obliged to be worked off plain first—and afterwards the Gold laid on and Worked off again. And this Gold Work requires Double Gold, being on Rough Grained Morocco, The Impressions of the Tools must be fitted and covered at the bottom with Gold to prevent flaws and cracks . . . £12 12 0

Fine drawing paper for Inlaying the designs 5*s.* 6*d.* Finest Pickt Lawn paper for Interleaving the Designs 1*s.* 8*d.* One yard and a half of Silk 10*s.* 6*d.* Inlaying the Designs at 8*d.* each 32 Designs £1, 1*s.* 4*d.*, ... 1 19 0

Mr Morton adding borders to the Drawings 1 16 0

£16 7 0'

Another bill, delivered to Dr Mosely, Payne's medical attendant, runs thus:

'*Harmony of the World, by Haydon: London* 1642. Bound in the very best manner; the book sewed in the very best manner with white silk, very strong, and will open easy; very neat and strong boards; fine drawing-paper inside stained to suit the colour of the book. The outsides finished in the *Rosie-Crucian taste*—very correct measured work. The inside finished in the *Druid taste*, with *Acorns* and *S S.* studded with *Stars*, &c., in the most magnificent manner. So neat, strong, and elegant as this book is bound, the binding is well worth 13*s.*, and the inlaying the frontispiece, cleaning and mending, is worth 2*s.* To Dr Mosely's great goodness, I am so much indebted, that my gratitude sets the price for binding, inlaying, cleaning, and mending at only . . £0 10 6'

Payne, for a long time, lived and worked alone in his filthy den; but towards the close of his career, he took in, as a fellow-labourer, an excellent workman named Weir. This man was a regularly 'dubbed ale-knight,' loved barley-wine to the full as much as his partner, and used to sing:

'Ale is not so costly,
Although that the most lie,
Too long by the oil of the barley,
Yet may they part late,
At a reasonable rate,
Though they come in the morning early.
Sack is but single broth,
Ale is meat, drink, and cloth.'

Sobriety may not be always a bond of union, but inebriation is a certain source of discord, and not only words, but frequently blows were exchanged between the two artists. Weir's wife was a famous cleaner of old books, and she went with her husband to Toulouse, where they exercised their skill and art, for several years, in binding and repairing the valuable library of Count Macarthy. Payne ended his wretched existence on the 20th of November 1797, and was soon followed by Weir to the bourne whence no man returneth. After their deaths, Mrs Weir was employed to clean and repair the books, parchments, vellums, &c., in the Register Office at Edinburgh. Lord Frederick Campbell was so much pleased with her good-conduct, and marvellously successful labours in this capacity, that he had her portrait drawn and engraved. Her *chef-d'œuvre* was a copy of the *Faite of Arms and Chivalrye,* printed by Caxton, and bound by Payne. At the Roxburgh sale, this book was brought to the hammer. As a work printed by Caxton, bound by Payne, and cleaned by Weir does not occur every day, the excitement and sensation when Mr Evans put it up was immense; nor was it finally knocked down till the biddings reached the high figure of three hundred and thirty-six pounds.

THE BRITISH NIMROD.

In a letter, dated 20th November 1611, from John Chamberlain, a gentleman and scholar, in the reign of James I., to his friend Sir Dudley Carleton, we find, amid other items of news, the following passage regarding the king and queen: 'The king is hunting at Newmarket, and the queen at Greenwich, practising for a new masque.' This brief sentence exhibits very comprehensively the ruling passions of those two royal personages. Queen Anne was no less fond of court masques and balls, than her consort was of the chase. His flatterers bestowed on him the title of the British Solomon, and extolled him as the most profoundly wise sovereign that had ever sat on a throne, but with much greater appropriateness, as far at least as regarded enthusiasm for, and devotedness to sport, they might have dubbed him the British Nimrod. From his early youth in Scotland, the love of the chase was with him an overpowering and absorbing passion, and he gave so much time to it, that the extent of his studies and his knowledge becomes the more a wonder. It took him much away from state business, and proved a serious annoyance to his counsellors — who would be required to accompany him after the stag for six hours in order to get five minutes' conversation with him; but he was never at a loss for something to say in excuse of this misspending of time. 'My health,' he would say, 'is necessary for the state; the chase is necessary for my health: *ergo*, it is doing the public a service if I hunt.' This logic, from royal lips, was irresistible. The king's sports were chiefly pursued in his own parks; but he was not less willing to let his bugle waken the echoes in those of his chief nobles, who were but too happy to contribute to his gratification that they might establish themselves in his favour.

Now and then, some one of the favoured few permitted to ride with him, has, luckily for us, sought to enliven his letters to absent friends with little sketches of the adventures that fell out on these merry hunting-mornings; and in the State Papers we meet with a series of detached photographs, which, brought together, form a not uninteresting picture. Bravely responding to the sharp sting of 'Ripon rowels,' we seem to witness the pure-blooded iron gray that carried England's fortunes, dash onwards, to be again at the head of the field, which he had momentarily lost. Down the steep, along the valley, through the centre of its shallow river's bed, sweep onwards the gallant cavalcade, scattering the shingle with their horses' hoofs, and throwing up the water in broad glistening sheets. A bugle-note from some distant forester falls on the ear. The game's 'at soil.' Another five minutes' sweep round that elbow of the stream, and there stands our 'hart of grease,' knee-deep in the amber pool, his broad dun haunches firm against the lichen-covered rock; his beamy antlers lowering from side to side, as the clustering hounds struggle and swim around him, straining their blood-shot eyes. The king, pleased, yet flushed and pale with excitement, his hunting-garb soiled with mire and bog-water from spur to bonnet plume, reins up just in time to witness the finish, for Bran and Buscar, Ringwood and 'Jewell' (prime leader of the royal pack), have fastened upon the quarry's throat. And when the deer has been broken up, and whilst the foresters, all unbonneted, wind the customary *mort* upon their bugles, our royal woodsman is plunging his unbooted limbs in the beast's warm, reeking entrails:* an extraordinary panacea, recommended by the court-physician, Sir Theodore Mayerne, as the 'sovereign'st thing on earth,' for those gouty and rheumatic twinges, which too emphatically reminded the Stuart in the autumn of his days, how 'every inordinate cup is unblest and the ingredient thereof a devil,' though the warning produced no practical result.

It is amusing enough to note how cheaply and contemptuously James held the judgment of such as presumed to differ from him in their estimation of his favourite sports and his style of indulging in them. Great was his disgust when he heard that his brother-in-law, Christian, king of Denmark, who visited England in 1606, had spoken slightingly of English hunting in general, saying it was an amusement in which more horses were killed in jest, than in the Low-Country wars were consumed in earnest.† James, after indulging in a few expletives, which it is as well to omit, sarcastically growled forth the reply: 'That he knew not what sport the old Danish gods, Thor and Woden, might partake of in their Scandinavian heaven, but flesh and blood could shew no better than he had done.'

A prince thus enamoured of the pleasures of a sportsman's life, could hardly be expected to endure otherwise than impatiently the sedentary duties of his council-chamber. They were, indeed, utterly distasteful to him; and so, likewise, by association, were those assembled there—Egerton, Buckhurst, Dorset, Naunton, Winwood, Nottingham, &c.; lord-keepers, lord-treasurers, lord-admirals, and lord-chamberlains. Debates about the most signal means of curbing Gondomar's haughty insolence, which but reflected the arrogance of his master, or upon the policy of the 'Spanish match,' were often abruptly terminated by the monarch rising from his chair with a yawning remark, that he had worked long enough; so he was off towards Royston, to have a flight with the new Spanish falcon. 'His majesty,' writes Sir Dudley Carleton, already referred to, having broken up the council, rides straight to Royston, 'with all his hunting-crew, a small train of forty persons;' and again: 'the king is at the inn at Ware, with his hawkes.' Unfortunately, he neglects to satisfy inquisitive posterity who read his pleasant letters more than two centuries afterwards, whether James, and his small hunting-crew of forty persons, passed their nights, one and all, in the great bed which is so inseparably associated in our ideas with that town.

Cecil, styled by his master—who had a characteristic nickname for every one about him—'my little beagle,'‡ because, like that diminutive hound, he was small of stature, and indefatigable in hunting

* James's practice invariably, whenever the deer was run down and killed.

† State Papers, 1606.

‡ There is extant a paper in James's handwriting, indorsed, 'A memorial for Sondaye—being the king's notes of various points of business to be dispatched with his Counsall—the little Beagle—and the Bishoppe of Canterburie.'

down—not hares and conies, but conspiracies—(men say he invented far more than he discovered) was almost the only one of his ministers for whom James felt any personal regard, although he often growled at the king's expensive hobbies, which, he said, 'cost more than would build a fleet.' Once when he lay ill of a fever, and the king was about to quit London on a sporting-tour, he received a visit of condolence from his sovereign, who comforted him with these words: 'that he was very sensible of his sickness, and must have a care of his well-doing; "For," quoth James, as he pressed his hand at parting, "should aught untoward occur to thee, my little beagle, there were no more safe hunting for the king of England."'* The probability of being assassinated in his solitary gallops through the lonely forest, was ever present to the royal mind; and his preservation he attributed wholly to the untiring vigilance of his astute state-secretary. Nor were his fears at all unfounded. Among the State Papers is a declaration of one Captain Newell, that a soldier named FitzJames had said, 'There would soone be a puffe, that may send some high enough and low enough to hell ere longe; and that he would shoote the king in the woods of Royston,' with many similar affidavits.

Our modern English sovereigns are satisfied with the modest parade of a single master-huntsman and one pack of buck-hounds. But the first English king of the Stuart race maintained at least seven establishments at the same number of hunting-lodges—at Royston, Hinchinbrooke, Theobalds, Windsor, Newmarket, Nonsuch, Hampton Court—with hounds for the chase in St John's Wood, and the great woods stretching around Newington. Possibly the reader may be rather astonished to hear of great stags and fallow-deer roaming wild in the two last-named suburbs of London, and that James maintained a large staff of foresters and keepers to preserve the pheasants, hares, conies, &c., swarming in their leafy coverts. The one, he now sees covered with pleasant villas, rising from the midst of grounds adorned with all the cunning of horticulture—elegant retirements for the refined and wealthy; the other, chiefly a squalid, densely-populated quarter—possessed by the sons of poverty and toil, and little suggestive of the accessaries to sylvan sport. Our old friend, Sir Dudley Carleton, viewed them under a different aspect. 'The king,' he says, 'went this evening to lie at Lord Arundel's, in Highgate, that he may be nearer and readier to hunt the stag on the morrow, in St John's Wood.' His son, Charles I., one Monday morning unharboured a buck from a great secluded dingle at Newington, where, twenty-four hours previously, a knot of poor trembling Puritans had sheltered themselves and their worship from the persecution of Archbishop Laud. 'We took,' says that zealous churchman in a letter to Windebank, dated Fulham, June 1632—'another conventicle of separatists in Newington Woods, in the very brake where the king's stag was to be lodged, for his hunting next morning.'

But, *revenons à nos chiens.* James had distinct packs of hounds for the several kinds of chase in which he indulged—stag, red deer, roebuck, fox, wolf, hare, and otter—beside ban, bear, and bull-dogs, with a nobleman for their keeper; and teams of spaniels, indispensable to his superb hawking establishments. These necessarily demanded a large suite of attendants, whose names sound strange in the ears of modern sportsmen. There were masters of the game, sergeants of the stag-hounds, 'lumbermen' of the buckhounds, yeomen and children of the leash, tents and toils (the latter being small pages who held relays of fresh dogs at openings of the forest), keepers of the royal fishing-cormorants, of the elephants, camels, and other 'tame beasts,' located in St James's Park. His majesty, we are told, once experienced some inconvenience at his hunting-seats, from the crowding about him of certain over-zealous country gentlemen, eager to gaze upon their sovereign 'taking saye,' or to assist at the ceremony of cutting up a fat stag.

One day when the court was at Rufford, says one of Lord Stafford's letters, 'the loss of a stag, and the hounds hunting foxes instead of deer—put the king into a marvellous chafe, accompanied by those ordinary symptoms (oaths), better known to you courtiers than to us rural swains. In the height whereof comes a clown galloping in, and staring full in his face. "Mass!" quoth the intruder, "am I come forty miles to see a fellow!" and presently turns about his horse, and away he goes faster than he came; the oddness whereof caused his majesty and all the company to burst out into a vehement laugh, and so the fume was for that time happily dispersed.' Yet was his majesty 'merry against the hair,' however genuine might be the glee of his courtiers. 'He that very day,' says John Chamberlain, 'erected a new office, and made Sir Richard Wigmore "marshal of the field." He is to take order that the king be not attended by any but his own followers; nor interrupted nor hindered in his sports by idle spectators.' During one season, the king hunted in the Fen country, where the deer not unfrequently sought safety in the meres, surrounded by dreary marshes, impassable to sportsmen and dogs. The fenmen, like the Bretons dwelling in the *Landes* of France, traversed their boggy soil on stilts; and a party of them being hired on one occasion to drive out the game, and doing their work off-hand and cleverly, James was so gratified thereat, and so amused by their singular appearance when stalking through the water, like a flight of fishing-cranes, that he signified his gracious pleasure to 'erect a new office.' Accordingly, one day after a jovial hunting-dinner, he chose Sir George Carew as leader of the stiltsmen—who was to be ready with his squad in uniform, whenever the royal hounds hunted that district.

Although passing a considerable portion of his life in the saddle, James was not a very skilful horseman, as is testified by the many and dangerous falls recorded of him, through which he was sometimes at the point of death. Every precaution was therefore resorted to, to lessen or avert the perils incident to the headlong pace which the king fearlessly maintained in order to be well-up at the finish. The high-sheriff of Herts, Thomas Wilson, writing to the constables of Sandon, Ketshall, and other towns of the county, informs them of the 'king's express command that they give notice to occupants of arable land, not to plough their fields in narrow ridges, nor to suffer swine to go abroad unringed, and root holes, &c., to the endangering

* State Papers, James I.

of his majesty and the prince in hawking and hunting; they are also to take down the high bounds between lands which hinder his majesty's ready passage.'*

Although his various kennels contained, at a moderate calculation, little short of two hundred couple of hounds, and the cost of their maintenance and equipages was a serious draught upon his privy purse,† James never deemed himself properly furnished, while a single hound of reputation remained in possession of his subjects. The writer has seen a score or two of docquets, empowering his officers everywhere to seize hounds, beagles, spaniels, and 'mongrels' for his majesty's disport; and his chief huntsman had a similar warrant to take by force every canine celebrity known to exist in three counties. On the occurrence of any of those hunting casualties, where his dogs got maimed by horse-kicks, or being ridden over, &c., he vented his indignation in the most outrageous language; yet there, as indeed in almost every transaction of his life, he shewed himself as placable as he was momentarily irate. There is a pleasant instance of this feeling mentioned in one of the letters already quoted. 'The king,' says the writer, 'is at Tibbalds, and the queen gone or going after him. At their last meeting being at Tibbalds, which was about a fortnight since, the queen, shooting at a deer with her crossbow, mistook her mark, and killed Jewell, the king's most special and principal hound, at which he stormed exceedingly awhile, swearing many and great oaths. None would undertake to break unto him the news, so they were fain to send Archie the fool on that errand. But after he knew who did it, he was soon pacified, and with much kindness wished her not to be troubled with it, for he should love her never the worse, and the next day sent her a *jewell* worth £2000, "as a legacy from his dead dog." Love and kindness increase daily between them, and it is thought they were never on better terms.' Doubtless this opportunity of perpetrating a practical joke upon the name of his 'most principal hound,' went a great way in reconciling the royal punster to his loss and to the queen.

NOVEMBER 21.

The Presentation of the Blessed Virgin Mary. St Gelasius, pope and confessor, 496. St Columban, abbot and confessor, 615.

Born.—Edmund, Lord Lyons, British admiral, 1790, *Christchurch.*

Died.—Marcus Licinius Crassus, Roman triumvir, slain in Mesopotamia, 53 B. C.; Eleanor, queen of Edward I., 1291 A. D.; Sir Thomas Gresham, founder of the London Exchange, 1579, *London;* Thomas Shadwell, poet, 1692, *Chelsea;* Henry Purcell, musician and composer, 1695, *Westminster;* John Hill, noted sarcastic writer and empiric, 1775, *London;* Abraham Newland, celebrated chief cashier of Bank of England, 1807, *Islington;* James Hogg, the Ettrick Shepherd, poet and miscellaneous writer, 1835, *Altrive, Selkirkshire;* Miss Berry, friend of Horace Walpole, 1852, *London;* James Meadows Rendel, engineer, 1856.

SIR THOMAS GRESHAM.

This eminent man was born in London in 1519, and was the second son of Sir Richard Gresham, a member of the Mercers' Company, a prosperous merchant, and lord mayor of London. Although destined for trade, young Gresham received a liberal education, and studied at Cambridge, where he was entered of Gonville College. Subsequently to this, he served an apprenticeship to his brother Sir John Gresham, also a member of the Mercers' Company. A few years after this, we find him employed by the crown in the reign of Edward VI., and afterwards in those of Mary and Elizabeth, in negotiating foreign loans.

Thomas Gresham received the honour of knighthood in 1559. His enjoyment of the queen's confidence, the magnitude of his transactions, and his princely liberality, procured for him the title of the Royal Merchant; and so splendid was his style of living, that he occasionally entertained, at the queen's request, foreign visitors of high rank. Some years previous to his attainment of these honours, he had married Anne, daughter of William Ferneley of West Creting, Suffolk, then the widow of William Read, mercer, of London, by whom he had issue one child, Richard, who died at the age of sixteen in 1564.

On the west side of Bishopsgate Street, in an airy and fashionable quarter, then almost in the fields, Sir Thomas Gresham built for himself a large mansion, which, with its gardens, seems to have extended into Broad Street, and to have occupied what is now the site of the Excise Office. The house was built of brick and timber, and appears to have consisted of a quadrangle enclosing a grass-plot planted with trees; there were two galleries a hundred and forty feet long, and beneath them was an open colonnade. Sir Thomas destined his mansion to become a college, and to form the residence of the seven professors for whose salaries he provided by an endowment. In the Royal Exchange of London, however, he raised a more lasting memorial of his wealth and generosity. In 1566, the site on the north side of Cornhill was bought for £3500, and upon it Sir Thomas Gresham built the Exchange. Its materials, as well as its architect, are stated to have been brought from Flanders, and the *Burse* at Antwerp would seem to have suggested the model. The plan was a quadrangular arcade, with an interior cloister. On the Cornhill front, there was a tower for a bell, which was rung at noon and at six in the evening; and on the north side there was a Corinthian column, which, as well as the tower, was surmounted by a grasshopper—the family crest. On the 23d January 1570, Queen Elizabeth dined at Gresham's house, and visited this new building, which she was pleased to name 'The Royal Exchange.' The shops or stalls in the galleries above the cloister, and surrounding the open court, were, in Gresham's

* State Papers.

† Wages due to the servants of the royal establishment in this and the following reign, were constantly in arrear. Peter Pett, one of the king's master-shipwrights, memorialised the Lords of the Admiralty, 'that unspeakable abuses are committed in Shotover and Stow woods (Surrey), by cutting off tops for browse for the deer as is pretended; and lopping wood fit for knees for great ships, for firewood. The head-keeper, Sir Thomas Tyrrell's answer was: "How should the keepers live, having but £26, 8*s.* a year, and that unpaid these *ten* years?"'—*State Papers.*

time, occupied by milliners and haberdashers (who sold mouse-traps, bird-cages, shoe-horns, lanterns, and other heterogeneous commodities), armourers, apothecaries, booksellers, goldsmiths, and dealers in glass. The open court below must have presented a curious scene when it was filled by the merchants of different nations, in the picturesque dresses of their respective countries.*

On the 4th July 1575, Sir Thomas Gresham made a will whereby he bequeathed legacies to his nieces and other relations, and to several of his 'preantysses.' He also directed black gowns, of 6*s.* 8*d.* the yard, to be given to a hundred poor men and a hundred poor women, to bring him to his grave in his parish church of St Helen's. By another will, made on the following day, he shewed most memorably that he had never forgotten what he learned at the university, and that it was the wish of his heart to extend to others through all time the aids to learning which he had himself enjoyed. Accordingly, he bequeathed one moiety of his interest in the Royal Exchange to the Corporation of London, and the other moiety to the Mercers' Company, and charged the corporation with the nomination and appointment of four persons to lecture in divinity, astronomy, music, and geometry. To each of these lecturers he directed an annual payment to be made of £50, and another yearly payment of £6, 13*s.* each, to eight 'almefolkes,' to be appointed by the corporation, and who should inhabit his almshouses at the back of his mansion. For the prisoners in each of five London prisons, he provided the annual sum of ten pounds. The wardens and commonalty of the Mercers' Company were charged to nominate three persons to read in law, physic, and rhetoric, within Gresham's dwelling-house; and out of the moiety vested in the company, to pay each lecturer £50 a year; to pay to 'Christ Church Hospital lately the Greyfriars,' to St Bartholomew's Hospital, to 'the Spital at Bedlam nere Bishopsgate Street,' to the hospital for the poor in Southwark, and for the prisoners in 'the Countter in the Powlttrye,' £10 each, annually, and to apply £100 a year, for four quarterly 'feasts or dynnars,' for the whole company of the corporation in the Mercers' Hall. The mansion-house itself, with the garden, stables, and appurtenances, were vested in the mayor, commonalty, and citizens, and in the wardens and commonalty of mercers, in trust to allow the lecturers to occupy the same, and there to inhabit and study, and daily to read the several lectures. He appointed his wife executrix, 'in wyche behalffe' (adds the testator) 'I doe holly put my trust in herr, and have no dowght but she will accomplishe the same accordingly, and all other things as shal be requisite or exspedieant for bothe our honnesties, fames, and good repportes in this transsitory world, and to the proffitt of the comen well, and relyffe of the carfull and trewe poore, according to the pleasseur and will of Allmyghttye God, to whom be all honnor and glorye, for ever and ever!' This will was in the handwriting of Sir Thomas Gresham himself, and was proved on the 26th November 1579, five days after the testator's death. He was honourably interred in the church of St Helen's, and there his sculptured altar-tomb remains.

* See notice and engraving of the old Royal Exchange, in vol. i. pp. 152, 153.

In June 1597, the year after the death of Lady Anne, Sir Thomas's widow, the daily lectures commenced according to his will; and thenceforth, for a long course of years, his mansion-house was known as 'Gresham College,' and the chief part of the buildings were appropriated as the lodgings of the various professors. The house escaped the Great Fire of London; and when the Mansion House of London, and Gresham's Exchange, and the houses of great city companies lay in ruins after that event, Gresham College was for a time employed as the Exchange of the merchants, and afforded an asylum to the lord mayor, and the authorities of the Mercers' Company. But Gresham College acquired a more illustrious association, for it may be regarded as the cradle of the Royal Society, which, in the early part of its history, viz. from 1660 to 1710, held its meetings here, when it numbered among its associates the names of Newton, Locke, Petty, Boyle, Hooke, and Evelyn. In 1768, however, a legislative act of Vandalism put an end to the collegiate character of Gresham's foundation, and the mansion and buildings were sold to government, to form a site for the Excise Office. As compensation to the lecturers for the loss of their lodgings, their salaries were raised to £100 a year. The lectures were afterwards read for some time at the Royal Exchange, but a new college was erected and opened on the 2d November 1843.

Gresham's Royal Exchange was destroyed, as we all know, in the Great Fire. It was rebuilt on a larger scale, but similar plan. This building was accidentally destroyed by fire on the 10th January 1838, and replaced by the present stately structure which visibly perpetuates the memory of the renowned Sir Thomas Gresham.

JOHN HILL.

Biography, combining instruction with amusement, not unfrequently exhibits, in one and the same character, examples of excellence to be fearlessly followed, and of weaknesses to be as sedulously shunned. As an instance of the advantages to be achieved by unwearied industry and rigid economy of time, the career of John Hill may be adduced as one well worthy of praise and emulation; while it also warningly shews the baleful and inevitable results of an unbridled vanity acting on a weak, malevolent, and contentious disposition. If Ishmael has his hand against every man, he must expect, as a natural consequence, that every man's hand will be against him. One of the various nicknames given to Hill by his contemporaries, was Dr Atall, sufficiently illustrative of his character. For players, poets, philosophers, physicians, antiquaries, critics, commentators, free-thinkers, and divines, were alternately selected by him as objects of satire or invective. And thus it happens, that while Hill's voluminous, and in many instances, useful works, are almost forgotten, and his valuable services to the then infant science of botany scarcely recognised at the present day, his name is principally preserved in the countless satirical squibs and epigrams launched at him by those whom he had wantonly provoked and insulted.

Hill was the son of a worthy Lincolnshire clergyman, and having been educated as an apothecary, he opened a shop in St Martin's Lane, London. Marrying before he had established a

business, the *res angusta domi* obliged him to look for other means of support. The fame of Linnæus, and the novelty of his sexual system of botany, then producing a great sensation throughout Europe, Hill determined to turn his attention to that science, for which he undoubtedly had a strong natural taste. Patronised by the Duke of Richmond and Lord Petre, he was employed by them to arrange their gardens and collections of dried plants. He then conceived a scheme of travelling over England to collect rare plants, a select number of which, prepared in a peculiar manner, and accompanied by descriptive letterpress, he proposed to publish by subscription. This plan failing, he tried the stage as an actor, but without success, failing even in the appropriate character of the half-starved apothecary in *Romeo and Juliet*. Relinquishing the sock and buskin, he returned to the mortar and pestle, and while struggling for a living in his original profession, he turned his attention to literature. His first work was a translation of Theophrastus *On Gems*, which, being well and carefully executed, established his reputation as a scholar, and procured him fame, friends, and money. Having at last found the tide that leads to fortune, Hill was not slow to take advantage of it. He wrote travels, novels, plays; he compiled and translated with marvellous activity and industry: works on botany, natural history, and gardening—in short, on every popular subject—flowed, as it were, from his ready pen. From these sources he derived for several years an annual income of £1500.

Obtaining a diploma in medicine from the College of St Andrews, Hill, with this passport to society, set up his carriage, and entered on the gay career of a man of fashion. He commenced the *British Magazine*, and, in addition to his other labours, published a daily essay in the *Advertiser*, under the title of the 'Inspector.' Notwithstanding all this employment, he combined business with pleasure, by being a constant attendant at all places of public amusement, and thus procured the scandalous anecdotes which he so freely dispensed in his periodical writings. About this time he came into collision with Garrick, Hill having composed a farce called the *Route*, and presented it to a charitable institution as 'a piece written by a person of quality.' The play was acted under Garrick's management, for the benefit of the charity, but received little favour; and, on the second night of its representation, it was hissed and hooted through every scene. Wild with rage and disappointment, the doctor disgorged his spite in venomous paragraphs against the manager. To which Garrick simply replied:

'For physic and farces,
His equal there scarce is;
His farces are physic,
His physic a farce is!'

Hill returned to the attack with a paper, entitled *A Petition from the Letters I and U to David Garrick*. In this, these letters are made to complain bitterly of the grievances inflicted on them by the actor, through his inveterate habit of banishing them from their proper places, as in the words virtue, and ungrateful, which he pronounced *vurtie* and *ingratefil*. Garrick again replied with an epigram, in which he had decidedly the best of it:

'If 'tis true, as you say, that I 've injured a letter,
I 'll change my note soon, and I hope for the better.
May the right use of letters, as well as of men,
Hereafter be fixed by the tongue and the pen;
Most devoutly I wish, that they both have their due,
And that *I* may be never mistaken for *U*.'

When all London was gulled by the story of Elizabeth Canning, Hill's natural shrewdness saw through the imposture. In a pamphlet he successfully opposed the current of popular opinion, and was applauded by the discerning few, who had escaped that strange infatuation. One of his opponents in that and other controversies, was Henry Fielding, the goodness of whose heart made him, in this instance, the dupe of female artifice and cunning.

When writing under the character of the 'Inspector,' Hill adopted a whimsically dishonest stratagem, to lash, without manifest inconsistency, some persons whom a little before he had eulogised. He published anonymously the first number of a periodical, entitled the *Impertinent*, in which he violently attacked the poet Smart; but took care, in the next 'Inspector' to defend him with faint praise, and rebuke the cruel treatment of him by the *Impertinent*. When Smart discovered this treacherous trick, he published a keen satire, entitled *The Hilliad*, in which he represents as follows a gipsy fortune-teller inducing Hill to abandon the pestle for the pen:

'In these three lines athwart thy palm I see
Either a tripod or a triple-tree,
For oh! I ken by mysteries profound,
Too light to sink, thou never canst be drowned—
Whate'er thy end, the Fates are now at strife,
Yet strange variety shall check thy life—
Thou grand dictator of each public show,
Wit, moralist, quack, harlequin, and beau,
Survey man's vice, self-praised and self-preferred,
And be th' INSPECTOR of the infected herd;
By any means aspire at any ends,
Baseness exalts, and cowardice defends,
The chequered world's before thee—go—farewell,
Beware of Irishmen—and learn to spell.'

The allusion in the last line refers to an Irish gentleman, named Brown, who, having been libelled in the 'Inspector,' retorted by publicly beating the doctor in the rotunda at Ranelagh Gardens (see cut on the following page). Hill received the buffeting with humility, but to shew that such meekness of conduct was attributable rather to stoicism than to a want of personal courage, he immediately afterwards published an account of himself having once given a beating to a person, whom he named Mario. A wag, doubting this story, wrote—

'To beat one man, great Hill was fated.'
'What man?' 'A man whom he created!'

Indeed, Hill did not claim for himself a high standard of truthfulness; he sometimes acknowledged in the 'Inspector' that he had told falsehoods, thus giving occasion for another epigram:

'What Hill one day says, he, the next, does deny,
And candidly tells us it is all a lie:
Dear doctor, this candour from you is not wanted;
For why should you own it? 'tis taken for granted.'

Hill, however, considered himself a moralist, a friend and supporter of piety and religion. He

published a ponderous guinea quarto on *God and Nature*, written professedly against the philosophy of Lord Bolingbroke; and every Saturday's 'Inspector' was devoted to what he termed 'a lay-sermon,' written somewhat in the Orator-Henley style, and affording subject-matter for the following epigrammatic parody:

'Three great wise men, in the same era born,
Britannia's happy island did adorn:
Henley in care of souls, displayed his skill,
Rock shone in physic, and in both John Hill;
The force of nature could no further go,
To make a third, she joined the former two.'

Rock was a notorious quack of the period. Being one day in a coffee-house on Ludgate Hill, a gentleman expressed his surprise that a certain physician of great abilities had but little practice, while such a fellow as Rock was making a fortune. 'Oh!' said the quack, 'I am Rock, and I shall soon explain the matter to you. How many wise men, think you, are in the multitude that pass along this street?' 'About one in twenty,' replied the other. 'Well, then,' said Rock, 'the nineteen come to me when they are sick, and the physician is welcome to the twentieth.'

And to the complexion of quackery did Hill come at last. His mind, from over-production, became sterile; his slovenliness of compilation, and disregard for truth, sank his literary reputation as fast as it had risen. When his works found no purchasers, the publishers ceased to be his bankers. He had lived in good style on the malice and fear of the community, he now found

ASSAULT ON DR HILL AT RANELAGH—FROM A CONTEMPORARY PRINT.

resources in its credulity. He brought out certain tinctures and essences of simple plants, sage, valerian, *bardana*, or water-dock, asserting that they were infallible panaceas for all the ills that flesh is heir to. Their sale was rapid and extensive, and whatever virtues they may have possessed, no one can deny that they were peculiarly beneficial to their author, enabling him to have a town-house in St James' Street, a country-house and garden at Bayswater, and a carriage to ride in from one to the other. The quivers of the epigram-writers were once more filled by these medicines, and thus some of their arrows flew—

'Thou essence of dock, of valerian, and sage,
At once the disgrace and the pest of this age;
The worst that we wish thee, for all of thy crimes,
Is to take thy own physic, and read thy own rhymes.'

To this another wit added:

'The wish must be in form reversed,
To suit the doctor's crimes,
For, if he takes his physic first,
He'll never read his rhymes.'

Hill, or some one in his name, replied:

'Ye desperate junto, ye great, or ye small,
Who combat dukes, doctors, the devil, and all!
Whether gentlemen-scribblers or poets in jail,
Your impertinent wishes shall never prevail;
I'll take neither sage, dock, nor balsam of honey:
Do you take the physic, and I'll take the money.'

The latter end of Hill's life was better than the beginning. Though his first wife was the daughter of a domestic servant, he succeeded in obtaining, as a second helpmate, a sister of Lord Ranelagh. At the parties of the Duchess of Northumberland, he was a frequent guest, and he acquired the patronage of the Earl of Bute. His last and most valuable work, a monument of industry and enterprise, was

a complete *Vegetable System*, in twenty-four folio volumes, illustrated by 1600 copper-plates, representing 26,000 plants, all drawn from nature. This work was in every respect far in advance of its period, and entailed a heavy pecuniary loss on its author. A copy of it, however, which he presented to the king of Sweden, was rewarded with the order of the Polar Star, and from thenceforth the quondam apothecary styled himself Sir John Hill. Lord Bute appointed him to the directorship of the royal gardens, with a handsome salary, but it does not seem that the grant was ever confirmed. In spite of the efficacy of his Tincture of Bardana, which Hill warranted as a specific for gout, he died of that disease on the 21st of November 1775. The following is the last fling which the epigrammatists had at him:

'Poor Doctor Hill is dead! Good lack!'
'Of what disorder?' 'An attack
Of gout.' 'Indeed! I thought that he
Had found a wondrous remedy.'
'Why, so he had, and when he tried,
He found it true—the doctor died!'

MARY BERRY.

This lady, who died in Curzon Street, Mayfair, on 21st November 1852, at the age of ninety, formed one of the last remaining links which connected the life and characters of the latter half of the last century with the present. Both she and her younger sister Agnes enjoyed the acquaintance and friendship of the celebrated Horace Walpole, Earl of Orford, who, after succeeding to that title, made a proffer, though an unaccepted one, of his hand and coronet to Mary Berry. These two ladies were the daughters of Mr Robert Berry, a gentleman of Yorkshire origin, but resident in South Audley Street, London. Walpole first met them, it is said, at Lord Strafford's, at Wentworth Castle, in Yorkshire, and the friendship thus formed was a lasting one. The Misses Berry afterwards took up their abode at Twickenham, in the immediate neighbourhood of Strawberry Hill, with whose master a constant interchange of visits and other friendly offices was maintained. Horace used to call them his two wives, corresponded frequently with them, told them many stories of his early life, and what he had seen and heard, and was induced by these friends, who used to take notes of his communications, to give to the world his *Reminiscences of the Courts of George I. and II.*

On Walpole's death, the Misses Berry and their father were left his literary executors, with the charge of collecting and publishing his writings. This task was accomplished by Mr Berry, under whose superintendence an edition of the works of Lord Orford was published in five volumes quarto. He died a very old man at Genoa, in 1817, and his daughters, for nearly forty years afterwards, continued to assemble around them all the literary and fashionable celebrities of London. Agnes, the younger Miss Berry, predeceased her sister by about a year and a half.

Miss Berry was an authoress, and published a collection of Miscellanies, in two volumes, in 1844. She also edited sixty Letters, addressed to herself and sister by Horace Walpole; and came chivalrously forward to vindicate his character against the sarcasm and aspersions of Lord Macaulay in the *Edinburgh Review*.

NOVEMBER 22.

Saints Philemon and Appia. St Cecilia, or Cecily, virgin and martyr, 230. St Theodorus the Studite, abbot, 9th century.

ST CECILIA.

This saint was a Roman lady of good family, and having been educated as a Christian, was desirous of devoting herself to heaven by a life of celibacy. Compelled, however, by her parents to wed a young nobleman named Valerian, she succeeded in converting both her husband and his brother to Christianity, and afterwards shared with them the honours of martyrdom. Accounts differ as to the death which she suffered, some asserting that she was boiled in a caldron, and others that she was left for days to expire gradually after being half decapitated. The legend states that the executioner, after striking one blow, found himself unable to complete his task.

St Cecilia is generally regarded as the patroness of church-music, and, indeed, of music generally; but the reason for her holding this office is not very satisfactorily explained. Butler says that it was from her assiduity in singing the divine praises, the effect of which she often heightened by the aid of an instrument. She is generally represented singing, and playing on some musical instrument, or listening to the performance of an angelic visitant. This last circumstance is derived from an ancient legend, which relates that an angel was so enraptured with her harmonious strains as to quit the abodes of bliss to visit the saint. Dryden thus alludes to the incident in his *Ode for St Cecilia's Day:*

'At last divine Cecilia came,
Inventress of the vocal frame;
The sweet enthusiast from her sacred store,
Enlarg'd the former narrow bounds,
And added length to solemn sounds,
With nature's mother-wit, and arts unknown before.
Let old Timotheus yield the prize,
Or both divide the crown;
He rais'd a mortal to the skies;
She drew an angel down.'

About the end of the seventeenth century, the practice was introduced of having concerts on St Cecilia's Day, the 22d of November. These were highly fashionable for a time; the words of the pieces performed being frequently from the pen of writers like Dryden, Addison, and Pope, and the music composed by artists like Purcell and Blow.

Born.—Professor Dugald Stewart, celebrated metaphysician, 1753, *Edinburgh.*

Died.—Pope John XXIII., 1419, *Florence;* Robert, Lord Clive, founder of the British empire in India, 1774, *Moreton Say, near Drayton;* John Stackhouse, botanist, 1819, *Bath;* François Le Vaillant, African traveller, 1824, *La Neve, near Lauzun;* Sir Henry Havelock, Indian general, 1857, *Lucknow;* Professor George Wilson, author of various scientific works, 1859, *Edinburgh;* Father Lacordaire, eminent French preacher, 1861, *Loreze.*

FATHER LACORDAIRE.

The Frenchman has an inborn aptitude for oratory, and seldom, for any period, are the pulpit and tribune of his nation deprived of the illumination of genius. Among the greatest of modern French orators was the Abbé Lacordaire. Paris is not a city in which priests are popular, but for years, the delivery of a discourse by him had only to be announced to assemble a crowded audience, waiting with breathless interest for the words from his mouth.

He was the son of a country physician, and was born in 1802. Educated for the law, he went to Paris in 1822, for the purpose of being called to the bar. He evinced remarkable abilities, and his success as an advocate was regarded as certain. Professing deistical opinions, he suddenly, to the amazement of his acquaintance, proclaimed his intention of becoming a priest, and straightway, on his twenty-third birthday, he entered the ecclesiastical seminary of St Sulpice. In after-life, he frequently repeated that neither man nor book was the instrument of his conversion, but that a sudden and secret stroke of grace opened his eyes to the nothingness of irreligion. In a single day he became a believer; and once a believer, he wished to become a priest.

For some years, life passed smoothly with Lacordaire in the fulfilment of a variety of ecclesiastical duties. The only singularity about him was his political liberalism, which he retained as firmly as in the days when a student and barrister. This liberalism drew him into association with Lamennais and Montalembert, and together they started a newspaper, *L'Avenir*, in 1830. Its device was, 'God and Liberty;' that is to say, the pope and the people, ultramontanism in religion and radicalism in politics. *L'Avenir* quickly brought its conductors into a blaze of notoriety, into lawsuits with the government, and into controversy with bishops; but what they gained in fame they lost in money, and they were compelled to stop their newspaper. Prompted by Lamennais, they carried their ecclesiastical controversy to Rome, and insisted on Gregory XVI. pronouncing a decision. To their intense chagrin, the pope issued an encyclical letter condemning the politics of *L'Avenir*. Lacordaire and Montalembert bowed to the papal authority, but Lamennais, after a fierce struggle with himself, passed into open rebellion, in which he continued to the end of his life.

At this time, Lacordaire made the acquaintance of Madame Swetchine, a Russian lady of rank, who, having become a Roman Catholic, resided in Paris, where her house, for more than forty years, was the resort of the most brilliant society of 'the faithful.' To Lacordaire she became more than a mother. 'Her soul,' he wrote, 'was to mine what the shore is to the plank shattered by the waves; and I still remember, after twenty-five years, all the light and strength she afforded to a young man unknown to her. Her counsel preserved me alike from despondency and the opposite extreme.' As long as her health permitted, she was always among Lacordaire's hearers. 'Should you like to see the preacher's mother?' was asked of two persons who were listening to him in Notre-Dame. 'Why, she died ten years ago!' was the answer. 'No, there she is, look at her;' and the speaker pointed to Madame Swetchine, hidden behind a pillar, whose constant attention to, and manifest happiness in, the discourse of the preacher, gave rise to this very natural mistake.

Lacordaire made his first essay as a preacher in 1833, and failed completely. Montalembert and others who heard him unanimously agreed, 'He is a talented man, but will never make a preacher,' and Lacordaire was of the same opinion. Nevertheless, he tried again in the following year, and was instantly successful. By some means his tongue had got loosed, and passion, tenderness, irony, and wit burst freely from his lips. One day, for the benefit of certain scoffers, he exclaimed: 'Gentlemen, God has made you witty, very witty indeed, to shew you how little he cares for the wit of man.' His fame grew daily. The archbishop of Paris called him to mount the pulpit of Notre-Dame; and on one occasion, rising from his throne, in the presence of an immense audience, he greeted the orator with the title of 'our new prophet.'

From this excess of glory he retired for seclusion, for two or three years, to Rome, and, whilst wandering and praying in the basilicas of the Eternal City, he became convinced that it was his mission to revive the order of Dominican friars in France. Having secured the requisite authority, he reappeared in Notre-Dame, clothed in the white woollen habit of the order, with shaven head and black scapular. The novelty lent fresh piquancy to his oratory, and Lacordaire, in Notre-Dame, became one of the lions of Paris, whom everybody, who could possibly do so, felt bound to see and hear. In his zeal, he assumed the name of Dominic, wrote a life of the saint, and defended the Inquisition. At the same time he contended, with all the vigour of a reformer, for freedom of opinion. 'Public conscience,' he said in one of his sermons, 'will always repel the man who asks for exclusive liberty, or forgets the rights of others; for exclusive liberty is but a privilege, and a liberty forgetful of others' rights is nothing better than treason. Yes, Catholics, know this well: if you want liberty for yourselves, you must will it for all men under heaven. If you ask it for yourselves simply, it will never be granted; give it where you are masters, in order that it may be given you wherever you are slaves.' Strange words these, the world thought, from a Dominican monk! Among his last public sayings uttered in Paris was: 'I hope to live and die a penitent Catholic, and an *impenitent liberal*.'

Such being Lacordaire's sentiments, it was nowise surprising that, in the Revolution of 1848, he was selected as member of the Constituent Assembly for the department of Bouches du Rhône. He entered that tumultuous parliament in the garb of St Dominic, and took his seat near the summit of the Mountain, not far from the side of his long-lost friend, Lamennais. His appearance attracted the greatest curiosity, but he was out of his proper sphere. He made several speeches, but they fell flat on his audience, and he had the good sense to perceive his error, and retire after a few weeks' trial. Louis Napoleon's *coup-d'état* was felt by him and his friends as a severe discomfiture, and though his liberty as a preacher was not directly interfered with, he found that it was limited, and that henceforward he must measure and consider every phrase. It was not, therefore, without a sense of

relief, that in 1854 he was appointed to the direction of the free college of Soreze, and preached his last sermon in Paris. Once only was he recalled from his provincial solitude. In 1860, he was elected to fill the chair in the French Academy, left vacant by M. de Tocqueville. He was introduced by M. Guizot, and his installation had all the significance of a political demonstration. Montalembert prayed him to remain in Paris for a day or two, but after some little hesitation he answered: 'No, I cannot; it would perhaps prevent some of my children, who are preparing for the coming festival, from going to confession. No one can say what the loss of one communion may be in the life of a Christian.' With such zeal did he give himself to his new duties, that Sorèze, under his care, took rank as the first school in the south of France.

His observance of monastic rule was rigorous in the extreme, and his health suffered by his austerities. 'The great men of antiquity were poor,' he used to say. 'Luxury is the rock on which every one splits to-day. People no longer know how to live on little. A great heart in a little house is of all things here below that which has ever touched me most.' Despite the simplicity and poverty of his habits, there was in him a passion for precision, neatness, and good order, which altogether redeemed them from meanness. During the last two years of his life, he was the subject of a cruel disease, against the influence of which he battled resolutely. Finally, he had to give up, saying: 'This is the first time that my body has withstood my will.' He died on the 22d of November 1861; his last words were: 'My God! open to me—open to me!'

To Protestants and Catholics, Lacordaire was a paradox, and in this lay one reason for the interest he excited. The faithful child of Rome and the democrat were hard to reconcile, yet in him they seemed to be united in all sincerity. In theology, he was no innovator; whatever might be his vehemence, he never lapsed from orthodoxy. He was a sentimentalist, not a philosopher; a patriot, not a statesman. It was his fervour, his fluency, his brilliancy, not depth nor originality of idea, which drew crowds to hear him. He was, what is a very rare thing, a real extempore speaker. He had a wonderful power of improvisation. He prepared his discourses by short but intense labour, and made no notes. Reporters took down what he said, and, with slight revision, he sent their copy to the press. Readers usually feel them tame and abounding in platitudes, but no orator can be judged truly in print. Like an actor, he must be seen to be appreciated. One day, in the pulpit, Lacordaire said: 'By the grace of God, I have a horror for what is commonplace;' whereon, observes his friend and admirer Montalembert, 'He was never more mistaken in his life;' but it demands no ordinary genius to bewitch the world with commonplace.

ROBIN HOOD.

Much controversy has prevailed with respect to this celebrated outlaw, and the difficulty, or rather impossibility, of now obtaining any information regarding his history that can be relied on as authentic, will, in all likelihood, render him ever a subject for debate and discussion among antiquaries. The utmost attainment that can reasonably be expected in such a matter, is the being enabled, through a judicious consideration and sifting of collateral evidence, to draw some credible inference, or establish some well-grounded probability.

The commonly-received belief regarding Robin Hood is, that he was the captain of a band of robbers or outlaws, who inhabited the forest of Sherwood, in Nottinghamshire, and also the woodlands of Barnsdale, in the adjoining West Riding of Yorkshire. They supported themselves by levying toll on wealthy travellers, more especially ecclesiastics, and also by hunting the deer and wild animals of the forest. Great generosity is ascribed to Robin, who is represented as preying only on the wealthy and avaricious, whilst he carefully eschewed all attacks on poor people or women, and was ever ready to succour depressed innocence and worth by his purse as well as his sword and bow. He is recorded to have cherished a special enmity towards the sheriff of Nottinghamshire, whom, on one occasion, under the guise of a butcher, and pretending that he had some horned cattle to dispose of, he entrapped into the forest of Sherwood, and only released on the payment of a swinging ransom. Bishops and rich ecclesiastics were the objects of his especial dislike and exactions, but he was, nevertheless, a religiously-disposed man, and never failed regularly to hear mass or perform his orisons. He even retained in his band a domestic chaplain, who has descended to posterity by the appellation of Friar Tuck, and been immortalised in *Ivanhoe*. The lieutenant of this renowned captain was a tall stalwart fellow called John Little, but whose name, for the sake of the ludicrous contrast it presented, was transposed into Little John. Other noted members of the band were William Scadlock, George-a-Green, and Much the miller's son. A mistress has also been assigned to Robin Hood, under the epithet of 'Maid Marian,' who followed him to the greenwood, and shared his dangers and toils.

The same popular accounts represent this gay outlaw as living in the period extending from the reign of Henry II., through those of Richard I. and John, to that of Henry III. We are informed that he was born at Locksley, in the county of Nottingham, about 1160 A.D.; that from having dissipated his inheritance through carelessness and extravagance, he was induced to adopt the life of an outlaw in the forests; and that after having, with the band which he had collected around him, successfully conducted his predatory operations for a long course of years, and set all law and magistrates at defiance, he at last, in his eighty-seventh year, felt the infirmities of age coming upon him, and was induced to enter the convent of Kirklees, in Yorkshire, to procure medical assistance. The prioress, who is described as a relation—by some, an aunt—of his own, was led, either through personal enmity or the instigation of another, to cause the death of Robin Hood, an object which she accomplished by opening a vein or artery, and allowing him to bleed to death. The date assigned to this event is November 1247. It is stated that when Robin perceived the treachery which had been practised on him, he summoned all his remaining strength, and blew a loud blast on his bugle-horn. The well-known call reached the ears of his trusty lieutenant, Little John, who forthwith hastened from the adjoining forest, and arriving at the

priory, forced his way into the chamber where his dying chieftain lay. The latter, according to the story in the ballad, makes the following request:

'Give me my bent bow in my hand,
And an arrow I 'll let free,
And where that arrow is taken up,
There let my grave digged be.'

The bow being then put into his hands by Little John, Robin discharged it through the open casement, and the arrow alighted on a spot where, according to popular tradition, he was shortly afterwards buried. A stone, carved with a florid cross and an obliterated inscription, marks the place of sepulture, and the whole has been in recent times surrounded by an enclosure, as shewn in the accompanying engraving. This probably genuine memorial of Robin Hood, is situated on the extreme edge of Kirklees Park, not far from Huddersfield. The site which it occupies is bold and picturesque, commanding an extensive view of what was formerly forest-land, and which still displays clumps of gnarled oaks, scattered up and down, mingled with furze and scrub.

ROBIN HOOD'S GRAVE.

Finally, we are informed by several old ballads, and also by some writers of a later age, that this prince of robbers was no other than the Earl of Huntingdon, who, from misfortunes or his own mismanagement, had been compelled to adopt a predatory life.

The above statements, with many additions and variations by way of embellishment, are all set forth in the numerous ballads which profess to record the exploits of Robin Hood and his 'merry men.' A collection of these, under the title of *A Lytell Geste* [history] *of Robyn Hood*, from a manuscript apparently of the latter end of the fourteenth century, was printed by Winkyn de Worde, one of the earliest English printers, about 1495. It forms the most satisfactory and reliable evidence that we possess of the life and deeds of the sylvan hero, and comprises one or two circumstances which, as we shall shortly see, go far to substantiate the fact of the actual existence of Robin Hood.

The *Lytell Geste* is divided into eight parts or *fyttes*, as they are called; the seventh of which, and part of the eighth, narrate an adventure of Robin with 'King Edward,' who, at the end of the sixth fytte, is styled 'Edwarde our comly kynge.' The only monarch of that name whom we can consistently believe to be here referred to, is the light-hearted and unfortunate Edward II., who is described as having immediately before made a progress through Lancashire. His father, Edward I., never was in Lancashire after he became king; and Edward III., if he was ever in that county at all, was certainly never there during the earlier years of his reign, whilst, as regards the subsequent years of his government, we have indisputable evidence that Robin Hood had by that time become a historical personage, or at all events an existence of the past. But with respect to Edward II., contemporary proof is furnished that in the autumn of the year 1323, and not long after the defeat and death of his great enemy and kinsman, the Earl of Lancaster, he made a progress through the counties of Lancashire, Yorkshire, and Nottingham. Here a coincidence occurs between a historical fact and the incidents related in the ballad.

According to these last, King Edward having arrived at Nottingham, resolves forthwith on the extermination of Robin Hood and his band, to whose depredations he imputes the great diminution that had lately taken place in the numbers of the deer in the royal forests. A forester undertakes to guide him to the haunts of the outlaw, and Edward and his train, disguised like monks—certainly rather an unkingly masquerade; but Edward II. had little kingliness about him—set out for the place, and on the way thither are suddenly encountered by Robin and his men, to whom the pseudo-abbot represents that he has only with him £40. The half of this he is obliged to give up, but is courteously permitted to retain the remaining moiety. After transacting this little matter of business, Robin invites the abbot and his party to dine with him—an invitation doubtless not to be resisted in the circumstances. After dinner, a shooting-match commences, and in course of this the real rank of the pretended abbot is discovered, and Robin, falling down on his knees, craves

forgiveness for himself and retainers. The king grants it, but on condition that the outlaw chief shall quit his present mode of life, and accompany his sovereign to court, where he is promised a place in the royal household. To this he readily consents, and accompanies the king first to Nottingham, and afterwards to London, where, for nearly a year, he 'dwelled in the kynge's courte.'

Now it is at least a singular coincidence, that in the records of the household expenses of Edward II., preserved in Exchequer, the name of 'Robyn Hode' occurs several times as a 'vadlet' or porter of the chamber in the period from the 25th of April to the 22d of November 1324, but no mention of him occurs either previous to the former or subsequent to the latter of these dates. This was the very time during which, according to the ballad, Robin Hood lived at court. The following is the entry on the 22d of November above referred to, which, on the assumption of the ballad-hero and the person there named being the same individual, may be regarded as the latest historical record which we have of that personage. 'Robyn Hod jadys un des porteurs poar cas qil ne poait pluis travailler, de donn par comandement—v s. [To Robin Hood, by command, owing to his being unable any longer to work, the sum of 5*s*.] It is unnecessary to remind the reader, that such a sum represented in those days a much greater value than at the present time.

In the ballad under notice, we are informed that Robert, after having remained in the king's service for about a twelvemonth, became wearied of the court, and longed for the free and joyous life of Sherwood Forest. The king consents to let him go, but only for a short period—a condition which Robin thoroughly disregards after regaining his liberty. Rapturously welcomed by his old associates, and reinstated as their leader, he continues for twenty-two years to lead the life of a robber-chief, and dies at last through treachery in Kirklees Priory, as already mentioned.

For the coincidences above related, between historical facts and the poetical narrative detailed by the compiler of the *Lytell Geste*, we are indebted to the researches of the late Rev. Joseph Hunter, who, in an ingenious tract, entitled *The Ballad-Hero, Robin Hood*, has endeavoured, and we think not unsuccessfully, to vindicate the real existence of this renowned outlaw against the arguments of those who would represent him as a mere poetical abstraction or myth. To the latter view of his character, we shall now advert.

There is no tendency which has been more characteristic of the present century, than that of investigating the foundations by which historical records are supported, sifting the evidence adduced, and endeavouring by an analysis of the materials in the crucible of research, to eliminate whatever has been intermingled of fable or romance. Ruthless and unsparing has been the process, sweeping and stupendous, in many instances, the demolition thereby occasioned, but the results have in the main been beneficial, and the cause of truth, as well as the progress of human knowledge, been signally benefited. In some instances, however, it cannot be denied that this sceptical and overturning tendency has been carried to an extreme. With a rashness, equivalent to the unhesitating faith which made our fathers accept as undoubted fact whatever they found recorded in ancient annals, our critical archæologists of the present day seem not unfrequently to ignore, superciliously, all popular traditions or belief, and transfer, indiscriminately, to the region of myth or fable, the individuals whose actions form the subject of these popular histories. Such a fate has, with other heroes of folk-lore, been shared by the chieftain of Sherwood Forest. It has been maintained by many distinguished antiquaries, including Mr T. Wright, in our own country, and Grimm in Germany, that Robin Hood is a mere fanciful abstraction, a poetical myth, or 'one amongst the personages of the early mythology of the Teutonic people.' It has been gravely conjectured that his name, 'Robin Hood,' is a corruption for 'Robin of the Wood,' and that he is to be only regarded as a mythical embodiment of the spirit of unrestrained freedom and sylvan sport. The principal grounds on which this argument is maintained, are the absence of any direct historical evidence regarding him; the numbers of places in widely-separated parts of the country, which are associated with him and bear his name; and a supposed resemblance between many of the circumstances related of him, and those recorded of various legendary personages throughout Europe.

Where parties have been led to form such views as those above indicated, it requires irrefragable evidence to convert them to an opposite way of thinking. And, doubtless, as far as regards Robin Hood, it is almost hopeless to expect that any more light than what we have hitherto obtained, will be procured to elucidate his history. But the whole weight of inferential evidence seems to be on the side of those who would retain the notion of his having been a real personage. There is nothing, as Mr Hunter remarks, supernatural in the attributes or incidents recorded of him. These are nothing more than what can be supposed to have belonged, or happened to an English yeoman, skilled in all manly sports, more especially in the use of the bow, and naturally endowed with a generous and genial disposition. Much embellishment and romantic fiction has, doubtless, been superadded to his history; but that the leading features of it, as popularly detailed, rest at all events on a basis of fact, is, in our opinion, satisfactorily established.

It will be observed that Mr Hunter, in fixing the reign of Edward II. as the period in which Robin Hood flourished, departs from the commonly-received notion, which represents him as living in the time of Richard I. and John. In this view he is supported by all the evidence that can be gathered from actual documents, and also by the statements in the poem of the *Lytell Geste;* whilst the other notion has no ground to rest on beyond the vague and uncertain authority of tradition, or of chroniclers who wrote long after the events which they profess to record. And it may here also be mentioned, that in the period immediately following Robin Hood's supposed withdrawal from court, Mr Hunter discovered, in the court-rolls of the Manor of Wakefield, the name of a certain 'Robertus Hood,' resident in that town, and a suitor in the manorial court. The adjoining district of Barnsdale, in the West Riding, was no less a haunt of Robin Hood and his followers, than Sherwood Forest, in Nottinghamshire. And another singular

circumstance is, that the wife of this Robertus Hood is mentioned under the name of *Matilda*, the title given by some old ballads to Robin Hood's wife, who, however, exchanges it for *Marian* when she follows him to the forest.

The statement that Robin Hood was the Earl of Huntingdon, seems to rest mainly on an epitaph manufactured in after-times, and on one or two obscure expressions found in ancient writers. Upon a flimsy foundation of this kind, Dr Stukeley has built a regular genealogy of Robin Hood, representing his real name as Robert Fitzooth, Earl of Huntingdon. No reliance whatever can be placed on this view of the question, and it is certainly wholly opposed to the few items of historical evidence which have already been adduced.

The earliest demonstrable allusion to Robin Hood in English literature, occurs in Longland's *Vision of Pierce Ploughman*, a poem belonging to the middle of the fourteenth century. A character, allegorising Sloth, is represented as saying:

'I kan not perfitly my paternoster as the prest it sayeth,
But I kan rymes of Robyn Hode and Randolf, Earl of Chester.'

By thus coupling his name with that of the Earl of Chester, a real personage, this passage affords a presumption that Robin Hood was likewise no creation of the imagination. That the fact of his being mentioned at this date, discredits the argument of his having lived only a few years previously, cannot warrantably be maintained, seeing it was a perfectly common practice in the days of minstrelsy to celebrate the deeds of personages, actually living at the time, as well as of those who belonged to a former age.

Assuming Robin Hood and his band to have had a real existence, it becomes a matter of interesting speculation, to conjecture whether any peculiar circumstance in the history of the time can have given rise to this singular society in the forests of Nottinghamshire and the West Riding. M. Thierry, in his *History of the Norman Conquest*, has represented Robin Hood as the chief of a small body of Saxons, who, in these remote fastnesses, defied successfully the authority of the Norman sovereigns. Another writer has imagined them to be a remnant of the followers of the celebrated Simon de Montfort, Earl of Leicester, who was slain at the battle of Evesham. But Mr Hunter's conjecture is at least as plausible as any—that they were persons who had taken part in the rebellion against Edward II., of his cousin, Thomas, Earl of Lancaster, which had been suppressed by the battle of Boroughbridge, in March 1322. A summary vengeance was taken on the earl, who, with a number of his most distinguished followers, was beheaded at his own castle of Pontefract. Many other chiefs were executed in different places. It is reasonable, however, to conjecture that numerous individuals who had taken part in the insurrection, would contrive to evade pursuit by retreating to remote fastnesses. In this way, a band like Robin Hood's might be formed under the leadership of a bold and energetic captain. The immense popularity which the Earl of Lancaster enjoyed in the West Riding, will tend still further to explain the favour and good-will with which Robin Hood and his followers seem to have been generally regarded by the peasantry. And a coincidence is thus established between the date of the battle and the progress of Edward II., already mentioned, in the autumn of the following year, through the northern counties of England.

The circumstance of so many places throughout the country bearing the name of Robin Hood—such as Robin Hood's Hill, Robin Hood's Chair, Robin Hood's Bay, &c.—is derived, with great probability, from the practice which prevailed both in England and Scotland, of celebrating on May-day certain sports under the designation of *Robin Hood Games*. These consisted of a personation of the various characters, which, according to the popular ballads, made up the court or retinue of the king of Sherwood Forest. The reader will find a notice of them at p. 580 of the first volume of this work. From certain places being selected for the observance of these festivities, and also, it may be, from some renowned performer in the games having been connected with a particular locality, the name of Robin Hood has frequently, in all likelihood, been associated with places which he never once visited. Doubtless, however, one or two of these spots are of a more genuine character; such as the grave at Kirklees Priory, and, as Mr Hunter is inclined to believe, the well, known as 'Robin Hood's Well,' a little to the north of Doncaster, on the Great North Road, leading from that town to Ferrybridge.

NOVEMBER 23.

St Clement, pope and martyr, 100. St Amphilochius, bishop of Iconium, confessor, 100. St Daniel, bishop and confessor, 545. St Tron, confessor, 693.

Born.—John Wallis, mathematician, 1616, *Ashford, Kent;* Dr Thomas Birch, historical and biographical writer, 1705, *London.*

Died.—Louis, Duke of Orleans, brother of Charles VI., assassinated at Paris, 1407; Thomas Tallis, composer of church-music, 1585, *Greenwich;* Richard Hakluyt, chronicler of voyages and travels, 1616; William Bentinck, first Earl of Portland, favourite minister of William III., 1709; Antoine François Prevot, novelist, 1763, *Forest of Chantilly;* Thomas Henderson, professor of astronomy, &c., 1844; Sir John Barrow, author of biographies and books of travel, 1848, *London.*

ARDEN OF FAVERSHAM.

One of the most terrible tragedies in private life—afterwards dramatised as a tragedy for the stage by George Lillo—was that known in connection with the name of Arden of Faversham. In 1539, Henry VIII. having ordered the principal part of the monastic buildings at Faversham, in Kent, to be pulled down, granted the site of the abbey, with some adjoining lands, to Sir Thomas Cheyney, who alienated them five years afterwards to Mr Thomas Arden, or Ardern, a gentleman of Faversham. It was this Arden whose atrocious murder, while mayor of the town in 1550, became lastingly impressed on the history of Kent. From Holinshed's *Chronicle* are derived all the later narratives of the event which we now proceed to relate. Arden's wife, 'Mistress Alice, young, tall,

and well-favoured of shape and countenance,' formed a criminal connection with a paramour, named Mosbye, 'a black, swart man.' Mosbye had been servant to Sir Edward North, Alice's father-in-law; and then settled as a tailor in London. The infatuated wife, lost to all sense of duty and morality, conspired with Mosbye to put an end to her husband's existence, in order that she might marry the profligate 'black, swart man.' They employed as their confederates one John Green, a Faversham tailor; George Bradshaw, a goldsmith of the same town; and 'one Black Will, of Calyce (Calais), a murderer, which murderer was privily sent for to Calyce by the earnest sute, appoyntment, and confederacye of Alice Arden and Thomas Mosbye.' The conspirators watched Master Arden 'walking in Poule's' (St Paul's Cathedral, the nave of which was a public promenade in those days), but could not find an opportunity to murder him; they then lay in wait for him on Rainham Down, and a second time in the Broomy Close (two places near Faversham), but on all these occasions failed in obtaining an opportunity. The wicked wife then laid a plot for murdering her husband in his own house. She procured the services of Mosbye's sister, Cicely Pounder, and of two of Arden's domestic servants, Michael Saunderson and Elizabeth Stafford. On a particular day selected—Sunday, too—Black Will was hidden in a closet at the end of Arden's parlour. After supper, Arden sat down to play some kind of game with Mosbye; Green stood at Arden's back, holding a candle in his hand, 'to shaddowe Black Will when he should come out;' and the other conspirators had their cue. At a given signal in the game, 'Black Will came with a napkyn in his hand, and sodenlye came behind Arden's back, threw the said napkyn over his hedd and face, and strangled him; and forthwith Mosbye stept to him, and strake him with a taylor's great pressing-iron upon the scull to the braine, and immediately drew out his dagger, which was great and broad, and therewith cut the said Arden's throat.' It is added that 'Mistress Alice herself, with a knife, gave him seven or eight pricks into the breast.' When Black Will had helped to drag the dead body into the closet, he went to Cicely Pounder's house, received eight pounds for his nefarious services, and left Faversham. Cicely then went to Arden's habitation, and assisted in bearing the corpse out into a meadow, called the Almery Croft, behind the house; 'where they laid him on his back in his nightgown, with his slippers on.' We are told by the chronicler, that the doubly-wicked Alice and her companions 'danced, and played on the virginals, and were merrie.' It would appear to have been their intention to make the towns-people aware of an entertainment, with dancing and music, having been given by Arden to his friends on that evening; and to induce them to believe, from the dead body being arrayed in night-clothes, that the unfortunate man had been murdered by some one during the night. On the following morning, Alice seems to have alarmed the town with an announcement of her husband's absence from the house, and her fears for his safety. A search was made by the towns-people, and the dead body was found in the Croft. But here occurred one of those trifling incidents which generally tend to the discovery of a murder. Some of the people 'saw a long rushe or two from the parlour-floor [there were no carpets in those days], stuck between one of his slippers and his foot.' Suspicions being aroused, the house was searched, and it was soon found that Arden had been murdered in his own parlour. Very likely Alice's conduct as a wife had already attracted public attention; for she was at once accused of the murder. Her courage gave way, and she cried out: 'Oh the bloud of God help! for this bloud have I shed!' One by one, as evidence came home to them, the guilty confederates suffered the punishment due to their crimes. Mistress Alice was burned at Canterbury; Mosbye was taken in bed, and was afterwards hung at Smithfield; Green was hung at Faversham; Black Will escaped for many years, but was at length taken, 'and brent on a scaffolde at Flushing;' Bradshaw was hanged in chains at Canterbury; Cicely Pounder was hanged at Smithfield; Saunderson was drawn and hanged at Faversham; and Elizabeth Stafford was burned at the same place. It was, in truth, a time when hanging and burning, drawing and quartering, were fearfully rife as punishments for criminals. It was long said that no grass would grow on the spot where Arden's dead body was found; some, in accordance with the superstitions of the times, attributed this to the murder; while others declared that 'the field he hadde cruelly taken from a widow woman, who had curst him most bitterly, even to his face, wishing that all the world might wonder on him.'

A tragedy, entitled *Arden of Faversham*, was printed in 1592, and was at first attributed to Shakspeare. In after-times, the subject was made the groundwork of a play by Lillo, author of *George Barnwell* and *Fatal Curiosity*. It is believed that an old house, still standing at Faversham, near the Abbey Gateway, is that in which the terrible crime was committed; and a low-arched door, near the corner of the Abbey wall, is pointed out as that through which the murdered Arden was carried out to the Croft.

PLUGGING LOBSTERS' CLAWS.

There is a curious practice followed by dealers in lobsters, arising out of the action of the wonderful claws with which these crustacea are provided. We do not refer here to the retail-fishmongers of London and other towns, but to the boilers and wholesale-dealers. Concerning the mode of obtaining the supplies of this favourite delicacy, a writer in the *Quarterly Review* (No. 189) says: 'Where do all the lobsters come from? The lovers of this most delicious of all the crustaceous tribe will probably be astonished to learn that they are mainly brought from Norway. France and the Channel Islands, the Orkneys and the Shetlands, do, it is true, contribute a few to the metropolitan market; but fully two-thirds are relentlessly, and with much pinching and twisting, dragged out of the thousand rock-bound inlets which indent the Norway coast. They are conveyed alive in a screw steamer, and by smacks, in baskets, sometimes to the extent of twenty thousand in a night, to Great Grimsby, and are then forwarded to town by the Great Northern Railway: another ten thousand arriving perhaps from points on our own and the

French coasts. The fighting, twisting, blue-black masses are taken, as soon as purchased, to what are termed the "boiling-houses," of which there are four, situated in Dark and Love Lanes, near Billingsgate.'

In 1830, particulars were made public respecting the manner in which these 'fighting, twisting, blue-black masses' are, or were at that time, occasionally treated. Mr Saunders, the leading salesman in the lobster-trade, and Mr Gompertz, secretary to the Society for the Prevention of Cruelty to Animals, waited on the lord mayor on 23d November, to solicit the interference of his lordship with a practice by which needless pain was inflicted on the animals. 'It has been the practice, when lobsters are caught, to tie up the claws with cords, in order to prevent them from doing each other injury; as it is known that shell-fish of this kind will, if some precaution be not taken, tear each other to pieces. The fish are fretted by being thus prevented from grasping whatever they approach; but they sustain no damage in quality as food. To save trouble, however, the persons who deal in shell-fish substitute another mode of preventing the lobsters from fighting, and stick a plug in the spot where the claw is divided. This practice is the cause of great agony to the poor animal; for the moment the shell is removed, the substance appears to have lost its firmness, and the place where the plug has been stuck is completely mortified. Lobsters are very often to be found in fishmongers' shops with the bodies injured materially; and the claws, which are considered the most delicate parts of the fish, absolutely rotten. It was ascertained beyond doubt, that the mortified condition of the fish was attributable to the cruel method of plugging.' The lord mayor might not, perhaps, have been able to check the practice merely because it was unnecessarily cruel; but as it was proved to injure the lobster as an article of food, he had magisterial power to interfere on this ground.

Crabs seem to be more sensitive than lobsters. When the lobsters are taken to the boiling-houses (the *Quarterly Review* informs us), they are plunged into a boiling caldron, basket and all, for twenty minutes. Crabs are boiled in the same way; but their nervous systems are so acute, that they would dash off their claws, in convulsive agony, if plunged in hot water. To prevent this mutilation, they are first killed by the dexterous insertion of a needle through the head.

NOVEMBER 24.

St Chrysogonus, martyr, beginning of 4th century. St Cianan or Kenan, bishop of Duleek, in Ireland, 489. Saints Flora and Mary, virgins and martyrs, 851. St John of the Cross, confessor, 1591.

Born.—Laurence Sterne, sentimental writer and novelist, 1713, *Clonmel;* John Bacon, sculptor, 1740, *Southwark;* Grace Darling, Northumbrian heroine, 1815, *Bamborough.*

Died.—John Knox, Scottish Reformer, 1572, *Edinburgh;* William Sancroft, archbishop of Canterbury, leader of the seven prelates in their celebrated petition to James II., 1693, *Fresingfield, Suffolk;* Dr Robert Henry, historian, 1790, *Edinburgh;* William Lamb, Viscount Melbourne, statesman, 1848, *Melbourne House, Derbyshire;* Rev. Dr George Croly, poet, and romance writer, 1860, *London.*

THE CIRCE OF CARLISLE HOUSE, SOHO SQUARE.

In the bankrupt list of *The London Gazette* for November 1772, the attention of the public was called, somewhat significantly, to 'Teresa Cornelys, Carlisle House, St Ann, Soho, dealer.' It will not be uninteresting to the reader to have some account of the nature of Teresa Cornelys's dealings.

This lady, by birth a German, and during many years a public singer in Italy and Germany, settled in London somewhere about the year 1756 or 1757: and for twenty years after that time she entertained the public, 'the votaries of fashion of both sexes,' with a series of entertainments, masked balls, and the like, at once 'fascinating and elegant.' These entertainments were held in the suitable mansion of Carlisle House, Soho Square, and figure largely in contemporary papers.

The first printed document referring to Mrs Cornelys, convinces us at once that she must have been a woman of tact. The date of it is, February 18, 1763: 'On Saturday last, Mrs Cornelys gave a ball at Carlisle House, to the upper-servants of persons of fashion, as a token of the sense she has [did not Circe herself insert this little notice?] of her obligations to the nobility and gentry, for their generous subscription to her assembly. The company consisted of 220 persons, who made up fourscore couple in country-dances; and as scarce anybody was idle on this occasion, the rest sat down to cards.'

The nobility and gentry who patronised Carlisle House, did so by paying an annual subscription, in consideration of which they received a ticket, which gave them the run of all that was there, whether it were a ball, or a masked ball, or 'a grand concert of vocal and instrumental music.' Also, it appears, they had the privilege of lending these tickets to friends—a great convenience—provided they wrote 'the name of the person upon the back of the said ticket, to whom they have lent it;' [here the English is again a little Germanized], 'to prevent any mistake.' No doubt single tickets for particular evenings, and the special benefit of non-subscribers, were to be had.

Notwithstanding her great success, for it seems to have been by no means inconsiderable, Mrs Cornelys had her troubles. It was natural that competition should originate opposition establishments. But on her part the best of feeling is always to be premised. 'Whereas it has been industriously reported, to the disadvantage of Mrs Cornelys, that she has expressed herself dissatisfied with a subscription now on foot, to build a large room in opposition to hers; she esteems it her duty, in this public manner, to declare that she never once entertained a thought so unjust and unreasonable.' Nay, so satisfied is she with matters in general, that her longing for 'fatherland' is perceptibly on the decline. 'She humbly hopes she has not been wanting in duty and gratitude to her protectors, and cannot sufficiently be thankful for the comfort she enjoys in this happy country, which she hopes never to leave.'

Mrs Cornelys seems to have spared no money or pains to have everything in keeping with the tastes of her illustrious friends. The expense of the 'alterations and additions to Carlisle House in Soho Square,' and of the 'new embellishments and

furniture,' amounted for the year 1765, alone to 'little less than £2000,' and made that house, in the news-writer's opinion, 'the most magnificent place of public entertainment in Europe.' To one of the rooms we find added, 'the most curious, singular, and superb ceiling that ever was executed or even thought of:' and to obviate certain 'complaints of excessive heat,' she arranged to have 'tea below stairs and ventilators above,' and succeeded so admirably, that subscribers were no longer subjected to 'the least danger of catching cold.' To relieve the press of the distinguished crowd, in its entrance and exit, she provided an additional door, and also 'a new gallery for the dancing of cotillons and allemandes, and a suite of new rooms adjoining;' in consequence of which she was most reluctantly compelled to charge subscribers an additional guinea.

On February 27, 1770, Mrs Cornelys's continued efforts were rewarded with a most magnificent masquerade.

First, as to the numbers who attended, 'Monday night the principal nobility and gentry of this kingdom, *to the number of near eight hundred*, were present at the masked ball, at Mrs Cornelys's, in Soho Square.'

Next, as to the stir it made in the neighbourhood. 'Soho Square and the adjacent streets were lined with thousands of people, whose curiosity led them to get a sight of the persons going to the masquerade; nor was any coach or chair suffered to pass unreviewed, the windows being obliged to be let down, and lights held up to display the figures to more advantage.'

One does not wonder at the anxiety of the rabble to see all that was to be seen, for 'the richness and brilliancy of the dresses,' we are told, 'were almost beyond imagination; nor did *any* assembly *ever* exhibit a collection of more elegant and beautiful female figures.'

And now for the company. The reader may form a faint idea: 'Among them were Lady Waldegrave, Lady Pembroke, the Duchess of Hamilton, Mrs Crewe, Mrs Hodges, Lady Almeria Carpenter, &c.'

The characters assumed by the company were extremely various. Sir R. Phillips appeared as 'a double man, half-miller, half-chimney sweeper.' There was also 'a figure of Adam in flesh-coloured silk, with an apron of fig-leaves,' who, in spite of the fig-leaves, must have seemed rather out of keeping. The Earl of Carlisle figured as a running footman; Mr James, the painter, as Midas. The Duke of Devonshire was 'very fine, but in no particular character.' And 'Lord Edg——b, in the character of an old woman, *was full as lovely as his lady*.'

But the ladies were not to be outdone on this festive occasion. 'The Countess-Dowager of Waldegrave wore a dress richly trimmed with beads and pearls, in the character of'—we are sorry to observe it—'Jane Shore.' Many indulged a classical fancy. 'The Duchess of Bolton, in the character of Diana, was captivating.' 'Lady Stanhope, as Melpomene, was a striking fine figure.' 'Lady Augustus Stuart, as a Vestal, and Lady Caroline, as a Fille de Patmos, shewed that true elegance may be expressed without gold and diamonds.' Others took a more modern turn. 'The Countess of Pomfret, in the character of a Greek sultana, and the two Miss Fredericks, who accompanied her, as Greek slaves, made a complete group;' and to eclipse all, 'Miss Monckton, daughter to Lord Galway, appeared in the character of an Indian sultana, in a robe of cloth of gold, and a rich veil. The seams of her habit were embroidered with precious stones, and she had a magnificent cluster of diamonds on her head: the jewels she wore were valued at £30,000.'

But all these brilliant achievements, it seems, were to have an end. The opening of the *Pantheon* shattered Mrs Cornelys to some extent. Then, unfortunately, there were certain 'Bills of Indictment preferred to the Grand Jury.' These indictments insinuated of Mrs Cornelys, 'that she does keep and maintain a common disorderly house, and did permit and suffer divers loose, idle, and disorderly persons, as well men as women, to be and remain during the whole night, rioting and otherwise misbehaving themselves.'

Upon this the nobility and gentry, we presume, to be on the safe side of rumour, transferred their patronage mostly to the *Pantheon*. For in July 1772, 'the creditors of Mrs Cornelys, of Carlisle House, Soho Square,' were 'most earnestly requested to deliver forthwith a particular account of their several and respective demands on the said Mrs Cornelys, to Mr Hickey, in St Alban's Street.' And at last our little register, from *the London Gazette*, of 'Teresa Cornelys, Carlisle House, St Ann, Soho, dealer,' closes the scene.

We hear a great deal more of Carlisle House, and the desperate struggle which it made, apparently with not much success, to regain its position; but it is enough. Mrs Cornelys ultimately retired into private life, and died at a very advanced age, August 19, 1797, in the Fleet Prison.

MERMAIDS.

Mermaids have had a legendary existence from very early ages; for the Syrens of the ancients evidently belonged to the same remarkable family. Mermen and mermaids—men of the sea, and women of the sea—have been as stoutly believed in as the great sea-serpent, and on very much the same kind of evidence. Sometimes, as expressed in Haydn's *Mermaid's Song*, there is a delightful bit of romance connected with the matter: as where the mermaid offers the tempting invitation:

> 'Come with me, and we will go
> Where the rocks of coral grow.'

But the romance is somewhat damped when the decidedly fishy tail is described. The orthodox mermaid is half-woman, half-fish; and the fishy half is sometimes depicted as being *doubly*-tailed. The heraldry of France and Germany often exhibits mermaids with two tails among the devices; and in the Basle edition of Ptolemy's Geography, dated 1540, a double-tailed mermaid figures on one of the plates. Shakspeare makes many of his characters talk about mermaids. Thus, in the *Comedy of Errors*, Antipholus of Syracuse says:

> 'Oh, train me not, sweet mermaid, with the note!'

And in another place:

> 'I'll stop mine ears against the mermaid's song.'

In the *Midsummer-Night's Dream*, Oberon says:

> 'I heard a mermaid on a dolphin's back.'

In *Hamlet*, the queen, speaking of Ophelia's death, says :

'Her clothes spread wide ; and mermaid-like,
Awhile they bare her up.'

In two other passages, he makes his characters say :

'I 'll drown more sailors than the mermaids shall.'

And :

'At the helm a seeming-mermaid steers.'

But in all these cases Shakspeare, as was his wont, made his characters say what *they* were likely to think, in their several positions and periods of life.

Notices of mermaids are scattered abundantly in books of bygone times ; sometimes in much detail, sometimes in a few vague words. In Merollo's *Voyage to Congo*, in 1682, mermaids are said to be very plentiful all along the river Zaire. A writer in *Notes and Queries*, in November 1858, lighted upon an old Scotch almanac, called the *Aberdeen Almanac, or New Prognostications for the Year* 1688 ; in which the following curious passage occurs : 'To conclude for this year 1688. Near the place where the famous Dee payeth his tribute to the German Ocean, if *curious observers of wonderful things in nature* will be pleased thither to resort the 1, 13, and 29 of May, and in divers other times in the ensuing summer, as also in the harvest-time, to the 7 and 14 October, *they will undoubtedly see a pretty company of* MAR MAIDS, creatures of admirable beauty, and likewise hear their charming sweet melodious voices :

"In well-tun'd measures and harmonious lays,
Extol their Maker and his bounty praise ;
That godly honest men, in everything,
In quiet peace may live, GOD SAVE THE KING !" '

The piety and loyalty of these predicted mermaids are certainly remarkable characteristics. In another part of Scotland, about the same period, a *real* mermaid was seen, if we are to believe *Brand's Description of Orkney and Shetland*, published in 1701. Two fishermen drew up with a hook a mermaid, 'having face, arms, breast, shoulders, &c., of a woman, and long hair hanging down the neck ; but the nether-part from below the waist hidden in the water.' One of the fishermen, in his surprise, drew a knife and thrust it into her heart ; 'whereupon she cried, as they judged, "Alas!" and the hook giving way, she fell backwards, and was seen no more.' In this case the evidence went thus—Brand was told by a lady and gentleman, who were told by a bailie to whom the fishing-boat belonged, who was told by the fishers ; and thus we may infer as we please concerning the growth of the story as it travelled.

In 1775, there was a very circumstantial account given of a mermaid, which was captured in the Grecian Archipelago, in the preceding year, and exhibited in London. 'It has,' as the *Annual Reviewer* of that day said, 'the features and complexion of a European. Its face is like that of a young female ; its eyes of a fine light blue ; its nose small and handsome ; its mouth small ; its lips thin, and the edges of them round like those of a codfish ; its teeth small, regular, and white ; its chin well shaped ; its neck full ; its ears like those of the eel, but placed like those of the human species ; and behind them are the gills for respiration, which appear like curls. Some (mermaids) are said to have hair upon the head ; but this has none, only rolls instead of hair, that at a distance may be mistaken for curls. But its chief ornament is a beautiful membrane or fin, rising from the temples, and gradually diminishing till it ends pyramidically, forming a foretop like that of a lady's head-dress. It has no fin on the back, but a bone like that of the human species. Its breasts are fair and full, but without nipples ; its arms and hands are well proportioned, but without nails on its fingers ; its belly is round and swelling, but no navel. From the waist downwards, the body is in all respects like a codfish. It has three sets of fins, one above another, below the waist, which enables it to swim out upon the sea ; and it is said to have an enchanting voice, which it never exerts except before a storm.' Here there is no great intricacy of evidence, for a writer in the *Gentleman's Magazine* also said he saw this particular mermaid —which, however, he described as being only three feet long, tail and all. But a sad blow was afterwards given to its reputation, by a statement that it was craftily made up out of the skin of the angel-shark.

In Mrs Morgan's *Tour to Milford Haven in the Year* 1795, there is an equally circumstantial account of a mermaid observed by one Henry Reynolds, in 1782. Reynolds was a farmer of Pen-y-hold, in the parish of Castlemartin. One morning, just outside the cliff, he saw what seemed to him a person bathing, with the upper part of the body out of the water. Going a little nearer, to see who was bathing in so unusual a place, it seemed to him like a person sitting in a tub. Going nearer still, he found it to resemble a youth of sixteen or eighteen years of age, with a very white skin. The continuation of the body below the water, seemed to be a brownish substance, ending with a tail, which seemed capable of waving to and fro. 'The form of its body and arms was entirely human ; but its arms and hands seemed rather thick and short in proportion to its body. The form of the head and all the features of the face were human also ; but the nose rose high between the eyes, was pretty long, and seemed to terminate very sharp.' Some peculiarities about the neck and back are then noticed, as also its way of washing its body. 'It looked attentively at him and at the cliffs, and seemed to take great notice of the birds flying over its head. Its looks were wild and fierce ; but it made no noise, nor did it grin, or in any way distort its face. When he left it, it was about a hundred yards from him ; and when he returned with some others to look at it, it was gone.' We hear nothing further of this merman or merboy ; but on looking at the roundabout evidence of the story, we find it to be thus—A paper containing the account was lent to Mrs Morgan ; the paper had been written by a young lady, pupil of Mrs Moore, from an oral account given to her by that lady ; Mrs Moore had heard it from Dr George Phillips ; and he had heard it from Henry Reynolds himself—from all of which statements we may infer that there were abundant means for converting some peculiar kind of fish into a merman without imputing intentional dishonesty to any one. Something akin to this kind of evidence is observable in the account of a mermaid seen in Caithness in 1809, the account of which attracted much attention in

England as well as in Scotland, and induced the Philosophical Society of Glasgow to investigate the matter. The editor of a newspaper who inserted the statement had been told by a gentleman, who had been shewn a letter by Sir John Sinclair, who had obtained it from Mrs Innes, to whom it had been written by Miss Mackay, who had heard the story from the persons (two servant girls and a boy) who had seen the strange animal in the water.

So it is with all these stories of mermaids when investigated. There is always a fish at the bottom of it—either a living fish of peculiar kind, which an ignorant person thinks bears some resemblance to a human being; or a fish which becomes marvellous in the progress of its description from mouth to mouth; or a dead fish's skin manufactured into something that may accord with the popular notions regarding these beings. Mr George Cruikshank, in 1822, made a drawing of a mermaid,* which was exhibited in St James's Street, and afterwards at Bartholomew Fair; it drew crowds by its ugliness, and shewed what wretched things will suffice to gull the public—although, of course, *outside* the booth at the fair there was a picture of the orthodox mermaid, with beautiful features and hair, comb in one hand, mirror in the other, and so forth. This was probably the identical mermaid, respecting which the lord chancellor was called upon to adjudicate, towards the close of November 1822. There was a disputed ownership, and his lordship expressed his satisfaction that he was not called upon to decide whether the animal was 'man, woman, or mermaid,' but only to say to whom it rightfully belonged.

Thanksgiving-Day in America.

The great social and religious festival of New England, from which it has spread to most of the states of the American republic, is a legacy of the Puritans. They abolished Christmas as a relic of popery, or of prelacy, which they held in nearly equal detestation, and passed laws to punish its observance; but, wanting some day to replace it, the colonial assemblies, and, later, the governors of the states, appointed every year some day in autumn, generally toward the end of November, as a day of solemn prayer and thanksgiving for the blessings of the year, and especially the bounties of the harvest.

Thanksgiving-day is always celebrated on Thursday, and the same day is chosen in most of the states. The governor's proclamation appointing the day, is read in all the churches, and there are appropriate sermons and religious exercises. Families, widely scattered, meet at the bountiful thanksgiving-dinners of roast turkeys, plum-pudding, and mince and pumpkin pies. The evenings are devoted by the young people to rustic games and amusements.

The subjects of the thanksgiving-sermons are not unfrequently of a political character, and in the chief towns of the union, those of the most popular preachers are generally published in the newspapers. The thanksgiving-festival, though widely celebrated, is not so universally respected as formerly, as the influx of Roman Catholics and Episcopalians has brought Christmas again into vogue, which is also kept by the Unitarians with considerable solemnity. As a peculiar American festival it will, however, long be cherished by the descendants of the Puritans.

NOVEMBER 25.

St Catharine, virgin and martyr, 4th century. St Erasmus or Elme, bishop and martyr, 4th century.

ST CATHARINE.

Among the earlier saints of the Romish calendar, St Catharine holds an exalted position, both from rank and intellectual abilities. She is said to have been of royal birth, and was one of the most distinguished ladies of Alexandria, in the beginning of the fourth century. From a child she was noted for her acquirements in learning and philosophy, and while still very young, she became a convert to the Christian faith. During the persecution instituted by the Emperor Maximinus II., St Catharine, assuming the office of an advocate of Christianity, displayed such cogency of argument and powers of eloquence, as thoroughly silenced her pagan adversaries. Maximinus, troubled with this success, assembled together the most learned philosophers in Alexandria to confute the saint; but they were both vanquished in debate, and converted to a belief in the Christian doctrines. The enraged tyrant thereupon commanded them to be put to death by burning, but for St Catharine he reserved a more cruel punishment. She was placed in a machine, composed of four wheels, connected together and armed with sharp spikes, so that as they revolved the victim might be torn to pieces. A miracle prevented the completion of this project. When the executioners were binding Catharine to the wheels, a flash of lightning descended from the skies, severed the cords with which she was tied, and shattered the engine to pieces, causing the death both of the executioners and numbers of the bystanders. Maximinus, however, still bent on her destruction, ordered her to be carried beyond the walls of the city, where she was first scourged and then beheaded. The legend proceeds to say, that after her death her body was carried by angels over the Red Sea to the summit of Mount Sinai. The celebrated convent of St Catharine, situated in a valley on the slope of that mountain, and founded by the Emperor Justinian, in the sixth century, contains in its church a marble sarcophagus, in which the relics of St Catharine are deposited. Of these the skeleton of the hand, covered with rings and jewels, is exhibited to pilgrims and visitors.

A well-known concomitant of St Catharine, is the wheel on which she was attempted to be tortured, and which figures in all pictured representations of the saint. From this circumstance are derived the well-known circular window in ecclesiastical architecture, termed a *Catharine-wheel window*, and also a firework of a similar form. This St Catharine must not be confounded with the equally celebrated St Catharine of Siena, who lived in the fourteenth century.

Born.—Lopez de la Vega, great Spanish dramatist, 1562, *Madrid;* Charles Kemble, actor, 1775, *Brecon;* Henry Mayhew, popular writer, 1812, *London.*

Died.—Pope Lucius III., 1185; Andrea Doria, Genoese admiral and patriot, 1560, *Genoa;* Edward Alleyn, actor, founder of Dulwich College, 1626, *Dulwich;* John Tillotson, archbishop of Canterbury, eminent Whig divine, 1694, *Lambeth;* Dr Isaac Watts, poet and hymn-writer, 1748, *Stoke-Newington;* Henry Baker, author of *The Microscope made Easy*, 1774, *London;* Richard Glover, poet, 1785; Thomas Amory, eccentric author, 1788; Sir Augustus Wall Calcott, landscape painter, 1844, *Kensington;* John Gibson Lockhart, son-in-law and biographer of Sir Walter Scott, 1854, *Abbotsford;* Rev. John Kitto, illustrator of the Bible and sacred history, 1854, *Cannstadt, near Stuttgardt;* Angus B. Reach, miscellaneous writer, 1856, *London.*

THE FOUNDER OF DULWICH COLLEGE.

Edward Alleyn, the son of an innkeeper, was born at the sign of the 'Pye,' in Bishopsgate, London. In the days before theatres were specially erected for the purpose, the yards of old inns, surrounded by tiers of wooden galleries, were particularly eligible for the representation of plays. Young Alleyn must, therefore, have been early accustomed to witness stage-performances. His father dying, and his mother marrying again one Browne, an actor and haberdasher, Alleyn was bred a stage-player, and soon became the Roscius of his day. Ben Jonson thus bears testimony to his merit:

'If Rome so great, and in her wisest age,
Feared not to boast the glories of her stage,
As skilful Roscius and grave Æsop, men,
Yet crowned with honours as with riches then;
Who had no less a trumpet of their name
Than Cicero, whose every breath was fame;
How can such great example die in me,
That Alleyn, I should pause to publish thee?
Who both their graces in thy self hast more
Outstript, than they did all that went before:
And present worth in all dost so contract,
As others speak, but only thou dost act.
Wear this renown: 'tis just, that who did give
So many poets life, by one should live.'

Exactly so, the poor player struts and frets his hour upon the stage, then dies, and is heard no more, but the poet lives for all time; and it was a brave thing for rare old Ben to acknowledge this, in the last two of the preceding lines:

'"Tis just that who did give
So many poets life, by one should live.'

Alleyn has been termed the Garrick of Shakspeare's era, and was no doubt intimate with the bard of Avon, as well as with Ben Jonson. A story is told of this grand trio spending their evening, as was their wont, at the Globe, in Blackfriars. On this occasion, Alleyn jocularly accused Shakspeare of having been indebted to him for Hamlet's speech, on the qualities of an actor's excellency. And Shakspeare, seemingly not relishing the innuendo, Jonson said: 'This affair needeth no contention, you stole it from Ned, no doubt; do not marvel: have you not seen him act, times out of number?'

Alleyn's first wife was Joan Woodward, the step-daughter of one Henslowe, a theatrical speculator and pawnbroker; a thrifty man, withal, well calculated to foster and develop the acquisitive spirit, so characteristic of the future life of his step-son-in-law. Soon after his marriage, Alleyn commenced to speculate in messuages and lands—buying and selling—and his exertions seem always to have been attended with profit. Amongst his other purchases, are inns of various signs—as the 'Barge,' the 'Bell and Cock,' at the Bankside; the 'Boar's Head,' probably the very house immortalised by his friend and fellow-actor Shakspeare, in Eastcheap; the parsonage of Firle, in Sussex, and the manor of Kennington in Surrey, may be adduced as instances of the curious variety of Alleyn's property. Being appointed to the office of royal bearward, he became keeper and proprietor of the bear-garden, which, besides bringing him an income of £500 per annum, led him to speculate in bulls, bears, lions, and animals of various kinds. One of the papers in Dulwich College, is a letter from one Fawnte, a trainer of fighting-bulls, who writes as follows:

'Mr Alleyn, my love remembered, I understood by a man, who came with two bears from the garden, that you have a desire to buy one of my bulls. I have three western bulls at this time, but I have had very ill-luck with them, for one has lost his horn to the quick, that I think he will never be able to fight again; that is my old Star of the West, he was a very easy bull; and my bull Bevis, he has lost one of his eyes, but I think if you had him, he would do you more hurt than good, for I protest he would either throw up your dogs into the lofts, or else ding out their brains against the grates, so that I think he is not for your turn. Besides, I esteem him very high, for my Lord of Rutland's man bad me for him twenty marks. I have a bull, which came out of the west, which stands me in twenty nobles. If you should like him, you shall have him of me. Faith he is a marvellous good bull, and such a one as I think you have had but few such, for I assure you that I hold him as good a double bull as that you had of me last is a single, and one that I have played thirty or forty courses, before he hath been taken from the stake, with the best dogs.'

Though Alleyn had, without doubt, a keen eye for a bargain, a ready hand to turn a penny, and an active foot for the main chance, he was, unlike many men of that description, of a true, affectionate, and kindly nature; ever anxious for the welfare and happiness of his home and its inmates. In his letters, when from home, he playfully styles his wife 'mecho, mousin, and mouse;' speaks of her father as 'Daddy Henslowe;' and her sister, as 'Sister Bess,' or 'Bess Dodipoll,' the latter appellation probably derived from some theatrical character. When the plague was raging, in his absence from London, he thoughtfully and playfully writes to his wife:

'My good, sweet mouse, keep your house fair and clean, which I know you will, and every evening throw water before your door; and have in your windows good store of rue and herb of grace, and with all the grace of God, which must be obtained by prayers; and, so doing, no doubt but the Lord will mercifully defend you.'

His interest in home matters, among all his more money-making transactions, never seems to flag. On another occasion he writes:

'Mouse, you send me no news of any things;

you should send me of your domestical matters, such things as happen at home, as how your distilled water proves, or this or that.'

It is little wonder to us, that such a man, when finding himself advanced in years, without an heir, should devote his property to the benefit of the poor. But the bad repute that anciently attached to an actor's profession, made the circumstance appear in his own day a miracle, which, of course, was explained by its consequent myth. According to the latter, Alleyn, when acting the part of a demon on the stage, was so terrified by the apparition of a real devil, that he forthwith made a vow to bestow his substance on the poor, and subsequently fulfilled this engagement by building Dulwich College.

The bad odour in which an actor was formerly held, is clearly exhibited by Fuller, who, speaking of Alleyn, quaintly says: 'In his old age, he made friends of his unrighteous mammon, building therewith a fair college at Dulwich, for the relief of poor people. Some, I confess, count it built on a foundered foundation, seeing, in a spiritual sense, none is good and lawful money, save what is honestly and industriously gotten; but, perchance, such who condemn Master Alleyn herein, have as bad shillings in the bottom of their own bags, if search were made therein. Thus he, who outacted others, outdid himself before his death.'

In further evidence of the disrepute attaching to actors in these days, it may be mentioned here, probably for the first time in print, that Izaak Walton, in his life of Dr Donne, has unworthily suppressed the fact, that Donne's daughter, Constance, was Alleyn's second wife. There were other reasons, however, for maintaining a prudent silence on this point; by a letter preserved at Dulwich, it would appear that Donne attempted to cheat Alleyn out of his wife's dowry.

Exercising his practical genius, Alleyn had his college built during his lifetime. In 1619, it was opened with a sermon and an anthem; then the founder read the Act of creation; and the party, consisting of the Lord Chancellor, the Earl of Arundel, Inigo Jones, and others of similar position and consequence, went to dinner. Each item of the feast, and its price, is carefully recorded in Alleyn's diary. Suffice it to say here, that they had beef, mutton, venison, pigeons, godwits, oysters, anchovies, grapes, oranges, &c., the whole washed down by eight gallons of claret, three quarts of sherry, three quarts of white wine, and two hogsheads of beer.

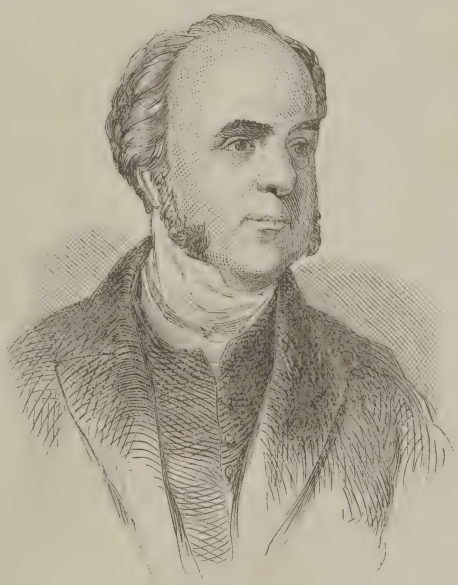
Alleyn then took upon himself the management of his college of God's Gift; living in it among the twelve poor men and twelve poor children, whom his bounty maintained, clothed, and educated. Here he was visited by the wealthy and noble of the land; and here he lost his faithful partner, Joan Woodward, and soon after married Constance, daughter of Dr Donne. Alleyn administered the affairs of his college till his death, which took place in the sixty-first year of his age, on the 25th of November 1626. With a pardonable wish to preserve his name in connection with the charity he founded, Alleyn appointed that the master and governor thereof should always be of the blood and surname of Alleyn. So strictly was this rule kept, that one Anthony Allen, a candidate for the mastership, was rejected in 1670, for want of a letter *y* in his name; but that objection has since been overruled.

Alleyn did not forget the people among whom he was born, nor those among whom he made his money. By his last will and testament Edward Alleyn, Esquire, Lord of the Manor of Dulwich, founded ten alms-houses, for ten poor people of the parish of St Botolph's, Bishopsgate; and ten alms-houses for ten poor people of the parish of St Saviour's, Southwark, where his bear-garden had so splendidly flourished. And, forgetting the ill-treatment he received from his father-in-law, he amply provided for his widow with a legacy of £1600; no mean fortune according to the value of money in those days.

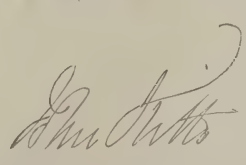
DR KITTO.

Per ardua was the motto graven on John Kitto's seal, and a more apt one he could scarcely have chosen. He was born in Plymouth in 1804, and as an infant was so puny, that he was hardly expected to live. He was carried in arms long after the age when other children have the free use of their limbs, and one of his earliest recollections was a headache, which afflicted him with various intermissions to the end of his days. His father was a master-builder, but was daily sinking in the world through intemperate habits. Happily the poor child had a grandmother, who took a fancy for him, and had him to live with her. She was a simple and kindly old woman, and entertained her 'little Johnny' for hours with stories about ghosts, wizards, witches, and hobgoblins, of which she seemed to have an exhaustless store. She taught him to sew, to make kettle-holders, and do patch-work, and in fine weather she led him delightful strolls through meadows and country lanes. As he grew older, a taste for reading shewed itself, which grew into a consuming passion, and the business of his existence became, how to borrow books, and how to find pence to buy them. He had little schooling, and that between his eighth and eleventh years, frequently interrupted by seasons of illness. When he was ten, his affectionate grandmother became paralysed, and he had to return to his parents, who found him a situation in a barber's shop. One morning a woman called, and told Kitto she wished to see his master. The guileless boy went to call him from the public-house, and in his absence she made off with the razors. In his rage at the loss, the barber accused Kitto of being a confederate in the theft, and instantly discharged him.

His next employment was as assistant to his father, and in this service occurred the great misfortune of his life. They were repairing a house in Batter Street, Plymouth, in 1817, and John had just reached the highest round of a ladder, with a load of slates, and was in the act of stepping on the roof, when his foot slipped, and he fell from a height of five-and-thirty feet on a stone pavement. He bled profusely at the mouth and nostrils, but not at the ears, and neither legs nor arms were broken. For a fortnight he lay unconscious. When he recovered, he wondered at the silence around him, and asking for a book, was answered by signs, and then by writing on a slate. 'Why do you *write* to me?' exclaimed the poor sufferer. 'Why do you not speak? Speak! speak!'



There was an interchange of looks and seeming whispers; the fatal truth could not be concealed; again the scribe took his pencil, and wrote: 'You are deaf!' Deaf he was, and deaf he remained until the end of his life.



If the prospect of poor Kitto's life was dark before, it was now tenfold darker. His parents were unable to assist him, and left him in idleness to pursue his reading. He waded and groped in the mud of Plymouth harbour for bits of old rope and iron, which he sold for a few pence wherewith to buy books. He drew and coloured pictures, and sold them to children for their half-pence. He wrote labels, to replace those in windows, announcing 'Logins for singel men,' and hawked them about town with slight success. By none of these means could he keep himself in food and raiment, and in 1819, much against his will, he was lodged in the workhouse, and set to learn shoemaking. There his gentle nature and studious habits attracted the attention and sympathy of the master, and procured him a number of indulgences. He commenced to practise literary composition, and quickly attained remarkable facility and elegance of style. He began to keep a diary, and was prompted by the master to write lectures, which were read to the other workhouse-boys. At the end of 1821, he was apprenticed to a shoemaker, who abused and struck him, and made him so miserable, that the idea of suicide not unfrequently arose to tempt him. Here, however, Kitto's pen came to his effectual help, and his well-written complaints were the means of the dissolution of his apprenticeship and re-admission to the workhouse after six months of intolerable wretchedness. Meanwhile the literary ability of the deaf pauper-boy began to be known; he was allowed to read in the Public Library; and some of his essays were printed in the *Plymouth Journal*. In the end there was written in the admission-book of the workhouse—'John Kitto discharged, 1823, July 17th. Taken out under the patronage of the literati of the town.'

Kitto's first book appeared in 1825, consisting of *Essays and Letters, with a short Memoir of the Author*. It brought him little profit, but served to widen his circle of friends. One of these, Mr Grove, an Exeter dentist, invited him to his house, and liberally undertook to teach him his own art; but after a while, hoping to turn his talents to better account, he had him introduced to the Missionary College at Islington, to learn printing. From thence he was sent to Malta, to work at a press there; but Kitto was much more inclined to private study than to mechanical occupation, and his habits not giving satisfaction to the missionaries, he returned to England in 1829, and set out with Mr Grove on a religious mission to the east. For four years he travelled in Russia, the Caucasus, Armenia, and Persia. Whilst living at Bagdad in 1831, the plague broke out, in which about fifty thousand perished, or nearly three-fourths of the inhabitants of the city. In this dreadful visitation, Mr Grove lost his wife. Kitto was restored to his native land in safety in 1833, with a mind enriched and enlarged with a rare harvest of experience.

Anxious, because with no certain means of livelihood, he fortunately procured an introduction to the secretary of the Society for the Diffusion of Useful Knowledge, and was employed by Mr Charles Knight as a contributor to the *Penny Magazine*. Proving a capable and steady workman, he obtained the promise of constant occupation, on the strength of which he married, and in his wife found a helpmate literary and domestic. Mr Knight, in 1835, projected a *Pictorial Bible*, with notes, and intrusted the editorship to Kitto. It was published in numbers, it was praised everywhere, it sold well, and its execution clearly indicated the line in which Kitto was destined to excel. He was next engaged on a *Pictorial History of Palestine*, then on a *Cyclopædia of Biblical Literature*, and finally on eight volumes of *Daily Bible Illustrations*. Besides these, he produced a number of minor works in illustration of the Scriptures, and started and edited a quarterly *Journal of Sacred Literature*. These writings made the name of Kitto a familiar word in every religious household in the land, and in 1850 he was placed for a pension of £100 a year on her Majesty's civil list, in consideration of his services.

Kitto was a ready writer, but at the same time painstaking and correct; and the production of such a mass of literature as lies under his signature, within a period of less than twenty years, entailed the necessity of perpetual labour. 'The working-day of the British Museum,' he wrote to Mr Knight, 'is six hours—mine is sixteen hours.' His deafness,

as well as habits of incessant industry, cut him off from society, and he seldom saw any visitors except such as had actual business to transact. He confessed to a friend, in the summer of 1851, that he had not crossed his threshold for six weeks. His work was his joy, he loved nothing better; but the strain he put upon his fragile constitution was too great. Congestion of the brain set in; he was told his only chance for life lay in perfect rest and

abstinence from work for a year or two ; but he insisted on completing his literary engagements, and alleged, truly, that he had a wife and ten children to provide for. A number of his admirers subscribed ample funds to justify some years of repose, and in the August of 1854 he retired to Cannstadt, in Würtemberg, but it was too late. On the 25th of November he died at Cannstadt, and was there buried.

In his seventeenth year, Kitto wrote this description of himself, which, making allowance for age, might serve for his picture at fifty, with the addition perhaps of an inch or two to his stature. 'I am four feet eight inches high ; my hair is stiff and coarse, of a dark-brown colour, almost black ; my head is *very* large, and, I believe, has a tolerable good lining of brain within. My eyes are brown and large, and are the least unexceptionable part of my person ; my forehead is high, eyebrows bushy ; my nose is large ; my mouth very big ; teeth well enough ; my limbs are not ill-shaped ; my legs are *well*-shaped.'

DOUBLE-CONSCIOUSNESS : ALTERNATE SANITY AND INSANITY.

An inquest, held in London on the 25th of November 1835, afforded illustrative testimony to that remarkable duality, double-action, or alternate action of the mind, which physiologists and medical men have so frequently noticed, and which has formed the basis for so many theories. Mr Mackerell, a gentleman connected with the East India Company, and resident in London, committed suicide by taking prussic acid, while labouring under an extraordinary paroxysm of delusions. During a period of four years, he had had these delusions *every alternate day*. Dr James Johnson, his physician, had bound himself by a solemn promise to the unhappy man, never to divulge to any human being the exact nature of the delusions in question. Fulfilling this promise, he avoided giving to the jury any detailed account. The doctor stated that the delusions under which his patient laboured, while accompanied by most dreadful horrors and depression of mind, 'had not the remotest reference to any act of moral guilt, or to any circumstance in which the community could have an interest, but turned on an idle circumstance equally unimportant to himself and to others, but still were capable of producing a most extraordinary horror of mind.' Mr Mackerell called his two sets of days his 'good days' and 'bad days.' On his bad days he would, if possible, see no one, not even his physician. On his good days he talked earnestly with Dr Johnson concerning his malady ; and said that although what he suffered on his bad days in body and mind might induce many men to rush madly upon suicide for relief, yet he himself had too high a moral and religious sense ever to be guilty of such an act. The delusion, Dr Johnson declared, was not of a kind that would have justified any restraint, or any imputation of what is usually called insanity. It was on one subject only, a true *monomania*, that a hallucination prevailed. Whether in London or the country, travelling by road or by sea, this monomania regularly returned every alternate day, beginning when he woke in the morning, and lasting all the day through. The miserable victim felt the first attack of it at a period of unusual excitement and disappointment ; and from that time it gradually strengthened until his death—leaving him on the *intermediate* days, however, a clear-headed and perfectly sane man : nay, 'a highly-educated gentleman, of very superior intellectual powers.' On two different occasions, his alternations of good and bad days influenced his proceedings in a curious way, leading him to undo each day what had been done the day before. It was just before the era of railways, when long journeys occupied two or more days and nights in succession. At one time, he secured a passage in the mail to Paisley ; but on reaching Manchester he quitted the coach, and returned by the first conveyance to London. Again he quitted London by mail for Paisley, but turned back at Birmingham. A *third* time he engaged a place in the mail to Paisley, but did not start at all, and sent his landlord to make the best bargain he could with the clerk at the coach-office for a return of a portion of the fare. It would appear that his good days gave him an inducement to travel northward, but the bad days then supervened, and changed his plans. He committed suicide, in spite of his oft-expressed religious views, on one of his good days (for the persons in whose house he lived kept a regular account of these singular alternations), having been apparently worn out with the unutterable miseries of one half of his waking existence.

Dr Wigan,* in his curious view of insanity, does not mention this particular case ; but he adduces two others of alternate sanity and insanity, or at least double manifestations of mental power. 'We have examples of persons who, from some hitherto unexplained cause, fall suddenly into, and remain for a time, in a state of existence resembling somnambulism ; from which, after many hours, they gradually awake—having no recollection of anything that has occurred in the preceding state ; although, during its continuance, they had read, written, and conversed, and done many other acts implying an exercise, however limited, of the understanding. They sing or play on an instrument, and yet, on the cessation of the paroxysm, are quite unconscious of everything that has taken place. They now pursue their ordinary business and avocations in the usual manner, perhaps for weeks ; when suddenly the somnambulic state recurs, during which all that had happened in the previous attack comes vividly before them, and they remember it as perfectly as if that disordered state were the regular habitual mode of existence of the individual—the healthy state and its events being now as entirely forgotten as were the disordered ones during the healthy state. Thus it passes on for many months, or even years.' Again, in one peculiar form of mental disease, an adult 'becomes a perfect child, is obliged to undertake the labour of learning again to read and write, and passes gradually through all the usual elementary branches of education—makes considerable progress, and finds the task becoming daily more and more easy ; but is entirely unconscious of all that had taken place in the state of health. Suddenly she is seized with a kind of fit, or with a sleep of preternatural length and intensity, and wakes in full possession of all the acquired knowledge

* *The Duality of the Mind.* By A. L. Wigan, M.D. 1844.

which she had previously possessed, but has no remembrance of what I will call her *child state*, and does not even recognise the persons or things with which she then became acquainted. She is exactly as she was before the first attack, and as if the disordered state had never formed a portion of her existence. After the lapse of some weeks, she is again seized as before with intense somnolency, and after a long and deep sleep wakes up in the *child state*. She has now a perfect recollection of all that previously occurred in that state, resumes her tasks at the point where she had left off, and continues to make progress as a person would do who was of that age and under those circumstances; but has once more entirely lost all remembrance of the persons and things connected with her healthy [or adult] state. This alternation recurs many times, and at last becomes the established habit of the individual—like an incurable ague.' There are numerous recorded cases in which a person *knows* that he or she is subject to alternate mental states, and can reason concerning the one state while under the influence of the other. Humboldt's servant, a German girl, who had charge of a child, entreated to be sent away; for whenever she undressed it, and noticed the whiteness of its skin, she felt an almost irresistible desire to tear it in pieces. A young lady in a Paris asylum had, at regular intervals, a propensity to murder some one; and when the paroxysm was coming on, she would request to be put in a strait-waistcoat, as a measure of precaution. A country-woman was seized with a desire to murder her child whenever she put it into her cradle, and she used to pray earnestly when she felt this desire coming on. A butcher's wife often requested her husband to keep his knives out of her sight when her children were nigh; she was afraid of herself. A gentleman of good family, and estimable disposition, had a craving desire, when at church, to run up into the organ-loft and play some popular tune, especially one with jocular words attached to it. All these cases, and many others of a kind more or less analogous, Dr Wigan attributes to a *duality of the mind*, connected with a *duality of the brain*. He maintains that the right and left halves of the brain are virtually two distinct brains, dividing between them the organism of the mental power. Both may be sound, both may be unsound in *equal* degree, both may be unsound in *unequal* degree, or one may be sound and the other unsound. The mental phenomena may exhibit, consequently, varying degrees of sanity and insanity. This view has not met with much acceptance among physiologists and psychologists; but, nevertheless, it is worthy of attention.

NOVEMBER 26.

St Peter, martyr, bishop of Alexandria, 311. St Conrad, bishop of Constance, confessor, 976. St Nicon, surnamed Metanoite, confessor, 998. St Sylvester Gozzolini, abbot of Osimo, instituter of the Sylvestrin monks, 1267.

Born.—Sir James Ware, antiquary, 1594, *Dublin;* Dr William Derham, natural philosopher, 1657, *Stowton, near Worcester.*

Died.—Prince William, son of Henry I. of England, drowned in the *White Ship*, 1120; John Spotswood or Spotiswood, archbishop of St Andrews, Scottish ecclesiastical historian, 1639; Philippe Quinault, tragic dramatist, 1688, *Paris;* John Elwes, noted miser, 1789, *Marcham, Berkshire;* Dr Joseph Black, eminent chemist, 1799, *Edinburgh;* John Loudoun Macadam, improver of roads, 1836; George, Lord Nugent (poetry, biography, &c.), *Lillies, Bucks;* Marshal Soult, Duke of Dalmatia, 1850, *Soult-Berg;* Vincenz Priessnitz, founder of hydropathy, 1851, *Graefenberg.*

JOHN ELWES.

On the 26th November 1789, died John Elwes, Esquire, a striking example of the impotent poverty of wealth when it does not enlarge the understanding, or awaken the social affections, and, consequently, cannot purchase common comforts for its wretched possessor. Elwes was the son of a successful brewer in Southwark, named Meggot. Evil tendencies of mind are as hereditary as diseases of the body. Elwes's mother starved herself to death, and his paternal uncle, Sir Harvey Elwes, was a notorious miser, from whom, by one of those fortuitous turns of events that sometimes throws great wealth into the power of those who have least occasion for it, John Elwes derived his name and a vast fortune.

If Elwes had been a mere miser, his name might well have been omitted from this collection; but the extraordinary man possessed qualities which, if they had not been suppressed by the all-absorbing passion of avarice, entitled him to the love and esteem of his friends, and might have advanced him to the respect and admiration of his countrymen. In spite of his penurious disposition, he had an unshaken gentleness of manner, and a pliancy of temper not generally found in a miserable money accumulator. One day he was out shooting with a gentleman who exhibited constant proofs of unskilfulness; so much so, that at last, in firing through a hedge, he lodged several shot in the miser's cheek. The awkward sportsman, with great embarrassment and concern, approached to apologise, but Elwes anticipated apology by holding out his hand, and saying: 'My dear sir, I congratulate you on improving; I thought you would hit something in time!'

Those afflicted by a habitual love of money are seldom scrupulous respecting the means of increasing their stores; yet Elwes abstained from usury on principle, considering it an unjustifiable method of augmenting his fortune. And contrary to an ostentatious meanness, too generally prevalent at the present day, by which many indulge in luxuries at the expense of others, Elwes's whole system of life and saving was founded on pure self-denial. He would walk miles in the rain, rather than hire a conveyance; and sit hours in wet clothes, rather than incur the expense of a fire. He would advance a large sum to oblige a friend, and on the same day risk his life to save paying a penny at a turnpike. He would eat meat in the last stage of putrefaction, 'the charnel-house of sustenance,' rather than allow a small profit to a butcher.

Like most of his class, Elwes was penny-wise and pound-foolish; not unfrequently losing the sheep for the half-penny worth of tar. He suffered his spacious country mansion to become uninhabitable, rather than be at the cost of a few necessary repairs. A near relative once slept at his seat in the country, but the bedchamber was

open to wind and weather, and the gentleman was awakened in the night by rain pouring in upon him. After searching in vain for a bell, he was necessitated to move his bed several times, till a place was at last found, where rain did not reach. On remarking the circumstance to Elwes in the morning, the latter said: 'Ay! I don't mind it myself; but to those who do, that is a nice corner in the rain!'

Elwes had an extensive property in houses in London, and as some of his houses were frequently without a tenant, he saved the price of lodgings by occupying any premises that might happen to be vacant. Two beds, two chairs, a table, and an old woman, were all his furniture, and with these, whenever a tenant offered, he was ready to remove at a moment's warning. It was then not easy to find him, or to know what part of the town might be his residence. Colonel Timms, his nephew, and heir to his entailed estates, was on one occasion anxious to see Elwes. After some inquiries, he learned accidentally that his uncle had been seen going into an uninhabited house in Great Marlborough Street. No *gentleman*, however, had been seen about there, but a pot-boy recollected observing an old beggar go into a stable and lock the door after him. Colonel Timms knocked at the door, but no one answering, sent for a blacksmith, and had the lock forced. The lower part of the building was all closed and silent; but, on ascending the staircase, moans were heard, apparently proceeding from a person in great distress. Entering a room, the intruders found, stretched out on an old pallet-bed, seemingly in death, the wretched figure of Elwes. For some time he remained insensible, till some cordials were administered by a neighbouring apothecary; then he sufficiently recovered to be able to say that he had, he believed, been ill for two or three days, and that there was an old woman in the house, but for some reason or other, she had not been near him; that she had been ill herself, but that she had recovered, he supposed, and gone away. On Colonel Timms and the apothecary repairing to the garret, they found the old woman stretched lifeless on the floor, having apparently been dead for two days.

When his inordinate passion for saving did not interfere, Elwes would willingly exert himself to the utmost to serve a friend. He once extricated two old ladies from a long and troublesome ecclesiastical suit, by riding sixty miles at night, and at a moment's warning. Such wonderful efforts would he make with alacrity, and at an advanced age, to serve a person for whom no motives or entreaties could have prevailed on him to part with a shilling. In this, and all his long journeys, a few hard-boiled eggs, a dry crust carried in his pocket, the next stream of water, and a spot of fresh grass for his horse, while he reposed beneath a hedge, were the whole of the travelling expenses of both man and beast. The ladies asked a neighbouring gentleman how they could best testify their thanks for such a service. 'Send him sixpence,' was the reply, 'for then he will be delighted by gaining twopence by his journey.'

So lived John Elwes, encouraging no art, advancing no science, working no material improvement on his estates or country, diffusing no blessings around him, bestowing no benevolence upon the poor and needy, and shewing few signs of parental care or affection. He never was married, but was the father of two natural children, to whom he bequeathed the greater part of his disposable property. Education he despised, and would lay out no money upon it. 'The surest way,' he constantly affirmed, 'of taking money out of people's pockets, is by putting things into their heads.' And no doubt he felt it so, for this strange man was a prey to every sharper who could put a scheme into his head by which he imagined that money might be got. Elwes has been compared to a great pike in a fishpool, which, ever voracious and unsatisfied, clutches at everything, until it is at last caught itself. With a mind incapable of taking comprehensive ideas of money-matters, and a constant anxiety to grasp the tangible results of his speculations, Elwes either disdained or was too indolent to keep regular accounts, and the consequence was that £150,000 of bad debts were owing to him at his death.

As we approach the last scene of all, the cruel tyranny of avarice, over its wretched slave, becomes more and more appalling. Comfortably domiciled in his son's house, Elwes fears that he shall die in poverty. In the night he is heard struggling with imaginary robbers, and crying: 'I will keep my money! I will! Don't rob me! Oh don't!' A visitor hears a footstep entering his room at night, and naturally asks, 'Who is there?' On which a tremulous voice replies: 'Sir, I beg your pardon, my name is Elwes, I have been unfortunate enough to be robbed in this house, which I believe is mine, of all the money I have in the world—of five guineas and a half, and half-a-crown.' A few days after, the money is found, where he had hidden it, behind a window-shutter. And a few days more, Elwes is found in bed, his clothes and hat on, his staff in his hand. His son comes to the bedside, and the father whispers John: 'I hope I have left you as much as you wished.' The family doctor is sent for, and, looking at the dying miser, says: 'That man, with his original strength of constitution, and life-long habits of temperance, might have lived twenty years longer, but for his continual anxiety about money.'

This notice of Elwes cannot be better concluded than in the following summary of his character, by his friend and acquaintance of many years, Mr Topham. 'In one word, his [Elwes] public character lives after him pure and without stain. In private life, he was chiefly an enemy to himself. To others, he lent much; to himself, he denied everything. But in the pursuit of his property, or in the recovery of it, I have it not in my remembrance one unkind thing that ever was done by him.'

JOHN LOUDOUN MACADAM.

Though neither a soldier nor a statesman, and laying no claim to distinction on the score either of literary or scientific achievement, the practical abilities of Macadam have, nevertheless, added a word to the English language, and earned for him the tribute of a grateful remembrance as one of the most important of our public benefactors. The traveller as he bowls smoothly along the even and well-kept turnpike-road, whether in gig, stage-coach, or chaise, may bless fervently the memory

of the great road-reformer of the nineteenth century, whose *macadamised* highways have tended so much to increase the comfort as well as diminish the dangers of vehicular locomotion. The means employed were of the simplest and most efficacious kind, and with an improvement on the original idea, have rendered the public roads throughout the British islands, if not superior, at least second to none in the world.

John Loudoun Macadam was born at Ayr on the 21st September 1756. His father was a landed proprietor, who died when John was about fourteen, and the young man was thereupon sent to the office of an uncle, a merchant in New York. Here he remained for a number of years, and on the war of independence breaking out, established for himself a lucrative business as an agent for the sale of prizes. The termination of hostilities, however, in favour of the colonists, found him nearly penniless, and he returned to his native country. For some time after this he resided in the neighbourhood of Moffat, and subsequently removed to Sauchrie, in Ayrshire, where for thirteen years he acted as deputy-lieutenant of the county, and a member of the commission of the peace. Being here engaged in the capacity of trustee on certain roads, his mind was first led to revolve some scheme for a general amelioration of the system of highways throughout the kingdom, and he continued for many years to study and experiment on the subject. Having been appointed, in 1798, agent for victualling the navy in the western ports of Great Britain, he took up his abode at Falmouth, but afterwards removed to Bristol. In 1815, he was appointed surveyor of the Bristol roads, and here he first seriously set himself to work to carry into actual operation the improvements which he had been pondering over for so many years. The main feature of his plan was to form a bed of fragments of stone—granite, whinstone, or basalt—none of which should be too large to pass through an iron ring two and a half inches in diameter. The stratum or bed of such materials was to be from six to twelve inches in thickness, and it was left to be brought into compactness and smoothness by the action of the vehicles passing over it. Though now approaching sixty years of age, Mr Macadam set himself with all energy to carry out this scheme, and before he died, he had the satisfaction of seeing his system of roadmaking generally adopted, though the only reward he reaped for his labours was a grant of £2000 from parliament, and the repayment of a large sum, amounting to several thousands more, which he proved before a committee of the House of Commons to have been expended by him from his own resources in perfecting his plan. He died at Moffat on 26th November 1836, in the eighty-first year of his age, leaving behind him the reputation of one of the most honourable and disinterested of men.

The great drawback from the virtues of Mr Macadam's plan, lies in the difficulty of obtaining a smooth surface. Without a firm substructure, the subjacent materials are apt to work up amongst those of the macadam bed. It is also found that carriages encounter a prodigious friction from these materials, until they have been somewhat beaten down; and that, even then, the wheels will be found to have left great longitudinal indentations or hollows, with rough ridges between, altogether at issue with true smoothness. The first objection was overcome by the great engineer Telford, who suggested a causewayed substructure as a basis for the bed of small stones. The second difficulty can be to a large extent overcome, by causing a heavy roller to pass in the first place over the bed of macadamised fragments, so as to jam them down into a compact cake, on which the carriages may then pass with comparative facility. But though this plan commends itself to the simplest common sense, and is very generally practised in France, the idea of its advantages seems never yet to have dawned upon the British intellect. Accordingly, the macadamised road is still, with us, a martyrdom to horses; and it is not too much to say, that the thoroughfares of London present, during a third part of all time, frictional difficulties ten times more than there is any just occasion for, and require four times the amount of renewal and expense which is strictly necessary.

THE HOTTENTOT VENUS.

Early in the present century, a poor wretched woman was exhibited in England under the appellation of the *Hottentot Venus*. With an intensely ugly figure, distorted beyond all European notions of beauty, she was said by those to whom she belonged to possess precisely that kind of shape which is most admired among her countrymen, the Hottentots. Mr Bullock, proprietor of a 'Museum' in which many exhibitions were held in those days, was applied to in 1810 by a Mr Dunlop, surgeon of an African ship, to purchase a beautiful camelopard skin. On account of the high price asked, the negotiation broke off; but at a second interview, Dunlop informed Mr Bullock that he had brought a Hottentot woman home with him from the Cape, whom he had engaged to take back again in two years; that she was an object of great curiosity; and that a person might make a fortune in two years by exhibiting her. Mr Bullock, however, did not close with the offers made to him, and the black woman was sold—for it appears to have been virtually a sale—by the surgeon to another person. Then came forth the advertisements and placards concerning the Hottentot Venus. She was exhibited on a stage two feet high, along which she was led by her keeper, and exhibited like a wild beast; being obliged to walk, stand, or sit, as he ordered her. The exhibition was so offensive and disgraceful, that the attorney-general called for the interference of the lord chancellor on the subject. He grounded his application on the fact, that the poor creature did not appear to be a free agent, and that she was little other than a slave or chattel. She and her keeper both spoke a kind of low Dutch, such as is known on the Hottentot borders of Cape Colony. It was observed, on one occasion, while being exhibited, that on her not coming forward immediately when called, the keeper went to her, and holding up his hand menacingly, said something in Dutch which induced her to come forward. She was often heard, also, to heave deep sighs in the course of the exhibition, and displayed great sullenness of temper. A Dutch gentleman, on one occasion, interrogated her how far she was a willing participator in the exhibition; but her keeper would not allow her to answer the questions. The publicity

given to the matter in the Court of Chancery, soon caused the disappearance of the Hottentot Venus from the public gaze, but of the subsequent history of the poor woman herself we have no information.

WILLIAM OF WYKEHAM.

Manners makyth the Man,
Quoth William of Wykeham.

William of Wykeham, probably one of the most popular characters in English history, was born of humble parents in the obscure Hampshire village from which he derives his surname. Nicholas Uvedale, the lord of the manor, attracted by the child's intelligence, sent him to school at Winchester. When still a youth, William became his patron's secretary, and being lodged in a lofty tower of Winchester Castle, there acquired the enthusiastic admiration of Gothic architecture, which laid the foundation of his future fortune. The young secretary visited the neighbouring churches, cathedrals, and castles; he measured, studied, and compared their various beauties and defects; then considered how such stately edifices had been erected; and figured in his own imagination others of still finer and grander proportions. So, when introduced by his patron to King Edward III., he was qualified to assist that monarch in planning and directing the building of his palatial castle at Windsor. Wykeham thus became the king's favourite and secretary; and subsequently applying himself to politics, he was made keeper of the Privy Seal; then entering the church, he became bishop of Winchester, and soon afterwards lord chancellor of England.

William, however, had nearly lost the favour of the king. When Windsor Castle was completed, the architect caused to be placed over the great gate, the words, THIS MADE WYKEHAM. The inscription was considered to be an arrogant assumption to himself, of all the honour and glory resulting from the great undertaking. The king, at first, was displeased, but William soon satisfied the monarch by the following explanation. In the inscription, the word Wykeham was, according to the idiom of the English language, in the accusative case, and, accordingly, the inscription did not mean that Wykeham made this building, but that the construction of the building made Wykeham, raising him from a poor lad to be the king's favourite architect. And when the heralds were busying themselves to find suitable arms for Wykeham, he gave them as his motto, MANNERS MAKYTH MAN; thereby meaning that a man's real worth is to be estimated, not from the outward and accidental circumstances of birth and fortune, but from the acquirements of his mind and his moral qualifications.

The biography of William of Wykeham, being part of the history of England, is rather beyond our scope. Ever sensible that the education and manners which he acquired at Winchester had made a man of him, he founded Winchester school, for the benefit of future generations. As a necessary adjunct and accessory to the school, he founded New College at Oxford. The publication of the charter of foundation of the latter establishment, bears date the 26th of November 1379.

During his long term of fourscore years, William devoted himself to acts of benevolence and charity. The immense fortune he acquired was expended with equal munificence. He contributed greatly to the promotion of sound education in England, while his skill as an architect was matched by an extraordinary aptitude for civil and ecclesiastical business. His talents and benevolence were not confined to scholastic and ecclesiastical edifices alone; he constructed roads and bridges, and regulated traffic on highways. He was buried in his own oratory in Winchester Cathedral, and whether the result of care or accident, it is pleasing to have to relate that Wykeham's tomb, of white marble, has never been desecrated. Many other tombs have suffered dilapidation in that cathedral, and other places, during the many political and religious changes that have occurred since Wykeham was interred; but his revered effigy, in pontifical robes, seems as if scarcely a few days had elapsed since it left the hand of the sculptor.

NOVEMBER 27.

St James, surnamed Intercisus, martyr, 421. St Maharsapor, martyr, 421. St Secundin or Seachnal, bishop of Dunseachlin or Dunsaghlin, in Meath, 447. St Maximus, bishop of Riez, confessor, about 460. St Virgil, bishop of Salzburg, confessor, 784.

Advent Sunday.

The four weeks immediately preceding Christmas are collectively styled *Advent*, a term denoting *approach* or *arrival*, and are so called in reference to the coming celebration of the birth of our Saviour. With this period, the ecclesiastical or Christian year is held to commence, and the first Sunday of these four weeks is termed Advent Sunday, or the first Sunday in Advent. It is always the *nearest* Sunday to the feast of St Andrew,* whether before or after that day; so that in all cases the season of Advent shall contain the uniform number of four Sundays. In 1864, Advent Sunday fell on the 27th of November, the earliest possible date on which it can occur.

Died.—Horace, lyric and satirical poet, 8 B. C.; Clovis, first king of France, 511, *Paris;* Maurice, Roman emperor, beheaded at Chalcedon, 602; Louis, Chevalier de Rohan, executed at Paris for conspiracy, 1674; Basil Montagu, Q.C. (writings on philosophical and social questions, &c.), 1851, *Boulogne.*

THE GREAT STORM.

Early on the morning of Saturday, the 27th November 1703, occurred one of the most terrific storms recorded in our national history. It was not merely, as usually happens, a short and sudden burst of tempest, lasting a few hours, but a fierce and tremendous hurricane of a week's duration, which attained its utmost violence on

* See under November 30.

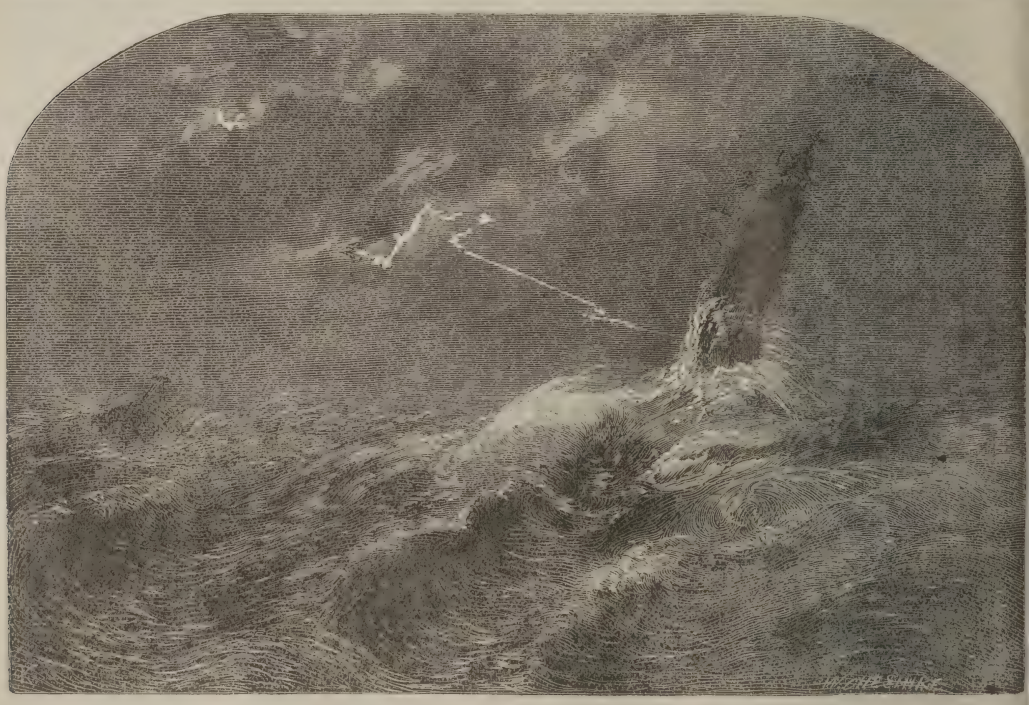
the day above mentioned. The preceding Wednesday was a peculiarly calm, fine day for the season of the year, but at four o'clock in the afternoon a brisk gale commenced, and increased so strongly during the night, that it would have been termed a great storm, if a greater had not immediately followed. On Thursday, the wind slightly abated; but on Friday it blew with redoubled force till midnight, from which time till daybreak on Saturday morning, the tempest was at its extreme height. Consequently, though in some collections of dates the Great Storm is placed under the 26th of November, it actually took place on the following day. Immediately after midnight, on the morning of Saturday, numbers of the affrighted inhabitants of London left their beds, and took refuge in the cellars and lower apartments of their houses. Many thought the end of the world had arrived. Defoe, who experienced the terrors of that dreadful night, says: 'Horror and confusion seized upon all; no pen can describe it, no tongue can express it, no thought conceive it, unless some of those who were in the extremity of it.' It was not till eight o'clock on the Saturday morning, when the storm had slightly lulled, that the boldest could venture forth from the shelter of their dwellings, to seek assistance, or inquire for the safety of friends. The streets were then thickly strewed with bricks, tiles, stones, lead, timber, and all kinds of building materials. The storm continued to rage through the day, with very little diminution in violence, but at four in the afternoon heavy torrents of rain fell, and had the effect of considerably reducing the force of the gale. Ere long, however, the hurricane recommenced with great fury, and in the course of the Sunday and Monday attained such a height, that on Tuesday night few persons dared go to bed. Continuing till noon on Wednesday, the storm then gradually decreased till four in the afternoon, when it terminated in a dead calm, at the very hour of its commencement on the same day of the preceding week.

The old and dangerously absurd practice of building chimneys in stacks, containing as many bricks as a modern ordinary-sized house, was attended by all its fatal consequences on this occasion. The bills of mortality for the week recorded twenty-one deaths in London alone, from the fall of chimneys. After the tempest, houses bore a resemblance to skeletons. Fortunately, three weeks of dry weather followed, permitting the inhabitants to patch up their dwellings with boards, tarpaulins, old sails, and straw; regular repairs being in many instances, at the time, wholly impossible. Plain tiles rose in price from one guinea to six pounds per thousand; and pan-tiles from fifty shillings to ten pounds, for the same number. Bricklayers' wages rose in proportion, so that even in the case of large public edifices, the trustees or managers bestowed on them merely a temporary repair, till prices should fall. During 1704, the Temple, Christ's Hospital, and other buildings in the city of London, presented a remarkable appearance, patched with straw, reeds, and other thatching materials.

At Wells, the bishop of that diocese and his wife were killed, when in bed, by a stack of chimneys falling upon them. Defoe, from personal observation, relates that, in the county of Kent alone, 1107 dwelling-houses and barns were levelled by the tremendous force of the hurricane. Five hundred grand old trees were prostrated in Penshurst, the ancient park of the Sidneys, and numerous orchards of fruit-trees were totally destroyed.

The same storm did great damage in Holland and France, but did not extend far to the northward; the border counties and Scotland receiving little injury from it. The loss sustained by the city of London was estimated at one million, and that of Bristol at two hundred thousand pounds. Great destruction of property and loss of life occurred on the river Thames. The worst period of the storm there, was from midnight to daybreak, the night being unusually dark, and the tide extraordinarily high. Five hundred watermen's wherries, 300 ship-boats, and 120 barges were destroyed; the number of persons drowned could never be exactly ascertained, but 22 dead bodies were found and interred.

The greatest destruction of shipping, however, took place off the coast, where the fleet, under the command of Sir Cloudesley Shovel, had just returned from the Mediterranean. The admiral, and part of his ships anchored near the Gunfleet, rode out the gale with little damage; but of the vessels lying in the Downs few escaped. Three ships of 70 guns, one of 64, two of 56, one of 46, and several other smaller vessels, were totally destroyed, with a loss of 1500 officers and men, among whom was Rear-admiral Beaumont.



It may surprise many to learn that the elaborate contrivances for saving life from shipwreck date from no distant period. Even late in the last century, the dwellers on the English coasts considered themselves the lawful heirs of all drowned persons, and held that their first duty in the case of a wreck was to secure, for their own behoof, the property which Providence had thus cast on their shores. That they should exert themselves to save the lives of their fellow-creatures, thus imperiled, was an idea that never presented itself. Nay, superstition, which ever has had a close connection with self-interest, declared it was unlucky to rescue a drowning man from his fate. In the humane endeavour to put an end to this horrible state of matters, Burke, in 1776, brought a bill into parliament, enacting that the value of plundered wrecks should be levied from the inhabitants of the district where the wreck occurred. The country gentlemen, resenting the bill as an attack on their vested interests, vehemently opposed it. The government of the day also, requiring the votes of the county members to grant supplies for carrying on the war against the revolted American colonies, joined in the opposition, and threw out the bill, as Will Whitehead expresses it:

> 'To make Squire Boobies willing,
> To grant supplies at every check,
> Give them the plunder of a wreck,
> They 'll vote another shilling.'

This allusion to the change which has taken place in public feeling on the subject of wrecks, was rendered necessary to explain the following incident in connection with the Great Storm. At low water, on the morning after the terrible hurricane, more than two hundred men were discovered on the treacherous footing of the Goodwin Sands, crying and gesticulating for aid, well knowing

that in a very short time, when the tide rose, they would inevitably perish. The boatmen were too busy, labouring in their vocation of picking up portable property, to think of saving life. The mayor of Deal, an humble slopseller, but a man of extraordinary humanity for the period, went to the custom-house, and begged that the boats belonging to that establishment might be sent out to save some, at least, of the poor men. The custom-house officers refused, on the ground that this was not the service for which their boats were provided. The mayor then collected a few fellow-tradesmen, and in a short speech so inspired them with his generous emotions, that they seized the custom-house boats by force, and, going off to the sands, rescued as many persons as they could from certain death. The shipwrecked men being brought to land, naked, cold, and hungry, what was to be done with them? The navy agent at Deal refused to assist them, his duties being, he said, to aid seamen wounded in battle, not shipwrecked men. The worthy mayor, whose name was Powell, had therefore to clothe and feed these poor fellows, provide them with lodgings, and bury at his own expense some that died. Subsequently, after a long course of petitioning, he was reimbursed for his outlay by government; and this concession was followed by parliament requesting the queen to place shipwrecked seamen in the same category as men killed or wounded in action. The widows and children of men who had perished in the Great Storm, were thus placed on the pension list.

The most remarkable of the many edifices destroyed during that dreadful night was the first Eddystone light-house, erected four years previously by an enterprising but incompetent individual, named Winstanley. He had been a mercer in London, and, having acquired wealth, retired to Littlebury, in Essex, where he amused himself with the curious but useless mechanical toys that preceded our modern machinery and engineering, as

THE GREAT STORM: DESTRUCTION OF THE FIRST EDDYSTONE LIGHT-HOUSE.

alchemy and astrology preceded chemistry and astronomy. As a specimen of these, it is related that, in one room of his house, there lay an old slipper, which, if a kick were given it, immediately raised a ghost from the floor; in another room, if a visitor sat down in a seemingly comfortable arm-chair, the arms would fly round his body, and detain him a close prisoner, till released by the ingenious inventor. The light-house was just such a specimen of misapplied ingenuity as might have been expected from such an intellect. It was built of wood, and deficient in every element of stability. Its polygonal form rendered it peculiarly liable to be swept away by the waves. It was no less exposed to the action of the wind, from the upper part being ornamented with large wooden candlesticks, and supplied with useless vanes, cranes, and other 'top-hamper,' as a sailor would say. It is probable that the design of this singular edifice had been suggested to Winstanley by a drawing of a Chinese pagoda. And this light-house, placed on a desolate rock in the sea, was painted with representations of suns and compasses, and mottoes of various kinds; such as POST TENEBRAS LUX, GLORY BE TO GOD, PAX IN BELLO. The last was probably in allusion to the building's fancied security, amidst the wild war of waters. And that such peace might be properly enjoyed, the light-house contained, besides a kitchen and accommodation for the keepers, a state-room, finely carved

and painted, with a chimney, two closets, and two windows. There was also a splendid bedchamber, richly gilded and painted. This is Winstanley's own description, accompanying an engraving of the light-house, in which he complacently represents himself fishing from the state-room window. One would suppose he had designed the building for an eccentric ornament to a garden or a park, were it not that, in his whimsical ingenuity, he had contrived a kind of movable shoot on the top, by which stones could be showered down on any side, on an approaching enemy. Men, who knew by experience the aggressive powers of sea-waves, remonstrated with Winstanley, but he declared that he was so well assured of the strength of the building, that he would like to be in it during the greatest storm that ever blew under the face of heaven. The confident architect had, a short time previous to the Great Storm, gone to the light-house to superintend some repairs. When the fatal tempest came, it swept the flimsy structure into the ocean, and with it the unfortunate Winstanley, and five other persons who were along with him in the building.

There is a curious bit of literary history indirectly connected with the Great Storm. Addison, 'distressed by indigence,' wrote a poem on the victory of Blenheim, in which he thus compares the Duke of Marlborough, directing the current of the great fight, to the Spirit of the Storm—

> 'So when an angel, by divine command,
> With rising tempests shakes a guilty land,
> Such as of late o'er pale Britannia past,
> Calm and serene, he drives the furious blast.
> And pleased th' Almighty's orders to perform,
> Rides in the whirlwind, and directs the storm.'

Lord Godolphin was so pleased with this simile, that he immediately appointed Addison to the Commissionership of Appeals, the first public employment conferred on the essayist.

CIRCUMSTANCES AT THE DEATH OF THOMAS, LORD LYTTELTON.

Thomas, second Lord Lyttelton, who died November 27, 1779, at the age of thirty-five, was as remarkable for his reckless and dissipated life—not to speak of impious habits of thought—as his father had been for the reverse. One of the wicked actions attributed to him, was the seduction of three Misses Amphlett, who resided near his country residence in Shropshire. He had just returned from Ireland—where he left one of these ladies—when, residing at his house in Hill Street, Berkeley Square, he was attacked with suffocating fits of a threatening character. According to one account, he dreamed one night that a fluttering bird came to his window, and that presently after a woman appeared to him in white apparel, who told him to prepare for death, as he would not outlive three days. He was much alarmed, and called for his servant, who found him in a profuse perspiration, and to whom he related the circumstance which had occurred.* According to another account, from a relative of his lordship, he was still awake when the noise of a bird fluttering at the window called his attention; his room seemed filled with light, and he saw in the recess of the window a female figure, being that of a lady whom he had injured, who, pointing to the clock on the mantel-piece, then indicating twelve o'clock, said in a severe tone that, at that hour on the third day after, his life would be concluded, after which she vanished and left the room in darkness.

That some such circumstance, in one or other of these forms, was believed by Lord Lyttelton to have occurred, there can be no reasonable doubt, for it left him in a depression of spirits which caused him to speak of the matter to his friends. On the third day, he had a party with him at breakfast, including Lord Fortescue, Lady Flood, and two Misses Amphlett, to whom he remarked: 'If I live over to-night, I shall have jockeyed the ghost, for this is the third day.' The whole party set out in the forenoon for his lordship's country-house, Pit Place, near Epsom, where he had not long arrived when he had one of his suffocating fits. Nevertheless, he was able to dine with his friends at five o'clock. By a friendly trick, the clocks throughout the house, and the watches of the whole party, including his lordship's, were put forward half an hour. The evening passed agreeably; the ghostly warning was never alluded to; and Lord Lyttelton seemed to have recovered his usual gaiety. At half-past eleven, he retired to his bedroom, and soon after got into bed, where he was to take a dose of rhubarb and mint-water. According to the report afterwards given by his valet,* 'he kept every now and then looking at his watch. He ordered his curtains to be closed at the foot. It was now within a minute or two of twelve by his watch: he asked to look at mine, and seemed pleased to find it nearly keep time with his own. His lordship then put both to his ear, to satisfy himself that they went. When it was more than a quarter after twelve by our watches, he said: "This mysterious lady is not a true prophetess, I find." When it was near the real hour of twelve, he said: "Come, I'll wait no longer; get me my medicine; I'll take it, and try to sleep."' Perceiving the man stirring the medicine with a toothpick, Lord Lyttelton scolded him, and sent him away for a tea-spoon, with which he soon after returned. He found his master in a fit, with his chin, owing to the elevation of the pillow, resting hard upon his neck. Instead of trying to relieve him, he ran for assistance, and when he came back with the alarmed party of guests, Lord Lyttelton was dead.

Amongst the company at Pit Place that day, was Mr Miles Peter Andrews, a companion of Lord Lyttelton. Having business at the Dartford powder-mills, in which he was a partner, he left the house early, but not before he had been pleasingly assured that his noble friend was restored to his usual good spirits. So little did the ghost-adventure rest in Mr Andrews's mind, that he did not even recollect the time when it was predicted the event would take place. He had been half an hour in bed at his partner, Mr Pigou's house at the mill,† when 'suddenly his curtains were pulled open, and Lord Lyttelton

* T. J., the subsequent proprietor of Lord Lyttelton's house, Pit Place, gives this (*Gent. Mag.* 1816, ii. 421), as from a narrative in writing, left in the house as an heir-loom, and 'which may be depended on.'

* *Gentleman's Magazine*, 1815, i. 597.

† J. W. Croker (*Notes to Boswell's Life of Johnson*).

appeared before him at his bedside, in his robe-de-chambre and night-cap. Mr Andrews looked at him some time, and thought it so odd a freak of his friend, that he began to reproach him for his folly in coming down to Dartford Mills without notice, as he could find no accommodation. "However," said he, "I'll get up, and see what can be done." He turned to the other side of the bed, and rang the bell, when Lord Lyttelton disappeared. His servant soon after coming in, he inquired: "Where is Lord Lyttelton?" The servant, all astonishment, declared he had not seen anything of his lordship since they left Pit Place. "Pshaw! you fool, he was here this moment at my bedside." The servant persisted that it was not possible. Mr Andrews dressed himself, and with the assistance of the servants, searched every part of the house and garden; but no Lord Lyttelton was to be found. Still Mr Andrews could not help believing that Lord Lyttelton had played him this trick, till, about four o'clock the same day, an express arrived to inform him of his lordship's death, and the manner of it.'

An attempt has been made to invalidate the truth of this recital, but on grounds more than usually weak. It has been surmised that Lord Lyttelton meant to take poison, and imposed the story of the warning on his friends; as if he would have chosen for a concealment of his design, a kind of imposture which, as the opinions of mankind go, is just the most hard of belief. This supposition, moreover, overlooks, and is inconsistent with, the fact that Lord Lyttelton was deceived as to the hour by the tampering with the watches; if he meant to destroy himself, he ought to have done it half an hour sooner. It is further affirmed—and the explanation is said to come from Lord Fortescue, who was of the party at Pit Place—that the story of the vision took its rise in a recent chase for a lady's pet-bird, which Lord Lyttelton declared had been harassingly reproduced to him in his dreams.* Lord Fortescue may have been induced, by the usual desire of escaping from a supra-natural theory, to surmise that the story had some such foundation; but it coheres with no other facts in the case, and fails to account for the impression on Lord Lyttelton's mind, that he had been warned of his coming death—a fact of which all his friends bore witness. On the other hand, we have the Lyttelton family fully of belief that the circumstances were as here related. Dr Johnson tells us, that he heard it from Lord Lyttelton's uncle, Lord Westcote, and he was therefore willing to believe it.† There was, in the Dowager Lady Lyttelton's house, in Portugal Street, Grosvenor Square, a picture which she herself executed in 1780, expressly to commemorate the event; it hung in a conspicuous part of her drawing-room. 'The dove ‡ appears at the window, while a female figure, habited in white, stands at the foot of the bed, announcing to Lord Lyttelton his dissolution. Every part of the picture was faithfully designed, after the description given to her by the valet-de-chambre who attended him, to whom his master related all the circumstances.'* The evidence of Mr Andrews is also highly important. Mr J. W. Croker, in his notes on Boswell, attests that he had more than once heard Mr Andrews relate the story, with details *substantially agreeing* with the recital which we have quoted from the *Gentleman's Magazine*. He was unquestionably good evidence for what occurred to himself, and he may be considered as not a bad reporter of the story of the ghost of the lady which he had heard from Lord Lyttelton's own mouth. Mr Croker adds, that Mr Andrews always told the tale 'reluctantly, and with an evidently solemn conviction of its truth.' On the whole, then, the Lyttelton ghost-story may be considered as not only one of the most remarkable from its compound character—one spiritual occurrence supporting another—but also one of the best authenticated, and which it is most difficult to explain away, if we are to allow human testimony to be of the least value.

* Scott's *Letters on Demonology*, 2d edition, p. 350, note.

† Boswell.

‡ The circumstance of the bird is remarkable. James Howel, in one of his *Familiar Letters*, dated July 3, 1632, gives an account of a tombstone he had seen preparing in a stone-cutter's shop in Fleet Street, on which were stated the deaths of four persons of a family named Oxenham, who had been visited just before their demise by a white-breasted bird, which fluttered over their heads or about the bed on which they lay. At the bottom of the inscriptions were given the names of sundry persons, who attested the fact. 'This stone,' says Howel, 'is to be sent to a town hard-by Exeter, where this happened.' —*Familiar Letters*, 5th ed., p. 232.

PITT AND HIS TAXES.

The great increase in taxation subsequent to the conclusion of the first American war, is a well-known circumstance in modern British history. The national debt, which, previous to the commencement of the Seven Years' War in 1755, fell short of £75,000,000, was, through the expenses entailed by that conflict, increased to nearly £129,000,000 at the peace of Paris in 1763, while, twenty years subsequently, at the peace of Versailles, in 1783, the latter amount had risen to upwards of £244,000,000, in consequence of the ill-judged and futile hostilities with the North American colonies. When William Pitt, the youngest premier and chancellor of exchequer that England had ever seen, and at the time only twenty-four years of age, came into office in December 1783, on the dismissal of the Coalition cabinet, he found the finances in such a condition as to necessitate the imposition of various new taxes, including, among others, the levying of an additional rate on windows, and also of duties on game-certificates, hackney-coaches, and saddle and race horses. This may be regarded as the commencement of a train of additional burdens on the British nation, which afterwards, during the French war, mounted to such a height, that at the present day it seems impossible to comprehend how our fathers could have supported so crushing a load on their resources. Opposite views prevail as to the expediency of the measures followed by England in 1793, when the country, under the leadership of such champions as Pitt and Burke, drifted into a war with the French republic; a war, however, which, in the conjuncture of circumstances attending the relations between the two countries, must have almost inevitably taken place, sooner or later. At the present day, indeed, when more

liberal and enlightened ideas prevail on international questions, and we have also had the benefit of our fathers' experience, such a consummation might possibly have been avoided. Of the straightforwardness and vigorous ability of Pitt throughout his career, there can be no doubt, however one-sided he may have been in his political sympathies; and a tribute of respect, though opinions will differ as to its grounds, is undoubtedly due to 'the pilot that weathered the storm.'

The taxes imposed by Pitt, as might have been anticipated, caused no inconsiderable amount of grumbling among the nation at large. This grumbling, in many instances, resolved itself into waggish jests and caricatures. The story of the Edinburgh wit, who wrote 'PITT'S WORKS, vol. i., vol. ii.,' &c., on the walls of the houses where windows had been blocked up by the proprietors in consequence of the imposition of an additional duty, is a well-known and threadbare joke. Another jest, which

A DEFIANCE TO PITT'S HORSE-TAX—A FARMER RIDING HIS COW TO STOCKPORT MARKET.

took a practical form, was that concocted by a certain Jonathan Thatcher, who, on 27th November 1784, in defiance of the horse-tax, imposed a few months previously by Pitt, rode his *cow* to and from the market of Stockport. A contemporary caricature, representing that scene, is herewith presented to our readers as a historical curiosity.

NOVEMBER 28.

THE REV. LANGTON FREEMAN AND HIS SINGULAR MAUSOLEUM.

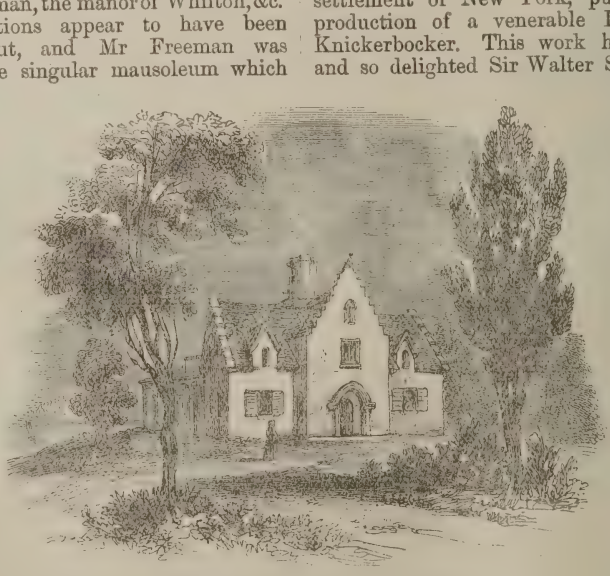
Among the numerous individuals who have rendered themselves conspicuous by eccentricities of character, few, perhaps, are more noteworthy than an English clergyman who died about eighty years ago.

The Rev. Langton Freeman, whose baptism is registered on 28th November 1710, was rector of Bilton, in Warwickshire. He resided at the retired and somewhat secluded village of Whilton, in Northamptonshire, some ten or twelve miles distant, from which he rode on Sundays to Bilton, to perform his ministerial duties. He was a bachelor, which may, in some measure, account for the oddities which have rendered his name famous in the neighbourhood where he dwelt. Living, as he did, in an old manor-house, and occupying so honoured a position in society, few persons would suppose that a clergyman and gentleman could be guilty of such meanness as to beg his Sunday-dinner from a labouring-man, and occasionally also help himself from the larder of a richer friend. But, to do him justice, the reverend *sorner* remembered all these petty thefts, and in his will bequeathed a recompense to those whom, in his lifetime, he had robbed.

His will is dated 16th September 1783, and his death took place the 9th of October in 1784. That portion of the testament relating to his burial is very curious, and runs thus :—

'In the name of God, amen. I, the Reverend Langton Freeman, of Whilton, in the county of Northampton, clerk, being in a tolerable good state of bodily health, and of a perfect sound and disposing mind, memory, and understanding (praised be God for the same), and being mindful of my death, do therefore make and ordain this my last Will and Testament, as follows: And principally I commend my soul to the mercy of God through the merits of my Redeemer. And first, for four or five days after my decease, and until my body grows offensive, I would not be removed out of the place or bed I shall die on. And then I would be carried or laid in the same bed, decently and privately, in the summer-house now erected in the garden belonging to the dwelling-house, where I now inhabit in Whilton aforesaid, and to be laid in the same bed there, with all the appurtenances thereto belonging; and to be wrapped in a strong, double winding-sheet, and in all other respects to be interred as near as may be to the description we receive in Holy Scripture of our Saviour's burial. The doors and windows to be locked up and bolted, and to be kept as near in the same manner and state they shall be in at the time of my decease. And I desire that the building, or summer-house, shall be planted around with evergreen-plants, and fenced off with iron or oak pales, and painted of a dark-blue colour; and for the due performance of this, in manner aforesaid, and for keeping the building ever the same, with the evergreen-plants and rails in proper and decent repair, I give to my nephew, Thomas Freeman, the manor of Whilton, &c.'

All these instructions appear to have been faithfully carried out, and Mr Freeman was duly deposited in the singular mausoleum which he had chosen. Till within the last few years, the summer-house was surrounded with evergreens; but now the palings are gone, the trees have been cut down, and the structure itself looks like a ruined hovel.



There is a large hole in the roof, through which, about two years ago, some men effected an entrance. With the aid of a candle they made a survey of the burial-place and its tenant; the latter, a dried up, skinny figure, having apparently the consistence of leather, with one arm laid across the chest, and the other hanging down the body, which, though never embalmed, seems to have remained perfectly incorrupted.

It is rather singular that there is nothing whatever in the parish register respecting the burial of the Rev. Langton Freeman. This may be accounted for, however, by the circumstance of his having been buried in unconsecrated ground.

WASHINGTON IRVING.

Were the fact not familiar to every one, most English readers of the *Sketch-Book*, *Bracebridge Hall*, and the lives of Goldsmith and Columbus, would be surprised to learn that they were written by an American; though, indeed, an American to whom England gave success and fame.

Washington Irving's father was a Scotchman, and his mother an Englishwoman. William Irving went to New York about 1763, and was a merchant of that city during the revolution. His son, Washington, was born April 3, 1783, just as the War of Independence had been brought to a successful termination; and he received the name of its hero, of whom he was destined to be the, so far, most voluminous biographer. His best means of education was his father's excellent library, and his elder brothers were men of literary tastes and pursuits. At sixteen, he began to study law, but he never followed out the profession. He was too modest ever to address a jury, and in the height of his fame, he could never summon the resolution to make a speech, even when toasted at a public dinner. Irving was early a traveller. At the age of twenty-one, he visited the south of Europe on a tour of health and pleasure. On his return to New York, he wrote for his brother's newspaper; joined with Paulding, Halleck, and Bryant in the *Salmagundi*—papers in the fashion of the *Spectator;* and wrote a comic history of the early settlement of New York, purporting to be the production of a venerable Dutchman, Diedrich Knickerbocker. This work had a great success, and so delighted Sir Walter Scott, that when the author visited him in 1820, he wrote to thank Campbell, who had given him a letter of introduction, for 'one of the best and pleasantest acquaintances he had met in many a day.' Sir Walter did not stop with compliments. Irving could not find a publisher for his *Sketch-Book*, being perhaps too modest to push his fortunes with the craft. He got it printed on his own account by a person named Miller, who failed shortly after. Sir Walter introduced the author to John Murray, who gave him £200 for the copyright, but afterwards increased the sum to £400. Irving then went to Paris, where he wrote *Bracebridge Hall*, and made the acquaintance of Thomas Moore and other literary celebrities. From thence

RESIDENCE OF WASHINGTON IRVING.

he proceeded to Dresden, and wrote the *Tales of a Traveller;* but he found his richest mine in Spain, where, for three months, he resided in the palace of the Alhambra, and employed himself in ransacking its ancient records. Here he wrote his *Life and Voyages of Columbus* (for which Murray paid him 3000 guineas), the *Conquest of Granada, Voyages of the Companions of Columbus,* &c.

By this time America, finding that Irving had become famous abroad—as American authors and artists mostly do, if at all, according to an old proverb—begged him to accept the post of secretary of legation at London ; a highly honourable office indeed, but, in point of emolument, worth only £500 a year. The Oxford University having conferred on him the honorary degree of D.C.L., and one of George IV.'s gold medals, the Americans, a modest people, always proud of European recognition, made him minister at the court of Spain. On his return to America, he retired to a beautiful country-seat, 'Sunnyside,' built in his own 'Sleepy Hollow,' on the banks of the Hudson, where he lived with his brother and nieces, and wrote *Astoria, Captain Bonneville, Goldsmith, Mahomet,* and his last work, the life of his great namesake, Washington. He was never married. In his youth he loved one who died of consumption, and he was faithful to her memory. He died, November 28, 1859, sincerely mourned by the whole world of literature, and by his own countrymen, who have placed his name at the head of the list of authors whom they delight to honour.

NOVEMBER 29.

St Saturninus, bishop of Toulouse, martyr, 257. St Radbod, bishop of Utrecht, confessor, 918.

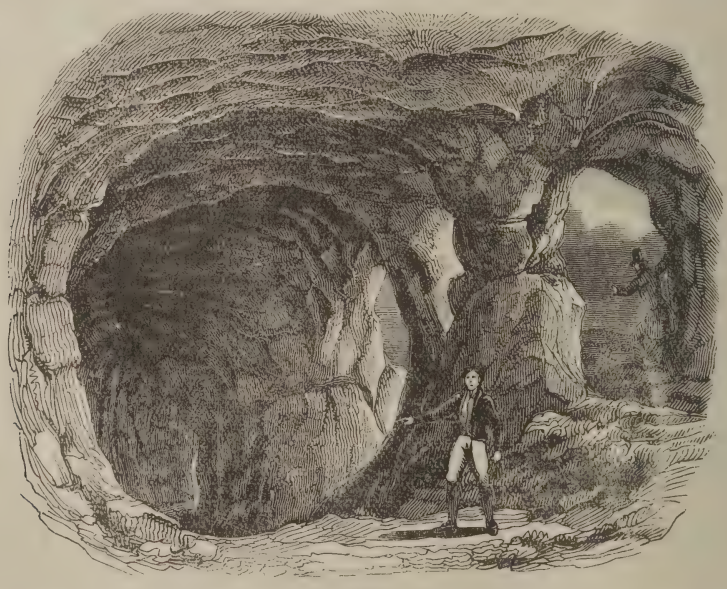
Born.—Margaret, daughter of Henry VII., and queen of James IV. of Scotland, 1489 ; Sir Philip Sidney, poet, 1554, *Penshurst, Kent;* Dr Peter Heylin, theological and historical writer, 1600, *Burford, Oxfordshire;* John Ray, eminent naturalist, 1628, *Black Notley, Essex.*

Died.—Pope Clement IV., 1268, *Viterbo;* Philippe le Bel, king of France, 1314, *Fontainebleau;* Roger Mortimer, paramour of Isabella, Edward II.'s queen, executed at Smithfield, 1330; Charles IV., Emperor of Germany, 1378, *Prague;* Cardinal Thomas Wolsey, minister of Henry VIII., 1530, *St Mary's Abbey, Leicester;* Frederick, Elector Palatine, son-in-law of James I. of England, 1632, *Metz;* Brian Walton, bishop of Chester, editor of the Polyglot Bible, 1661, *London;* Prince Rupert, of Bavaria, cavalier-general, 1682, *London;* Marcello Malpighi, eminent anatomist, 1694, *Rome;* Anthony Wood or à Wood, antiquarian writer, 1695, *Oxford;* Maria Theresa, queen of Hungary, 1780, *Vienna.*

THE EARL OF MARCH: 'MORTIMER'S HOLE.'

To the traveller approaching Nottingham by rail from the Derby side, the commanding position of its ruined castle cannot but be an object of interest. Though commerce has completely surrounded the rock it stands upon with workshops, wharves, and modern dwelling-houses, the castle seems literally 'to dwell alone.' Associations of a character peculiar to itself cluster round it. It has a distinctive existence—claims a distinct parentage from the puny, grovelling erections beneath it—and soars as much beyond them by the events it calls to mind, as by its proud and lofty position. Its history, in fact, is interwoven in the history of the nation ; and part of the glory and shame of its country's deeds rests upon it.

The old castle must have frowned with unusual gloominess when Isabella, queen of Edward II., and her unprincipled paramour, Mortimer, took up their abode in it. The queen had rebelled against and deposed her husband. Mortimer had accomplished his death. And with the young king, Edward III., in their tutelage, they tyrannised over the country, and squandered its treasures as they pleased.



As a fresh instance of her favour, the frail princess had recently elevated Mortimer to the earldom of March. But the encroaching arrogance of the haughty minion was awakening in the minds of the barons a determination to curb his insolence and overgrown power. This spirit of revenge was still further excited by the execution of the king's uncle, the Earl of Kent, who appears to have been slain merely to shew that there was none too high to be smitten down if he dared to make himself obnoxious to the profligate rulers. The bow, however, was this time strained beyond its strength. The blow that was intended to quell the rising storm of indignation, rebounded, with increased force, on the guilty Mortimer, and proved his own destruction. For all parties, weary of his insolence and oppression, were forgetting their former feuds in the common anxiety to work his overthrow, and this last savage act of his government aroused them to a full sense of their danger, and gave increased intensity to their hatred and desire of vengeance. Besides which, they saw in the young king, now in his eighteenth year, signs of growing impatience of the yoke which Mortimer, as regent, had imposed on his authority. Daily they poured complaints into the royal ear of the profligacy, the exactions, and the illegal practices of the paramour, and found in Edward a willing listener. At length he was brought to see his own danger—to look upon Mortimer as the murderer of his father and uncle, the usurper of power which ought to be in his own hands, the spoiler of his people, and the man who was bringing daily dishonour to himself and the nation by an illicit connection with his royal mother. He determined, accordingly, to humble the pride of the arrogant chief, and redress the public grievances.

A parliament was summoned to meet at Nottingham, about Michaelmas 1330. The castle was occupied by the dowager-queen and the Earl of March, attended by a guard of a hundred and eighty knights, with their followers ; while the king, with his queen, Philippa, and a small retinue, took up his abode in the town. The number of their attendants, and the jealous care with which the castle was guarded, implied suspicion in the minds of the guilty pair. Every night the gates of the fortress were locked, and the keys delivered to the queen, who slept with them under her pillow. But with all their precautions, justice was more than a match for their villany. Sir William Mountacute, under the sanction of his sovereign, summoned to his aid several nobles, on whose loyalty and good faith he could depend, and obtained

the king's warrant for the apprehension of the Earl of March and others. The plot was now ripe for execution. For a time, however, the inaccessible nature of the castle-rock, and the vigilance with which the passes were guarded, appeared to present an insuperable obstacle to the accomplishment of their designs. Could Sir William Eland, the constable of the castle, be won over, and induced to betray the fortress into their hands? The experiment was worth a trial, and Mountacute undertook the delicate task. Sir William joyfully fell in with a proposition which enabled him at once to testify his loyalty to his sovereign and his detestation of the haughty tyrant. The result of the interview is thus quaintly described by one of the old chroniclers, whose manuscript is quoted by Deering:

'Tho saide Sir William Montagu to the constabill in herynge of all them that were helpyng to the quarrel. "Now certis dere ffrendes us behoveth for to worche and done by your Queyntyse to take the Mortimer, sith ye be the keeper of the castell and have the kayes in your warde." "Sir," quod the constabill, "woll ye understoude that the yats of the castell beth loken with lokys, and Queen Isabell sent hidder by night for the kayes thereof, and they be layde under the chemsell of her beddis hede unto the morrow, and so I may not come into the castell by the yats no manner of wyse; but yet I know another weye by an aley that stretchith oute of the ward under the earthe into the castell that goeth into the west, which aley Queen Isabell, ne none of her meayne, ne the Mortimer, ne none of his companye knowith it not, and so I shall lede you through the aley, and so ye shall come into the castell without spyes of any man that beth your enemies."'

Everything being now arranged, on the night of Friday, October 19, 1330, Edward and his loyal associates were conducted by Sir William Eland through a secret passage in the rock to the interior of the castle. Proceeding at once to a chamber adjoining the queen's apartment, they found the object of their search in close consultation with the bishop of Lincoln and others of his party. The Earl of March was seized; Sir Hugh Turplinton and Sir John Monmouth, two of the state-guards, were slain in attempting to rescue him from the king's associates; and the queen, hearing the tumult, and suspecting the cause, rushed into the room in an agony of terror, exclaiming: 'Fair son, fair son, have pity on the gentle Mortimer!' Notwithstanding the cries and entreaties of the weeping Isabella, her beloved earl was torn from her presence, and hurried down the secret passage by which his captors entered, and which has ever since been designated *Mortimer's Hole*. With so much secrecy and despatch was this stratagem executed, that the guards on the ramparts of the castle were not disturbed, and the good people of Nottingham knew nothing of the enterprise till the following day, when the arrest of Mortimer's sons and several of his adherents by the royalists, gave a significant and acceptable indication that the luxurious and profligate usurpation of the Earl of March had at length been terminated by kingly authority.

MORTIMER'S HOLE, NOTTINGHAM CASTLE—THE PASSAGE THROUGH WHICH MONTACUTE AND HIS PARTY ENTERED.

Mortimer was conveyed by a strong guard to the Tower of London. Edward repaired to Leicester, whence he issued writs for the assembling of a new parliament at Westminster, for the purpose of hearing charges against the late administration, and redressing the grievances under which the kingdom had laboured. At this parliament Mortimer was impeached and convicted in a most summary manner of high treason, and other crimes. No proof in evidence of his guilt was heard, and he was condemned to die as a traitor, by being drawn and hanged on the common gallows; a sentence which was executed at 'The Elms,' in Smithfield, on the 29th of November 1330. His body was

allowed to hang two days on the gallows, and was then interred in the church of the Greyfriars.

THE FALL OF WOLSEY.

Any new information regarding the history of Cardinal Wolsey must ever be welcome. A few items of this description were some years ago obtained from a state manuscript of the reign of Henry VIII., then in the possession of Sir Walter C. Trevelyan, Bart., F.S.A., a junior member of whose family was one of the chaplains to King Henry. Through him it may have found its way to the venerable seat of Nettlecombe, in the county of Somerset, where this manuscript, relating to domestic expenses and payments, has, for some centuries, been deposited.

Mr Payne Collier, in describing this document to the Society of Antiquaries, says: 'We pass over the manner in which Wolsey appears, without check or control, to have issued his written warrants or verbal commandments for payments of money for nearly all purposes, and upon all occasions, even for the despatch of his own letters to Rome; an entry of this kind is made in the first month to which the manuscript applies. Neither is it necessary to dwell upon the items which relate to the known part he took upon the trial of Queen Katherine, since upon this portion of the subject nearly all the authorities, from Hall to Lord Herbert of Cherbury, concur. It is to be observed, with reference to the transactions in which Wolsey was concerned, that no warrant was issued by him for the payment of any sum of money after the 19th of June 1529, when Sir Thomas Fitzgerald, the Irish knight, had a present made to him of £66, 13*s.* 4*d.*, the order for which was given by Wolsey. After this date, the warrants were those of the king, or of particular officers, and it does not seem that the cardinal was allowed to interfere; for his disgrace had then commenced, in consequence of the vexatious postponements in the trial of the divorce. Neither does his name occur again in this document, until we come upon it, as it were, by surprise, where he is spoken of by his double title of Cardinal of York and Bishop of Winchester, in connection with a payment to him of one thousand marks out of the revenues of Winchester. The terms are remarkable. "Item, paide to the Lorde Cardynall of Yorke and Bishope of Wincestre, xviij die Martii, by the Kynge's warraunte, datede at Windesour, xvj. die Martii, in the advancement of his hole yeres pension of M. mrs. by the yeere, out of the bishopricke of Winchester, which yere shall fully ende and ronne at Michilmas next cumming—DCIXVJ$^{li.}$ XIIJ$^{s.}$ IIIJ$^{d.}$"'

This quotation is valuable, both biographically and historically, since it settles the question, whether the sum granted to Wolsey were 1000 marks, as Stow, in his Annals, asserts; or 4000 marks, as it stands in some manuscripts of Cavendish's life of the cardinal. By the above entry, confirmed by a subsequent passage in Cavendish, it is clear that, in consideration of the necessities of the cardinal, it was to be allowed him beforehand. After all his pomp and prosperity—after all his vast accumulations of wealth—after all his piles of plate, and heaps of cloth of gold, and costly apparel—Wolsey, in March 1530 (judging from this entry), was reduced to the necessity of obtaining a loan of a thousand marks; this, too, to carry him to his exile at York, whither his enemies had, by this date, induced the fickle, selfish, and luxurious king to banish his former favourite.

Of Wolsey's subsequent residence at Cawood, we find in this manuscript, an 'Item to David Vincent, by the king's warrant, for his charge, being sent to Cawood, in the north contrie, at suche time as the cardenall was sicke.' As the sum charged was considerable—namely, £35, 6*s.* 8*d.* (more than £200 present money)—we may infer, perhaps, that the messenger, whom Cavendish styles his 'fellow Vincent,' made some stay there, watching the progress of Wolsey's illness, and sending intelligence to the king, who was more anxious for the death than for the life of his victim, in order that he might seize upon the remains of his movables. It is quite evident that the cardinal was not, at this period, so destitute as many have supposed, and that he had carried with him a very large quantity of plate, of which the king possessed himself the moment the breath was out of the body of its owner. Among the payments for January, 22 Henry VIII., we read, in the Trevelyan manuscript, that *two persons were employed three entire days in London, 'weighing the plate from Cawood, late the Cardinalle's.'* Such are the unceremonious terms used in the original memorandum, communicating a striking fact, of which we now hear for the first time.

From Cawood, as is well known, Wolsey was brought to the Earl of Shrewsbury's seat, at Sheffield Park; and thither messengers were unexpectedly sent to convey the cardinal to the Tower. This state manuscript shews that Sir William Kingston, captain of the guard, was sent to arrest the cardinal; and that forty pounds were paid to Kingston in November 1530, for the expenses of his journey, as follows: 'Item, to Sir William Kingston, knight-capitain of the kinges garde, sent to Therle of Shrewsebury with divers of the kinges garde, for the conveyance of the Cardinall of Yorke to the Tower of London, in prest for their charges—XL$^{li.}$'

The cardinal was taken ill on the road: the Earl of Shrewsbury encouraged him to hope for recovery, but the cardinal replied that he could not live, and discoursed learnedly about his ailment, dysentery, which he said, within eight days, if there were no change, would necessarily produce 'excoriation of the entrails, or delirium, or death.' This was on the eighth day, when he confidently expected his death; and he expired after the clock had struck eight, according to his own prediction; 'the very hour,' says Shakspeare, 'himself had foretold would be his last.' He had reached Leicester three days previously: as he entered the gate of the monastery, he said: 'Father abbot, I am come to lay my bones among you;' and so the event proved: the monks carried him to his bed, on which he expired on the 29th of November 1530. Shakspeare has little altered the words he used on his death-bed, though they were spoken to Kingston, and not, as in the play, to Cromwell:

> 'But had I served my God with half the zeal
> I served my king, he would not in mine age
> Have left me naked to mine enemies.'
>
> *Henry VIII.*, Act iii. sc. 2.

It is a curious and novel circumstance, brought to light in the document before us, that, exactly

two months before the day of Wolsey's death, the dean and canons of Cardinal's (now Christ-church) College, Oxford, had so completely separated themselves from Wolsey, and from all the interest which he had taken in their establishment, that, instead of resorting to him for the comparatively small sum of £184, for the purpose of carrying on the architectural works, they applied to the king for the loan of the money. The entry of this loan is made in the state document under consideration, 'upon an obligation to be repaid agayne, on this side of Cristinmas next cumming;' so that even this trifling advance could not be made out of the royal purse, filled to repletion by the sacrifice of Wolsey, without an express stipulation that the money was to be returned before Christmas.

Everything in Wolsey (says Mr Collier), his vices and his virtues—were great. He seemed incapable of mediocrity in anything: voluptuous and profuse, rapacious and of insatiable ambition, but too magnanimous to be either cruel or revengeful, he was an excellent master and patron, and a fair and open enemy. If we despise the abjectness which he exhibited in his first fall, let it be remembered from and to what he fell—from a degree of wealth and grandeur which no subject on earth now enjoys, to a condition of ignominy and want, with all the terrible and unknown consequences to which he might be exposed from the merciless and unscrupulous temper of the king.

A picturesque tower or gate-house, the only remains of Wolsey's palace, exists, to this day, at Esher. Its erection has been commonly attributed to the cardinal; he is, however, thought to have had little time for building at Esher; and the architecture of the towers is of an earlier period than Wolsey's. With better authority, the erection of this building is attributed to Bishop Wainfleet, who preceded the cardinal in the possession of the see of Winchester by about eighty years, and is known to have erected 'a stately brick mansion and gate-house' in Esher Park. It is now luxuriantly mantled with ivy: the interior has a very skilfully-wrought newel staircase, of brick; and in the roof is introduced the principle of the oblique arch, a supposed invention of much later date.

In estimating the abjectness of Wolsey, we should also take into account the abject submission which he had long been taught to exhibit before the tyrant—

'Whose smile was transport, and whose frown was fate.'

Of this arbitrary sovereign, one circumstance is disclosed by Cavendish, utterly surpassing all the measures of common iniquity. When Wolsey was sued in a premunire by Henry's order, and all his movables were seized, the chest which contained a dispensation under the king's sign-manual for the very facts on which he was proceeded against, was withheld, and he was prevented from adducing a document, which, if law and reason had any scope, would have preserved him. His misfortunes, and the conversation of some devout and mortified Carthusians, appear to have awakened the first sense of genuine religion in his mind. During his retreat at Cawood, while the king was persecuting him with one refinement of ingenious cruelty after another, he was calm and composed; and here, for the first time, he seems to have exercised, or even comprehended, the character of a Christian bishop. He reconciled enemies, he preached, he visited—nay, he was humble. But this character he was not long permitted to sustain. He had talents for popularity, which, in his delicate and difficult circumstances, he was, perhaps, not sufficiently reserved in displaying. He was preparing to be enthroned at York, with a degree of magnificence which, though far inferior to that which had been practised by his predecessors, was yet sufficient to awaken the jealousy of Henry. The final arrest at Cawood ensued. It is unnecessary, as well as uncharitable, to suppose what there is no proof of —that he died of poison, either administered by himself or others. The obvious and proximate cause of his death was affliction. A great heart, oppressed with indignities, and beset with dangers, at length gave way; and Wolsey, under circumstances affectingly detailed by Cavendish, received, in Leicester Abbey, the two last charities of a death-bed and a grave.

THE FIRST NEWSPAPER PRINTED BY STEAM.

The 29th of November 1814 forms an important date in the history of printing, and consequently in that of civilisation. It was the day on which a newspaper was for the first time printed by steam, instead of manual power. It seems appropriate that the *Times*, the newspaper which of all others throughout the world is now regarded as the most influential, should have been the one that inaugurated this vast improvement. The common printing-press, though much improved during the second half of the last century, could seldom strike off more than two or three hundred impressions per hour, with one man to ink the types, and another to work the press. To set forth the importance of machine-printing, it is only necessary to remark that, without such an invention, the production of a large impression of a newspaper was mechanically impossible, as the news would have been stale before the end of the impression was accomplished. In 1790, Mr W. Nicholson obtained letters-patent for a machine similar in many respects to those which have been adopted in later years; but it does not appear that he brought his invention into practice. Steam-power, it was known, would effect movements in machinery of almost every imaginable kind; but it was the enterprise of the proprietors of the *Times* that enabled inventors to surmount the difficulties of applying such power to printing-presses.

It was the *second* Mr John Walter (the son of the first and the father of the present proprietor), whose management of the *Times* began in 1803, that gave so immense an impetus to rapid printing. It took many hours to strike off the 3000 or 4000 copies of which the daily issue of the *Times* then consisted; and Mr Walter was dissatisfied with that slow process. In 1804, Thomas Martyn, a compositor in his employment, produced a model of a self-acting machine for working the press; and Walter supplied him with money to continue his ingenious labours. The pressmen, however, were so bitterly hostile to any such innovation, that Martyn was placed almost in fear of his life; and as Walter did not at that time possess a very large capital, the scheme fell to the ground. John Walter, however, was not a man to be beaten by

difficulties; he bore in mind Martyn's invention, and bided his time. He encouraged inventors from all quarters; and as his pecuniary means increased, he became able to pay them well for their services. In 1814, he consented that König's patent for a printing-machine should be tried—not in the actual printing-office of the *Times*, but in adjoining premises, for fear of the hostility of the pressmen. König and his assistant, Bauer, worked quietly in these premises for many months, gradually perfecting the machine. The proceedings on the momentous 29th of November were highly characteristic of Mr Walter. 'The night on which this curious machine was first brought into use in its new abode,' says his biographer,* 'was one of great anxiety, and even alarm. The suspicious pressmen had threatened destruction to any one whose inventions might suspend their employment—"destruction to him and his traps." They were directed to wait for expected news from the continent. It was about six o'clock in the morning, when Mr Walter went into the press-room, and astonished its occupants by telling them that the *Times* was already printed by steam; that if they attempted violence, there was a force ready to suppress it; but that if they were peaceable, their wages should be continued to every one of them till similar employment could be procured. The promise was no doubt faithfully performed; and, having so said, he distributed several copies among them. Thus was this most hazardous enterprise undertaken and successfully carried through; and printing by steam, on an almost gigantic scale, given to the world.'

The leading article of the *Times*, on the 29th of November 1814, adverted to the great event in the following terms: 'Our journal of this day presents to the public the practical result of the greatest improvement connected with printing, since the discovery of the art itself. The reader of this paragraph now holds in his hands one of the many thousand impressions of the *Times* newspaper which were taken off last night by a mechanical apparatus. A system of machinery, almost organic, has been devised and arranged, which, while it relieves the human frame of its most laborious efforts in printing, far exceeds all human powers in rapidity and despatch. That the magnitude of the invention may be justly appreciated by its effects, we may inform the public that, after the letters are placed by the compositors, and enclosed in what is called the "form," little more remains for man to do than to attend upon and watch this unconscious agent in its operations. The machine is then merely supplied with paper. Itself places the form, inks it, adjusts the paper to the newly-inked type, stamps the sheet, and gives it forth to the hands of the attendant, at the same time withdrawing the form for a fresh coat of ink, which itself again distributes, to meet the ensuing sheet, now advancing for impression; and the whole of these complicated acts is performed with such a velocity and simultaneousness of movement, that no less than 1100 sheets are impressed in one hour. That the completion of an invention of this kind, not the effect of chance, but the result of mechanical combinations, methodically arranged in the mind of the artist, should be attended with many obstructions and much delay, may be readily admitted. Our share in the event has, indeed, only been the application of the discovery, under an agreement with the patentees, to our own particular business; yet few can conceive, even with this limited interest, the various disappointments and deep anxiety to which we have, for a long course of time, been subjected. Of the person who made this discovery, we have but little to add. Sir Christopher Wren's noblest monument is to be found in the building which he erected; so is the best tribute of praise, which we are capable of offering to the inventor of the printing machine, comprised in the description, which we have feebly sketched, of the powers and utility of the invention. It must suffice to say further, that he is a Saxon by birth; that his name is König; and that the invention has been executed under the direction of his friend and countryman, Bauer.' We have now before us two consecutive numbers of the *Times*—the last that was printed at the hand-press (November 28, 1814), and the first that was printed by machinery (November 29); the latter is far cleaner and more legible than the former—possibly because a new fount of type was used. König's machine was, however, very complicated, and was soon afterwards superseded by one invented by Messrs Applegath and Cowper. As improved, this machine ultimately printed 8000 impressions per hour, but was superseded by the Hoe machine. This in its turn gave way to the famous Walter press, patented in 1866, which prints at an average rate of 12,000 copies per hour, and can do good work at the rate of 17,000 copies.

* In the *Times*, 29th July 1847.

REMARKABLE WAGERS.

On Monday, 29th November 1773, Mr Foster Powell, an attorney's clerk, commenced a journey from London to York and back again, on foot; a feat which he accomplished in the space of six days, reaching York on the Wednesday evening, and starting again the following morning for London, where he arrived on the evening of Saturday, the 4th December. By this extraordinary effort of pedestrianism, he netted the sum of a hundred guineas, which had been staked on his success.

It has been remarked that a collection of curious or foolish wagers would make an interesting volume. After much ransacking, we have succeeded in unearthing a few of the most remarkable instances, which we now present to our readers.

A wager is said to have been won by Sir Walter Raleigh from the Virgin Queen, on the question of how much smoke is contained in a pound of tobacco. A pound of the article in question was weighed, burned, and then weighed again in ashes. The question was held to be satisfactorily settled by determining the weight of the smoke as exactly that of the tobacco, before being burned, minus the residuum of ashes. The fact of the ashes having received an additional weight by combination with the oxygen of the atmosphere, and also the circumstance of numerous imperceptible gases being evolved by the process of combustion, were alike unthought of by Elizabeth and her knight.

Sir John Pakington, called 'Lusty Pakington,' and by Queen Elizabeth, 'My Temperance,' laid a wager of £3000 to swim against three noble courtiers from Westminster Bridge to Greenwich, but her majesty interposed to prevent any further

procedure on the bet. A gentleman of the name of Corbet, a distinguished family near Shrewsbury, betted that his leg was the handsomest in the county or kingdom; and staked immense estates on the point. He won the wager, and a picture is still preserved in the family mansion, representing the process of measuring the legs of the various disputants. A dispute of a similar kind, between two celebrated beauties in the Scottish metropolis, occasioned a considerable amount both of amusement and scandal in the Modern Athens, about half a century ago. It is recorded of Lord Spencer, that he cut off his coat-tails, and laid a successful wager that such a mutilated style of garment would become fashionable. And an amusing bet, though for the very trifling amount of five shillings, is related to have been decided in 1806, in the Castleyard, York, between Thomas Hodgson and Samuel Whitehead, as to which should succeed in assuming the most *singular* and *original* character. Hodgson appeared decorated with ten-guinea, five-guinea, and guinea notes on his coat and waistcoat, a row of five-guinea notes and a purse of gold round his hat, whilst to his back a paper was attached, with the words, 'John Bull.' Whitehead appeared dressed like a woman on one side, with a silk stocking and slipper, and one half of his face painted. The other half of his body resembled a negro in a man's dress, with a boot and spur. One would have thought, that so far as presenting a ridiculous spectacle and making a fool of himself, he ought to have won the wager, but it was decided in favour of his companion. How far the latter owed his success to the prevailing weakness of humanity towards wealth or the display of it, is a question which we think might be fairly mooted.

A gentleman laid a wager to a considerable amount, that he would stand for a whole day on London Bridge with a trayful of sovereigns, fresh from the Mint, and be unable to find a purchaser for them at a penny apiece. Not one was disposed of.

In the roaring, hard-drinking days of the last century, wagers of all kinds were plentiful. Something similar to the case of Hodgson and Whitehead above related was the bet made in relation to Heidegger, Master of the Revels to George II., whose ugliness it was alleged impossible to surpass. The slums of London were ransacked from one end to the other, and at last, in St Giles's an old woman was found, who it was thought would bear away the palm. On being confronted with Heidegger, the judges maintained that the latter, who made himself a party to the dispute with the greatest good-humour, had now fairly met with his match, when it was suggested that he should put on the old woman's bonnet. The additional hideousness thus imparted was such, that Heidegger was unanimously declared as the undoubted holder of the championship of ugliness. A wager of a more intellectual description was laid for a thousand guineas in 1765 between two noblemen, one of whom had constructed a machine which he maintained would propel a boat at the rate of twenty-five miles an hour. A canal was prepared for the experiment near the banks of the Thames; but the tackle broke, and the wager was lost, before the apparatus had an opportunity of being tested. In the *Annual Register* for 1788, we find it stated in the chronicle of occurrences, that a young Irish gentleman, on 21st September of that year, started for Constantinople, having engaged to walk from London to Constantinople and back again within a year. Twenty thousand pounds are stated as being dependent on the issue of the wager, but we have no further accounts of the affair.

The subject-matter of wagers has sometimes taken rather a grim form. A well-known story is related of a member of a party of revellers who engaged, in a fit of bravado, to enter the vault of a church at midnight, and in proof of his having done so, to stick a fork into a coffin which had been recently deposited there. He accomplished his object, and was returning triumphantly, when he felt himself suddenly caught, and was so overpowered by terror that he fell into a swoon, and was found in this condition shortly afterwards on the floor of the vault by his companions, who, alarmed at his long absence, had come out to look for him. The fork which he had stuck into the coffin had caught hold of his long cloak, and thus occasioned a fit of terror which had nearly proved fatal. An incident of this nature is credibly recorded to have taken place in London in the last century, the scene being one of the vaults beneath Westminster Abbey.

It is only consistent with the British propensity for sport and athletic effort, that so many wagers should be recorded in connection with feats of pedestrianism. Thus we are told that on the 24th July 1750, a man upwards of forty years of age, for a wager of fifty guineas, ran from Shoreditch to the eight mile-stone beyond Edmonton in fifty minutes, having been allowed an hour for performing the exploit. In 1763, one of the Gloucestershire militia undertook, for a wager of £300, to walk from London to Bristol in twenty hours. This he accomplished in nineteen hours and thirty-five minutes, having quitted London at midnight, and arrived at Bristol the following evening. In the same year, a shepherd ran on Moulsey Hurst, fifteen miles in one hour and twenty-eight minutes, having engaged to do so in an hour and a half. And in July 1809, was completed the famous pedestrian feat of Captain Barclay, who won £3000 on a wager that he would walk a thousand miles in a thousand successive hours. The captain's entry into Newmarket after the accomplishment of his undertaking, was heralded by a peal of bells. Numerous other pedestrian bets of a similar character to Barclay's have subsequently been made, and are familiar to all readers of sporting literature.

Till recently, the fulfilment of an obligation constituted by wager, contrary to what has all along prevailed in Scotland, could be enforced in English courts of law. Latterly, indeed, they were looked upon with great disfavour; but the judges, nevertheless, still found themselves bound to take cognizance of them, however contrary such matters might seem to legal seriousness and dignity. A few of the cases recorded are curious enough. Perhaps one of the most noted is the action tried before Lord Mansfield in July 1777, on a wager which had been laid regarding the sex of the celebrated Chevalier D'Eon. A great deal of evidence, much more curious than edifying, was brought forward; and it was maintained by the defendant, that the action ought to be dismissed as

a gambling, indecent, and unnecessary proceeding. The lord chief-justice, however, took a different view; and while expressing a strong disapprobation of such cases, laid down that pactions proceeding on wagers were not contrary to the law of England, and that therefore the jury should find a verdict for the plaintiff. A verdict for £700 was accordingly returned. In another case before Lord Mansfield, in the Court of King's Bench, the sum of 500 guineas was sought to be recovered by Lord March from Mr Pigott, on a wager which the plaintiff had laid with the defendant as to whether Sir William Codrington or old Mr Pigot should first die. The latter died suddenly of gout in the head the morning previous to the laying of the wager. Owing to this circumstance, the defendant maintained that there was no bet; but the court and jury ruled otherwise, and a verdict was returned for the full amount claimed, and costs. An amusing case is related to have been tried at the Kingston assizes, where a Mr Courtney was sued for the payment of 100 guineas on a wager which had been laid that the plaintiff should furnish three horses which should go ninety miles in three hours. This he performed to the letter, but it was by starting all the three horses together, so that they had only thirty miles each to run within the three hours, an undertaking which they accomplished with the utmost ease. The court supported the defendant's view of the transaction, that it was an unfair bet, and a verdict in his favour was consequently given. In another action, tried before the Court of Common Pleas, the plaintiff sought to enforce a claim on a wager for 'a rump and dozen,' which Sir James Mansfield was inclined to dismiss, because he did not *judicially* know the meaning of 'a rump and dozen,' but he was overruled by Mr Justice Heath, who remarked that they knew quite well *privately* that 'a rump and dozen' meant a dinner and wine, an agreement, as his lordship observed, in which he could discover no illegality.

Many similar cases might be related, but we shall restrict ourselves to two more. One of these was an action brought at the York assizes in 1812, by the *Reverend* B. Gilbert against Sir Mark M. Sykes, Bart. At a dinner-party in his own house, the latter, in the course of a conversation on the hazard to which the life of Bonaparte was exposed, had offered, on receiving a hundred guineas, to pay a guinea a day as long as Napoleon should remain alive. Mr Gilbert suddenly closed with the proposal, sent the hundred guineas to the baronet, and the latter continued to pay the clergyman a guinea a day for nearly three years. At last he declined to pay any longer, and an action was brought to enforce the fulfilment of the obligation. It was contended by the defendant's counsel, that he had been surprised into the bet by the clergyman's hasty acceptance of it, and also that the transaction was an illegal one, seeing that Mr Gilbert, having a beneficial interest in the life of Bonaparte, might, in the event of invasion, be tempted to use all means for the preservation of the life of an enemy of his country. The jury returned a verdict for the defendant; but on the case being brought before the Court of King's Bench, a rule was granted by Lord Ellenborough, to shew cause why the verdict should not be set aside and a new trial granted, as in his lordship's opinion the fact of a contract was clearly established, and unless anything of an immoral or impolitic tendency could be proved, the agreement must be supported. On the ground last mentioned, the rule was ultimately discharged and a new trial refused; the judges finding that such a wager was illegal, from its tendency to produce public mischief, as, on the one hand, an undue interest was created in the preservation of the life of a public enemy, and on the other, a temptation might be induced to plot the assassination of Bonaparte, any suspicion of which ought to be carefully guarded against by the nation at large.—The other case to which we have referred, was an action brought on a wager, that the celebrated Johanna Southcott would be delivered of a son, on or before the 1st of November 1814. As the party in question was a single woman, it was held that no claim of action could be sustained, as the wager involved the perpetration of an immorality. On similar grounds, it has been ruled that no action was maintainable on a bet respecting the issue of a boxing-match, such a proceeding being a breach of the peace.

By the gambling act passed in 1845, all agreements whatever founded on any gaming or betting transaction, are declared absolutely null and void, and no action for their enforcement can be sustained. The courts of law have thus been saved the expenditure of much valuable time, to the postponement often of important business, on the discussion of frivolous and unedifying questions.

NOVEMBER 30.

St Andrew, apostle. Saints Sapor and Isaac, bishops; Mahanes, Abraham, and Simeon, martyrs, 339. St Narses, bishop, and companions, martyrs, 343.

ST ANDREW.

St Andrew was the son of Jonas, a fisherman of Bethsaida, in Galilee, and was the brother of Simon Peter, but whether elder or younger we are not informed in Scripture. He was one of the two disciples of John the Baptist, to whom the latter exclaimed, as he saw Jesus pass by: 'Behold the Lamb of God!' On hearing these words, we are informed that the two individuals in question followed Jesus, and having accosted him, were invited by the Saviour to remain with him for that day. Thereafter, Andrew went in quest of his brother Simon Peter, and brought him to Christ, a circumstance which has invested the former apostle with a special pre-eminence.

After the Ascension, the name of St Andrew is not mentioned in the New Testament, but he is believed to have travelled as a missionary through Asiatic and European Scythia; to have afterwards passed through Thrace, Macedonia, and Epirus into Achaia; and at the city of Patra, in the last-named region, to have suffered martyrdom about 70 A.D. The Roman proconsul, it is said, caused him to be first scourged and then crucified. The latter punishment he underwent in a peculiar manner, being fastened by cords instead of nails to the cross, to produce a lingering death by hunger and thirst; whilst the instrument of punishment itself, instead of being T-shaped, was in the form of an X, or what is termed a cross decussate. We are further

informed that a Christian lady of rank, named Maximela, caused the body of St Andrew to be embalmed and honourably interred; and that in the earlier part of the fourth century, it was removed by the Emperor Constantine to Byzantium, or Constantinople, where it was deposited in a church erected in honour of the Twelve Apostles. The history of the relics does not end here, for we are informed that, about thirty years after the death of Constantine, in 368 A. D., a pious Greek monk, named Regulus or Rule, conveyed the remains of St Andrew to Scotland, and there deposited them on the eastern coast of Fife, where he built a church, and where afterwards arose the renowned city and cathedral of St Andrews. Whatever credit may be given to this legend, it is certain that St Andrew has been regarded, from time immemorial, as the patron saint of Scotland; and his day, the 30th of November, is a favourite occasion of social and national reunion, amid Scotchmen residing in England and other places abroad.

The commencement of the ecclesiastical year is regulated by the feast of St Andrew, the nearest Sunday to which, whether before or after, constitutes the first Sunday in Advent,* or the period of four weeks which heralds the approach of Christmas. St Andrew's Day is thus sometimes the first, and sometimes the last festival in the Christian year.

Born.—Sir Henry Savile, eminent scholar and mathematician, 1549, *Over Bradley, Yorkshire;* Jonathan Swift, humorous and political writer, 1667, *Dublin;* John Toland, sceptical writer, 1669, *Ireland;* Mark Lemon, dramatist and miscellaneous writer, 1809, *London.*

Died.—Euripides, tragic dramatist, 406 B. C.; Edmund Ironside, colleague of King Canute, assassinated 1016; William Gilbert, celebrated writer on magnetism, 1603, *Colchester;* John Selden, politician, and legal writer, author of *Table-talk*, 1654, *London;* Maurice, Marshal Saxe, 1750, *Castle of Chambord;* James Sheridan Knowles, dramatist, 1862, *Torquay.*

SELDEN.

The seventeenth century was rich in great lawyers, but few could take precedence of John Selden. In the contests between the Stuarts and their parliaments he was constantly referred to for advice, and his advice he gave without fear or favour. James I., in 1621, cast him into prison for counselling the Commons to resist his will, and in 1629 Charles I. committed him to the Tower for a similar offence; yet neither the tyranny of the crown nor the applause of the people could make him swerve from his persistent integrity. He was not a cold-blooded reasoner, but a patriot, whose motto was 'Liberty above all;' nevertheless his proud distinction was, that in the tumults and excitement of a stormy age he preserved his reason and independence unimpaired. A mediator is usually an unpopular character, but Selden commanded the respect alike of Royalist and Roundhead. Clarendon writes of him: 'Mr Selden was a person whom no character can flatter, or transmit in any expressions equal to his virtue. He was of so stupendous learning in all kinds, and in all languages, that a man would have thought he had been entirely conversant among books, and had never spent an hour but in reading and writing; yet his humanity, courtesy, and affability was such, that he would have been thought to have been bred in the best courts, but that his good-nature, charity, and delight in doing good, and in communicating all he knew, exceeded that breeding.'

Selden's learning was indeed prodigious. From his youth he was a hard student, and having a rare memory, he seldom forgot what he had read. While quite a young man, he had earned a high reputation as a jurist. He was no orator, but men resorted to him for his opinion rather than his rhetoric, and his practice lay rather in his chamber than in the law-courts. He wrote many books; and a *History of Tithes*, published in 1618, provoked much excitement in consequence of his denying the divine, while admitting the legal right of the clergy to tithes. He was summoned in consequence before the High Commission Court, but without further result than the exaction from him of an expression of sorrow for creating disturbance, no retractation being made of the opinion which he had expressed. Few except antiquaries at this day disturb Selden's works, but his memory is kept green in literature by means of a collection of his *Table-talk* made by Milward, his secretary for twenty years. Of this choice volume Coleridge in a somewhat extravagant vein says: 'There is more weighty bullion sense in Selden's *Table-talk* than I ever found in the same number of pages in any uninspired writer.' The *Table-talk* affords a fine idea of Selden, and confirms Clarendon's eulogy when he says: 'In his conversation Selden was the most clear discourser, and had the best faculty of making hard things easy, and of presenting them to the understanding of any man that hath been known.' Not unfrequently also, over some bright saying, will the reader be ready to exclaim with Coleridge: 'Excellent! Oh! to have been with Selden over his glass of wine, making every accident an outlet and a vehicle for wisdom.' Throughout the *Table-talk* there are evidences of his independent and impartial temper; High Churchmen and Puritans suffer equally from his blows. Of women his opinion is generally contemptuous. For instance, he says:

'*Of Marriage.*—Marriage is a desperate thing. The frogs in Esop were extreme wise; they had a great mind to some water, but they would not leap into the well, because they could not get out again.'

The experience of his times would suggest this bit of wisdom about

'*Religion.*—Alteration of religion is dangerous, because we know not where it will stay; it is like a millstone that lies upon the top of a pair of stairs; it is hard to remove it, but if once 'tis thrust off the first stair, it never stays till it comes to the bottom.'

Thus would Selden have justified the execution of a witch:

'*Witches.*—The law against witches does not prove there be any; but it punishes the malice of those people that use such means to take away men's lives. If one should profess that by turning his hat thrice, and crying "Buz," he could take away a man's life, though in truth he could do no such thing, yet this were a just law made by the state, that whosoever should turn his hat thrice, and cry "Buz," with the intention to take away a man's life, shall be put to death.'

* See p. 622 of this volume.

Here is an anecdote about King James:

'*Judgments.*—We cannot tell what is a judgment of God; 'tis presumption to take upon us to know. Commonly we say a judgment falls upon a man for something we cannot abide. An example we have in King James, concerning the death of Henry IV. of France. One said he was killed for his wenching, another said he was killed for turning his religion. "No," says King James (who could not abide fighting), "he was killed for permitting duels in his kingdom."'

The following have their application to the scruples and asceticism of the Puritans:

'*Conscience.*—A knowing man [a wise man] will do that which a tender conscience man dares not do, by reason of his ignorance; the other knows there is no hurt: as a child is afraid of going into the dark, when a man is not, because he knows there is no danger.

Pleasure.—'Tis a wrong way to proportion other men's pleasure to ourselves; 'tis like the child's using a little bird, "O poor bird! thou shalt sleep with me!" so lays it in his bosom, and stifles it with his hot breath: the bird had rather be in the cold air. And yet, too, it is the most pleasing flattery, to like what other men like.'

After a banishment of nearly four centuries, Cromwell allowed the Jews to settle in England. Selden no doubt approved his liberality, for, said he:

'*Jews.*—Talk what you will of the Jews, that they are cursed, they thrive where ere they come, they are able to oblige the prince of their country by lending him money; none of them beg, they keep together, and for their being hated, my life for yours, Christians hate one another as much.'

In the following, he gives his judgment against those who hold that genius is an acquirement of education or industry:

'*Learning and Wisdom.*—No man is wiser for his learning: it may administer matter to work in, or objects to work upon; but wit and wisdom are born with a man.'

These morsels may give some notion of the flavour of the *Table-talk;* there is no better book to have at hand and dip into at an odd half-hour.

Selden was born at Salvington, on the Sussex coast, near Worthing, in 1584. In the house where he spent his boyhood, on the lintel of the door withinside, is a Latin distich, rudely cut in capitals intermixed with small letters, reputed to have been the work of Selden when ten years old. The inscription runs:

'Gratus, honeste, mihi; non claudar, initio, sedeque:
Fur abeas, non sum facta soluta tibi.'

Which may be rendered:

'Thou 'rt welcome, honest friend, walk in, make free:
Thief, get thee hence, my doors are closed to thee!'

His father was a musician, or as he is called in the parish register, 'a minstrell.' Young Selden was educated at Oxford, and from thence removed to London, and entered the Inner Temple in 1604. His early rise in life he owed simply to his own diligence and ability. When asked, in his old age, to whom he should leave his fortune, he said he had no relation but a milk-maid, and she would not know what to do with it. He died on the last day of November 1654, within sixteen days of the completion of his seventieth year. He was buried in the Temple Church, and Archbishop Usher preached his funeral sermon, in the course of which he observed, that he 'looked upon the deceased as so great a scholar, that he was scarce worthy to carry his books after him.' In person Selden was tall, being in height about six feet; his face was thin and oval, his nose long and inclining to one side; and his eyes gray, and full, and prominent.

MARSHAL SAXE.

Though not a general of the highest order, Marshal Saxe is still the most distinguished commander that appeared in France during the greater part of the last century. The victory of Fontenoy, in which he repulsed the combined forces of England and Holland under the Duke of Cumberland and Prince Waldeck, was followed by a series of successes which compelled the allies to enter into negotiations with France for peace, resulting in the treaty of Aix-la-Chapelle in 1748. Honours of all sorts were showered on him by Louis XV.; and among other rewards, the magnificent castle of Chambord, twelve miles from Blois, with an annual revenue of 100,000 francs, was bestowed on the hero of so many achievements.

Marshal Saxe was the natural son of Augustus II., king of Poland, and was born at Dresden on 19th October 1696. From boyhood he was inured to arms, having, when only twelve years of age, served under Count Schulembourg before Lisle. He first entered the French army about 1720, when the Duke of Orleans appointed him to the command of a regiment. Subsequently to this he succeeded in getting himself elected Duke of Courland; but through the influence of the Czarina Catharine I. in the Polish Diet, he was deprived of his sovereignty, and compelled to retreat to France. After some vicissitudes of fortune, he took service, in 1733, again with France, under whose banners, with the exception of an interval spent in vainly prosecuting his claim to the duchy of Courland, he continued for the remainder of his days.

A foreigner by birth, Marshal Saxe was, in religious belief, a Lutheran; and as he died in the Protestant faith, it was impossible to bury him with all the rites and ceremonies due to his distinguished position and services. A lady of rank remarked on hearing of his death: 'How vexatious that we cannot say a *De profundis* for him who made us so often sing *Te Deum!*' Louis XV., however, caused his corpse to be conveyed with great pomp from Chambord to Strasburg, where it was interred in the Lutheran church in that town.

THE GREAT RAILWAY MANIA-DAY.

Never had there occurred, in the history of joint-stock enterprises, such another day as the 30th of November 1845. It was the day on which a madness for speculation arrived at its height, to be followed by a collapse terrible to many thousands of families. Railways had been gradually becoming successful; and the old companies had, in many cases, bought off, on very high terms, rival lines which threatened to interfere with their profits. Both of these circumstances tended to encourage the concoction of new schemes. There is always floating capital in England waiting for profitable employment; there are always professional men looking out for employment in great engineering

works; and there are always scheming moneyless men ready to trade on the folly of others. Thus the bankers and capitalists were willing to supply the capital; the engineers, surveyors, architects, contractors, builders, solicitors, barristers, and parliamentary agents, were willing to supply the brains and fingers; while, too often, cunning schemers pulled the strings. This was especially the case in 1845, when plans for new railways were brought forward literally by hundreds, and with a recklessness perfectly marvellous.

By an enactment in force at that time, it was necessary for the prosecution of any railway scheme in parliament, that a mass of documents should be deposited with the Board of Trade on or before the 30th of November in the preceding year. The multitude of these schemes, in 1845, was so great, that there could not be found surveyors enough to prepare the plans and sections in time. Advertisements were inserted in the newspapers, offering enormous pay for even a smattering of this kind of skill. Surveyors and architects from abroad were attracted to England; young men at home were tempted to break the articles into which they had entered with their masters; and others were seduced from various professions into that of railway engineers. Sixty persons in the employment of the Ordnance Department left their situations to gain enormous earnings in this way. There were desperate fights in various parts of England between property-owners who were determined that their land should not be entered upon for the purpose of railway-surveying, and surveyors who knew that the schemes of their companies would be frustrated unless the surveys were made and the plans deposited by the 30th of November. To attain this end, force, fraud, and bribery were freely made use of. The 30th November 1845 fell on a Sunday; but it was no Sunday near the office of the Board of Trade. Vehicles were driving up during the whole of the day, with agents and clerks bringing plans and sections. In country districts, as that day approached, and on the morning of the day, coaches-and-four were in greater request than even at race-time, galloping at full speed to the nearest railway-station. On the Great Western Railway an express train was hired by the agents of one new scheme; the engine broke down; the train came to a stand-still at Maidenhead, and in this state, was run into by another express train hired by the agents of a rival project; the opposite parties barely escaped with their lives, but contrived to reach London at the last moment. On this eventful Sunday, there were no fewer than *ten* of these express trains on the Great Western Railway, and *eighteen* on the Eastern Counties! One railway company was unable to deposit its papers, because another company surreptitiously bought, for a high sum, twenty of the necessary sheets from the lithographic printer; and horses were killed in madly running about in search of the missing documents before the fraud was discovered. In some cases the lithographic stones were stolen; and in one instance the printer was bribed by a large sum not to finish, in proper time, the plans for a rival line. One eminent house brought over four hundred lithographic printers from Belgium, and even then, and with these, all the work ordered could not be executed. Some of the plans were only two-thirds lithographed, the rest being filled up by hand. However executed, the problem was to get these documents to Whitehall before midnight on the 30th of November. Two guineas a mile were in one instance paid for post-horses. One express train steamed up to London 118 miles in an hour and a half, nearly 80 miles an hour. An established company having refused an express train to the promoters of a rival scheme, the latter employed persons to get up a mock funeral cortège, and engage an express train to convey it to London; they did so, and the plans and sections came *in the hearse*, with solicitors and surveyors as mourners!

Copies of many of the documents had to be deposited with the clerks of the peace of the counties to which the schemes severally related, as well as with the Board of Trade; and at some of the offices of these clerks, strange scenes occurred on the Sunday. At Preston, the doors of the office were not opened, as the officials considered the orders which had been issued to keep open on that particular Sunday, to apply only to the Board of Trade; but a crowd of law-agents and surveyors assembled, broke the windows, and threw their plans and sections into the office. At the Board of Trade, extra clerks were employed on that day, and all went pretty smoothly until nine o'clock in the evening. A rule was laid down for receiving the plans and sections, hearing a few words of explanation from the agents, and making certain entries in books. But at length the work accumulated more rapidly than the clerks could attend to it, and the agents arrived in greater number than the entrance-hall could hold. The anxiety was somewhat allayed by an announcement, that whoever was inside the building before the clock struck twelve should be deemed in good time. Many of the agents bore the familiar name of Smith; and when 'Mr Smith' was summoned by the messenger to enter and speak concerning some scheme, the name of which was *not* announced, in rushed several persons, of whom, of course, only one could be the right Mr Smith at that particular moment. One agent arrived while the clock was striking twelve, and was admitted. Soon afterwards, a carriage with reeking horses drove up; three agents rushed out, and finding the door closed, rang furiously at the bell; no sooner did a policeman open the door to say that the time was past, than the agents threw their bundles of plans and sections through the half-opened door into the hall; but this was not permitted, and the policeman threw the documents out into the street. The baffled agents were nearly maddened with vexation; for they had arrived in London from Harwich in good time, but had been driven about Pimlico, hither and thither, by a post-boy who did not, or would not, know the way to the office of the Board of Trade.

The *Times* newspaper, in the same month, devoted three whole pages to an elaborate analysis, by Mr Spackman, of the various railway schemes brought forward in 1845. They were no less than 620 in number, involving an (hypothetical) expenditure of 560 millions sterling; besides 643 other schemes which had not gone further than issuing prospectuses. More than 500 of the schemes went through all the stages necessary for being brought before parliament; and 272 of these became acts of parliament in 1846—to the ruin of thousands who had afterwards to find the money to fulfil the engagements into which they had so rashly entered.

And after him came next the chill December;
Yet he through merry feasting which he made,
And great bonfires, did not the cold remember;
His Saviour's birth his mind so much did glad.
Upon a shaggy-bearded goat he rode,
The same wherewith Dan Jove on tender yeares,
They say, was nourisht by th' Idæan mayd;
And in his hand a broad deepe bowle he beares,
Of which he freely drinks an health to all his peeres.

SPENSER.

(DESCRIPTIVE.)

DECEMBER DARK December has now come, and brought with him the shortest day and longest night: he turns the mist-like rain into ice with the breath of his nostrils: and with cold that pierces to the very bones, drives the shivering and houseless beggar to seek shelter in the deserted shed. He gives a chilly blue steel-like colour to the shrivelled heps and haws, and causes the half-starved fieldfares to huddle together in the naked hedge for warmth; while the owl, rolling himself up like a ball in his feathers, creeps as far as he can into the old hollow tree, to get out of the way of the cold. Even the houses, with their frosted windows, have now a wintery look; and the iron knocker of the door, covered with hoary rime, seems to cut the fingers like a knife when it is touched. The only cheering sight we see as we pass through a village, is the fire in the blacksmith's forge, and boys sliding—as they break the frosty air with merry shouts—on the large pond with its screen of pollard-willows, broken now and

then by the report of the sportsman's gun, and the puff of smoke which we see for a few moments floating on the air like a white cloud in the distant valley. We see the footprints of the little robin in the snow, and where it lies deep, the long-eared hare betrays her hiding-place by the deep indentments she makes in the feathery flakes. The unfrozen mere looks black through the snow that lies around it, while the flag-like sedges that stand upright appear like sharp sword-blades frosted with silver. The trees mirrored deep down seem as if reflected on polished ebony, until we draw nearer and look at the cold gray sky, that appears to lie countless fathoms below. When the wind shakes the frosted rushes and the bending water-flags, they seem to talk to one another in hoarse husky whispers, as if they had lost their voices through standing so long in the cold by the water-courses, and forgotten the low murmurings they gave utterance to in summer. We pity the few sheep that are still left in the fields, burrowing for the cold turnips under the snow, and almost wish their owners had to procure their own food in the same way, for having neglected to fold them. The falling snow from some overladen branch, under which we are passing, makes us shake our heads as we feel it thawing about the neck. Now the mole is compelled to work his way deeper underground in search of food, as the worms he feeds upon are only to be found beyond the reach of the frost, below which he must penetrate or starve, for his summer hunting-grounds are now tenantless. During a severe frost, myriads of fish perish for want of air in our ponds and rivers, and those who value their stock will not neglect to make holes through the ice, and throw food into the water, for unless this is done, they will devour one another. Cattle also gather about their usual drinking-place, and wait patiently until the ice is broken for them. That lively little fellow, the water-wagtail—the smallest of our birds that walk—may now be seen pecking about the spots of ground that are unfrozen in moist places, though what he finds to feed upon there, unless it be loosened bits of grit and gravel, is difficult to ascertain. Many a shy bird, but seldom seen at any other season, now draws near to our habitations in search of food; and sometimes, when entering an outhouse, we are startled by the rush of wings, as the pretty intruder escapes by the open doorway we are entering. The black-bird dashes out of the shed as the farmer's boy enters to fodder the cattle, frightening him for the moment, so unexpected and sudden is the rush; for cattle must now be attended to early and late, and the farmer finds plenty to do, although there is but little labour going on in the fields. Sometimes he has to hurry out half-dressed in the night, for there is a cry of 'murder' in the hen-roost, and he well knows that the fox has broken in someway, and will not retire supperless in spite of the loud outcry. The housewife, when she counts her chickens next morning, and reckons up her loss, wishes the old earth-stopper had been laid up with rheumatism instead of being out all night as he is, blocking up the fox-holes, while Reynard is out feeding, to prevent him from running in when he is hunted. Poor old fellow! we have often felt sorry for him, as we have passed him on a cold winter's night, with his lantern and spade, making the best of his way to some fox's burrow, to block up the entrance and have often wondered what the fox thinks when he returns home, and finds the doorway filled in with thorns and furze, over which the earth is shovelled. Though a thief, he is a beautifully formed animal, and I like to see him trailing his long bush through the snow, and to hear his feet stirring the fallen leaves as he steals through the wood.

How few and apt are the words Shakspeare has used to paint a perfect picture of winter in *Love's Labour's Lost!* He begins by describing the icicles hanging down the wall, and Dick the shepherd blowing his nails to warm them, with the same breath that he blows into his porridge to cool it. Next he tells us how Tom drags huge logs to the great hall-fire, which he would rear on the andirons, for grates and coal were not in use in Shakspeare's time; then follows Marian with her red, raw nose, the milk frozen in the pail she carries, pitying the poor birds she saw outside shivering in the snow. Neither do matters mend at church, where there is such a noise of coughing as to drown the parson's 'sixteenthly,' one aisle answering to another, as if the congregation were playing at catching colds instead of balls, for as soon as one has ceased to cough, it is taken up by another, until it goes the whole round of the church. Outside, at night, the owl keeps crying, 'To-whit, too-whoo,' hidden, perhaps, among the ivy of centuries, which has overgrown the picturesque and ornamented gable. Every line here of the great poet is a picture of winter, though only painted in words; and so distinct is each outline, that any artist, with a poetical eye, might transfer every figure, with such action as Shakspeare has given to each, to canvas. Now is the time to sit by the hearth and peruse his immortal works; and few, we think, will read a page attentively without discovering something new—some thought that assumes a fresh form, or presents itself to the mind in a new light. For out-of-door pleasure, at times, is not to be found, as the days are short, cold, comfortless, and almost dark; lanes, fields, and woods naked, silent, and desolate; while the dull gray sky seems, at times, as if sheeted with lead. What a brave heart the pretty robin must have to sing at such a season! and if anything can tempt us out of doors, it is a hope that we may hear his cheerful song.

Beside the song of the robin, the green ivy gives a life to the nakedness, especially when we see it clambering up a gigantic tree, whose branches are bald. In summer we could not see it for the intervening foliage, though it was then green with young leaves. We love to see it romping about our gray old churches, and old English manor-houses; sometimes climbing up the old square tower of the one, and burying under its close-clinging stems the twisted chimneys of the other, forming a warm shelter for the little wrens and titmice from the biting frosts and cutting winds of winter. Then there are the bright holly-bushes, with their rich clusters of crimson berries, which throw quite a cheerful warmth around the places in which they grow, and recall pleasant visions of the coming Christmas, and the happy faces they will flash upon when reflecting the sunny blaze from the snug warm hearth. Here and there, though never very common, we see the mirth-making

mistletoe, generally growing on old apple and hawthorn trees, and very rarely on the oak; and it is on records which have been written from ancient traditions, that wherever the Druids selected a grove of oaks for their heathen worship, they always planted apple-trees about the place, so that the mistletoe might be trained around the trunks of the oaks. The black hellebore, better known as the Christmas-rose, is one of the prettiest flowers now seen out of doors, though but seldom met with in the present day, excepting in old gardens, which we much wonder at, as it is a large, handsome, cup-shaped flower, sometimes white, but more frequently of a rich warm pink colour, and quite as beautiful as any single rose that is cultivated. But few gardens are without evergreens, and the winter-blooming laurustinus, mixed with other shrubs, now make a pretty show, though a noble, old, high holly-hedge is, after all, one of the grandest of green objects we now meet with. Another curious shrub that now occasionally flowers, is the Glastonbury-thorn, which our forefathers believed never bloomed until Christmas-day. It may sometimes be found now covered with blossom, although, like the rest of the thorns, it had bloomed before in May, as will be seen by the berries hanging on it at its second time of flowering, though this after-crop of bloom is not general. All we can see in the kitchen-garden is a little green above the ridge, where the celery is earthed up; a few savoys and kale, with a refreshing rim of parsley here and there, if it has been protected from the frost; and these, excepting the autumn-sown cabbage plants, are about all that now look green. Still there are occasionally days when the sun comes out, and a mild south wind blows, shaking the icicles that hang from the gray beard of grim old Winter, as if to tell him that he must not sleep too sound, for the shortest day has come, and the snow-drops will soon be in flower, and then a flush of golden crocuses will be seen, that will make his dim eyes dance again as he rubs the hoary rime from his frosted eyelashes. And on these fine December days, great enjoyment may be found in a good bracing country-walk, which will send a summer glow through the system, and cause us to forget the cold. The sky appears of a more brilliant blue, and looks as if higher up than at any other season, while the winter moon, often seen at noonday, appears to have gone far away beyond her usual altitude. We see a new beauty in the trees which we beheld not before—the wonderful ramification of the branches as they cross and interlace each other, patterns fit for lace, nature's rich net-work—scallop and leaf, that seem as if worked on the sky to which we look up; and we marvel that some of our pattern-drawers have not made copies of these graceful intersections of spray and bough as seen amid the nakedness of winter. Sometimes the branches are hung with frost, which, were it not of so pure a white, we might fancy was some new kind of beautiful shaggy moss, in form like what is often seen on trees. The bushes, sedge, and withered grasses are covered with it, and look at times as if they were ornaments cut out of gypsum or the purest marble; while some portions of the hedges, where only parts of the branches are seen, look like the blackthorn, which is sheeted with milk-white blossoms long before a green leaf appears.

We often wonder how, during a long and severe frost, the birds contrive to live. That many perish through cold and want of food, is well known through the number that are picked up dead and frozen, though a greater number are eaten by the animals that prey upon everything they can find. Many pick up insects in a dormant state from out the stems of decayed trees, old walls, and the thatched roofs of cottages and outhouses, and they also forage among furze-bushes, the underneath portions of which being dead, form a warm shelter for such insects as the gnats, which may be seen out in every gleam of sunshine; for there are numbers of birds that never approach the habitation of man, no matter how severe the winter may be. But most mysterious of all is the manner the waterfowl manage to subsist, when every stream, lake, and river is frozen, which has happened at times, and lasted for several weeks. It is very possible that they then leave our inland waters, and have recourse to the sea, though many naturalists have come to the conclusion that they then return to the countries from whence they came. There is but little doubt that birds feed on many things we are ignorant of. We have startled them, many a time, from some spot where they were pecking at something as fast as their little heads could go up and down; but even with the aid of a powerful magnifying-glass, we were unable to discover anything but small grit, sand, and portions of fine gravel on the spot. Wood-pigeons, we know well, eat the eyeshoots out of the tops of turnips, and devour the tenderest portion of winter-greens. Larks and other birds find a living in the autumn-sown cornfields, and make sad havoc among the seed. Other birds tear the thatch off corn-stacks, and eat until they are hardly able to fly. Country lads know that there is good shooting to be found in places like these. Nor does the farmer care so much about what they devour, as the injury they cause to what is left; for where the thatch is off, the rain penetrates, and runs down to the very lowest sheaves in the rick, which, after getting wet, soon become black and rotten. One thing we must consider, birds require less food during these short, dark days than they do at any other season of the year, as they are asleep more than double the time they pass in slumber in summer, nor when awake do they exert themselves so much on the wing as during the long days.

How dreary must have been the winters through which our forefathers passed, no further back even than a century ago! But few of our towns were then lighted at night; here and there an oil-lamp flickered, which the wind soon blew out; and these cast such a dull light, and were so far apart, that few old people ventured through the streets on dark nights without carrying lanterns in their hands. Those who could afford it, followed their servants, who were the lantern-bearers. Then the roads were almost impassable in winter, and a few may still be found in the remote corners of England, bad enough, to tell what the generality of highways were in those old days. Coaches were almost unknown, and unless people rode on horseback, there was only the slow-paced stage-wagon, which even a cripple might pass on the road; for the great lumbering tilted vehicle, when it did not stick fast, seldom crept along at the rate of more than two miles an hour. All the miles of villages and roads that

went stretching away from the little town, were in darkness; for when the last dim lamp was left behind at the town-end, no more light was to be seen, unless from the window of some solitary farmhouse, where they had not retired to rest, until you reached your own home in the far-away hamlet; and fortunate you were if you did not lose your shoes in the knee-deep muddy roads. Men have been known, in those old winters, to stick fast in the roads that run through clay lands, where they were sometimes found dead, or if they survived, were unable to move when pulled out in the following morning, until warmth was restored to the system. On lonesome moors, wide unenclosed commons, and hedgeless heaths, wayfarers, unable to travel along the deep-rutted and muddy roads, lost their way, trying to find a firmer footing elsewhere, and wandered about until the cold gray dawn of winter broke, fortunate if in the night they stumbled upon some dilapidated field-shed or sheepfold. Goods were carried from one town to another on the backs of packhorses; and the mounted traveller who had to journey far, carried all his necessaries in his saddle-bags, considering himself very fortunate if he had not to give them up, with all his money, to some daring highwayman, who generally rode up, pistol in hand, demanding without ceremony 'Your money, or your life!' Any one glancing over the files of country newspapers that appeared about a century ago, would be startled to read of the number of highway robberies that then took place, and the many wayfarers that perished through cold on the roads during those old hard winters. We, who travel by rail, and live in towns lighted by gas, are not subject to these calamities. We have, in our day, seen men compelled to cross the wide fens and marshes when snow has fallen after a hard frost, and it was impossible to tell where the water-courses lay in places that drained these wide low-lying lands, as all appeared alike a level waste buried under a white snowy pall. For safety they bestrode long leaping-poles, which they used for clearing the dikes in summer, and now employed in throwing themselves across the trenches, so that if the ice broke with them, they were seldom immersed above the legs. And across those long, wide, white windy marshes, where there was neither hoof, wheel, nor footmark to guide them, would these hardy men travel on their errands, with nothing to guide them but some bush or embankment or taller tuft of sedge, whose forms were so altered by the fallen snow, that they went along in doubt as to whether they were the same landmarks they were accustomed to trust to. And sometimes they fell into deep hollows, where the snow drifted over them in the night, and were not found again for weeks after they were lost, when their bodies were borne back for burial. From some of these old newspapers now before us, describing the winters a hundred years ago in the country, we find such passages as the following: 'The frost was so severe, the street-lamps could not be lighted on account of the oil being frozen; many people were found frozen to death in the fields and roads, and thousands of birds were picked up dead.' —'So severe was the weather, that only eight or nine people came from the country on market-day; none of the carriers arrived, nor any sheep or cattle; the town has been without water three weeks, except what is got through melting down the ice and snow. Many people have been found dead in the stackyards and sheds without the town.' —And during this severe weather, the quartern-loaf was selling for 1*s.* 4*d.*, and wheat fetching £6 and £7 a quarter, and that was no longer ago than the first year of the present century. Another of these old papers says: 'The weather was so severe, and the snow so deep, that the judges were detained on the road, and could not come in time to open the assizes.'

Flocks of sheep perished in the snow-drifts during these hard winters, and shepherds who went out to look after them, were sometimes lost, nor were their bodies found until spring came and all the snow had melted away. We were shewn a deep dell in the wild wolds, where one of the shepherds was found, after the snow had gone, and all around where he had so long lain dead, there were thousands of primroses in bloom. Even in the present day, when winters are generally milder, we have often with difficulty climbed some hill, that we might look over the snow-clad country at our feet. The cottages in the distance seem half-buried, as if the snow stood as high as the window-sills and reached half up the doorways, and you wonder how the inhabitants can get out, and make their way over those white untrodden fields, so deep as they are covered with snow. The rick-yard looks like mounds of up-coned snow, yet so smooth and equally distributed that no human hand could pile flake above flake in such level and beautiful slopes, so unindented and unbroken, out of any material mechanical art can contrive; and yet so lightly do the flakes lie on one another, that the first gust of wind shakes them loose, and disperses them on the air like full-blown May-blossoms. One might fancy that the long rows of level hedges were thick marble walls, and that the black line far beyond which marks the river, was the deep chasm from which all those miles of upheaving marble has been quarried. We look behind, where hills ascend above hills, with level table-lands between, telling where, for unknown epochs, the ocean spread and sank in desolate silence; and we seem as if looking upon a dead country, from which everything living has long since passed away, and nothing could find sustenance on those cold terraces and bald high uplands of snow, to whose sides the few bare trees that lean over seem to cling in agony, as the wind goes moaning through their naked branches. But, like the blue of heaven seen through the rift of clouds beyond, there is hope before us, for the shortest day is passed, and soon some little hardy flower will be seen here and there, and far across the snow we shall hear the faint bleating of new-born lambs, and the round green daisies will begin to knock under the earth to be let out, and so frighten grim old Winter in his sleep, that he will jump up and hurry away, looking with averted head over his shoulder, for fear he should be overtaken by Spring.

(HISTORICAL.)

December, like the three preceding months, derives its name from the place which it held in the old Roman calendar, where the year was divided, nominally, only into ten months, with

the insertion of supplementary days, to complete the period required for a revolution of the earth round the sun. In allusion to the practice of lighting fires in this month for the purpose of warmth, and the consequent inconveniences which resulted, Martial applies to it the epithet of *fumosus* or *smoky*. He also characterises it as *canus* or *hoary*, from the snows which then overspread the high grounds. By the ancient Saxons, December was styled *Winter-monat* or *winter month;* a term which, after their conversion to Christianity, was changed to *Heligh-monat* or *holy month* from the anniversary, which occurs in it, of the birth of Christ. Among the modern Germans, December is still, from this circumstance, distinguished by the epithet of *Christmonat*.

CHARACTERISTICS OF DECEMBER.

On the 22d of December, the sun enters the sign of *Capricornus* or the *Goat*. The idea thus allegorised by a *climbing* animal is said to be the ascent of the sun, which, after reaching its lowest declination at the winter-solstice, on the 21st of this month, recommences its upward path, and continues to do so from that date till it attains its highest altitude at the summer-solstice, on the 21st of June.

The average temperature for the middle of December, throughout the British Islands, is about 39°. On the 1st of the month, in the latitude of London, the sun rises at 7.57 and sets at 4.3. As regards meteorological characteristics, December bears in its earlier portion a considerable resemblance to the preceding month of November. Heavy falls of snow and hard frosts used to be of normal occurrence at the season of Christmas, but in recent years Britain has witnessed such a cycle of mild winters, that, as a general rule, snow rarely descends in any quantity before the commencement of the New Year.

First of December.

St Eligius or Eloy, bishop of Noyon, confessor, 659.

Born.—Princess Anna Comnena, historian, 1083, *Constantinople;* John Keill, mathematician and natural philosopher, 1671, *Edinburgh.*

Died.—Henry I. of England, 1135, *Rouen;* Pope Leo X., 1521; Sir James Ware, antiquary, 1666, *Dublin;* Susanna Centlivre, dramatist, 1723, *London;* Alexander I., Emperor of Russia, 1825, *Taganrog;* Dr George Birkbeck, promoter of scientific education, 1841, *London;* Ebenezer Elliott, poet ('the anti-cornlaw rhymer'), 1849, *Barnsley.*

MRS CENTLIVRE.

Literary success presupposes talent and industry, but dramatic success not only talent and industry, but patience and tact in dealing with the world. An author, when he has acquired the confidence of the publishers, may live quietly at home and transact his business from his desk; but a dramatist, when he has finished his work as a man of letters, often finds himself at the beginning of his troubles. He has to adapt his piece to the style and caprice of the actors, to submit to the excision of what he considers the finest efforts of his wit and fancy, and to the insertion of what he thinks clap-trap or commonplace. Hence, whatever may be thought of the theatre, the writer of a dozen or two of successful plays cannot but be regarded with a certain reverence, as one who has passed through an ordeal of which only a character of equal sweetness and energy is capable.

Of the private life and character of Mrs Centlivre, not much is known; but, in an age when female authorship was far from being so common as in our own, she wrote some score of plays, two or three of which hold their place on the stage to the present day. With few advantages of education, she managed to acquire a respectable stock of learning, to write with sprightliness and ease, and to find herself a welcome guest wherever literature was had in honour.

The date and place of her birth are both uncertain. Her father, Mr Freeman, had an estate at Holbeach, Lincolnshire, was a zealous dissenter and republican, and, after the Restoration, sought refuge from persecution in Ireland. There, about 1680, it is supposed his daughter Susannah was born. Whilst she was yet a girl, he died, leaving her quite destitute. There is a romantic story, that Susannah set out for London alone, either to find some friends, or earn a livelihood; and that, when near Cambridge, she was seen by a young gentleman, who was so charmed by her loveliness, that he persuaded her to dress as a boy, and live with him as a fellow-student at the university. There seems no doubt that, at sixteen, she was married to a nephew of Sir Stephen Fox, and that, within a year, she was a widow. Soon after, Colonel Carrol made her his wife; but ere two years were out, he was killed in a duel, and thus, before she was twenty, the beauty was twice widowed. Very fond of the theatre, she thought she would try her hand at a tragedy, and was fortunate enough to have it performed at Drury Lane in 1700, under the title of *The Perjured Husband*. Thus encouraged, she persevered, but abandoned tragedy for comedy, finding it the line in which she could excel. At the same time she procured an engagement as an actress, but, like Mrs Inchbald at a later date, she discovered that her pen was a more effective instrument than her voice and face. Nevertheless, it was on the stage that she gained her third husband. She was at Windsor in 1706, performing as Alexander the Great in Lee's *Rival Queens*, when she won the heart of Joseph Centlivre, Yeoman of the Mouth, or, in other words, chief cook to Queen Anne. They were married, and lived happily together until her death, in 1723, at his house in

Spring Gardens, Charing Cross. She was buried in St Martin's in the Fields.

Mrs Centlivre was lively if not witty, and, for her good-humour, was loved wherever she was known. The language of her plays has little in it to attract the reader, but her plots are well constructed, the scenes full of action, and her characters natural and well marked. By these qualities they sometimes succeeded in spite of the prognostics of the players. In rehearsal, *The Busy Body* was decried; but it ran for thirteen nights, then thought an extraordinary success, whilst Congreve's *Way of the World*, sparkling with wit and smartness, was a failure. Mrs Centlivre shares in the sin of her time, in the occasional licentiousness of her dialogue. During the rehearsal of her *Bold Stroke for a Wife*, a comedy which, as well as the *Busy Body*, still appears occasionally on modern play-bills, Wilks, the actor, declared that not only would it be dee'd, but that she would be dee'd for writing it. Her *Wonder, or a Woman keeps a Secret*, if not her best, is the most popular of her productions. In it, as Don Felix, Garrick took his farewell in 1776. As became the daughter of a suffering dissenter, Mrs Centlivre was an ardent Whig and advocate of the Hanoverian succession, and not unfrequently introduced her politics into her plays. Pope gave her a line in the *Dunciad*—

'At last Centlivre found her voice to fail'—

for writing a ballad against his Homer before she had read it.

THE YOUNG ROSCIUS.

Precocity of genius, or of ability, has always a certain attraction for the world; partly on account of a kindly feeling towards the young, but principally owing to a love of the marvellous, which leads most of us to run after that which is new and wonderful. If the encouragement thus afforded to precocious boys and girls had the effect of strengthening the powers thus early developed, this would be a great point in its favour; but such is certainly not the case. The youthful prodigy generally becomes, if he or she lives, a very prosaic adult. This was illustrated in the instance of *The Young Roscius*, a boy-actor who made the public almost crazy in the early part of the present century. William Henry West Betty, the boy in question, was born near Shrewsbury in 1791. Almost from a child he evinced a taste for dramatic recitations, which was encouraged by a strong and retentive memory. Having been taken to see Mrs Siddons act, he was so powerfully affected, that he told his father 'he should certainly die if he was not made a player.' He gradually got himself introduced to managers and actors; and at eleven years of age, he learned by heart the parts of Rollo, Young Norval, Osman, and others high in popular favour in those days. On the 16th of August 1803, when under twelve years of age, he made his first public appearance at Belfast in the character of Osman; and went through the ordeal without mistake or embarrassment. Soon afterwards he undertook the characters of Young Norval and Romeo. His fame having rapidly spread through Ireland, he soon received an offer from the manager of the Dublin theatre. His success there was prodigious, and the manager endeavoured, but in vain, to secure his services for three years. Addresses were presented to the *Young Roscius*, as he was now called; and pamphlets were written in advocacy of plans for insuring the happiness and completing the education of one who was to be the bright star of the age. He next played nine nights at the small theatre at Cork, whose receipts, averaging only ten pounds on ordinary nights, amounted to a hundred on each evening of Master Betty's performance. In May 1804, the manager of the Glasgow theatre invited the youthful genius to Scotland. When, a little after, Betty went to the sister-city of Edinburgh, one newspaper announced that he 'set the town of Edinburgh in a flame;' and, at a loss apparently how to account for so brilliant a phenomenon, put forth a theory that the boy's 'pleasing movements of perfect and refined nature, had been incorporated with his frame previous to his birth!' Mr Home went to see the character of Young Norval in his own play of *Douglas* enacted by the prodigy, and is said to have declared: 'This is the first time I ever saw the part played according to my ideas of the character. He is a wonderful being!' The manager of the Birmingham playhouse then sent an invitation, and was rewarded with a succession of thirteen closely-packed audiences. Here the *Rosciomania*, as Lord Byron afterwards called it, appears to have broken out very violently; it affected not only the inhabitants of that town, but all the iron and coal workers of the district between Birmingham and Wolverhampton. In an article in one of the early volumes of the *Penny Magazine*, descriptive of the South Staffordshire district and its people, it is said: 'One man, more curious or more idle than his fellows, determined to leave his work, and see the prodigy with his own eyes. Having so resolved, he proceeded, although in the middle of the week, to put on a clean shirt and a clean face, and would even have anticipated the Saturday's shaving, but he was preserved from such extravagance by the motive which prevented Mrs Gilpin from allowing the chaise to draw up to her door on the eventful morning of the journey:

——"lest all
Should say that she was proud."

But, notwithstanding this moderation, he did not pass unobserved. The unwonted hue of the shirt and face were portents not to be disregarded, and he had no sooner taken the road to Birmingham, than he was met by an astonished brother, whose amazement, when at last it found vent in words, produced the following dialogue: "Oi say, sirree, where be'est thee gwain?" "Oi 'm agwain to Brummajum." "What be'est thee agwain there for?" "Oi 'm agwain to see the Young Rocus." "What?" "Oi tell thee oi 'm agwain to see the Young Rocus." "Is it aloive?" The 'Young Rocus,' who was certainly 'aloive' to a very practical end, then went to Sheffield, and next to Liverpool.

Such was the boy who, on December 1, 1804, made his first bow to a London audience. After a desperate competition between the managers of Drury Lane and Covent Garden theatres, the former succeeded in securing the treasure. The flaming accounts from the country newspapers had driven the Londoners to a high pitch of excitement. The pressure at the theatre was unparalleled. As early as one o'clock in the day, persons began to

take their stations near the doors; and the inhabitants in the neighbouring streets looked out from their upper windows upon the tremendous array of people that assembled by six o'clock. Bow-Street officers were posted in great force within the theatre, and Foot-guards without, to endeavour to maintain order. At the opening of the door, after many faintings in the crowd, hundreds were in danger of suffocation from the mad endeavours of those behind them to force themselves forward. Although no places were unlet in the boxes, gentlemen paid box-prices to have a chance of jumping over the fronts of the boxes into the pit; and then others who could not find room for a leap of this sort, fought for standing-places with those who had hired the boxes days or weeks before. In short, it was a frightful scene, which long impressed itself on the memories of those who were present. The play, Browne's *Barbarossa*, in which the Young Roscius played the part of Selim, was to have been preceded by an address from Mr Charles Kemble; but as not a word of it could be heard in the tumultuous house, he wisely gave up the attempt. Half the first scene of the play was then gone through; nothing could be heard. Kemble came forward again, but again could not be heard; and the first act of the play proceeded in dumb-show. At length, in the second act, Selim appeared, and the perspiring audience gave up their frantic noise for equally frantic admiration. Audiences as full as the theatre could hold, though without such wild paroxysms, afterwards witnessed his performance of Tancred, Romeo, Frederick, Octavian, Hamlet, Osman, Achmet, Young Norval, and other favourite characters. An arrangement was made by the patrons and managers of the two Theatres Royal, that this golden talisman should be made available for both; and he played at the two theatres on alternate nights—earning about £1000 a week altogether. Young Betty was 'presented to the king, and noticed by the rest of the royal family and the nobility, as a prodigy. Prose and poetry were put in requisition to celebrate his praise; prints of his person were circulated throughout the kingdom; and even the university of Cambridge was sufficiently hurried away by the tide of the moment, to make the subject of Sir William Browne's prize-medal, *Quid noster Roscius egeat?* It was even in public contemplation to erect statues to him; and Opie painted a full-length portrait of him, in which the Young Roscius was represented as having drawn inspiration from the tomb of Shakspeare. But the best proof of the sensation he created is the fact, that the amount which twenty-eight nights of his performances at Drury Lane brought into the house was £17,210, an average of nearly £615 per night.'* It is supposed that the receipts at Covent Garden were nearly as much, and that thus £30,000 was earned by this boy for the managers in fifty-six performances.

Fortunately for young Betty, his friends took care of his large earnings for him, and made a provision for his future support. He soon retired from the stage, and then became a person of no particular note in the world, displaying no more genius or talent than the average of those about him. When he became a man, he appeared on the stage again, but *utterly failed;* he would not and could not 'draw.' The Young Roscius and Mr Betty were two entirely different persons in the public estimation.

* *The Georgian Era*, vol. iv.

MR HEBER'S LIBRARY: BIBLIOMANIACS.

The sale by auction of Mr Richard Heber's library, the disposal of one department of which commenced on the 1st of December 1834, illustrated in a significant way that exclusive fondness for books which is frequently styled *Bibliomania*, or *book-madness*. If the collectors were in the habit of reading the works which they buy, all would be well; or if, when collected, the books were sold or given in a mass to those who would know how to value them, this again would be well; but the real bibliomaniac collects books merely for the pleasure of collecting, and the collection is generally dispersed after a time. Mr Heber was a man of great learning, whose knowledge really extended over a vast range of literature; and it is a pity that there is no 'Heber's Library' in existence, as a testimony to his taste and knowledge; the library which he formed having shared the usual fate of such ponderous collections. Born in 1773, Mr Heber (who was half-brother to the celebrated bishop of Calcutta, of the same name) inherited property which permitted him to spend immense sums in the purchase of books, and he received an education which enabled him to appreciate the books when purchased. He formed the habit of making excursions from the family-seats in Yorkshire and Shropshire to London, to attend book-sales; and the first collection which he made, consisted of curious old works relating to early English poets and dramatists. When the termination of the war, in 1815, opened the continent to English travellers, Heber visited France, Belgium, and the Netherlands, making large purchases of books in each country. Again, in 1825, he went abroad, purchasing books everywhere; and at the same time he kept an agent employed in buying largely for him at all the book-sales in England. All the hopes once entertained of him as a public man, or a country gentleman, were disappointed; he cared for nothing but books. Libraries which he possessed in different localities, sale-rooms, and booksellers' shops, were almost the only places which had attractions for him. He kept up a correspondence with all the great dealers in old books throughout the kingdom, and had all their catalogues regularly sent to him. On hearing of a curious book, he was known to have put himself into a mail-coach, and travelled three or four hundred miles to obtain it, fearful to intrust his commission to any one else. One of his biographers says: 'He has been known to seriously say to his friends, on their remarking on his many duplicates, "Why, you see, sir, no man can do comfortably without *three* copies of a work. One he must have for a *show*-copy, and he will probably keep it at his country-house. Another, he will require for his own use and reference; and unless he is inclined to part with this, which is very inconvenient, or risk the injury of his best copy, he must needs have a third at the service of his friends! This was a handsome speech to address to a borrower; but it cannot be denied that Mr Heber's duplicates were often purchased, through that passion of collectors which demands not only that an article

should be possessed, but that it should also be kept from the possession of others. The fact was, that collecting had grown into an uncontrollable habit; and that it was only satisfied in him, as in others, by an almost unlimited indulgence. The desire of possessing duplicates, or (which is the same thing under another name) preventing other collectors obtaining them, was not peculiar to Mr Heber, but was more remarkable in him, because exhibited on a large scale and with ample means.'

The taste strengthened as he grew older. Not only was his collection of old English literature unprecedented, but he brought together a larger number of fine copies of Latin, Greek, French, Spanish, Italian, and Portuguese books than had ever been possessed by a private individual. His house at Hodnet, in Shropshire, was nearly all library. His house in Pimlico (where he died in 1833) was filled with books from top to bottom: every chair, table, and passage containing 'piles of erudition.' A house in York Street, Westminster, was similarly filled. He had immense collections of books, in houses rented merely to contain them, at Oxford, Paris, Antwerp, Brussels, and Ghent. When he died, curiosity was naturally excited to know what provision he had made in reference to his immense store of books; but when his will was discovered, after a long and almost hopeless search among bills, notes, memoranda, and letters, it was found, to the astonishment of every one on reading it, that the library *was not even mentioned!* It seemed as if Heber cared nothing what should become of the books, or who should possess them, after his decease; and as he was never married, or influenced greatly by domestic ties, his library was considered by the executors of his will as merely so much 'property,' to be converted into cash by the aid of the auctioneer. What was the number of books possessed by him, or the amount of money paid for them, appears to have been left in much doubt. Some estimated the library at 150,000 volumes, formed at a cost of £100,000; others reckoned it at 500,000 volumes, at an aggregate value of £250,000. The truth was, his executors did not know in how many foreign towns his collections of books were placed. Thus it could not accurately be ascertained what portion of the whole was sold by auction in London in 1834—6; but the mere catalogue of that portion fills considerably more than two thousand printed octavo pages. The sales were conducted by Mr Evans, Messrs Sotheby, and other book-auctioneers, and occupied two hundred and two days, extending through a period of upwards of two years from April 10, 1834, to July 9, 1836. One copy of the catalogue has been preserved, with marginal manuscript notes relating to almost every lot; and from this a summary of very curious information is deducible. It appears that, whatever may have been the number of volumes sold by auction, or otherwise got rid of abroad, those sold at this series of auctions in London were 117,613 in number, grouped into 52,672 lots. As regards the ratio borne by the prices obtained, to those which Mr Heber had paid for the books in question, the account as rendered shewed that the auctioneer's hammer brought £56,775 for that which had cost £77,150. It would appear, therefore, that the losses accruing to Mr Heber's estate through his passion for book-collecting, amounted to upwards of £20,000, and this irrespective of the fate, whatever it may have been, of the continental libraries. We can hardly come to any other conclusion, than that Mr Heber's life was nearly a useless one—performing unnecessary work, which was undone soon after his death.

DECEMBER 2.

St Bibiana, virgin and martyr, 363.

Born.—Francis Xavier Quadrio, learned Jesuit, and historical writer, 1695, *Valtellina;* Henry Gally Knight, illustrator of architectural antiquities, 1786.

Died.—Hernan Cortes, conqueror of Mexico, 1547, *near Seville;* Margaret of Navarre, grandmother of Henri IV., 1549; St Francis Xavier, Catholic missionary, 1552, *China;* Gerard Mercator (Kaufmann), geographer, 1594, *Doesburg;* Philip, Duke of Orleans, Regent of France, 1723; Amelia Opie, novelist, 1853, *Norwich.*

ST FRANCIS XAVIER.

St Francis Xavier was born on the 7th of April 1506, in a castle at the base of the Spanish side of the Pyrenees, not far from which his future comrade and director, Ignatius Loyola, was then living, a gay youth of fifteen. Xavier was sent to the university of Paris, and there shared a room with Peter Faber, a Savoyard, to whom he became tenderly attached. In 1528, Loyola arrived at their college, a middle-aged man, meanly clad, worn with austerities, and burning with zeal. Loyola made friends with Faber, but Xavier could not endure him, and repulsed his approaches. Loyola, discerning a desirable spirit in Xavier, nevertheless persevered. One day Xavier had been lecturing on philosophy, and having met with much applause, was walking about in a high state of elation, when Loyola whispered in his ear: 'What shall it profit a man if he gain the whole world and lose his own soul?' The question startled Xavier, and changed the current of his feelings towards Loyola. He associated with him and Faber in study and devotion. Three other students joined them—Lainez, Bobadilla, and Rodriguez—and on the 15th of August 1534, the six met in a subterranean chapel of the church of Montmartre, and took vows of perpetual celibacy, poverty, and labour for the conversion of infidels. Such was the humble beginning of the Society of Jesuits. They resolved to place their lives at the service of the pope, and when preaching at Rome, in 1540, Xavier was chosen to go as a missionary to India. With joy he started, and on his way to Lisbon came within a few miles of his birthplace, and was pressed to turn aside and bid his mother farewell. He refused, lest his ardour should suffer loss in the regrets of filial affection. A voyage to India was a tedious enterprise in the sixteenth century. He sailed from Lisbon on the 7th of April 1541, wintered in Africa on the coast of Mozambique, and his ship did not reach Goa until the 6th of May 1542. The Portuguese of Goa, he found, were leading worse lives than the heathen, except that they did not worship idols, and their conversion was his first business. He learned the language of Malabar, and went preaching among the pearl-

fishers; and entering the kingdom of Travancore, he met with such success, that he reported baptising 10,000 Indians in a month. At Malacca, then a great centre of trade, he met three Jesuits, whom Loyola had sent to his aid, and with them made a tour through the Moluccas. At Malacca, he had met a Japanese, whose account of his strange and populous country had decided Xavier to visit it. He picked up as much of the language as he could, and in August 1549 landed in Japan, and for about two years travelled through the islands, making a host of converts. His mission was continued with great vigour by the Jesuits for nearly a century, when, for some cause or other, the government took fright, massacred the Christians, foreign and native, and sealed Japan against Europeans until our own day. He next determined to plant his faith in China, but the Portuguese merchants pleaded with him not to make the attempt, as he would assuredly be the cause of their utter destruction. Xavier was not to be moved by such alarms, and persuaded a Chinaman to run him ashore by night near Canton. This plan the Portuguese frustrated, and in the midst of his disappointment, on the barren island of Sancian, within sight of the desired Chinese mainland, he took fever, and died on the 2d of December 1553, aged only forty-seven, and in the twelfth year of his Asiatic ministry. His body was carried to Goa, and his shrine is to Catholics the holiest place in the Far East. In 1662, he was canonized, and by a papal brief in 1747, was pronounced the patron-saint of the East Indies. His festival is observed on the 3d of December.

The story of Xavier in Asia, as told by Catholics, is a long record of miracle on miracle; and by his miracles they account for the otherwise incredible statements regarding his success as a propagandist.

MECHANICS' INSTITUTIONS.

On the 2d December 1824, an institution was opened in London concerning which very warm anticipations were entertained, but which has not fully borne the fruit hoped for. After one or two minor attempts in various towns, it was resolved to establish a place in the metropolis, where workmen could acquire a knowledge of science, and of the principles of those arts on which they were daily employed. Scarcely any books on such matters were then accessible to persons of limited means, and popular lectures were nearly unknown. Many men in high places dreaded such innovations; insomuch that one declared, that 'science and learning, if universally diffused, would speedily overturn the best-constituted government on earth.' It is to the credit of Scotland that she took the lead of England in this matter. The Andersonian Institution at Glasgow had a mechanics' class, at which the late benevolent Dr Birkbeck lectured to large audiences on scientific subjects connected with the occupations of working-men; and the School of Arts at Edinburgh, under the auspices of Mr Leonard Horner and other enlightened men, furnished similar instruction, though to smaller audiences. In October 1823, proposals were put forth for establishing a Mechanics' Institution in London; and in the following month a public meeting on the subject was held at the Crown and Anchor Tavern. The object was declared to be 'the instruction of mechanics at a cheap rate in the principles of the art they practise, as well as in all other branches of useful knowledge;' and the means for obtaining this object were 'lectureships on the different arts and sciences, a library of reference and circulation, a reading-room, a museum of models, a school of design, an experimental workshop and laboratory, and a supply of instruments and apparatus.' Mr (afterwards Lord) Brougham, in a letter addressed to Dr Birkbeck as chairman, said: 'The plan will prosper in exact proportion to the interest which the mechanics themselves take in its detail. It is for their benefit, and ought to be left in their hands as soon as possible after it is begun.' And Mr Cobbett supported this view by saying: 'If they'—the working-men—'allowed other management to interfere, men would soon be found who would put the mechanics on one side and make use of them only as tools.' The scheme having been favourably received, the *London Mechanics' Institution* was formed, and was opened on the day above named. Men of great attainments offered their services as lecturers, and the lecture-hall frequently contained a thousand persons, listening with the greatest attention to discourses on astronomy, experimental philosophy and chemistry, physiology, the steam-engine, &c. Many persons, who afterwards attained to a more or less distinguished position in society, owed their first knowledge of the principles of science to the London Mechanics' Institution. The novelty and the success of the enterprise were so great, that similar institutions sprang up rapidly in various parts of the kingdom. At a public meeting in London, in July 1824, Mr Brougham said: 'Scarcely three days ever elapse without my receiving a communication of the establishment of some new Mechanics' Institution. At the beginning of May last, I made a calculation that since the preceding July I had received accounts of no less than thirty-three being established.' They extended far and wide, until at length there were at the very least four hundred such institutions in Great Britain.

It will not be suitable, in a work like this, to investigate fully the question why Mechanics' Institutions have comparatively failed; why, when the first enthusiasm had worked off, they failed to realise the expectations of their founders; a few words, nevertheless, may be said on the subject. Of the fact itself, there can be little doubt. 'In large towns,' a careful observer remarks, 'they [Mechanics' Institutions] have usually sprung from the exertions and wishes, not so much of the working-classes, as of the more wealthy. The energy and enthusiasm that originated them carried them on for a time; but as the novelty wore off, the members and revenue decreased, modifications of plan had to be adopted, new features introduced, and radical changes made. If these proved acceptable to the public, the institution flourished; if not, it decayed. If the original idea of giving scientific education only were strictly carried out, the number of members was small; while if amusement took the place of study, the institution lived in jeopardy, from the fickle and changing taste for amusement on the part of the public.' But *why* have mechanics shewn themselves, except in a few special instances, unwilling to give to these institutions such a measure of support as is necessary to their profitable working? The reasons assigned

are many. In some places where bickerings have existed between employers and employed on the subject of wages, and where the employers have lent aid towards establishing Mechanics' Institutions, the men have persuaded themselves that there is some secret design lurking underneath, and have suspiciously held aloof. Then, as to natural bias, most working-men shew a stronger taste for social and political subjects than for scientific and educational questions; they would rather attend a political meeting than a scientific lecture; rather read a party-newspaper than a dispassionate book; rather invest a little money in a benefit society or a building club, than in an institution for mental improvement; and although it may be a wise rule to exclude politics and theology, many men find such topics more 'exciting' and attractive than science or education. Next, a very large class of workmen consists of persons who really do not care at all for such subjects as those last named; when their work is done, theatres, public-houses, music-halls, smoking-rooms, &c., are their regular places of resort; and they would deem it almost as strange to go to a scientific lecture as to church on a week-day evening. The quarterly payments for Mechanics' Institutes are chargeable with another portion of the comparative failure; for a workman who receives weekly wages would more readily pay a subscription weekly, than save up for thirteen weeks in order to pay in one sum. Uncertainty of employment is another unfavourable circumstance; if a workman is out of employ when his subscription becomes due, the Mechanics' Institute is one of the first things he would give up. When the subscription is made small enough to attract numerous members, it is often too small to carry on the institute efficiently, and the instruction degenerates both in quantity and quality. One more circumstance must be noticed — unless working-men subscribe in sufficient number to form a majority, they cannot retain the management in their own hands; and unless they do, it ceases to be suitable to the wants and wishes of their class; and thus they have a further excuse for staying away.

Some among the above causes have rendered the London Mechanics' Institution, and most others of its kind, less successful than the early promoters had anticipated.

DECEMBER 3.

St Lucius, king and confessor, end of second century. St Birinus, bishop and confessor, 650. St Sola, hermit, 790. St Francis Xavier, Apostle of the Indies, confessor, 1552.

Born.—Luigi Pulci, Italian poet, 1431, *Florence;* John Gruter, eminent scholar and critic, 1560, *Antwerp;* Matthew Wren, bishop of Ely, 1585, *London;* Samuel Crompton, inventor of the *mule* for spinning cotton, 1753, *Firwood, near Bolton;* Robert Bloomfield, poet, 1766, *Honington, Suffolk.*

Died.—Alexander Farnese, Duke of Parma, distinguished commander, 1592; Giovanni Belzoni, explorer of Egyptian antiquities, 1823, *Gato, in Guinea;* John Flaxman, sculptor, 1826, *London;* Frederick VI., king of Denmark, 1839; Robert Montgomery, poet, 1855, *Brighton;* Christian Rauch, sculptor, 1857, *Dresden.*

SAMUEL CROMPTON.

Muslins, until near the close of last century, were all imported from India. English spinners were unable to produce yarn fine enough for the manufacture of such delicate fabrics. Arkwright had invented spinning by rollers, and Hargreaves the spinning-jenny, when, in 1779, Crompton succeeded in combining both inventions in his *mule.* He thereby enabled spinners to draw out long threads, in large numbers, to more than Hindu tenuity, and helped Lancashire effectually to her high and lucrative office of cotton-spinner-in-chief to the world.

Samuel Crompton was born on the 3d of December 1753, at Firwood, near Bolton. His father was a farmer, and the household, after the custom of Lancashire in those days, employed their leisure in carding, spinning, and weaving. While Samuel was a child, his father died. Shortly before his death, he had removed to a portion of an ancient mansion called Hall-in-the-Wood, about a mile from Bolton. It was a large rambling building, built in different styles and at different periods, and full of rooms, large and small, connected by intricate stairs and corridors. The picturesque site and appearance of Hall-in-the-Wood has made it a favourite subject with artists, and it has been painted and engraved again and again. Seldom has a mechanical invention had a more romantic birthplace.

Widow Crompton was a strong-minded woman, and carried on her husband's business with energy and thrift. She was noted for her excellent butter, honey, and elder-berry wine. So high was her repute for management, that she was elected an overseer of the poor. Her boy Samuel she ruled straitly. He used to tell that she beat him occasionally, not for any fault, but because she *so* loved him. He received an ordinary education at a Bolton day-school, and when about sixteen, his mother set him to earn his living by spinning at home, and she exacted from him a certain amount of work daily. His youth at Hall-in-the-Wood was passed in comparative seclusion. All day he was alone at work, his mother doing the bargaining and fighting with the outer world. He was very fond of music, and managed to construct a violin, on which he learned to play with proficiency. His evenings he spent at a night-school in the study of mathematics. A virtuous, reserved, and industrious youth was Crompton's.

At Hall-in-the-Wood lived his uncle, Alexander Crompton, a remarkable character. He was so lame that he could not leave the room in which he slept and worked. On his loom he wove fustians, by which he earned a comfortable living. Like the rest of the family, his piety was somewhat austere; and as he was unable to go to church, he was accustomed on Sundays, as soon as he heard the bells ringing, to put off his working-coat and put on his best. This done, he slowly read from the prayer-book the whole of the morning-service and a sermon, concluding about the same time as the church was coming out, when his good coat was laid aside, and the old one put on. In the evening, the same solitary solemnity was gone through.

With one of Hargreaves's jennies, Crompton

span. The yarn was soft, and was constantly breaking; and if the full quantity of allotted work was not done, Mrs Crompton scolded, and the time lost in joining broken threads kept the gentle spinner from his books and his darling fiddle. Much annoyance of this kind drove his ingenuity into the contrivance of some improvements.

Five years—from his twenty-first year, in 1774, to his twenty-sixth in 1779—were spent in the construction of the mule. 'My mind,' he relates, 'was in a continual endeavour to realise a more perfect principle of spinning; and though often baffled, I as often renewed the attempt, and at length succeeded to my utmost desire, at the expense of every shilling I had in the world.' He was, of course, only able to work at the mule in the leisure left after each day's task of spinning, and often in hours stolen from sleep. The purchase of tools and materials absorbed all his spare cash; and when the Bolton theatre was open, he was glad to earn eighteenpence a night by playing the violin in the orchestra. The first mule was made, for the most part, of wood, and to a small roadside smithy he used to resort, 'to file his bits o' things.'

Crompton proceeded very silently with his invention. Even the family at Hall-in-the-Wood knew little of what he was about, until his lights and noise, while at work in the night-time, excited their curiosity. Besides, inventors of machinery stood in great danger from popular indignation. The Blackburn spinners and weavers had driven Hargreaves from his home, and destroyed every jenny of more than twenty spindles for miles round. When this storm was raging, Crompton took his mule to pieces, and hid the various parts in a loft or garret near the clock in the old Hall. Meanwhile, he created much surprise in the market by the production of yarn, which, alike in fineness and firmness, surpassed any that had ever been seen. It immediately became the universal question in the trade, How does Crompton make that yarn? It was at once perceived that the greatly-desired muslins, brought all the way from the East Indies, might be woven at home, if only such yarn could be had in abundance.

At this time Crompton married, and commenced housekeeping in a cottage near the Hall, but still retained his work-room in the old place. His wife was a first-rate spinner, and her expertness, it is said, first drew his attention to her. Orders for his fine yarn, at his own prices, poured in upon him; and though he and his young wife span their hardest, they were quite unable to meet a hundredth part of the demand. Hall-in-the-Wood became besieged with manufacturers praying for supplies of the precious yarn, and burning with desire to penetrate the secret of its production. All kinds of stratagems were practised to obtain admission to the house. Some climbed up to the windows of the work-room, and peeped in. Crompton set up a screen to hide himself, but even that was not sufficient. One inquisitive adventurer is said to have hid himself for some days in the loft, and to have watched Crompton at work through a gimlet hole in the ceiling.

If Crompton had only possessed a mere trifle of worldly experience, there is no reason why, at this juncture, he might not have made his fortune. Unhappily his seclusion and soft disposition placed him as a babe at the mercy of sharp and crafty traders. He discovered he could not keep his secret. 'A man,' he wrote, 'has a very insecure tenure of a property which another can carry away with his eyes. A few months reduced me to the cruel necessity either of destroying my machine altogether, or giving it to the public. To destroy it, I could not think of; to give up that for which I had laboured so long, was cruel. I had no patent, nor the means of purchasing one. In preference to destroying, I gave it to the public.'

Many, perhaps the majority of inventors, have lacked the means to purchase a patent, but have, after due inquiry, usually found some capitalist willing to provide the requisite funds. There seems no reason to doubt, that had Crompton had the sense to bestir himself, he could easily have found a friend to assist him in securing a patent for the mule, or the Hall-i'-th'-Wood-Wheel, as the people at first called it.

He says he 'gave the mule to the public;' and virtually he did, but in such a way that he gained no credit for his generosity, and was put to inexpressible pain by the greed and meanness of those with whom he dealt. Persuaded to give up his secret, the following document was drawn up.

'We, whose names are hereunto subscribed, have agreed to give, and do hereby promise to pay unto, Samuel Crompton, at the Hall-in-the-Wood, near Bolton, the several sums opposite our names, as a reward for his improvement in spinning. Several of the principal tradesmen in Manchester, Bolton, &c., having seen his new machine, approve of it, and are of opinion that it would be of the greatest public utility to make it generally known, to which end a contribution is desired from every well-wisher of trade.'

To this were appended fifty-five subscribers of one guinea each, twenty-seven of half a guinea, one of seven shillings and sixpence, and one of five shillings and sixpence—making, together, the munificent sum of £67, 6*s.* 6*d.*, or less than the cost of the model-mule which Crompton gave up to the subscribers! Never, certainly, was so much got for so little. The merciless transaction receives its last touch of infamy, from the fact recorded by Crompton in these words:—'Many subscribers would not pay the sums they had set opposite their names. When I applied for them, I got nothing but abusive language to drive me from them, which was easily done; for I never till then could think it possible that any man could pretend one thing and act the direct opposite. I then found it was possible, having had proof positive.'

Deprived of his reward, Crompton devoted himself steadily to business. He removed to Oldhams, a retired place, two miles to the north of Bolton, where he farmed several acres, kept three or four cows, and span in the upper story of his house. His yarn was the best and finest in the market, and brought the highest prices; and, as a consequence, he was plagued with visitors, who came prying about under the idea that he had effected some improvement in his invention. His servants were continually bribed away from him, in the hope that they might be able to reveal something that was worth knowing. Sir Robert Peel (the first baronet) visited him at Oldhams, and offered him a situation, with a large salary, and the prospect of a partnership; but Crompton had a morbid dislike to Peel,

and he declined the overtures, which might have led to his lasting comfort and prosperity.

In order to provide for his increasing family, he moved into Bolton in 1791, and enlarged his spinning operations. In 1800, some gentlemen in Manchester commenced a subscription on his behalf, but, what with the French war, the failure of crops, and suffering commerce, their kindly effort stuck fast between four and five hundred pounds. The amount collected was handed over to Crompton, who sunk it in the extension of his business.

Aided by the mule, the cotton manufacture prodigiously developed itself; but thirty years elapsed ere any serious attempt was made to recompense the ingenuity and perseverance to which the increase was owing. At last, in 1812, it was resolved to bring Crompton's claims before parliament. It was proved that 4,600,000 spindles were at work on his mules, using up 40,000,000 lbs. of cotton annually; that 70,000 persons were engaged in spinning, and 150,000 more in weaving the yarn so spun; and that a population of full half a million derived their daily bread from the machinery his skill had devised. The case was clear, and Mr Perceval, the chancellor of the exchequer, was ready to propose a handsome vote of money, when Crompton's usual ill-luck intervened in a most shocking manner. It was the afternoon of the 11th of May 1812, and Crompton was standing in the lobby of the House of Commons conversing with Sir Robert Peel and Mr Blackburne, when one of them observed: 'Here comes Mr Perceval.' The group was instantly joined by the chancellor of the exchequer, who addressed them with the remark: 'You will be glad to know that I mean to propose £20,000 for Crompton; do you think it will be satisfactory?' Hearing this, Crompton moved off from motives of delicacy, and did not hear the reply. He was scarcely out of sight when the madman Bellingham came up, and shot Perceval dead. This frightful catastrophe lost Crompton £15,000. Six weeks intervened before his case could be brought before parliament, and then, on the 24th June, Lord Stanley moved that he should be awarded £5000, which the House voted without opposition. Twenty thousand pounds might have been had as easily, and no reason appears to have been given for the reduction of Mr Perceval's proposal. All conversant with Crompton's merits felt the grant inadequate, whether measured by the intrinsic value of his service, or by the rate of rewards accorded by parliament to other inventors.

With the £5000 Crompton entered into various manufacturing speculations with his sons; but none turned out well, and as he advanced in years some of his friends found it necessary to subscribe, and purchase him an annuity of £63. A second application to parliament on his behalf was instituted, but it came to nothing. Worn out with cares and disappointments, Crompton died at his house in King Street, Bolton, on the 26th of June 1827, at the age of seventy-four.

The unhappiness of Crompton's life sprung from the absence of those faculties which enable a man to hold equal intercourse with his fellows. 'I found to my sorrow,' he writes, 'that I was not calculated to contend with men of the world; neither did I know there was such a thing as protection for me on earth!' When he attended the Manchester Exchange to sell his yarns or muslins, and any rough-and-ready manufacturer ventured to offer him a less price than he had asked, he would invariably wrap up his samples, put them into his pocket, and quietly walk off. During a visit to Glasgow, the manufacturers invited him to a public dinner; but he was unable to muster courage to go through the ordeal, and, to use his own words, 'rather than *face up*, I first hid myself, and then fairly bolted from the city.' One day a foreign count called on him in Bolton. Crompton sent a message that he was in bed, and could not be seen. A friend, who accompanied the count, thereon ran up stairs, and proposed to Crompton that they should pay their visit in the bedroom; but he would not be persuaded, and vowed that if the count was brought up, he would hide under the bed! His excessive pride made him extremely sensitive to the very appearance of favour or patronage. To ask what was due to him always cost him acute pain. When in London, in 1812, prosecuting his claims, he wrote to Mr Giddy, one of his most steadfast supporters in parliament, 'Be assured, sir, there will be no difficulty in getting rid of me. The only anxiety I now feel is, that parliament may not dishonour themselves. *Me* they cannot dishonour. All the risk is with them. I conceived it to be the greatest honour I can confer on them, to afford them an opportunity of doing me and themselves justice. I am certain my friends and family would be ashamed of me, were I to consider myself come here *a-begging*, or on the contrary *demanding*. I only request that the case may have a fair and candid hearing, and be dealt with according to its merits.'

Crompton's habits were simple and frugal in the extreme, and by his industry he readily procured every comfort he cared to possess. Well would it have been for him when he lost the ownership of his invention, if he had been able to sweep every expectation connected with it into oblivion. The operation of these hopes were even less mischievous on him than on his sons and daughters, who unhappily were deprived of the guidance of their mother's good sense in their childhood. Before their eyes was continually dangling the possibility of their father being raised to affluence; and when poor Crompton came back to Bolton with £5000 instead of a great fortune, he heard the bitterest reproaches in his own household. His family he loved very tenderly, and we can fairly imagine that it was goaded by desire to satisfy them, that he spent five weary months in London in 1812, dancing attendance on members of parliament.

Crompton has been described by those who knew him in the strength and beauty of manhood, as a singularly handsome and prepossessing man; all his limbs, and particularly his hands, were elegantly formed, and possessed great muscular power. He could easily lift a sack of flour by the head and tail, and pitch it over the side of a cart. His manners and motions were at all times guided by a natural politeness and grace, as far from servility as rudeness. His portrait displays a beautiful face and head, in which none can fail to discern a philosopher and gentleman.

Crompton's memory, until lately, has been strangely neglected. In 1859, Mr Gilbert J. French, of Bolton, published an excellent biography of his townsman, from which work our facts have been drawn. A statue of Crompton, in bronze, by

Mr W. Calder Marshall, was erected in the market-place of Bolton in 1862.

GIOVANNI BATTISTA BELZONI.

In 1778, a son was born to a poor barber in the ancient city of Padua. There was little room for this novel addition to an impoverished family of fourteen, and the youth's earliest aspirations were to push his fortune far distant from his father's house. A translation of *Robinson Crusoe* falling into the lad's hands, excited an adventurous spirit, that clung to him through life; for, strange to say, Defoe's wonderful romance, though seemingly written with a view to deter and discourage wandering spirits, has ever had the contrary effect. When quite a boy, the barber's son ran away from home, but, after a few days' poverty, hardship, and weary travelling, he was fain to return to the shelter of the parental roof. He now settled for a season, learned his father's business, and, becoming an able practitioner with razor and scissors, he once more set off with the determination of improving his fortunes in the city of Rome. There a love disappointment induced him to enter a Capuchin convent, where he remained till the arrival of the French army threw the monks homeless and houseless on the world. Of an almost gigantic figure, and endowed with commensurate physical power, the barber-monk now endeavoured to support himself by exhibiting feats of strength and dexterity. The old inclination for wandering returning with increased force, he travelled through Germany to Holland and England, reaching this country in 1802. In the same year he performed at Sadler's Wells Theatre, in the

BELZONI AT SADLER'S WELLS AS THE PATAGONIAN SAMSON.

character of the Patagonian Samson, as represented in the accompanying engraving, copied from a very rare character portrait of the day. His performance is thus described in a contemporary periodical: 'Signor Belzoni's performance consists in carrying from seven to ten men in a manner never

attempted by any but himself. He clasps round him a belt, to which are affixed ledges to support the men, who cling round him; and first takes up one under each arm, receives one on either side, one on each of his shoulders, and one on his back; the whole forming a kind of a pyramid. When thus encumbered, he moves as easy and graceful as if about to walk a minuet, and displays a flag in as flippant a manner, as a dancer on the rope.'

In some unpublished notes of Ellar, the Harlequin and contemporary of Grimaldi, the pantomimist observes that he saw Belzoni in 1808, performing in Sander's Booth, at Bartholomew Fair, in the character of the French Hercules. In 1809, he continues, 'Belzoni and I were jointly engaged at the Crow Street Theatre, Dublin, in the production of a pantomime—I as Harlequin, he as artist to superintend the last scene, a sort of hydraulic temple, that, owing to what is frequently the case, the being overanxious, failed, and nearly inundated the orchestra. Fiddlers generally follow their leader, and Tom Cook, now leader at Drury Lane, was the man; out they ran, leaving Columbine and myself, with the rest, to finish the scene in the midst of a splendid shower of fire and water. The young lady who played the part of Columbine was of great beauty, and is now the wife of the celebrated Thomas Moore, the poet. Signor Belzoni was a man of gentlemanly but very unassuming manners, yet of great mind.'

There are few towns in England, Scotland, or Ireland in which Belzoni did not exhibit about this period. The following is an exact copy of one of his hand-bills, issued in Cork early in 1812. The GRAND CASCADE, mentioned in the bill, was in all probability the splendid shower of fire and water recorded in the preceding passage from Ellar's note-book.

Theatre, Patrick Street.

CUT

A Man's Head

OFF!!!

AND PUT IT ON AGAIN!

This present Evening MONDAY, Feb. 24, 1812,
And positively and definitively the LAST NIGHT.

SIG. BELZONI

RESPECTFULLY acquaints the Public, that by the request of his Friends, he will Re-open the above *Theatre* for one night more—*i. e.*, on MONDAY Feb. 24, and although it has been announced in former *Advertisements*, that he would perform for Two Nights—he pledges his word that this present Evening, will be positively and definitively the last night of his Re-presentations, and when he will introduce a FEAT OF LEGERDEMAIN, which he flatters himself will astonish the Spectators, as such a feat never was attempted in Great Britain or Ireland. After a number of Entertainments, he will

CUT

A Man's Head Off!!

And put it on Again!!!

ALSO THE

GRAND CASCADE.

Belzoni married in Ireland, and continuing his wandering life, exhibited in France, Spain, and Italy. Realising a small capital by his unceasing industry, he determined to visit Egypt, a country that for ages has been the *El Dorado* of the Italian race. Belzoni's object in visiting Egypt was to make a fortune by instructing the natives to raise water, by a very dangerous method, now abandoned—a kind of tread-wheel, formerly known to English mechanics by the technical appellation of 'the monkey.' Being unsuccessful in this endeavour, he turned his attention to removing some of the ancient Egyptian works of art, under the advice and patronage of Mr Salt, the British consul. The various adventures he went through, and how he ultimately succeeded, are all detailed by Belzoni in the published account of his travels, entitled *Narrative of the Operations and recent Discoveries in the Pyramids, Temples, Tombs, and Cities of Egypt and Nubia.*

Scarcely four years' exertions in Egypt had made Belzoni comparatively wealthy and famous. On his way to England, to publish his book, he visited Padua, and was received with princely honours. The authorities met him at the city gates, presented him with an address, and ordered a medal to be struck in his honour. Arriving in London, he became the fashionable lion of the day; and with a pardonable reticence, Belzoni took care not to allude to the character he had formerly sustained when in England. On this point the late Mr Crofton Croker tells an interesting story, published in Willis's *Current Notes.* He says, 'I remember meeting Belzoni, the last day of 1821, at the late Mr Murray's, in Albemarle Street, where we saw the New Year in, and "glorious John" brewed a special bowl of punch, for the occasion. Beside the juvenile family of our host, the whole D'Israeli family were present. We all played a merry game of Pope Joan, and when that was over, Murray presented to each a pocket-book, as a New-year's gift. Murray was engaged, at a side-table, making the punch, upon tasting the excellence of which he uttered something like the sounds made by a puppet-showman, when about to collect an audience. The elder D'Israeli thereupon took up my pocket-book, and wrote with his pencil the following impromptu:

"Gigantic Belzoni at Pope Joan and tea,
What a group of mere puppets we seem beside thee;
Which our kind host perceiving, with infinite jest,
Gives us Punch at our supper, to keep up the jest."

'Indifferent as the epigram itself was, I smiled at it, and observed: "Very true—excellent!" Which Belzoni perceiving, said: "Will you permit me to partake of your enjoyment?" "Certainly," I replied, handing him the book. Never shall I forget his countenance after he had read the four lines. He read the last line twice over, and then his eyes actually flashed fire. He struck his forehead, and muttering: "I am betrayed!" abruptly left the room.'

At a subsequent interview between Mr Croker and Belzoni, the latter accounted for his strange conduct by stating that he had considered the lines to be an insulting allusion to his early life as a showman. On Mr Croker explaining that they could not possibly have any reference to him, Belzoni requested the former to accompany him to Mr Murray, with the view of making an explanation. They went, and then the great publisher knew, for the first time, that the celebrated Egyptian explorer had been an itinerant exhibitor.

The active mind of Belzoni soon tired of a mere London existence. In 1822, he determined to embark in the too fatal field of African adventure. In the following year, when passing from Benin to Houssa, on his way to Timbuctoo, he was stricken with dysentery, carried back to Gato, and put on board an English vessel lying off the coast, in hopes of receiving benefit from the sea-air. He there died, carefully attended by English friends, to whom he gave his amethyst ring, to be delivered to his wife, with his tender affection and regrets that he was too weak to write his last adieux.

The kindly sailors, among whom he died, carried his body ashore, and buried it under an arsamatree, erecting a monument with the following inscription:

'HERE
LIE THE REMAINS
OF
G. BELZONI, ESQ.

Who was attacked with dysentery on the 20th Nov. at Benin, on his way to Houssa and Timbuctoo, and died at this place on the 3d December 1823.

'The gentlemen who placed this inscription over the remains of this celebrated and intrepid traveller, hope that every European visiting this spot, will cause the ground to be cleared and the fence around repaired if necessary.'

The people of Padua have since erected a statue to the memory of their townsman, the energetic son of a poor barber; but it was not till long after his death that the government of England bestowed a small pension on the widow of Belzoni.

'CROSSING THE LINE.'

Among the festivals of the old Roman calendar, in pagan times, we find one celebrated on the 3d of December, in honour of Neptune and Minerva. In connection with the former of these deities, we may here appropriately introduce the account of a well-known custom, which, till recently, prevailed on board ship, and was regarded as specially under the supervision of Neptune, who, *in propriâ personâ*, was supposed to act the principal part in the ceremony in question. We refer to the grand marine saturnalia which used to be performed when 'crossing the line:' that is, when passing from north to south latitude, or *vice versâ*. The custom, in some form or other, is believed to be very ancient, and to have been originally instituted on the occasion of ships passing out of the Mediterranean into the Atlantic, beyond the 'Pillars of Hercules.' It had much more absurdity than vice about it; but sometimes it became both insulting and cruel. When the victims made no resistance, and yielded as cheerfully as they could to the whim of the sailors, the ceremony was performed somewhat in the following way, as related by Captain Edward Hall, and quoted by Hone: 'The best executed of these ceremonies I ever saw, was on board a ship of the line, of which I was lieutenant, bound to the West Indies. On crossing the line, a voice, as if at a distance, and at the surface of the water, cried: "Ho, ship ahoy! I shall come on board!" This was from a person slung over the bows, near the water, speaking through his hands. Presently two men of large stature came over the bows. They had hideous masks on. One represented Neptune. He was naked to the waist, crowned with the head of a large wet swab, the end of which reached to his loins, to represent flowing locks; a piece of tarpaulin, vandyked, encircled the head of the swab and his brows as a diadem; his right hand wielded a boarding-pike, manufactured into a trident; and his body was smeared with red ochre, to represent fish-scales. The other sailor represented Amphitrite, having locks formed of swabs, a petticoat of the same material, with a girdle of red bunting; and in her hand a comb and looking-glass. They were followed by about twenty fellows, naked to the waist, with red ochre scales, as Tritons. They were received on the forecastle with much respect by the old sailors, who had provided the carriage of an eighteen-pounder gun as a car, which their majesties ascended: and were drawn aft along the gangway to the quarter-deck by the sailors. Neptune, addressing the captain, said he was happy to see him again that way; adding that he believed there were some "Johnny Raws" on board who had not paid their dues, and whom he intended to initiate into the salt-water mysteries. The captain answered, that he was happy to see him, but requested he would make no more confusion than was necessary. They then descended to the main-deck, and were joined by all the old hands, and about twenty "barbers," who submitted the shaving-tackle to inspection.' This shaving-tackle consisted of pieces of rusty hoop for razors, and very unsavoury compounds as shaving-soap and shaving-water, with which the luckless victim was bedaubed and soused. If he bore it well, he was sometimes permitted to join in performing the ceremony upon other 'Johnny Raws.' See engraving on the following page.

It was not always, however, that neophytes conformed without resistance to such rough christening ceremonies. A legal action, instituted in 1802, took its rise from the following circumstances. When the ship *Soleby Castle* was, in the year mentioned, crossing the equator on the way to Bombay, the sailors proceeded to the exercise of their wonted privilege. On this occasion, one of the passengers on board, Lieutenant Shaw, firmly resisted the performance of the ceremony. He offered to buy off the indignity by a present of money or spirits; but this was refused by the men, and it then became a contest of one against many. Shaw shut himself up in his cabin, the door of which he barricaded with trunks and boxes; and he also barred the port or small window. After he had remained some time in this voluntary imprisonment, without light or air, during the hottest part of the day, and 'under the line,' the crew, dressed as Neptune and his satellites, came thundering at his cabin-door, and with oaths and imprecations demanded admission. This he refused, but at the same time renewed his offer of a compromise. Mr Patterson, the fourth mate, entreated the crew, but in vain, to accept the offer made to them. The men, becoming chafed with the opposition, resolved now to obtain their way by force, regardless of consequences. They tried to force the door, but failed. Mr Raymond, third mate, sanctioned and approved the conduct of the men; and suggested that while some were engaged in wrenching the door off its hinges, others should effect an entry through the port. A sailor, armed with a sword and bludgeon, was lowered by a rope

down the outside of the ship; and he succeeded in getting into the cabin, just at the moment when the other sailors forced open the door. Lieutenant Shaw defended himself for a time with his sword, and fired off his pistols—more for the sake of summoning assistance than to do injury, for they were not loaded. The whole gang now pressed round him, and after wresting the sword from his hand, dragged him upon deck. There he clung for some time to the post of the cuddy-door; and, finding the first and third mates to be abetting the seamen, he called out loudly for the captain. The captain's cabin-door, however, was shut, and he either did not or would not hear the appeal. So impressed was the sensitive mind of the lieutenant with the indignity in store for him, that he actually endeavoured to throw himself overboard, but this was prevented by Mr Patterson. Unmoved by all

MARINE CEREMONIES AT 'CROSSING THE LINE.'

his entreaties, the crew proceeded with the frolic on which they had set their hearts, and which, after the resistance they had encountered, they resolved not to forego on any terms. They seized the lieutenant, dragged him along the quarter-deck to the middle of the ship, and placed him sitting in a boat half-filled with filthy liquid. His eyes being bandaged with a dirty napkin, a nauseous composition of tar and pitch was rubbed over his face, as 'Neptune's shaving soap,' and scraped off again by means of a rusty hoop, which constituted 'Neptune's razor.' He was then pushed back with violence into the boat, and there held struggling for some seconds, with his head immersed in the noisome liquid. Injured in body by this rough treatment, he was much more wounded in his mental feelings; and when the ship arrived at Bombay, he brought an action against the first and third mates. The fourth mate bore witness in his favour; and the captain, as a witness, declared that he did not hear the cry for assistance; but it is known that captains, at that time, were mostly unwilling to interfere with the sailors on such occasions. The damages of 400 rupees (£40), though more than the mates relished being called upon to pay, could scarcely be deemed a very satisfactory recompense for the inflictions which the lieutenant had undergone.

The improvement wrought among seafaring-men during the last few years, has tended to lessen very much the frequency of this custom. Not only naval officers, but officers in the mercantile marine, are better educated than those who filled such posts in former times; and the general progress of refinement has led them to encourage more rational sports among the crew. The sailors themselves are not much more educated than formerly; but improvement is visible even here; and the spirit which delighted in the coarse fun of this equatorial 'shaving,' is now decidedly on the wane.

DECEMBER 4.

St Clement of Alexandria, father of the church, beginning of 3d century. St Barbara, virgin and martyr, about 306. St Maruthas, bishop and confessor, 5th century. St Peter Chrysologus, archbishop of Ravenna, confessor, 450. St Siran or Sigirannus, abbot in Berry, confessor, 655. St Anno, archbishop of Cologne, confessor, 1075. St Osmund, bishop and confessor, 1099.

Born.—Thomas Carlyle, historical and miscellaneous writer, 1795, *near Ecclefechan, Dumfriesshire;* Dr John Kitto, Biblical illustrator, 1804, *Plymouth.*

Died.—Pope John XXII., 1334, *Avignon;* Cardinal Richelieu, celebrated minister of Louis XIII., 1642, *Paris;* William Drummond, poet, 1649, *Hawthornden;* Thomas Hobbes, philosopher, author of *Leviathan*, 1679; John Gay, poet and dramatist, 1732, *London;* John Shute, Lord Barrington, 1734; James Perry, editor of the *Morning Chronicle*, 1821, *Brighton;* Robert Jenkinson, Earl of Liverpool, statesman, 1828; Samuel Butler, bishop of Lichfield, great scholar, 1839.

HOBBES.

Hobbes was the plague of the theologians and philosophers of the seventeenth century. Charles II. likened him to a bear against whom the church played its young dogs in order to exercise them. Warburton, writing a century later, said: 'The philosopher of Malmesbury was the terror of the last age, as Tindall and Collins are of this. The press sweat with controversy, and every young churchman-militant would try his arms in thundering on Hobbes's steel cap.' A library might, indeed, be formed of the literature Hobbes provoked; and supposing it were admitted that he was altogether in the wrong, yet we should see a beneficent end in the means which stimulated so much mental activity. Faith is strengthened and assured in free contest with error; belief would lapse into mere hearsay if not sharply tested by question and denial; and we all must own, that 'truth like a torch the more it 's shook it shines.'

Thomas Hobbes was born at Malmesbury, in Wilts, on Good Friday, 1588, the year of the Spanish Armada. It is said his birth was hastened by his mother's terror of the enemy's fleet; and it may be, that a timidity with which through life he was afflicted, was thus induced. He and Fear, he was wont to say, were born together. He was a precocious child; he learned much and easily, and while yet a boy, translated the *Medea* of Euripides from the Greek into Latin verse. At the age of fifteen he was sent to Oxford, and at twenty he entered the Cavendish family as tutor to Lord Hardwicke, and with scarcely an intermission remained in the service of that noble house as tutor and secretary to the end of his long life. Born under Elizabeth, he lived through the reigns of James and Charles; he saw the rise and fall of the Commonwealth; and died in 1679, at the great age of ninety-two, within six years of the accession of James II. The latter part of his life was spent in Derbyshire, in the charming retreat of Chatsworth, and from Bishop Kennet we have a minute account of his habits there. 'His professed rule of health was to dedicate the morning to his exercise, and the afternoon to his studies. At his first rising, therefore, he walked out and climbed any hill within his reach; or, if the weather was not dry, he fatigued himself within doors by some exercise or other, to be a sweat. . . . . After this he took a comfortable breakfast; and then went round the lodgings to wait upon the earl, the countess and the children, and any considerable strangers, paying some short addresses to all of them. He kept these rounds till about twelve o'clock; when he had a little dinner provided for him, which he ate always by himself without ceremony. Soon after dinner, he retired to his study, and had his candle with ten or twelve pipes of tobacco laid by him; then shutting his door, he fell to smoking, thinking, and writing for several hours.' Hobbes was tall and spare; his forehead was massive, and in old age deeply wrinkled; his hair was a bright black, till time grizzled it; his eyes were quick and sparkling, and his nose long. His countenance, he tells us, was 'not beautiful, but when I am speaking, far from disagreeable.'

Hobbes's temper was naturally and intensely conservative, and his lot was cast in times when the whole current of events seemed destined to disturb it. His first work, a translation of Thucydides, in which he had the assistance of Ben Jonson, was published in 1628, in order that the absurdities of the Athenian democrats might serve as a warning to turbulent Englishmen. As civil troubles thickened, he was glad to seek refuge in Paris, where he enjoyed the acquaintance of Descartes, Gassendi, and other eminent Frenchmen. But though he had no inclination for a personal share in the strife which was rending his country into warring factions, he was far from indifferent to it. His mind was absorbed in the questions it suggested; he was asking himself, what was the origin of society? and what were the true relations between rulers and their subjects? The first result of his meditations appeared in a Latin treatise, *De Cive*, printed in Paris in 1642, and afterwards translated into English as *Philosophical Rudiments concerning Government and Society.* Descartes wrote of *De Cive*, 'I can by no means approve of its principles or maxims, which are very bad and extremely dangerous, because they suppose all men to be wicked, or give them occasion to be so. His whole design is to write in favour of monarchy, which might be done to more advantage than he has done, upon maxims more virtuous and solid.' The principles set forth in the *De Cive*, Hobbes more fully developed in the celebrated *Leviathan; or the Matter, Form, and Power of a Commonwealth, Ecclesiastical and Civil*, published in London, in folio, in 1651. In this work he describes man in a state of nature, or of isolation, as in a state of war, which in society he exchanges for a state of amity or peace. God made man, and man, in his turn, makes society, which is a sort of artificial man; a man on a large scale, in which the ruler is the brain, and his subjects, according to their various offices, the members. To the monarch he accords absolute power, and to his subjects unconditional obedience, not only in matters civil but religious. It might be supposed that such a doctrine would have proved highly acceptable to a generation in which the divine right of kings was in common vogue, but it was quickly discerned that though Hobbes rendered a useful defence of absolutism, it was a defence, spite of Hobbes's protests, which might serve a

Cromwell as well as a Stuart. Hence, in 1666, parliament passed a censure on the *Leviathan* and *De Cive*.

Hobbes's pen, to the end of his life, was never idle. He wrote in advocacy of necessity against free-will. He translated the *Iliad* and *Odyssey* into very ordinary verse. He composed a history of the civil wars from 1640 to 1660. He had a controversy with Dr Wallis, professor of geometry at Oxford, which lasted twenty years, and in which he was thoroughly worsted. Hobbes had commenced the study of mathematics in middle life, and imagined he had discovered the quadrature of the circle. Wallis told him he was mistaken, and the dispute which ensued was acrimonious to a laughable degree. Hobbes published *Six Lessons to the Professors of Mathematics in Oxford*, to which Wallis replied in *Due Correction for Mr Hobbes for not Saying his Lessons Right*.

Though the parliament condemned Hobbes, he was a favourite with Charles II. and his court. The aversion in which he was held by the pious, was a fair title to their esteem; and his sharp sayings and low estimate of human motives, were perfectly suited to their tastes. Moreover, he had been mathematical tutor to Charles when in exile; and though, after the publication of the *Leviathan*, he had been forbidden the royal presence, the king had a real fondness for his old master, and, seeing him one day in London, as he passed along in his coach, he sent for Hobbes, gave him his hand to kiss, ordered his portrait to be taken, and settled on him a pension of £100 a year.

Hobbes was freely denounced as an atheist, but solely by inference, and in direct opposition to his own confession. He expressly acknowledged God as 'the Power of all powers, and First Cause of all causes;' but, at the same time, denied that any could know '*what* He is, but only that He *is*.' What gave great handle to some to treat him as an atheist, was the contempt he expressed for many of those scholastic terms invented by theologians, in their endeavour to define the Infinite, and his determination to pursue his reasoning on politics and philosophy in thorough independence of their dogmas. Consistently with his principles, he conformed to the Church of England, and partook of its sacraments; but he seldom remained to listen to the sermon after the prayers.

Perhaps no writer has treated questions of polity and metaphysics with greater terseness and clearness than Hobbes, and lovers of a manly English style receive deep gratification from his pages. The late Sir William Molesworth collected and edited the works of Hobbes in sixteen volumes. When he stood as candidate for parliament for Southwark in 1845, one of the election cries was, 'Will you vote for Molesworth, the editor of Atheist Hobbes?'

JOHN GAY: ORIGIN OF A POPULAR NURSERY RHYME.

Gay is chiefly remembered as the author of the *Fables* and the *Beggar's Opera*, both of which, though not productions evincing the highest order of genius, have, by their sparkling vivacity and humour, secured for themselves transmission to posterity. He appears to have been wild and improvident in conduct, but nevertheless of a most amiable and genial disposition, which endeared him to a wide circle of literary friends, one of whom, Pope, thus touchingly commemorates him in the well known elegy on Gay:

> 'Of manners gentle, of affections mild;
> In wit a man, simplicity, a child.'

A mock-heroic poem, by Gay, entitled *Trivia, or the Art of Walking the Streets of London*, gives a very lively description of the city of London as it existed in the reign of Queen Anne, and of the dangers and inconveniences to which a pedestrian was exposed in those days while traversing its thoroughfares. This poem is indirectly connected with a well-known nursery rhyme. Few of our readers are unacquainted with the effusion commencing:

> 'Three children sliding on the ice,
> Upon a summer's day;'

with its tragi-comical catastrophe, and its moral of like character, addressed to—

> 'Parents that have children dear,
> And eke they that have none.'

Like many other tales of that class, both in prose and verse, its origin, we believe, has long remained unknown. A little old book, however, which we had occasion to quote in our first volume (p. 173), *The Loves of Hero and Leander* (London, 1653 and 1677), enlightens us on this point, and gives these lines in their primitive form.

In the latter part of the work, we find a rambling story, in doggerel rhymes, attempting the comical, and no less than eighty-four lines in length: it begins thus:

> '*Some* Christian people, *all* give ear
> Unto the grief of us:
> Caus'd by the death of three children dear,
> The which it hapned thus.'

And, elsewhere in the narrative, we meet with three other quatrains, the origin evidently of the rhyme in question:

> 'Three children sliding thereabout,
> Upon a place too thin,
> That so at last it did fall out,
> That they did all fall in.
>
> * * * *
>
> For had these at a sermon been,
> Or else upon dry ground,
> Why then I would ne'er have been seen,
> If that they had been drown'd.
>
> Ye parents all that children have,
> And ye that have none yet,
> Preserve your children from the grave,
> And teach them at home to sit.'

From the concluding verse of the story, as told in the original, it would seem that these lines were composed in the early part of the Civil Wars of Charles I.

In connection with this homely production, we have now to advert to an instance in which a more recent writer has evidently been indebted to it. Among the other incidents of the narrative, we are told that these unlucky children were sliding upon

the Thames, when frozen over, and that one of them had the misfortune to lose his head by the inopportune closing of the ice :

'Of which one's head was from his should-
Ers stricken, whose name was John,
Who then cry'd out as loud as he could,
"O Lon—a, Lon—a, London,
Oh ! tut—tut, turn from thy sinful race,"
Thus did his speech decay.'

If we turn to a passage in Gay's *Trivia* (book ii. ll. 388–392), descriptive of a frost on the Thames, near a century later, we find the following account of the tragic death of Doll the apple-woman :

'The cracking crystal yields, she sinks, she dies,
Her head, chopt off, from her lost shoulders flies ;
"Pippins," she cry'd, but death her voice confounds,
And "Pip, pip, pip," along the ice resounds ! '

The severing of the head from the shoulders, the half-articulated words, and the 'speech decaying,' or 'voice confounded,' in death, are, all of them, points so extremely similar, that there can hardly be room for supposing this to be a case of accidental coincidence.

MR PERRY OF THE *MORNING CHRONICLE.*

James Perry was one of those silent workers whose works do not perish ; and who, even when the worker and the work both have disappeared, exert a lasting influence on those who follow them. He was an Aberdeen man, born in 1756. After receiving a good education, and commencing the study of the law, he was suddenly thrown upon his own resources through commercial disasters in his family. Coming to England, he obtained an engagement as clerk to a manufacturer in Manchester ; and while thus employed, he greatly improved himself, during his leisure hours, by joining a literary association. The essays and papers which he contributed as a member of this society attracted much attention at the time. He went to London in 1777, to seek a wider sphere of usefulness ; and feeling a kindred sympathy towards a newspaper called the *General Advertiser*, he wrote essays and fugitive-pieces, dropped them into the letter-box at the office of that journal, and had the pleasure of seeing them in print a day or two afterwards. An accidental circumstance brought him into communication with the proprietors. Calling one day at the shop of Messrs Richardson and Urquhart, booksellers, to whom he had letters of recommendation, he found the latter busily engaged reading, and apparently enjoying an article in the *General Advertiser*. After Mr Urquhart had finished the perusal, Perry delivered his message ; and Urquhart said : 'If you could write articles such as this, I could give you immediate employment.' When Urquhart (who was one of the proprietors of the paper) heard that Perry was the author of the article, and had another of a similar kind with him in his pocket, they soon came to terms. Urquhart offered and Perry accepted a situation of a guinea a week, with an extra half-guinea for aiding in the *London Evening Post*, issued from the same establishment. Installed now in a regular literary capacity, Mr Perry threw the whole of his energies into his work. During the memorable trials of Admirals Keppel and Palliser, he, for six successive weeks, by his own individual efforts, managed to transmit daily, from Portsmouth, eight columns of a report of the proceedings, taken by him in court. These contributions, so very acceptable to the general public, raised the circulation of the *General Advertiser* largely. Even this arduous labour did not exhaust his appetite for study ; and he wrote, in addition, papers on a large variety of subjects. In 1782, he conceived the plan, and commenced the publication, of the *European Magazine*, a monthly journal, intended to combine a review of new books with a miscellany on popular subjects. After conducting this for twelve months, he was appointed editor to a newspaper called the *Gazetteer*, with a salary of four guineas a week, and a proviso that he should be allowed to advocate those political opinions which he himself held, and which were those of Charles James Fox. To understand an innovation which he at once introduced, it will be necessary to bear in mind what constituted parliamentary reporting in those days. Both Houses of parliament, for a long series of years, had absolutely forbidden the printing of the speeches in newspapers ; and it was only in an indirect way that the public could learn what was going on with the legislature. No facilities were offered to reporters ; there was no 'Reporters' Gallery ;' the 'Strangers' Gallery' was the only place open to them, and no one was allowed to use a note-book. William Woodfall, of the *Morning Chronicle*, became quite famous for his success in overcoming these difficulties. He used to commit a debate to memory, by attentively listening to it, and making here and there a secret memorandum ; when the House rose, he went home, and wrote out the whole of the speeches, trusting a little to his memoranda, but chiefly to his memory. Though generally accurate, mistakes, of course, occurred ; and now and then the report contained evidence of 'poking fun' at an honourable member. Mr Wilberforce once explained to the House, that in a report of a speech of his concerning the cultivation of the potato, he was made to say : 'Potatoes make men healthy, vigorous, and active ; but what is still more in their favour, they make men tall ; more especially was he led to say so, as being rather under the common size ; and he must lament that his guardians had not fostered him under that genial vegetable ! ' Woodfall's reputation became considerable ; and when strangers visited the House, their first inquiry often was : 'Which is the Speaker, and which is Mr Woodfall ?' As the visitors were locked into the gallery, and not allowed to leave it, or partake of any refreshment, till the debate was ended, Woodfall often had a very exhausting night of it. He would draw a hard-boiled egg from his pocket, take off the shell in his hat, and stoop his head to make a hasty meal, before the serjeant-at-arms could witness this infraction of the rules of the House. He was not a favourite with the other reporters ; and on one occasion the well-known hard egg was filched from his pocket, and an unboiled one substituted by a practical joker who owed him a grudge. One of the reporters who had thus to retain in his memory the substance of the speeches, was Mark Supple, an Irishman full of wit and humour, and often full of wine likewise.

One evening, being in his usual place in the gallery, a dead silence happened to occur for a few seconds, when he suddenly called out: 'A song from Mr Speaker!' William Pitt was nearly convulsed with laughter; Mr Addington, the speaker, could with difficulty retain his gravity; but the serjeant-at-arms had to punish the offender.

Mr Perry, we have said, in the *Gazetteer* introduced a great improvement—that of employing several reporters in each House of parliament, instead of one only, as had been the usual custom. Many of the speeches had been wont to appear in print some days after they had been delivered; but Perry rightly thought that the public ought to be served more promptly. By employing, accordingly, a larger staff, he was enabled to surprise and gratify the readers of his paper each morning with very fair reports of the speeches of the previous evening. He conducted the *Gazetteer* for eight years, and also edited Debrett's *Parliamentary Debates*. Mr Woodfall, who had gained celebrity in connection with the *Morning Chronicle*, sold it (apparently in 1790) to Mr Perry and Mr Gray, who had the money lent to them by Mr Bellamy, a wine-merchant, and housekeeper to the House of Commons. Perry at once took a high tone; he advocated steady liberal principles, avoiding alike bigoted Toryism on the one hand, and rabid Republicanism on the other; and at the same time, kept equally aloof from scandal and from venality. Although nearly always opposed to the minister of the day, he was only twice, in his newspaper career of forty years, exposed to *ex officio* prosecution, and was in both cases honourably acquitted. During a critical period of the French Revolution, Perry lived for twelve months at Paris, and acted there as reporter and correspondent for the *Chronicle*. He had many eminent men to assist him in the editorship; at one time, Mr (afterwards Serjeant) Spankie; at another, Mr (afterwards Lord) Campbell; at another, Thomas Campbell, the poet; and at another, William Hazlitt. Perry was a general favourite, and he was thus characterised by a contemporary: 'He was a highly honourable and brave man: confidence reposed in him was never abused. He was the depositary of many most important secrets of high personages. Generous in the extreme, he was ever ready with his purse and his services. His manner was manly, frank, and cordial; and he was the best of proprietors. Walter, of the *Times*, was a better man of business; and Daniel Stuart, of the *Post* and *Courier*, knew better how to make money; but Perry was a thorough gentleman, who attracted every man to him with whom he was connected.'

Soon after Mr Perry's death, the *Morning Chronicle* was sold for £42,000 to Mr Clements, proprietor of the *Observer*. In 1834, Sir John Easthope bought it for a much smaller sum. In later years, it sunk greatly in reputation; and the sale became so small, that it could no longer be carried on without loss. The proprietorship changed frequently; and an attempt was made to revive the sale by establishing the journal as a penny-paper. This also failing, the *Morning Chronicle* disappeared from the public eye altogether. Mr Perry's reputation is not affected by these failures; he made the paper the best of all the London journals; the decadence was due to others.

DECEMBER 5.

St Crispina, martyr, 304. St Sabas, abbot, 532. St Nicetius, bishop of Triers, confessor, about 566.

Born.—Robert Harley, Earl of Oxford, minister of Queen Anne, 1661.

Died.—Francis II. of France, husband of Queen of Scots, 1560; Sir Henry Wotton, poet and miscellaneous writer, 1639, *Eton;* Johann Wolfgang Theophilus Mozart, celebrated composer, 1792, *Vienna;* John Bewick, wood-engraver, 1795, *Ovingham;* Carlo Giovanni Maria Denina, historical writer, 1813, *Paris;* Leopold Frederick, Count Stolberg, poet and miscellaneous writer, 1819, *Sondermühlen, near Osnabrück;* Captain S. A. Warner, inventor of projectiles, 1853, *Pimlico.*

MOZART.

Mozart appears as a being eccentrically formed to be a medium for the expression of music and no grosser purpose. In this he was strong: in everything else of body and mind, he remained a child during the thirty-six years to which his life was limited.

'When three years old, his great amusement was finding concords on the piano; and nothing could equal his delight when he had discovered a harmonious interval. At the age of four, his father began to teach him little pieces of music, which he always learned to play in a very short time; and, before he was six, he had invented several small pieces himself, and even attempted compositions of some extent and intricacy.

'The sensibility of his organs appears to have been excessive. The slightest false note or harsh tone was quite a torture to him; and, in the early part of his childhood, he could not hear the sound of a trumpet without growing pale, and almost falling into convulsions. His father, for many years, carried him and his sister about to different cities for the purpose of exhibiting their talents. In 1764, they came to London, and played before the late king. Mozart also played the organ at the Chapel Royal; and with this the king was more pleased than with his performance on the harpsicord. During this visit he composed six sonatas, which he dedicated to the queen. He was then only eight years old. A few years after this he went to Milan; and at that place was performed, in 1770, the opera of *Mithridates*, composed by Mozart at the age of fourteen, and performed twenty nights in succession. From that time till he was nineteen, he continued to be the musical wonder of Europe, as much from the astonishing extent of his abilities, as from the extreme youth of their possessor.

'Entirely absorbed in music, this great man was a child in every other respect. His hands were so wedded to the piano, that he could use them for nothing else: at table, his wife carved for him; and, in everything relating to money, or the management of his domestic affairs, or even the choice and arrangement of his amusements, he was entirely under her guidance. His health was very delicate; and, during the latter part of his too short life, it declined rapidly. Like all weak-minded people, he was extremely apprehensive of death; and it was only by incessant application to his favourite study, that he prevented his spirits

sinking totally under the fears of approaching dissolution. At all other times, he laboured under a profound melancholy, which unquestionably tended to accelerate the period of his existence. In this melancholy state of spirits, he composed the *Zauberflöte*, the *Clemenza di Tito*, and the celebrated mass in D minor, commonly known by the name of his *Requiem*. The circumstances which attended the composition of the last of these works are so remarkable, from the effect they produced upon his mind, that we shall detail them; and, with the account, close the life of Mozart.

'One day, when his spirits were unusually oppressed, a stranger, of a tall, dignified appearance, was introduced. His manners were grave and impressive. He told Mozart that he came from a person who did not wish to be known, to request he would compose a solemn mass, as a requiem for the soul of a friend whom he had recently lost, and whose memory he was desirous of commemorating by this solemn service. Mozart undertook the task, and engaged to have it completed in a month. The stranger begged to know what price he set upon his work, and immediately paid him one hundred ducats, and departed. The mystery of this visit seemed to have a very strong effect upon the mind of the musician. He brooded over it for some time; and then suddenly calling for writing materials, began to compose with extraordinary ardour. This application, however, was more than his strength could support; it brought on fainting-fits; and his increasing illness obliged him to suspend his work. "I am writing this Requiem for myself!" said he abruptly to his wife one day; "it will serve for my own funeral-service;" and this impression never afterwards left him. At the expiration of the month, the mysterious stranger appeared, and demanded the Requiem. "I have found it impossible," said Mozart, "to keep my word; the work has interested me more than I expected, and I have extended it beyond my first design. I shall require another month to finish it." The stranger made no objection; but observing, that for this additional trouble it was but just to increase the premium, laid down fifty ducats more, and promised to return at the time appointed. Astonished at his whole proceedings, Mozart ordered a servant to follow this singular personage, and, if possible, to find out who he was: the man, however lost sight of him, and was obliged to return as he went. Mozart, now more than ever persuaded that he was a messenger from the other world, sent to warn him that his end was approaching, applied with fresh zeal to the Requiem; and, in spite of the exhausted state both of his mind and body, completed it before the end of the month. At the appointed day the stranger returned; but Mozart was no more.' *

NOTES ON AN ANCIENT GOTHIC CROWN.

Towards the close of 1858, or early in 1859, in the course of excavations at La Fuente de Guarraz, near Toledo, on the property of some private individual, a hoard of treasure of great value and interest was brought to light. No particulars of the discovery are recorded It seems, however, that there were not found any remains of a case or casket in which the relics had been enclosed; in several parts the ornamentation had been filled with the soil in which they were found; it has, therefore, been supposed that those relics of royalty had been buried in some time of confusion without any enclosure. The spot where the crowns were found was uncultivated land, which the peasants were breaking up when the discovery was made. The treasure consisted of eight crowns: four are of gold richly jewelled; from the front of the crowns jewelled crosses are suspended by gold chains; there are also chains of the same metal for the purpose of hanging the crowns in some convenient situation. These ancient and precious objects were brought to Paris in the month of January 1859, by the proprietor of the land where they were found, and the crowns were immediately purchased by the Minister of Public Instruction, for the national collection at the Hotel de Cluny, a museum which is already possessed of many valuable examples of medieval art, besides specimens of more ancient date. The largest of the crowns bears the following inscription, in letters jewelled and appended by little chains to its lower margin, 'RECCESVINTHVS REX OFFERET;' the letters are about two inches in length each—they are separately hung, and to each is attached a pendant pearl and sapphire. The gold letters are beautifully incrusted with precious stones, and engraved in the same manner as some of the gold work of the Anglo-Saxon period. By means of the inscription, we are able to arrive at a knowledge of the date of this crown, for King Reccesvinthus governed Spain from 653 to 675; the inscription also shews that it has been an offering (probably to some religious shrine) by this ruler; and the seven other crowns, of smaller dimensions and value, may have been those of the queen and the princes and princesses of the family; some of them, judging by their size, are intended for children of early age—the whole being a solemn offering on some important occasion.

In ancient times it was customary to enrich the saintly shrines with choice and valuable gifts; amongst these, however, there were often imitation crowns and other objects given as votive-offerings, to be placed over the altars, or in some other conspicuous position. There are, however, instances of the crowns which were actually worn by kings and queens having been devoted to this purpose—amongst these may be mentioned the Iron Crown of Lombardy. It is to be observed that the gold chains by which those relics were suspended, have been added to the simple circlets which were no doubt actually worn by royal personages about twelve hundred years ago, since they are formed with hinges and fastenings to facilitate the fastening of them to the heads of the wearers.

The crown of the king measures about nine inches in diameter, and twenty-seven in circumference; it is a hoop about four inches in breadth, and upwards of half an inch in thickness; it is, however, not solid, but formed of massive gold plates soldered together. The margins of this hoop consist of two bands of *cloisonné* work, with incrustations of carnelian; and it is still further enriched with thirty oriental sapphires of large size, set in collets, giving to the gems a very prominent relief. Thirty very large pearls are arranged alternately with the

* *Edinburgh Review*, xxxiii. 380.

sapphires. The intervening spaces are pierced in open work and engraved, so as to represent foliage and flowers, and to the lower margin is appended the fringe of letters already mentioned. The golden chains are united above with foliated ornaments, which are enriched with numerous pendant pearls and sapphires, and surmounted by a capital, in the form of a knot of crystal, elaborately carved and polished, and terminating in a globe of the same material. The Latin shaped cross, suspended from the crown by a slender chain, is set with six fine sapphires and eight pearls of remarkable dimensions, mounted in very high relief; jewelled pendants are also attached to the limbs and foot of the cross. This has been worn as a fibula or brooch, the acus by which it has been fastened to the royal robes being still visible. The entire length of this combination of ornament, from the gold hook to which it is fastened to the lowest pendant sapphire attached to the cross, is about three feet. The crown is composed of the purest gold, the colour of which, with the violet sapphires alternating with the pearls, &c., presents a most gorgeous appearance.

ANCIENT GOTHIC CROWN.

The crown of which we give an engraving was probably worn by the queen of Reccesvinthus. The broad circlet is set with fifty-four rubies, sapphires, emeralds, and opals, whilst pendant sapphires fringe its lower margin. Above and below, near both edges of this circlet, there are little loops which seem to have been used for fastening a lining or cap of some costly tissue within the golden hoop, to protect the forehead of the wearer. The pendant cross is not so much decorated as that above mentioned, being, however, richly set on both sides with sapphires. The same jewels are also suspended from the cross. The other six crowns are of several fashions. Three are essentially different from the others, for instead of a broad band, the circlet consists of open framework of gold, formed of three horizontal hoops and numerous traverses, with gems set at the points of intersection; all the crowns are enriched with not less than fifty-four precious stones and pearls, and have also hanging fringes of sapphires.

On the pendant crosses of one of the crowns is engraved the following dedication: 'IN DEI NOMINE OFFERET SONNICA SANCTÆ MARIÆ IN SORBACES.' After the word NOMINE, a leaf is introduced as a stop; M. Du Sommerards considers that *Sonnica* is a male appellation. The three smallest crowns had no pendant crosses. As an example of ancient art-workmanship, this may be regarded as one of the most remarkable discoveries which have been made in recent times. The articles are in excellent preservation, and the French have reason to congratulate themselves that they have gained possession of such a prize.

DR SHEBBEARE.

A person happening to pass by Charing Cross, on the 5th of December 1758, would have witnessed an extraordinary spectacle—a vast crowd surrounding a scaffold, on which stood two men and a pillory. A man in the pillory was no unusual sight in those days, but, in this particular case, the culprit's head and hands were not enclosed in the holes provided for the purpose; unconfined, he stood at his ease, and, to prevent even the rains of heaven from visiting him too roughly, a servant, dressed in a rich livery, carefully held an umbrella over his revered head. The man whose legally inflicted punishment was thus turned into a triumph, was Dr John Shebbeare. The son of a country attorney in Devonshire, Shebbeare was educated as a surgeon, but, being unsuccessful in his profession, turned his attention to literature. Having resolved, as he admitted, to write himself into a pension or the pillory, his political tracts were of an exceedingly virulent character, most galling to the king and ministry of the day. His best-known work is a series of *Letters to the People of England*, which had a wide circulation, and was eagerly read by all classes. The leading idea in the *Letters*, was the then not unpopular one, that the grandeur of France and the misfortunes of England, were wholly attributable to the undue influence of Hanover in the British council-chamber. In allusion to the White Horse being the armorial ensign of Hanover, Shebbeare's motto prefixed to his *Letters*, was the well-known verse from the *Apocalypse*—'And I looked and beheld a pale horse; and his name that sat upon him was Death, and Hell followed.'

In consequence of these *Letters*, the Attorney-general Pratt, afterwards Lord Camden, filed an information against Shebbeare in the Court of King's Bench, at the Easter term, 1758. At the trial, the officers of the crown admitted a point, then and afterwards much disputed, but now incontrovertibly established, that the jury have the right to determine both the *law* and the *fact* in cases of libel. Shebbeare was found guilty, and sentenced to be fined five pounds, to stand in the pillory one hour, to be imprisoned in the Marshalsea for three years, and to give security for his good-behaviour for seven years, himself in £500, and two others in £250 each. The under-sheriff at that time was a Mr Beardmore, a person of exactly the same political principles as Shebbeare; so he brought the culprit to the pillory in one of the city state-coaches, handing him out and in with the greatest demonstrations of respect. This gave Churchill occasion to write in the *Author:*

'Where is Shebbeare? O let not foul reproach,
Travelling thither in a city-coach,
The pillory dare to name; the whole intent
Of that parade was fame, not punishment,
And that old stanch Whig, Beardmore, standing by
Can in full court give that reproach the lie.'

The last line refers to a trial that arose out of this affair. Beardmore was arraigned in the Court of King's Bench for not doing his duty on the occasion. He contended that he had fulfilled the letter of the law by pillorying Shebbeare, and brought forward a number of witnesses to prove it. The judge, however, ruled that Shebbeare had not been put *in* the pillory, and the too-indulgent sub-sheriff was sentenced to pay a fine of £50, and suffer two months' imprisonment. Beardmore afterwards had his revenge, when solicitor to Wilkes; by an overstretch of legal power, he and his clerk were taken into custody, and recovered heavy damages from the secretary of state, for false imprisonment.

The footman who held the umbrella over Shebbeare, was an Irish chairman, hired and dressed in livery for the occasion. The following day, he called on the doctor, representing that the guinea he received for his trouble was scarcely sufficient; for, as he put it, 'only think of the disgrace, your honour.' Shebbeare gave him five shillings more, and the man went away satisfied.

Shebbeare remained three years, the full term of his sentence, in prison. On the expiration of that time, a new reign had commenced: George III., young and inexperienced, had ascended the throne; and his minister, Lord Bute, was the most unpopular of men. So it was thought best to make a friend of such a virulent and unscrupulous writer as the doctor, and a pension was granted to him accordingly. Thus his words were made good—he wrote himself into the pillory, and into a pension. Dr Johnson was pensioned shortly after, causing the wits to say that the king had first pensioned a *she* bear, and afterwards a *he* bear. In a satirical poem, entitled the *Masquerade*, Johnson and Shebbeare are thus alluded to:

'Much beared and much flattered by people of note,
With cash in his pockets for turning his coat,
Surly Johnson as Crispin the Second comes pat in,
Talking Latin in English, and English in Latin,
Successor of Shebbeare, but missing the wood,
Where, pampered by Bute, his prototype stood.'

Shebbeare's plays, novels, political, satirical, and medical works, are thirty-four in number, but now all utterly forgotten. He died at a good old age in 1788, greatly lamented by his friends; for this Ishmael of politics and public life is represented as a very amiable and worthy man in all his private relations, as husband, son, father, brother, and friend. So little do we know of each other, so little do we probably know of our ownselves and characters.

DECEMBER 6.

St Theophilus, bishop of Antioch, confessor, 190. St Nicholas, confessor, archbishop of Myra, 342. Saints Dionysia, Dativa, Aemilianus, Boniface, Leontia, Tertius, and Majoricus, martyrs, 484. St Peter Paschal, bishop and martyr, 1300.

ST NICHOLAS.

St Nicholas belongs to the fourth century of the Christian era, and was a native of the city of Patara, in Lycia, in Asia Minor. So strong were his devotional tendencies, even from infancy, that we are gravely informed that he refused to suck on Wednesdays and Fridays, the fast-days appointed by the church! Having embraced a religious life by entering the monastery of Sion, near Myra, he was in course of time raised to the dignity of abbot, and for many years made himself conspicuous by acts of piety and benevolence. Subsequently he was elected archbishop of the metropolitan church of Myra, and exercised that office with great renown till his death. Though escaping actual martyrdom, he is said to have suffered imprisonment, and otherwise testified to the faith under the persecution of Diocletian.

As with St Cuthbert, the history of St Nicholas does not end with his death and burial. His relics were preserved with great honour at Myra till the end of the eleventh century, when certain merchants of Bari, on the Adriatic, moved by a pious indignation similar to what actuated the Crusaders, made an expedition to the coast of Lycia, and landing there, broke open the coffin containing the bones of the saint, and carried them off to Italy. They landed at Bari on the 9th of May 1087, and the sacred treasure which they had brought with them was deposited in the church of St Stephen. On the day when the latter proceeding took place, we are told that thirty persons were cured of various distempers through imploring the intercession of St Nicholas, and since that time his tomb at Bari has been famous for pilgrimages. In the ensuing article a description is given of the annual celebration of his festival in that seaport.

Perhaps no saint has enjoyed a more extended popularity than St Nicholas. By the Russian nation, he has been adopted as their patron, and in England no fewer than three hundred and seventy-two churches are named in his honour. He is regarded as the special guardian of virgins, of children, and of sailors. Scholars were under his protection, and from the circumstance of these being anciently denominated *clerks*, the fraternity of *parish clerks* placed themselves likewise under the guardianship of St Nicholas. He even came to be regarded as the patron of robbers, from an alleged adventure with thieves, whom he compelled

to restore some stolen goods to their proper owners. But there are two specially celebrated legends regarding this saint, one of which bears reference to his protectorship of virgins, and the other to that of children. The former of these stories is as follows: A nobleman in the town of Patara had three daughters, but was sunk in such poverty, that he was not only unable to provide them with suitable marriage-portions, but was on the point of abandoning them to a sinful course of life from inability to preserve them otherwise from starvation. St Nicholas, who had inherited a large fortune, and employed it in innumerable acts of charity, no sooner heard of this unfortunate family, than he resolved to save it from the degradation with which it was threatened. As he proceeded secretly to the nobleman's house at night, debating with himself how he might best accomplish his object, the moon shone out from behind a cloud, and shewed him an open window into which he threw a purse of gold. This fell at the feet of the father of the maidens, and enabled him to portion his eldest daughter. A second nocturnal visit was paid to the house by the saint, and a similar present bestowed, which procured a dowry for the second daughter of the nobleman. But the latter was now determined to discover his mysterious benefactor, and with that view set himself to watch. On St Nicholas approaching, and preparing to throw in a purse of money for the third daughter, the nobleman caught hold of the skirt of his robe, and threw himself at his feet, exclaiming: 'O Nicholas! servant of God! why seek to hide thyself?' But the saint made him promise that he would inform no one of this seasonable act of munificence. From this incident in his life is derived apparently the practice formerly, if not still, customary in various parts of the continent, of the elder members and friends of a family placing, on the eve of St Nicholas's Day, little presents, such as sweetmeats and similar gifts, in the shoes or hose of their younger relatives, who, on discovering them in the morning, are supposed to attribute them to the munificence of St Nicholas. In convents, the young lady-boarders used, on the same occasion, to place silk-stockings at the door of the apartment of the abbess, with a paper recommending themselves to 'Great St Nicholas of her chamber.' The next morning they were summoned together, to witness the results of the liberality of the saint who had bountifully filled the stockings with sweetmeats. From the same instance of munificence recorded of St Nicholas, he is often represented bearing three purses, or three gold balls; the latter emblem forming the well-known pawnbrokers' sign, which, with considerable probability, has been traced to this origin. It is true, indeed, that this emblem is proximately derived from the Lombard merchants who settled in England at an early period, and were the first to open establishments for the lending of money. The three golden balls were also the sign of the Medici family of Florence, who, by a successful career of merchandise and money-lending, raised themselves to the supreme power in their native state. But the same origin is traceable in both cases—the emblematic device of the charitable St Nicholas.

The second legend to which we have adverted is even of a more piquant nature. A gentleman of Asia sent his two sons to be educated at Athens, but desired them, in passing through the town of Myra, to call on its archbishop, the holy Nicholas, and receive his benediction. The young men, arriving at the town late in the evening, resolved to defer their visit till the morning, and in the meantime took up their abode at an inn. The landlord, in order to obtain possession of their baggage, murdered the unfortunate youths in their sleep; and after cutting their bodies to pieces, and salting them, placed the mutilated remains in a pickling-tub along with some pork, under the guise of which he resolved to dispose of the contents of the vessel. But the archbishop was warned by a vision of this horrid transaction, and proceeded immediately to the inn, where he charged the landlord with the crime. The man, finding himself discovered, confessed his guilt, with great contrition, to St Nicholas, who not only implored on his behalf the forgiveness of Heaven, but also proceeded to the tub where the remains of the innocent youths lay in brine, and then made the sign of the cross, and offered up a supplication for their restoration to life. Scarcely was the saint's prayer finished, when the detached and mangled limbs were miraculously reunited, and the two youths regaining animation, rose up alive in the tub, and threw themselves at the feet of their benefactor. We are further informed, that the archbishop refused their homage, desiring the young men to return thanks to the proper quarter from which this blessing had

LEGENDARY REPRESENTATION OF ST NICHOLAS—FROM A MANUSCRIPT IN THE BODLEIAN LIBRARY.

descended; and then, after giving them his benediction, he dismissed them with great joy to continue their journey to Athens. In accordance with this legend, St Nicholas is frequently represented, as delineated in the accompanying engraving, standing in full episcopal costume beside a tub with naked children.

An important function assigned to St Nicholas, is that of the guardianship of mariners, who in Roman Catholic countries regard him with special reverence. In several seaport towns there are churches dedicated to St Nicholas, whither sailors resort to return thanks for preservation at sea, by hanging up votive pictures, and making other offerings. This practice is evidently a relic of an old pagan custom alluded to by Horace:

Me tabulâ sacer
Votivâ paries indicat uvida
Suspendisse potenti
Vestimenta maris Deo.

The office of protector of sailors, thus attributed in ancient times to Neptune, was afterwards transferred to St Nicholas, who is said, on the occasion of making a voyage to the Holy Land, to have caused by his prayers a tempest to assuage, and at another time to have personally appeared to, and saved some mariners who had invoked his assistance.

The Feast of St Nicholas.

The Feast of St Nicholas, at Bari, is one of the chief ecclesiastical festivals of Southern Italy. It is attended by pilgrims in thousands, who come from considerable distances. From the Tronto to Otranto, the whole eastern slope of the Apennines sends eager suppliants to this famous shrine, and nowhere is there more distinctly to be seen how firm and deep a hold the faith in which they have been educated has on the enthusiastic nature of the Italian peasantry, than at this sanctuary, and on this occasion.

Bari is a city of considerable importance, in the compartment of Apulia. It is situated on the Adriatic coast, half-way between the spur, formed by Monte Gargano, and the heel of the boot. It contains some 58,000 inhabitants, and is capital of the province of Terra di Bari, which contains more than half a million of population. The city occupies a small peninsula, which escapes, as it were, into the blue waters of the Adriatic, from the bosom of the richest and most fertile country in Italy. The whole seaboard, from the mouths of the Ofanto to within a few miles of the renewed 'overland-route' harbour of Brindisi, recalls the descriptions given of Palestine in its ancient and highly-cultivated state. The constant industry of the people—in irrigation, in turning over the soil, in pruning the exuberant vegetation—is rewarded by a harvest in every month of the year, and the wealth of the soil is expressed by the contented aspect, the decent clothing, and the personal adornment with rings, chains, and ear-rings, of both men and women. Stockings and even gloves are commonly worn, and that not as being needed for defence against the climate, but as marks of decent competence. At Barletta, the great grain-port, which is situated between this garden of Italy and the great pastoral plain of Apulia, there is a labour-market held daily, during the summer months, at four A.M. There the labourers meet, before going to their daily toil, to settle the price of labour, and to arrange for the due distribution of workmen through the country. Each man is attended by his dog, and most of them mount their asses, at the conclusion of this ancient and admirable congress, to ride to the scene of their occupation.

The harvests of this fertile country commence, in the latter part of April and earlier portion of May, by the gathering of the pulse crops, those of beans especially, on which the people subsist for some weeks, and of vetches. Oranges and lemons succeed during the month of May, and the country affords many species of these fruit, one at least of which, as large as a child's head, and with a thick and edible rind, is unknown in other parts of Europe. In June, succeeds the harvest of oats, barley, and wheat, and the gathering of flax. In July, the maize is harvested; a plant which has been regarded as of American origin, but which is represented in the frescoes of Pompei as boiled and eaten precisely as we see it used at the present day. July is also the chief month for the making of cheese, as well as for the silk crop, or the tending of the silk-worm till it forms its cocoons. August produces cotton, tobacco, and figs. September yields grapes and a second shearing of wool, the first having taken place in May. The next five months, in fertile years, supply a constant yield of olives; and the plucking and preserving of the fruit, as well as the manufacture of oil, afford continual occupation. The olive, which, in the south of France, appears as a small shrub, covers the hills to the south of the Ofanto with trees about the size of the apple-trees of the Gloucestershire and Herefordshire orchards; and yet further south, in the Terra di Otranto, it rises into the magnitude of a forest-tree, and covers large districts of country with a rich and shady woodland. The culture and the varieties of the olive are the same with those that are so minutely described by Virgil, and the flavour of the edible species, and the delicacy and filbert-like aroma of the new-made oil, can only be appreciated by a visit to a country like Apulia. In March, the latest addition to the production of the country, the little Mandarin orange, becomes ripe; a delicious fruit, too delicate to export. Introduced into Italy during the present generation, it has already much increased in size, at the expense, it is said, of flavour. In April is the season for the slaughtering of fatted animals, which brings us round again to the wool-crop.

Bari is an archiepiscopal city, but its ancient cathedral, with its almost picturesque architecture, is outshone by the splendour of the Church of St Nicholas, the 'protector of the city.' The grand prior of St Nicholas is one of the chief ecclesiastical dignitaries in Italy, claiming to rank with the bishop of Loretto, the archbishop of Milan, and the cardinal of Capua. The king of Italy for the time is, when he enters the precincts of St Nicholas, a less person than the grand prior, ranking always, however, as the first canon of the chapter, and having a throne in the choir erected for his occupation in that capacity. It so chanced that the writer was in Bari, and was the guest of the grand prior, who was a man every way fitted to sustain such a dignity—courteous and affable, erect and vigorous in form and gait, and clear and bright in complexion, although hard on fourscore years of age. He was the very counterpart of the pictures of Fénélon, but of Fénélon unworn by the charge of the education of a dauphin.

The two great festivals that are distinctive of the

city are those of St Mark and St Nicholas. On St Mark's Day, the chief peculiarity is the procession of the clergy and municipality to the walls of the ancient castle that overlook the sea, and the solemn firing of a cannon thrice in the direction of Venice, in acknowledgment of the relief afforded by the Venetian fleet when Bari was besieged by the Saracens in 1002 A.D. The ricochet of the cannon-ball over the surface of the Adriatic is watched with the greatest interest by the people, and the distance from the shore at which the water is struck appears to be regarded as ominous.

But on the festa of St Nicholas, in addition to the rejoicings of the citizens and to the influx of the *contadini*, the city is absolutely invaded by an army of pilgrims. With staves bound with olive, with pine, or with palm, each bearing a suspended water-bottle formed out of a gourd, frequently barefoot, clothed in every variety of picturesque and ancient costume, devotees from many different provinces of the kingdom seek health or other blessings at the shrine of the great St Nicholas. The priory gives to each a meal, and affords shelter to many. Others fill every arch or sheltered nook in the walls, bivouac in the city, or spend the night in devotion. The grand vicar of the priory said that on that morning they had given food to nine thousand pilgrims, and there are many who never seek the dole, but travelling on horseback or in carriages to within a few miles of Bari, assume the pilgrim habit only to enter the very precincts of the shrine.

The clergy composing the chapter of St Nicholas are not slow to maintain the thaumaturgic character of their patron, and seem to believe in it. The bones of the saint are deposited in a sepulchre beneath the magnificent crypt, which is in itself a sort of subterranean church, of rich Saracenic architecture. Through the native rock which forms the tomb, water constantly exudes, which is collected by the canons on a sponge attached to a reed, squeezed into bottles, and sold to the pilgrims, as a miraculous specific, under the name of the 'Manna of St Nicholas.' As a proof of its supernatural character, a large bottle was shewn to me, in which, suspended from the cork, grew and floated the delicate green bladder of one of the Adriatic *ulvæ*. I suppose that its growth in fresh water had been extremely slow, for a person, whose word I did not doubt, assured me that he remembered the bottle from his childhood, and that the vegetation was then much less visible. 'This,' said the grand vicar, a tall aquiline-featured priest, who looked as if he watched the effect of every word upon a probable heretic—'this we consider to be conclusive as to the character of the water. If vegetation takes place in water that you keep in a jar, the water becomes offensive. This bottle has been in its present state for many years. You see the vegetation. But it is not putrid. Taste it, you will find it perfectly sweet. *Questa è prodigiosa.*' I trust that all the water that was sold to the pilgrims was really thus afforded by St Nicholas, if its efficacy be such as is asserted to be the case; but on this subject the purchasers must rely implicitly on the good faith of the canons, as mere human senses cannot distinguish it from that of the castle well.

The pilgrims, on entering the Church of St Nicholas, often shew their devotion by making the circuit once, or oftener, on their knees. Some are not content with this mark of humility, but actually move around the aisles with the forehead pressed to the marble pavement, being generally led by a child, by means of a string or handkerchief, of which they hold the corner in the mouth. It is impossible to conceive anything more calculated to stir the heart with mingled feelings of pity, of admiration, of sympathy, and of horror than to see these thousands of human beings recalling, in their physiognomy, their dialects, their gesticulations, even their dresses, the *Magna Græcia* of more than two thousand years ago, urged from their distant homes by a strong and intense piety, and thinking to render acceptable service by thus debasing themselves below the level of the brute. The flushed face, starting eyes, and scarred forehead, fully distinguish such of the pilgrims as have thus sought the benediction of the saint.

The mariners of Bari take their own part, and that a very important one, in the functions of the day, and go to a considerable expense to perform their duty with *éclat*. Early in the morning, they enter the church in procession, and receive from the canons the wooden image of the saint, attired in the robes and mitre of an archbishop, which they bear in triumph through the city, attended by the canons only so far as the outer archway of the precincts of the priory. They take their charge to visit the cathedral and other places, and then fairly embark him, and carry him out to sea, where they keep him until nightfall. They then return, disembark under the blaze of illumination, bonfires, and fireworks, and the intonation, by the whole heaving mass of the population, of a Gregorian Litany of St Nicholas; parade the town, visit by torchlight, and again leave, his own church; and finally, and late in the night, return the image to the reverend custody of the canons, who, in their purple robes and fur capes turned up with satin, play only a subordinate part in the solemnity. 'It is the only time,' said a thickly-moustached bystander—'it is the only occasion, in Italy, on which you see the religion of Jesus Christ in the hands of the people.' The conduct of the festa was, indeed, in the hands of the mariners and of the pilgrims; the character of the religion is a different question.

Those who have witnessed the festa of St Januarius at Naples, will err if they endeavour thence to realise the character of the festa of St Nicholas at Bari. The effect on the mind is widely different. Without the frantic excitement that marks the Neapolitan festival, there is a deep, serious, anxious conviction that pervades the thousands who assemble at Bari, which renders the commemoration of St Nicholas an event unique in its nature. The nocturnal procession, the flashing torches, the rockets, the deep-toned litany, the hum and surge of the people through the ancient archways, the thousands of pilgrims that seem to have awakened from a slumber of seven centuries, all tend powerfully to affect the imagination. But the chief element of this power over the mind is to be found in the deep earnestness of so great a mass of human beings, while the stars look down calm and solemn on their time-honoured rite, and a deep bass to their litany rolls in from the waves of the Adriatic.

The Boy-Bishop: Eton Montem.

On St Nicholas's Day, in ancient times, a singular ceremony used to take place. This was the election of the *Boy-bishop*, or *Episcopus Puerorum*, who, from this date to Innocents' or Childermas Day, on 28th December, exercised a burlesque episcopal jurisdiction, and, with his juvenile dean and prebendaries, parodied the various ecclesiastical functions and ceremonies. It is well known that, previous to the Reformation, these profane and ridiculous mummeries were encouraged and participated in by the clergy themselves, who, confident of their hold on the reverence or superstition of the populace, seem to have entertained no apprehension of the dangerous results which might ultimately ensue from such sports, both as regarded their own influence and the cause of religion itself.

The election of the Boy-bishop seems to have prevailed generally throughout the English cathedrals, and also in many of the grammar-schools, but the place where, of all others, it appears to have specially obtained, was the episcopal diocese of Salisbury or Sarum. A full description of the mock-ceremonies enacted on the occasion is preserved in the *Processional of Salisbury Cathedral*, where also the service of the Boy-bishop is printed and set to music. It seems to have constituted literally a mimic transcript of the regular episcopal functions; and we do not discover any trace of parody or burlesque, beyond the inevitable one of the ludicrous contrast presented by the diminutive bishop and his chapter to the grave and canonical figures of the ordinary clergy of the cathedral. The actors in this solemn farce were composed of the choristers of the church, and must have been well drilled in the parts which they were to perform. The boy who filled the character of bishop, derived some substantial benefits from his tenure of office, and is said to have had the power of disposing of such prebends as fell vacant during the period of his episcopacy. If he died in the course of it, he received the funeral honours of a bishop, and had a monument erected to his memory, of which latter distinction an example may be seen on the north side of the nave of Salisbury Cathedral, where is sculptured the figure of a youth clad in episcopal robes, with his foot on a lion-headed and dragon-tailed monster, in allusion to the expression of the Psalmist: '*Conculcabis leonem et draconem*—[Thou shalt tread on the lion and the dragon].'

Besides the regular buffooneries throughout England of the Boy-bishop and his companions in church, these pseudo-clergy seem to have perambulated the neighbourhood, and enlivened it with their jocularities, in return for which a contribution, under the designation of the 'Bishop's subsidy,' would be demanded from passers-by and householders. Occasionally, royalty itself deigned to be amused with the burlesque ritual of the mimic prelate, and in 1299, we find Edward I., on his way to Scotland, permitting a Boy-bishop to say vespers before him in his chapel at Heton, near Newcastle-on-Tyne, on the 7th of December, the day after St Nicholas's Day. On this occasion, we are informed that his majesty made a handsome present to this mock-representative of Episcopacy, and the companions who assisted him in the discharge of his functions. During the reign of Queen Mary of persecuting memory, we find a performance by one of these child-bishops before her majesty, at her manor of St-James-in-the-Fields, on St Nicholas's Day and Innocents' Day, 1555. This queen restored, on her accession, the ceremonial, referred to, which had been abrogated by her father, Henry VIII., in 1542. We accordingly read in Strype's *Ecclesiastical Memorials*, quoted by Brand, that on 13th November 1554, an edict was issued by the bishop of London to all the clergy of his diocese to have the procession of a boy-bishop. But again we find that on 5th December, or St Nicholas's Eve, of the same year, 'at even-song time, came a commandment that St Nicholas should *not go abroad or about*. But notwithstanding, it seems so much were the citizens taken with the mock of St Nicholas—that is, a boy-bishop—that there went about these St Nicholases in divers parishes, as in St Andrew's, Holborn, and St Nicholas Olaves, in Bread Street. The reason the procession of St Nicholas was forbid, was because the cardinal had, this St Nicholas Day, sent for all the convocation, bishops, and inferior clergy, to come to him to Lambeth, there to be absolved from all their perjuries, schisms, and heresies.' Again Strype informs us that, in 1556, on the eve of his day, 'St Nicholas, that is, a boy habited like a bishop *in pontificalibus*, went abroad in most parts of London, singing after the old fashion, and was received with many ignorant but well-disposed people into their houses, and had as much good cheer as ever was wont to be had before, at least, in many places.'

With the final establishment of Protestantism in England, the pastime of the Boy-bishop disappeared; but the well-known festivity of the *Eton Montem* appears to have originated in, and been a continuance under another form, of the medieval custom above detailed. The Eton celebration, now abolished, consisted, as is well known, in a march of the scholars attending that seminary to Salt Hill, in the neighbourhood [AD MONTEM—'To the Mount'—whence the name of the festivity], where they dined, and afterwards returned in procession to Eton in the evening. It was thoroughly of a military character, the mitre and ecclesiastical vestments of the Boy-bishop and his clergy of former times being exchanged for the uniforms of a company of soldiers and their captain. Certain boys, denominated *salt-bearers*, and their *scouts* or deputies, attired in fancy-dresses, thronged the roads in the neighbourhood, and levied from the passers-by a tribute of money for the benefit of their captain. This was supposed to afford the latter the means of maintaining himself at the university, and amounted sometimes to a considerable sum, occasionally reaching as high as £1000. According to the ancient practice, the salt-bearers were accustomed to carry with them a handkerchief filled with salt, of which they bestowed a small quantity on every individual who contributed his quota to the subsidy. The origin of this custom of distributing salt is obscure, but it would appear to have reference to those ceremonies so frequently practised at schools and colleges in former times, when a new-comer or *freshman* arrived, and, by being *salted*, was, by a variety of ceremonies more amusing to his companions than himself, admitted to a participation with the other scholars in their pastimes and privileges. A favourite joke at Eton in former

times was, it is said, for the salt-bearers to fill with the commodity which they carried, the mouth of any stolid-looking countryman, who, after giving them a trifle, asked for an equivalent in return.

About the middle of the last century, the Eton Montem was a *biennial*, but latterly it became a *triennial* ceremony. One of the customs, certainly a relic of the Boy-bishop revels, was, after the procession reached Salt Hill, for a boy habited like a parson to read prayers, whilst another officiated as clerk, who at the conclusion of the service was kicked by the parson downhill. This part of the ceremonies, however, was latterly abrogated in deference, as is said, to the wishes of Queen Charlotte, who, on first witnessing the practice, had expressed great dissatisfaction at its irreverence. The Eton-Montem festival found a stanch patron in George III., who generally attended it with his family, and made, along with them, liberal donations to the salt-bearers, besides paying various attentions to the boys who filled the principal parts in the show. Under his patronage the festival flourished with great splendour; but it afterwards fell off, and at last, on the representation of the master of Eton College to her Majesty and the government, that its continuance had become undesirable, the Eton Montem was abolished in January 1847. This step, however, was not taken without a considerable amount of opposition.

In recent times, the Eton-Montem festival used to be celebrated on Whit-Tuesday, but previous to 1759, it took place on the first Tuesday in Hilary Term, which commences on 23d January. It then not unfrequently became necessary to cut a passage through the snow to Salt Hill, to allow the procession to pass. At a still remoter period, the celebration appears to have been held before the Christmas holidays, on one of the days between the feasts of St Nicholas and the Holy Innocents, the period during which the Boy-bishop of old, the precursor of the 'captain' of the Eton scholars, exercised his prelatical functions.

THE INTRODUCTION OF TEA.

Dr Johnson gives Earls Arlington and Ossory the credit of being the first to import tea into England. He says that they brought it from Holland in 1666, and that their ladies taught women of quality how to use it. Pepys, however, records having sent for a cup of tea, a China drink of which he had never drunk before, on the 25th of September 1660; and by an act of parliament of the same year, a duty of eightpence a gallon was levied on all sherbert, chocolate, and tea made for sale. Waller, writing on some tea commended by Catherine of Braganza, says:

> 'The best of herbs and best of queens we owe
> To that bold nation, which the way did shew
> To the fair region where the sun does rise.
>
> The Muses' friend, Tea, does our fancy aid,
> Repress the vapours which the head invade,
> And keeps the palace of the soul serene.'

Her majesty may have helped to render tea-drinking fashionable, but the beverage was well known in London before the Restoration. The *Mercurius Politicus* of September 30, 1658, contains the following advertisement:—'That excellent, and by all physicians approved, China drink, called by the Chineans *Tcha*, by other nations *Tay*, alias Tee, is sold at the Sultaness Head Coffee-House, in Sweeting's Rents, by the Royal Exchange, London.' Possibly this announcement prompted the founder of Garraway's to issue the broadsheet, preserved in the British Museum Library, in which he thus runs riot in exaltation of tea: 'The quality is moderately hot, proper for winter or summer. The drink is declared to be most wholesome, preserving in perfect health until extreme old age. The particular virtues are these. It maketh the body active and lusty. It helpeth the headache, giddiness and heaviness thereof. It removeth the obstructions of the spleen. It is very good against the stone and gravel. . . . . It taketh away the difficulty of breathing, opening obstructions. It is good against lippitude distillations, and cleareth the sight. It removeth lassitude, and cleanseth and purifieth adust humours and a hot liver. It is good against crudities, strengthening the weakness of the stomach, causing good appetite and digestion, and particularly for men of a corpulent body, and such as are great eaters of flesh. It vanquisheth heavy dreams, easeth the brain, and strengtheneth the memory. It overcometh superfluous sleep, and prevents sleepiness in general, a draught of the infusion being taken; so that, without trouble, whole nights may be spent in study without hurt to the body. It prevents and cures agues, surfeits, and fevers by infusing a fit quantity of the leaf, thereby provoking a most gentle vomit and breathing of the pores, and hath been given with wonderful success. It (being prepared and drunk with milk and water) strengtheneth the inward parts and prevents consumptions. . . . . It is good for colds, dropsies, and scurvies, and expelleth infection. . . . . And that the virtue and excellence of the leaf and drink are many and great, is evident and manifest by the high esteem and use of it (especially of late years), by the physicians and knowing men in France, Italy, Holland, and other parts of Christendom, and in England it hath been sold in the leaf for six pounds, and sometimes for ten pounds the pound-weight; and in respect of its former scarceness and dearness, it hath been only used as a regalia in high treatments and entertainments, and presents made thereof to princes and grandees till the year 1657.'

Having furnished these excellent reasons why people should buy tea, Mr Garway proceeds to tell them why they should buy it of him: 'The said Thomas Garway did purchase a quantity thereof, and first publicly sold the said tea in leaf and drink, made according to the directions of the

most knowing merchants and travellers into those Eastern countries ; and upon knowledge and experience of the said Garway's continued care and industry in obtaining the best tea, and making drink thereof, very many noblemen, physicians, merchants, and gentlemen of quality, have ever since sent to him for the said leaf, and daily resort to his house in Exchange Alley, to drink the drink thereof. And to the end that all persons of eminency and quality, gentlemen and others, who have occasion for tea in leaf, may be supplied, these are to give notice that the said Thomas Garway hath tea to sell from sixteen shillings to fifty shillings the pound.'

Rugge's Diurnal tells us that tea was sold in almost every street in London, in 1659, and it stood so high in estimation, that, two years later, the East India Company thought a couple of pounds a gift worthy the acceptance of the king. Its use spread rapidly among the wealthier classes, although the dramatists railed against it as only fit for women, and men who lived like women. In 1678, we find Mr Henry Saville writing to his uncle, Secretary Coventry, in disparagement of some of his friends who have fallen into 'the base unworthy Indian practice' of calling for tea after dinner in place of the pipe and bottle, seeming to hold with *Poor Robin* that

> 'Arabian tea
> Is dishwater to a dish of whey.'

The enemies of the new fashion attacked it as an innocent pretext for bringing together the wicked of both sexes, and ladies were accused of slipping out of a morning :

> 'To Mrs Thoddy's
> To cheapen tea, without a bodice.'

Dean Swift thus sketches a tea-table scene :

> 'Let me now survey
> Our madam o'er her evening tea,
> Surrounded with the noisy clans
> Of prudes, coquettes, and harridans.
> Now voices over voices rise,
> While each to be the loudest vies.
> They contradict, affirm, dispute ;
> No single tongue one moment mute ;
> All mad to speak and none to hearken,
> They set the very lapdog barking,
> Their chattering makes a louder din,
> Than fishwives o'er a cup of gin ;
> Far less the rabble roar and rail,
> When drunk with sour election ale !'
> *Journal of a Modern Lady.*

Scandal, if the poets are to be believed, was always an indispensable accompaniment of the cheering cup :

> 'Still, as their ebbing malice it supplies,
> Some victim falls, some reputation dies.'

And Young exclaims :

> 'Tea ! how I tremble at thy fatal stream !
> As Lethe dreadful to the love of fame.
> What devastations on thy banks are seen,
> What shades of mighty names that once have been !
> A hecatomb of characters supplies
> Thy painted altars' daily sacrifice !'

Other writers denounced tea on economical grounds. *The Female Spectator* (1745) declares the tea-table 'costs more to support than would maintain two children at nurse ; it is the utter destruction of all economy, the bane of good-housewifery, and the source of idleness.' That it was still a luxury rather than a necessity, is plain from the description of the household management of a model country rector, as given in *The World* (1753). 'His only article of luxury is tea, but the doctor says he would forbid that, if his wife could forget her London education. However, they seldom offer it but to the best company, and less than a pound will last them a twelvemonth.' What would the frugal man have thought of the country lady mentioned by Southey, who, on receiving a pound of tea as a present from a town-friend, boiled the whole of it in a kettle, and served up the leaves with salt and butter, to her expectant neighbours, who had been invited specially to give their opinions on the novelty ! They unanimously voted it detestable, and were astonished that even fashion could make such a dish palatable.

Count Belchigen, physician to Maria Theresa, ascribed the increase of new diseases to the weakness and debility induced by daily drinking tea ; but as a set-off, allowed it to be a sovereign remedy for excessive fatigue, pleurisy, vapours, jaundice, weak lungs, leprosy, scurvy, consumption, and yellow fever. Jonas Hanway was a violent foe to tea. In an essay on its use, he ascribes the majority of feminine disorders to an indulgence in the herb, and more than hints that the same vice has lessened the vigour of Englishmen, and deprived Englishwomen of beauty. He is horrified at the fact of no less than *six* ships and some five hundred seamen being employed in the trade between England and China ! Johnson reviewed the essay in the *Literary Magazine*, prefacing his criticism with the candid avowal that the author 'is to expect little justice from a hardened and shameless tea-drinker, who has for twenty years diluted his meals with only the infusion of this fascinating plant ; whose kettle has scarcely time to cool ; who with tea amuses the evening, with tea solaces the midnight, and with tea welcomes the morning.' Spite of this threatening exordium, the doctor's defence of his beloved drink is but weak and lukewarm. He admits that tea is not fitted for the lower classes, as it only gratifies the taste without nourishing the body, and styles it 'a barren superfluity,' proper only to amuse the idle, relax the studious, and dilute the meals of those who cannot use exercise, and will not practise abstinence. For such an inveterate tea-drinker, the following is but faint praise : 'Tea, among the greater part of those who use it most, is drunk in no great quantity. As it neither exhilarates the heart, nor stimulates the palate, it is commonly an entertainment merely nominal, a pretence for assembling to prattle, for interrupting business or diversifying idleness.' He gives the annual importation then (1757) as about four million pounds, 'a quantity,' he allows, 'sufficient to alarm us.' What would the doctor say now, when, as evening closes in, almost every English household gathers round the table, where

> 'The cups
> That cheer but not inebriate wait on each,'

and the quantity of the article imported is nearly fortyfold what he regards in so serious a light ?

DECEMBER 7.

St Ambrose, bishop and confessor, doctor of the church, 397. St Fara, virgin and abbess, 655.

Born.—Giovanni Lorenzo Bernini, architect and sculptor, 1598, *Naples;* Rev. Richard Valpy, D.D., compiler of classic grammars, &c., 1754, *Jersey.*

Died.—Cicero, Roman orator, assassinated 43 B.C.; Algernon Sidney, republican and patriot, beheaded on *Tower Hill*, 1683; Marshal Ney, general of Napoleon, shot at *Paris*, 1815; Dr John Aikin, popular author, 1822, *Stoke-Newington;* Abbé Macpherson, rector of the Scotch College, Rome, 1846.

SINGULAR DISPENSATION GRANTED BY LUTHER AND OTHER PROTESTANT DIVINES.

Philip, landgrave of Hesse, one of the stanchest protectors of Luther, had married Catherine of Saxony; but this princess, though beautiful and accomplished, had never succeeded in finding favour in his eyes. After having, for several years, paid his addresses to various beauties, the inconstant husband at last formed a more abiding intimacy with Marguerite de Staal. A severe illness, from which he only recovered with great difficulty, had the effect of inspiring him with some scruples relative to his course of life—he resolved to have his conscience set at rest.

To attain this object, the landgrave addressed a memorial to Luther, in which, fortified by the authority of the Old Testament, he demanded from the Reformer permission to have *two wives* at the same time—one who, in public, should receive the honours due to a princess and his consort, and another who, without scandal, might be regarded as his legal mistress. Although, in this remarkable document, Philip supplicates the doctors to grant him this favour, he at the same time threatens to appeal to the emperor, or even the pope, should he fail in having his request complied with by the Protestant divines. Moreover, he makes most liberal promises. 'Let them grant me,' he says, 'in the name of God, what I ask, so that I may be able to live and die more cheerfully for the cause of the gospel, and be more ready to undertake its defence. I engage to perform, on my part, all that may be required of me in reason, whether as regards *the property of convents*, or matters of a similar description.'

The conduct of this singular negotiation was intrusted to the celebrated reformer, Bucer. The Protestant clergy were embarrassed. On the one part, they feared to bring their profession of belief into discredit by so extended a compliance; while, on the other hand, they were desirous to retain a patron of such power and influence as Philip. At last Melanchthon, as principal scribe, drew up a resolution, which was approved by the other divines. An extract from this curious document is subjoined.

It is drawn up with considerable care and address. The theologians begin by laying down, according to the gospel, the position that no man ought to have more than one wife; the landgrave is requested to take notice what confusion would result, if this fundamental law of society were overthrown; and it also represents to him that the princess, his consort, is a pattern of virtue; that she has presented him with several children, &c.

'But, in conclusion,' continues the reverend conclave through their spokesman, 'if your highness is thoroughly determined to marry a second wife, we are of opinion that it ought to be done secretly; that is to say, there should be none present beyond the contracting parties, and a few trustworthy persons, who should be bound to secrecy. There is no opposition or real scandal to be dreaded here, for it is no unusual thing for princes to maintain mistresses, *nihil enim est inusitati principes concubinas alere;* and even though the people in general were scandalised, the most enlightened of the community would doubt the truth of the story, whilst prudent persons would always prefer this moderate course of procedure to adultery and other brutal actions. We ought not to care greatly for what the world will say, provided our own conscience is clear: *nec curandi aliorum sermones, si rectè cum conscientiâ agatur.* It is thus that we approve of the proceeding in question, though only in the circumstances which we have just indicated, for the gospel has neither recalled nor forbidden what the law of Moses permitted with regard to marriage.'

This warrant of approval is subscribed by eight doctors of divinity, including Luther, Melanchthon, and Bucer, and is dated the 7th of December 1539.

On the 4th of March of the ensuing year, Philip espoused Marguerite de Staal in the castle of Rothemburg. The marriage-contract is a no less curious document than the resolution of the Protestant divines above quoted.

'Considering that the eye of God' (so says this precious manifesto) 'penetrates everything, and that little of the workings of Omniscience comes to the knowledge of men, his highness declares his intention of marrying Marguerite de Staal, notwithstanding that the princess, his consort, is still alive; and in order to prevent this proceeding being imputed to inconstancy or whim, to avoid scandal, and preserve the honour of the said Margaret and the reputation of her family, he here swears before God, and on his soul and conscience, that he neither takes her to wife through levity or caprice, nor from any contempt of law or superiors, but because he is compelled to this step by certain necessities so important and inevitable of health and conscience, that it is impossible for him to preserve his existence and live according to the law of God, unless he espouse a second wife in addition to the consort whom he already possesses. That his highness has explained the matter to many learned divines, men of Christian piety and prudence, and has taken the advice of these reverend persons, who, after investigating the circumstances laid before them, have recommended his highness to place his soul and conscience at rest by a double marriage. That the same cause and the same necessity have induced the most serene Princess Christina, Duchess of Saxony, first wife of his highness, through the exalted prudence and sincere devotion which render her so estimable, to consent with readiness *that a companion should be given to her*, so that the soul and health of her beloved spouse may run no further risk, and that the glory of God may be promoted, as the writing under the hand of the said princess sufficiently testifies.'

It will be recollected that the very same year

(1540) in which the above marriage of Philip of Hesse took place, Henry VIII. of England obtained, or rather commanded, the sanction of his clergy and parliament to his divorce from Anne of Cleves, merely because she did not happen to be to his liking. A still more liberal dispensation from the ordinary rules of morality was, in the last century, accorded by the Calvinistic clergy of Prussia to the reigning king, Frederick William II., nephew and successor of Frederick the Great, to have *three* wives at the same time—Elizabeth of Brunswick, the Princess of Hesse, and the Countess of Euhof. The authorisation granted by the divines was, like that of Luther and his brethren, founded on the principle, that it was better to contract an illegal marriage than to pursue habitually a course of immorality and error.*

CUT-PURSES AND PICKPOCKETS.

In the olden time, ere pockets were invented, the *gipciere*, or purse, containing money and other valuables, being worn at the girdle, became a much-coveted prize for the dishonest, who managed to obtain possession of it by deftly cutting the strings by which it was suspended. Autolycus said, and we can well believe him, that 'an open ear, a quick eye, and a nimble hand, is necessary for a cut-purse.' Subsequently, however, when pockets came into fashion, the cut-purses—moving with the times, as the saying is—became pickpockets; still, down to the period of the Restoration, both branches of the light-fingered art flourished contemporaneously. And, though the days of the girdle-purse are long since past, its remembrance is not even yet lost. In the language of vulgar contumely, the opprobrious epithet of 'cut-purse rogue' is still applied to a person whose ill-favoured countenance is not belied by the honesty of his character. The thieves of London have long enjoyed the reputation of being exceedingly dexterous in the art of stealing from the person. Paul Hentzner, who visited England in 1598, in the capacity of tutor to a young German nobleman, tells us that, at Bartholomew Fair, one of his company, a Dr Tobias Solander, 'had his pocket picked of his purse, containing nine crowns *du soleil*, which, without doubt, was so cleverly taken from him by an Englishman, who always kept very close to him, that the doctor did not in the least perceive it.'

Such dexterity is not, altogether, to be wondered at in the street-thieves of the period, seeing that they were regularly trained to the exercise of their profession. Stow informs us that, in 1585, a person named Wotton, 'kept an academy for the education and perfection of pickpockets and cut-purses.' This man was of gentle birth, and had been a merchant of good credit, but becoming reduced in circumstances, he set up an ale-house at Smart's Quay, near Billingsgate. Here 'he commenced a new trade in life,' by opening a school to teach young boys to cut purses. 'Two devices,' continues Stow, 'were hung up—one was a pocket, and the other was a purse. The pocket had in it certain counters, and was hung about with hawk's bells, and over the top did hang a little sacring bell. The purse had silver in it, and he that could take out a counter, without noise of any of the bells, was adjudged a judicial *nypper*, according to their terms of art; a *foyster* was a pickpocket, a *nypper* was a pick-purse or cut-purse.

Mr John Selman, a celebrated 'nypper and foyster,' whose portrait is here presented to the

SELMAN, THE CUT-PURSE.

reader, with the purse, the fatal fruit of his dishonesty, still in his hand, was in all probability trained at Wotton's academy, on Smart's Quay. His history, so far as it is known, is short and simple, and in some places reads very like a police report of the present day. On Christmas-day, 1611, when King James, Queen Anne, the Duke of York, and several of the nobility, were receiving the sacrament in the Chapel Royal of Whitehall, a Mr Dubbleday observed a stranger in the sacred edifice, whose honesty he had some reason to suspect. Seeing this person swiftly but quietly leaving the chapel, after hovering for a short time round a Mr Barrie, Dubbleday went up to Barrie, and in the stereotyped phrase of a modern policeman, asked him if he had lost anything. Barrie at first said, 'No;' but on feeling his pockets, found that his purse, containing forty shillings, was gone. The two immediately followed the stranger, and arresting him, found in one of his pockets the stolen purse, in the other, a small knife used for cutting. After service was over, Sir Richard

* The above article is, for the most part, translated from *Ephémérides Politiques, Littéraires et Religieuses*, a French work already quoted. Strange as the facts appear, they are perfectly authentic.

Banister, clerk of the Green Cloth, as the crime had been committed within the precincts of the court, examined the prisoner. The man, having been taken *flagrante delicto*, could not deny his crime. He gave his name John Selman, resident in Shoe Lane, of no trade or profession, and acknowledged that he had gone to the royal chapel with an evil intention. He wore 'a fair black cloak, lined and faced with velvet, the rest of his apparel being suitable thereto.' In short, Selman was a prototype of the modern swell-mob's-man; and the short cloak he is represented wearing in the engraving, greatly resembles the cape which detectives tell us is used as a 'cover' by pickpockets at the present time. Six days afterwards, Selman was tried by royal commission, and found guilty. Being asked why sentence of death should not be passed upon him, he fell on his knees, submitted himself to the king's mercy, and begged that his body might have Christian burial. Then Sir Francis Bacon delivered sentence, not without taking the opportunity of pandering to the king's love of gross flattery, by saying: 'The first and greatest sin that ever was committed was done in heaven; the second was done in paradise, being heaven upon earth; and truly I cannot choose but place this in the third rank, in regard it was done in the house of God, and also God's lieutenant here on earth, being in God's house there present ready to receive the holy sacrament, all which being considered, the time, the place, and person there present, I do advise thee, that as thou hast submitted thyself to the king's mercy, so thou wilt crave pardon at God's hands.' Seven days more, and the sentence was carried into execution between Charing Cross and the Court Gate. Selman's last speech we may pass over; but it appears that the crowd at the execution behaved much as such crowds now do. 'See,' exclaims the chronicler to whom we are indebted for Selman's history, 'see the graceless and unrepenting minds of such livers; for one of his quality, a pickpocket, even at his execution, grew master of a true man's purse, who being presently taken, was imprisoned, and is like, the next sessions, to wander the long voyage after his grand captain, Monsieur John Selman.'

Ben Jonson humorously introduces a pickpocket in his play of *Bartholomew Fair*. A simple country squire, who fancies himself a match for all kinds of roguery, asks a ballad-singer for a song. The vocalist proposing to sing, '*A caveat against Cut-purses*,' the squire exhibits, boastingly, his well-lined purse, defying any thief to take it from him, and the singer commences thus:

'My masters, and friends, and good people, draw near,
And look to your purses, for that I do say;
And though little money, in them you do bear,
It costs more to get, than to lose in a day,
You oft have been told,
Both the young and the old,
And bidden beware of the cut-purse so bold.
Then if you take heed not, free me from the curse,
Who both give you warning, you, and the cut-purse.
Youth, youth, you had better been starved by thy nurse,
Than live to be hanged for cutting a purse!'

In another verse allusion is evidently made to Selman.

'At plays, and at sermons, and at the sessions,
'Tis daily their practice such booty to make;
Yea, under the gallows, at executions,
They stick not the stare-abouts' purses to take.
Nay, one without grace,
At a better place,
At court, and in Christmas, before the king's face,
Alack! then, for pity, must I bear the curse,
That only belongs to the cunning cut-purse.
Youth, youth, thou hadst better been starved by thy nurse,
Than live to be hanged for stealing a purse!'

While the squire stands listening to the song, his purse in his pocket, and one hand holding it firmly, a thief tickles his ear with a straw. As the hand is lifted to brush away the supposed insect, the purse is stolen and passed to the ballad-singer, who is an accomplice. The surprise and discomfiture of the silly squire may be imagined, but only rare Ben himself can describe it.

The most noted pickpocket in what Dr Johnson termed the *Biographia Flagitiosa*, was a woman named Mary Frith, but better known as Mall Cut-purse. This 'Sybilla Tyburnia' was born in 1585, and soon became an accomplished cut-purse. There is little new under the sun. She used to *work* in company with two other thieves, just as pickpockets do now. One called the '*bulk*,' created an obstruction; Mary, the '*file*,' cut the purse, and handed it to a third named the '*rub*,' who carried it off. When Mary was quite young, she, for a bet of £20, rode Banks's famous horse Morocco,* from Charing Cross to Shoreditch, dressed in doublet, breeches, boots, and spurs, carrying a trumpet in her hand and a banner hanging over her back. For wearing men's clothes on this occasion, Mall was tried by the ecclesiastical court, and forced to do penance at the door of St Paul's Cathedral. Having thus atoned for her offence, and finding a great convenience in male attire, she wore it ever after. She soon became an adroit fencer and bold rider, and in the character of a highwayman, robbed the Parliamentary general, Fairfax, of 200 gold jacobuses on Hounslow Heath. This, however, she considered merely robbing a Philistine who had stolen the crown from her king; for Mall was the stanchest of Cavaliers, and this trait in her character throws an air of romance over her strange history. She had established herself opposite the Conduit, in Fleet Street, as a broker or negotiator between thieves and the public, when Charles I. passed her door, on his return from the Border in 1639. Rushing out, she caught the king's hand, and kissed it; the same day she caused the Conduit to run with wine at her own expense. When Wentworth's trial was in progress, she sent a bull to the Bear Garden to be baited. As the sport was about to commence, she said: 'Gentlemen, that noble animal, the bull, is named Strafford; the wretched curs going to bait him are named Pym and St John; and if any one feels offended at what I say, here am I ready to maintain it by sword or cudgel.'

Mall's deeds were not all done in defiance of the law. She was instrumental in bringing to justice the notorious 'five women barbers,' who used a young girl in a very cruel and indescribable manner. With less good taste and feeling, Killigrew composed a song on this affair, which he sang to

* See *Book of Days*, vol. i. p. 225.

Charles II., till tears of laughter ran down the too merry monarch's cheeks. Antiquaries would give almost anything for a perfect copy of this song, which thus commences:

'Did you ever hear the like?
Did you ever hear the fame?
Of the five women barbers,
Who lived in Drury Lane.'

One of these five women barbers was the mother of Nan Clarges, who, marrying Monk, when his fortunes were at a low ebb, lived to hear herself styled Duchess of Albemarle.

Mall is said to have been the first Englishwoman who smoked tobacco. A portrait, representing her in the act of indulging in the luxury, adorns the frontispiece of Middleton's play of the *Roaring Girl*, in which she figures as the principal character. Another portrait represents her with a

MALL CUT-PURSE.

dog, an ape, and a parrot; for, like her friend Banks, she delighted in training animals, and made money by exhibiting their tricks. It is said that she was at one time worth £3000, but her generosity to distressed Cavaliers left her little more than £100 at her death. This sum she left to her relative, John Frith, a shipmaster at Rotherhithe; advising him to spend it in good wine, like a man, rather than venture it at sea, at the risk of being drowned in vile salt-water, like a dog. She died of a dropsy when upwards of seventy years of age, after having composed the following epitaph on herself, in the form of an acrostic:

'M erry I lived, and many pranks I played,
A nd, without sorrow, now in grave am laid;
R est, and the sleep of death, doth now surcease
Y outh's active sins, and their old-aged increase.

F amous I was for all the thieving art,
R enowned for what old women ride in cart,
I n pocket and in placket, I had part,
T his life I lived in a man's disguise,
H e best laments me that with laughter cries.'

An instance of a female acquiring a considerable sum of money by picking pockets, occurred in the last century. In 1783, a Miss West, a noted pickpocket, died; leaving, according to a magazine obituary, £3000 to her two children—'one of whom was born in Clerkenwell Bridewell, while the mother was imprisoned for picking pockets in Exeter Change, when Lord Baltimore' (another infamous character) 'was lying in state.'

DECEMBER 8.

The Conception of the Blessed Virgin Mary. St Romaric, abbot, 653.

Conception of the Virgin Mary.

This is one of the festivals of the Roman Catholic Church, in connection with which a long controversy prevailed. It is well known that the doctrine of the *immaculate* conception of the Virgin, or her conception without the taint of original sin, was, till recently, a theological dogma on which the Church of Rome had pronounced no positive decision. Though accepted by the majority of doctors, and strenuously maintained by many theological writers, it was, nevertheless, denied by some, more especially by the Dominicans, and was pronounced by several popes to be an article of faith which was neither to be absolutely enforced nor condemned—a point, in short, on which the members of the church were free to use their private judgment. But the question, which for centuries had been allowed to remain an open subject for discussion, was determined in the affirmative by a deliverance of Pope Pius IX. on 8th December 1854. The doctrine of the Immaculate Conception of the Virgin forms accordingly, now, an essential article in the Roman Catholic system of belief.

Born.—Mary, Queen of Scots, 1542, *Linlithgow;* Queen Christina of Sweden, 1626; Charles Wentworth Dilke, editor of the *Athenæum*, &c., 1789; Johann Georg von Zimmermann, celebrated author of treatise on *Solitude*, 1728, *Brug, Switzerland.*

THOMAS DE QUINCEY.

In Mrs Gordon's *Memoir of Christopher North*, published towards the close of 1862, we meet with several curious illustrations of De Quincey's singular character.

De Quincey's confirmed habit of taking opium, which, at one time, held complete mastery over his powerful intellect, caused him to be distinguished

by the undesirable title of 'the Opium Eater.' He may be said to have given himself the appellation in the first instance, by his book, entitled *The Confessions of an Opium Eater*, in which he professes to describe his experience as such, vividly portraying the wretchedness and the ecstasies of those extraordinary conditions of mind and body, with which, from his constant use of the drug, he became familiar. In 1829, De Quincey made a protracted stay at Professor Wilson's house. In the later years of his life, he almost entirely shook off an indulgence which pain, in the first instance, had led him to acquire, and which use had made habitual, and, to some extent, necessary; but at the time of this visit, he was still a slave. Mrs Gordon thus describes his daily routine, on the occasion of his visit to her father, above referred to:

'An ounce of laudanum per diem prostrated animal life in the early part of the day. It was no unfrequent sight to find him in his room lying upon the rug in front of the fire, his head resting upon a book, with his arms crossed over his breast, plunged in profound slumber. For several hours he would lie in this state, until the effects of the torpor had passed away. The time when he was most brilliant, was generally towards the early morning-hours; and then, more than once, in order to shew him off, my father arranged his supper-parties, so that, sitting till three or four in the morning, he brought Mr De Quincey to that point at which, in charm and power of conversation, he was so truly wonderful.'

A less painful and more amusing anecdote is told of that wordy, wandering manner, which renders his impassioned and beautiful prose sometimes tedious in the extreme. Being obliged, from delicacy of constitution, to be careful about his food, as Mrs Gordon tells us, he used to dine in his own room, and at his own hour. His invariable diet was 'coffee, boiled rice and milk, and a piece of mutton from the loin.' 'The cook, who had an audience with him daily, received her instructions in silent awe, quite overpowered by his manner; for, had he been addressing a duchess, he could scarcely have spoken with more deference. He would couch his request in such terms as these: "Owing to dyspepsia afflicting my system, and the possibilities of any additional disarrangement of the stomach taking place, consequences incalculably distressing would arise; so much so, indeed, as to increase nervous irritation, and prevent me from attending to matters of overwhelming importance, if you do not remember to cut the mutton in a diagonal rather than in a longitudinal form." The cook—a Scotchwoman—had great reverence for Mr De Quincey as a man of genius; but after one of these interviews, her patience was pretty well exhausted, and she would say: "Weel, I never heard the like o' that in a' my days; the body has an awfu' sicht o' words. If it had been my ain maister that was wanting his dinner, he would ha' ordered a hale tablefu' wi' little mair than a waff o' his haun, and here 's a' this claver aboot a bit mutton nae bigger than a prin. Mr De Quinshey would mak' a gran' preacher, though I 'm thinking a hantle o' the folk wouldna ken what he was driving at."'

The cook's view of the opium-eater's style was anything but superficial. During the last seventeen years of his life, De Quincey resided at the village of Lasswade, near Edinburgh. He died in the Scottish metropolis on 8th December 1859.

SPOTS IN THE SUN.

December 8, 1590, at sunset, James Welsh of the ship *Richard of Arundel*, sailing off the coast of Guinea, observed a great black spot on the sun, and found the same appearance visible next morning.—*Hakluyt's Voyages*, ii. 618. Similar phenomena had been observed on several previous occasions. They did not, however, become a subject for scientific remark till about 1611.

'When viewed with a telescope and coloured glasses, the sun is observed to have large black spots upon it, surrounded with a band or border less completely dark, called a *penumbra*. This penumbra is partially luminous, and terminated by distinct edges, presenting no apparent gradations of luminosity: it is mostly of a shape nearly corresponding to that of the spot it surrounds, but occasionally occupying a considerable space, and including several spots. Though the sun's radiant disc is sometimes clear, it very frequently, indeed generally, exhibits these *maculæ;* they are of various magnitudes—some of them I have myself found, by careful measurement, to be several times larger than the earth. These solar spots are usually confined within 35° of his equator, and in a zone parallel; but I have often seen them much nearer to the polar regions. . . . . The extreme difficulty of watching such changes with the telescope, in the sun's brilliant glare, is a very serious obstacle to minute scrutiny. Nor is it wholly without danger; the illustrious Sir William Herschel lost an eye in this service; and I myself had a narrow escape from a similar disaster, by neglecting to reduce the aperture of the instrument.'

As to the spots—'From their generally preserving the same position *inter se*, and continuing visible during equal times, it is held that they are component parts of the sun's solid body, seen through vast accidental openings in the luminous substance which encompasses that immense orb. Hence the variability of the maculæ, which in some cases are seen to contract, dilate, and disappear, at short intervals, in a manner only compatible with the atmospheric or gaseous state of matter.' The sun is thus to be 'regarded as a black solid nucleus, surrounded by two atmospheres, the one obscure, the other luminous. In the instance of a spot, the penumbra is the extremity of the inner and dark atmosphere, a fissure exposing the bare nucleus, but not so wide as that in the outer luminous medium above.'—*Smythe's Cycle of Celestial Objects*, i. 89.

The ingenious Mr James Nasmyth, in 1860, made an interesting addition to our knowledge of the surface of the sun. He discovered that the luminous envelope is composed of masses of bright matter, of the shape of willow-leaves. They become particularly distinct in this form, in the narrow straits of luminous matter which are often seen crossing through the dark maculæ.

DECEMBER 9.

The Seven Martyrs at Samosata, 297. St Leocadia, virgin and martyr, 304. St Wulfhilde, virgin and abbess, 990.

Born.—Gustavus Adolphus the Great, of Sweden, 1594; John Milton, poet, 1608, *London;* William Whiston, divine, translator of Josephus, 1667, *Norton, Leicestershire;* Philip V. of Spain, 1683, *Versailles.*

MILTON'S BIRTHPLACE, AND ITS VICINITY.

The house in which John Milton was born, on the 9th December 1608, no longer exists; but its site can be determined within a few yards. His father was a scrivener, who carried on business in Bread Street, Cheapside; and here was born the child who was destined to become one of the world's greatest poets. 'In those days,' says Professor Masson in his *Life of Milton*, 'houses in cities were not numbered, as now; and persons in business, to whom it was of consequence to have a distinct address, effected the purpose by exhibiting over the door some sign or emblem. This fashion, now left chiefly to publicans, was once common to all trades and professions. Booksellers and printers, as well as grocers and mercers, carried on their business at the "Cross Keys," the "Dial," the "Three Pigeons," the "Ship and Black Swan," and the like, in such and such streets; and every street in the populous part of such a city as London presented a succession of these signs, fixed or swung over the doors. The scrivener Milton had a sign as well as his neighbours. It was an eagle with outstretched wings; and hence his house was known as the "Spread Eagle," in Bread Street.' Now, it appears that there is a little inlet or court on the east side of Bread Street, three or four doors from Cheapside, which was once called 'Spread Eagle Court,' but which has now no name distinct from that of the street itself; and Professor Masson thinks, not without good grounds, that this spot denotes pretty nearly the site of John Milton's birthplace. Bread Street is almost exactly in the centre of that large area of buildings which was consumed by the great fire of 1666; and the house in question was one of those destroyed. Before that year (although *Paradise Lost* was not yet published), Milton's name had become famous; and Anthony à Wood states that strangers liked to have pointed out to them the house where he first saw the light. The church of Allhallows, close by, still contains the register of Milton's baptism.

It is interesting to trace the changes which that part of the city has undergone since the old days. Courtiers, poets, wits, and gallants were once quite at home in a place where almost every house is now a wholesale warehouse for textile goods. Milton himself, as we know from the details of his life, after his boyish-days in Bread Street, lived in Barbican, in Jewin Street, in Bartholomew Close, and in Little Britain, besides various places at the west end of the town. Bread Street was occupied as a bread-market in the time of Edward I.; and other streets turning out of Cheapside or situated near it, such as Milk Street, Wood Street, and Hosier Lane, were in like manner markets for particular kinds of commodities. William Stafford, Earl of Wiltshire, had a mansion in Bread Street, towards the close of the fifteenth century. Stow says: 'On the west side of Bread Street, amongst divers fair and large houses for merchants, and fair inns for passengers, had ye one prison-house pertaining to the sheriffs of London, called the Compter, in Bread Street; but in the year 1555, the prisoners were removed from thence to one other new Compter in Wood Street, provided by the city's purchase, and built for that purpose.' The 'fair inns for travellers' were the 'Star,' the 'Three Cups,' and the 'George.' But more famous than these was the 'Mermaid,' thought by some writers to have been in Friday Street, but more generally considered to have been in Bread Street. It was a tavern where Shakspeare, Ben Jonson, Beaumont, Fletcher, Donne, and other choice spirits assembled, in the time of Queen Elizabeth.

'What things have we seen
Done at the Mermaid!'

said one of them; and there can be little doubt that wit flashed and sparkled there merrily; for witty courtiers, as well as witty authors, swelled the number. All are gone now—the bread-market, the Compter, the earl's mansion, the inns for travellers, the renowned 'Mermaid,' and the poet's birthplace; no wealthy merchants, even, 'live' in Bread Street, for their private residences are far away from city bustle. Bread Street is now almost exclusively occupied by the warehouses of wholesale dealers in linens, cottons, woollens, silks, and all the multifarious articles, composed of these, belonging to dress. Not only are nearly all the sixty or seventy houses so occupied, but in some cases as many as seven wholesale firms will rent the rooms of one house.

And so it is in nearly all the streets that surround Bread Street. Where almost every house is now a warehouse, there were once places or people that one likes to read and hear about. Take Cheapside ('Chepe,' or 'West Cheaping') itself. This has always been the greatest thoroughfare in the city of London; and nearly all the city pageants of old days passed through it. It contained the shops of the wealthy mercers and drapers from very early times. Lydgate, in his *London Lykpenny*, written in the fifteenth century, makes his hero say:

'Then to the Chepe I began me drawne,
Where moch people I saw for to stand.
One ofred me velvet, sylke, and lawne;
An other he taketh me by the hande,
"Here is Parys thread, the finest in the land!"'

This is curious, as tending to shew that the mercers or their apprentices were wont to solicit custom at their shop-doors, as butchers still do. There was once the 'Conduit' in Cheapside, near which Wat Tyler beheaded some of his prisoners in 1381, and Jack Cade beheaded Lord Saye in 1450. The cross in Cheapside, one of those erected by Edward in memory of his queen, Eleanor, was near the

Poultry. Where Bow Church now stands, Edward I. and his queen sat in a wooden gallery to see one of the city pageants pass through Cheapside. An accident on that occasion led to the construction of a stone gallery; and when all this part of the city was laid in ashes in 1666, Sir Christopher Wren included a pageant-gallery in the front of his beautiful steeple of Bow Church, just over the arched entrance. That gallery, in which Charles II. and Queen Anne were royal visitors, is still existing, though no longer used in a similar way. Concerning the street itself, Howes, writing about 1631, said: 'At this time and for divers years past, the Goldsmith's Row' (a jutting row of wooden tenements), 'in Cheapside, was very much abated of her wonted store of goldsmiths, which was the beauty of that famous street; for the young goldsmiths, for cheapnesse of dwelling, take their houses in Fleet Street, Holborne, and the Strand, and in other streets and suburbs; and goldsmiths' shops were turned to milliners, linen-drapers, and the like.' Two centuries or more ago, therefore, Cheapside, which had already been a mart for mercery and drapery, became still more extensively associated with those trades. It was about that time that Charles I. dined on one occasion with Mr Bradborne, one of the wealthy Cheapside mercers. If we turn into any one of the streets branching from this great artery, we should find strange contrasts to the old times now exhibited. In Friday Street, now occupied much in the same way as Bread Street, there was at one time a fish-market on Fridays; the 'Nag's Head,' at the corner of Cheapside, was concerned in some of the notable events of Elizabeth's reign; and a club held the meeting which led eventually to the establishment of the Bank of England. In Old Change—once the 'Old Exchange,' for the receipt of bullion to be coined; and where dealers in 'ventilating corsets' and 'elastic crinolines' now share most of the houses with mercers and drapers—Lord Herbert, of Cherbury, had a fine house and garden in the time of James I.; and early in the last century, there was a colony of Armenian merchants there. In Bow Lane, Tom Coryat, the eccentric traveller, died in 1617. In Soper's Lane, changed, after the great fire, to Queen Street, the 'pepperers' used to reside in some force; they were the wholesale-dealers in drugs and spices. In the Old Jewry, Sir Robert Clayton had a fine house in the time of Charles II.; and in this street Professor Porson died. Bucklersbury, where Sir Thomas More lived, and where his daughter Margaret was born, was a famous place for druggists, apothecaries, herbalists, and dealers in 'simples.'

BRAMAH LOCK-PICKING.

Joseph Bramah, the mechanical engineer, is better remembered, perhaps, in connection with lock-making than with any other department of his labours, although others were of a more important character. Born in 1749, he was intended, like his brothers, to follow the avocation of their father, who was a farmer in Yorkshire; but a preference for the use of mechanical tools led him to the trade of a carpenter and cabinet-maker. He became an inventor, and then a manufacturer, of valves and other small articles in metal-work; and in 1784, he devised the 'impregnable' lock, which has ever since obtained so much celebrity. Then ensued a long series of inventions in taps, tubes, pumps, fire-engines, beer-engines for taverns, steam-engines, boilers, fire-plugs, and the like. His hydraulic-press is one of the most valuable contributions ever made by inventive skill to manufacturing and engineering purposes. His planing-machine for wood and metal surfaces has proved little less valuable. He made a machine for cutting several pen-nibs out of one quill, and a machine for numbering bank-notes, and devised a new mode of rendering timber proof against dry-rot. In the versatile nature of his mechanical genius, he bears a strong resemblance to the elder Brunel. His useful life, passed in an almost incessant series of inventions, was brought to a close, characteristically enough, on December 9, 1814, by a cold caught while using his own hydraulic-press for uprooting trees in Holt Forest.

The reason why Bramah's locks have been more publicly known than any other of his inventions is, because there was a mystery or puzzle connected with them. How to lock a door which can be opened only by means of a proper key, is a problem nearly four thousand years old; for Denon, in his great work on Egypt, has given figures of a lock found depicted among the bas-reliefs which decorate the great temple at Karnak: it is precisely similar in principle to the wooden locks now commonly used in Egypt and Turkey. The principle is simple, but exceedingly ingenious. Shortly before Mr Bramah's time, English inventors sought to improve upon the old Egyptian locks; but he struck into a new path, and devised a lock of singularly ingenious and complex character. To open it without its proper key, would be (to use his own language) 'as difficult as it would be to determine what kind of impression had been made in any fluid, when the cause of such impression was wholly unknown; or to determine the separate magnitudes of any given number of unequal substances, without being permitted to see them; or to counterfeit the tally of a banker's cheque, without having either part in possession.' One particular lock made by him, having thirteen small pieces of mechanism called 'sliders,' was intended to defy lock-pickers to this extent: that there were the odds of 6,227,019,500 to 1, against any person, unprovided with the proper key, finding the means of opening the lock without injuring it! Mr Chubb, and many other persons both in England and America, invented locks which attained, by different means, the same kind of security sought by Mr Bramah; and it became a custom with the makers to challenge each other—each daring the others to pick *his* lock. The Great Exhibition of 1851 brought this subject into public notice in a singular way. An American lockmaker, Mr Hobbs, declared openly at that time that *all* the English locks, including Bramah's, might be picked; and, in the presence of eleven witnesses, he picked one of Chubb's safety-locks in twenty-five minutes, without having seen or used the key, and without injuring the lock. After much controversy concerning the fairness or unfairness of the process, a bolder attempt was made. There had, for many years, been exhibited in the shop-window of Messrs Bramah (representatives of the original Joseph Bramah), a padlock of great size, beauty, and complexity; to

which an announcement was affixed, offering a reward of two hundred guineas to any person who should succeed in picking that lock. Mr Hobbs accepted the challenge; the lock was removed to an apartment specially selected; and a committee was appointed, chosen in equal number by Messrs Bramah and Mr Hobbs, to act as arbitrators. The lock was screwed to, and between two boards, and so fixed and sealed that no access could be obtained to any part of it except through the keyhole. Mr Hobbs, without once seeing the key, was to open the lock within thirty days, by means of groping with small instruments through the keyhole, and in such way as to avoid injury to the lock. By one curious clause in the written agreement, Messrs Bramah were to be allowed to use the key in the lock at any time or times when Mr Hobbs was not engaged upon it; to insure that he had not, even temporarily, either added to or taken from the mechanism in the interior, or disarranged it in any way. This right, however, was afterwards relinquished; the key was kept by the committee during the whole of the period, under seal; and the keyhole was also sealed up whenever Mr Hobbs was not engaged upon it. This agreement, elaborate enough for a great commercial enterprise, instead of merely the picking of a lock, was signed in July 1851; and Mr Hobbs began operations on the 24th. For sixteen days, spreading over a period of a month, he shut himself in the room, trying and testing the numerous bits of iron and steel that were to enable him to open the lock; the hours thus employed were fifty-one in number, averaging rather more than three on each of the days engaged. On the 23d of August Mr Hobbs exhibited the padlock *open*, in presence of Dr Black, Professor Cowper, Mr Edward Bramah, and Mr Bazalgette. In presence of two of these gentlemen, he then both locked and unlocked it, by means of the implements which he had constructed, without ever having once seen the key. On the 29th he again locked and unlocked it, under the scrutiny of all the members of the committee. On the 30th the proper key was unsealed, and the lock opened and shut with it in the usual way: thus shewing that the delicate mechanism of the lock had not been injured. Mr Hobbs then produced the instruments which he used. The makers of the lock took exception to some of the proceedings, as not being in accordance with the terms of the challenge; but the arbitrators were unanimous in their decision that Mr Hobbs had fairly achieved his task. The two hundred guineas were paid. Of the stormy controversy that arose among the lock-makers, we have not here to speak: suffice it to say, that the lock which was thus picked was one which Joseph Bramah had made forty years earlier. All the intricate details on which the lock-picker was engaged, were contained within a small brass barrel about two inches long.

THE FORTUNE THEATRE.

'1621, Dec. 9, Md.—This night att 12 of the clock the Fortune was burnt.' Such is the brief account given by Alleyn, in his diary, of the destruction of his theatre after an existence of twenty-one years. In two hours the building was burned to the ground, and all its contents destroyed.

The Fortune stood on the east of Golding (now Golden) Lane, Barbican, and was built in the year 1599 for Alleyn and his partner Henslowe, by Peter Streete, citizen and carpenter. The contract for its erection has been preserved, and we find it therein stipulated that the frame of the house was to be set square, and contain fourscore feet 'every way square' without, and fifty feet square within. The foundation, reaching a foot above the ground, was of brick, the building itself being constructed of timber, lath, and plaster. It consisted of three stories; the lowest, twelve, the second, eleven, and the upper one, nine feet in height; with four convenient divisions for 'gentlemen's rooms' and 'twopenny rooms.'* The stage was forty-three feet wide, and projected into the middle of the yard—the open space where the groundlings congregated. The theatre was covered with tiles, instead of being thatched like the Globe, and the supports of the rooms or galleries were wrought like pilasters, and surmounted by carved satyrs. Streete contracted to do all the work, except the painting, for £440, but the entire cost was considerably more. Alleyn's pocket-book contains the following memorandum, made in 1610:

'What the Fortune cost me in November 1599:

First for the lease to Brews, . .	£240
Then for building the playhowse, .	520
For other private buildings of myne own,	120
So it hath cost me in all for the leas, .	£880

Bought the inheritance of the land of the Gills of the Isle of Man within the Fortune, and all the howses in Wight Cross Street, June 1610, for the sum of £340.

Bought John Garret's leas in reversion from the Gills for twenty-one years, for £100, so in all it cost me £1320.

Blessed be the Lord God Everlasting.'

While the Fortune was in course of erection, a complaint was laid by sundry persons against 'building of the new theatre,' which led to an order in council limiting the theatres to be allowed to the Globe on the Surrey side, and the Fortune on the Middlesex side of the river—the latter being licensed, contingent on the Curtain Theatre, in Shoreditch, being pulled down or applied to other uses. The performances were only to take place twice a week; and the house was on no account to be opened on Sundays, during Lent, or 'at such time as any extraordinary sickness shall appear in or about the city.'

In May 1601, the 'Admiral's servants' were transferred from the Curtain to Alleyn's new house, where they appear to have prospered. After it was burned down, it was rebuilt with brick, and the shape altered from square to round; and, in 1633, Prynne speaks of it as lately re-edified and enlarged. When Alleyn founded Dulwich College (the charity from which his own profession have been so strangely excluded), the Fortune formed part of its endowment, and the funds of the college suffered greatly when the theatre was closed during the Civil War. In 1649,

* The gentlemen's rooms are represented by our modern boxes, and the twopenny rooms by our gallery—taking their name from the charge for admission—

'I'll go to the Bull or Fortune, and there see
A play for twopence, and a jig to boot.'

Goffe's *Careless Shepherdess*, 1656.

some Puritan soldiers destroyed the interior of the house; and the trustees of the college finding it hopeless to expect any rent from the lessees, took the theatre into their own hands. A few years later, they determined to get rid of it altogether, and inserted an advertisement in the *Mercurius Politicus* of February 14, 1661, to the following effect: 'The Fortune Playhouse, situate between White Cross Street and Golding Lane, in the parish of St Giles, Cripplegate, with the ground belonging, is to be let to be built upon; where twenty-three tenements may be erected, with

HOUSE OCCUPYING THE SITE OF THE FORTUNE THEATRE, GOLDEN LANE, IN 1790.

gardens, and a street may be cut through for the better accommodation of the buildings.' From this, it may be judged that the theatre occupied considerable space. There are no signs of any gardens now, the site of the theatre is marked by a plaster-fronted building bearing the royal arms, represented in the accompanying engraving; and the memory of the once popular playhouse is preserved in the adjacent thoroughfare called Playhouse Yard.

DECEMBER 10.

St Eulalia, virgin and martyr, about 304. St Melchiades, pope, 314.

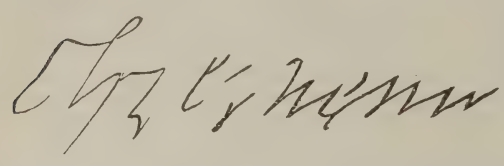
Born.—Thomas Holcroft, dramatist and translator, 1745, *London;* General Sir William Fenwick Williams, hero of Kars, 1800, *Nova Scotia.*

Died.—Llewellyn, Prince of Wales, killed, 1282; Edmund Gunter, mathematician, 1626; Jean Joseph Sue, eminent physician, 1792, *Paris;* Casimir Delavigne, French dramatist, 1843, *Lyon;* William Empson, editor of *Edinburgh Review*, 1852, *Haileybury;* Tommaso Grossi, Italian poet, 1853, *Florence;* Dr Southwood Smith, author of works on sanitary reform, 1861, *Florence.*

LLEWELLYN, THE LAST NATIVE PRINCE OF WALES.

The title of 'Prince of Wales' has entirely changed its character. Originally, it was applied to a native sovereign. In the ninth century, when the Danes and Saxons had completely broken the power of the Britons in England, Wales was still in the hands of the *Cymri*, a branch of the same stock as the Britons; and it was governed by three brothers, with the dignity of princes—the prince of North Wales having precedence of the others in rank. It was, however, a very stormy and unsettled rule; for we find that, during the next three centuries, the princes of Wales were often obliged to pay tribute to the Saxon, Danish, and Norman rulers of England; and, moreover, the princes were frequently quarrelling among themselves, overstepping each other's landmarks, and breaking agreements without much scruple. At length one prince, Llewellyn, rose superior to the rest, and was chosen by the general voice of the people sovereign of Wales in 1246. The border district between the two countries, known as the *Marches*, was the scene of almost incessant conflicts between the English and Welsh, let who might be king in the one country, or prince in the other. There is a passage in Fuller, illustrative of the hardships endured by the English soldiers during a raid across the Marches nearly to the western part of the principality: 'I am much affected with the ingenuity [ingenuousness] of an English nobleman, who, following the camp of King Henry III. in these parts (Caernarvonshire), wrote home to his friends, about the end of September 1245, the naked truth, indeed, as followeth: "We lie in our tents, watching, fasting, praying, and freezing. We watch, for fear of the Welshmen, who are wont to invade us in the night; we fast,

for want of meat, for the half-penny loaf is worth five pence; we pray to God to send us home speedily; and we freeze for want of winter garments, having nothing but thin linen between us and the wind.'" On the other hand, the Welsh were always ready to take advantage of any commotions across the border. In 1268, Llewellyn was compelled to accept terms which Henry III. imposed upon him, and which rendered him little else than a feudal vassal to the king of England. When Henry died, and Edward I. became king, Llewellyn was summoned to London, to render homage to the new monarch. The angry blood of the Welshman chafed at this humiliation; but he yielded—more especially as Edward held in his power the daughter of Simon de Montfort, Earl of Leicester, to whom Llewellyn was betrothed, and he could only obtain her by coming to London. In 1278, Llewellyn and the lady were married, the king himself giving away the bride. The Prince and Princess of Wales went to their future home in the principality. Their happiness, however, was short-lived: the princess died in giving birth to a daughter, who afterwards ended her days as a nun in a Lincolnshire convent. Peace did not long endure between Llewellyn and Edward. A desolating war broke out, marked by much barbarity on both sides. Llewellyn's friends fell away one by one, and made terms with the powerful king of England. The year 1282 saw the close of the scene. While some of his adherents were combating the Earl of Gloucester and Sir Edmund Mortimer in South Wales, Llewellyn himself was fighting in the north. Leaving the bulk of his soldiers, and coming almost unattended to Builth, he fell into an ambush, which cost him his life. Dr Powel, in 1584, translated into English an account of the scene, written by Caradoc of Llanfargan: 'The prince departed from his men, and went to the valley with his squire alone, to talk with certain lords of the country, who had promised to meet him there. Then some of his men, seeing his enemies come down from the hill, kept the bridge called the Pont Orewyn, and defended the passage manfully, till one declared to the Englishmen where a ford was, a little beneath, through the which they sent a number of their men with Elias Walwyn, who suddenly fell upon them that defended the bridge, in their backs, and put them to flight. The prince's esquire told the prince, as he stood secretly abiding the coming of such as promised to meet him in a little grove, that he heard a great noise and cry at the bridge; and the prince asked whether his men had taken the bridge, and he said, "Yes." "Then," said the prince, "I pass not if all the power of England were on the other side." But suddenly, behold the horsemen about the grove; and as he would have escaped to his men, they pursued him so hard that one Adam Francton ran him through with a staff, being unarmed, and knew him not. And his men being but a few, stood and fought boldly, looking for their prince, till the Englishmen, by force of archers, mixed with the horsemen, won the hill, and put them to flight. And as they returned, Francton went to despoil him whom he had slain; and when he saw his face, he knew him very well, and stroke off his head, and sent it to the king at the abbey of Conway, who received it with great joy, and caused it to be set upon one of the highest turrets of the Tower of London.'



Thus closed the career of Llewellyn, the last native sovereign of Wales. Edward I. speedily brought the whole principality under his sway, and Wales has ever since been closely allied to England. Edward's queen gave birth to a son in Caernarvon Castle; and this son, while yet a child, was formally instituted Prince of Wales. It thenceforward became a custom, departed from in only a few instances, to give this dignity to the eldest son, or heir-apparent of the English king or queen. The title is not actually inherited; it is conferred by special creation and investiture, generally soon after the birth of the prince to whom it relates. It is said, by an old tradition, that Edward I., to gratify the national feelings of the Welsh people, promised to give them a prince without blemish on his honour, Welsh by birth, and one who could not speak a word of English. He then, in order to fulfil his promise literally, sent Queen Eleanor to be confined at Caernarvon Castle, and the infant born there had, of course, all the three characteristics. Be this tradition true or false, the later sovereign cared very little whether the Princes of Wales were acceptable or not to the people of the principality. In the mutations of various dynasties, the Prince of Wales was not, in every case, the eldest son and heir-apparent; and in two instances, there was a princess without a prince. Henry VIII. gave this title to his two daughters, Mary and Elizabeth, in succession; but the general rule has been as above stated. It may be useful here to state, in chronological order, the eighteen Princes of Wales, from the time of Edward I. to that of Victoria. We shall construct the list from details given in Dr Doran's *Book of the Princes of Wales*. Each prince has a kind of surname, according to the place where he was born. (1.) *Edward of Caernarvon*, son of Edward I., born 1284; died, 1327, as Edward II. (2.) *Edward of Windsor*, son of Edward II., born 1312; died, 1377, as Edward III. (3.) *Edward of Woodstock*, son of Edward III., born 1330; known as Edward the Black Prince, and died 1376. (4.) *Richard of Bordeaux*, son of Edward the Black Prince, born 1367; died, 1399, as Richard II. (5.) *Henry of Monmouth*, son of Henry IV., born 1387; died, 1422, as Henry V.; (6.) *Edward of Westminster*, son of Henry VI., born 1453; died 1471. (7.) *Edward of the Sanctuary*, son of Edward IV., born 1470; died, 1483, as Edward V. (8.) *Edward of Middleham*, son of Richard III., born 1474; died 1484. (9.) *Arthur of Winchester*, eldest son of Henry VII., born 1486; died 1502. (10.) *Henry of Greenwich*, second son of Henry VII., born 1491; died, 1547, as Henry VIII. (11.) *Henry of Stirling*, eldest son of James I., born 1594; died 1612. (12.) *Charles of Dunfermline*, second son of James I., born 1600; died, 1649, as Charles I. (13.) *Charles of St James's*, son of Charles I., born 1630; died, 1685, as Charles II. (14.) *George Augustus of Hanover*, son of George I., born 1683; died, 1760, as George II. (15.) *Frederick Louis of Hanover*, son of George II., born 1707; died 1751. (16.) *George William Frederick of Norfolk House*, son of the last named, born 1738; died, 1820, as George III. (17.) *George Augustus Frederick of St James's*, son of George III., born 1762; died, 1830, as George IV. (18.) *Albert Edward*, son of Queen Victoria, born 1841; and

came of age, 1862. Besides the above, there were two wanderers, who were regarded in many parts of Europe as Princes of Wales, and certainly were so in right of birth. These were the son and grandson of the fugitive James II.—*James Francis Edward*, born 1688, and known afterwards as the 'Old Pretender,' died 1765; and his son, *Charles Edward*, born 1720, and for a long period known as the 'Young Pretender,' died 1788.

FACSIMILES OF INEDITED AUTOGRAPHS:

CHRISTIANA OR 'CHRESTIENN,' DUCHESS OF LORRAINE.

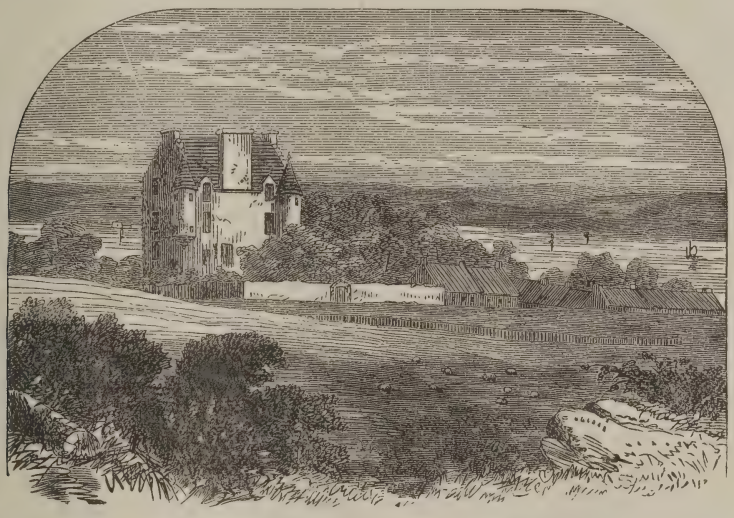
This princess was the daughter of Christiern II., of Denmark, surnamed, from his atrocities, the Nero of the North, and Isabel of Austria. She was a woman of keen intellect and great ability.

Henry VIII. of England sought her hand, but Christiana repulsed him, with the sarcastic observation, that 'had she possessed two heads, *one* should have been at his grace's service.' She died December 10, 1590.

THE MISSISSIPPI SCHEME.

On the 10th of December 1720, John Law, late comptroller-general of the finances of France, retreated from Paris to his country-seat of Guermande, about fifteen miles distant from the metropolis, and in a few days afterwards quitted the kingdom, never again to return. A few months before, he had enjoyed a position and consideration only comparable with that of a crowned monarch—if, indeed, any sovereign ever received such eager and importunate homage, as for a time was paid to the able and adventurous Scotchman.

The huge undertaking projected by Law, and known by the designation of the Mississippi Scheme, was perhaps one of the grandest and most comprehensive ever conceived. It not only included within its sphere of operations the whole colonial traffic of France, but likewise the superintendence of the Mint, and the management of the entire revenues of the kingdom. The province of Louisiana, in North America, then a French possession, was made over by the crown to the 'Company of the West,' as the association was termed, and the most sanguine anticipations were entertained of the wealth to be realised from this territory, which was reported, amid other resources, to possess gold-mines of mysterious value. In connection with the same project, a bank, established by law, under the sanction of the Duke of Orleans, then regent of France, promised to recruit permanently the impoverished resources of the kingdom, and diffuse over the land, by an unlimited issue of paper-money, a perennial stream of wealth.



For a time these sanguine anticipations seemed to be fully realised. Prosperity and wealth to a hitherto unheard of extent prevailed throughout France, and Law was, for a short period, the idol of the nation, which regarded him as its good genius and deliverer. Immense fortunes were realised by speculations in Mississippi stock, the price of which rose from 500 livres, the original cost, to upwards of 10,000 livres by the time that the mania attained its zenith. A perfect frenzy seemed to take possession of the public mind, and to meet the ever-increasing demand, new allotments of stock were made, and still the supply was inadequate. Law's house in the Rue Quinquempoix, in Paris, was beset from morning to night by eager applicants, who soon by their numbers blocked up the street itself and rendered it impassable. All ranks and conditions of men—peers, prelates, citizens, and mechanics, the learned and the unlearned, the plebeian and the aristocrat—flocked to this temple of Plutus. Even ladies of the highest rank turned stockjobbers, and vied with the rougher sex in eagerness of competition. So utterly inadequate did the establishment in the Rue Quinquempoix prove for the transaction of business, that Law transferred his residence to the Place Vendôme, where the tumult and noise occasioned by the crowd of speculators proved such a nuisance, and impeded so seriously the procedure in the chancellor's court in that quarter, that the monarch of stockjobbers found himself obliged again to shift his camp. He, accordingly, purchased from the Prince of Carignan, at an enormous price, the Hôtel de Soissons, in which mansion, and the beautiful and extensive gardens attached, he held his levees, and allotted the precious stock to an ever-increasing and enthusiastic crowd of clients.

With such demands on his time and resources, it became absolutely impossible for him to gratify one tithe of the applicants for shares, and the most ludicrous stories are told of the stratagems employed to gain an audience of the great financier. One lady made her coachman overturn her carriage when she saw Mr Law approaching, and the *ruse* succeeded, as the gallantry of the latter led him instantly to proffer his assistance, and invite the distressed fair one into his mansion, where, after a little explanation, her name was entered in his books as a purchaser of stock. Another female device to procure an interview with Law, by raising an alarm of fire near a house where he was at dinner, was not so fortunate, as the subject of the trick suspecting the motive, hastened off in another direction, when he saw the lady rushing into the house, which he and his friends had emerged from on the cry of fire being raised.

The terrible crash at last came. The amount of notes issued from Law's bank more than doubled all the specie circulating in the country, and great difficulties were experienced from the scarcity of the latter, which began both to be hoarded up and sent out of the country in large quantities. Severe and tyrannical edicts were promulgated, threatening heavy penalties for having in possession more than 500 livres or £20 in specie; but this ukase only increased the embarrassment and dissatisfaction of the nation. Then came an ordinance reducing gradually the value of the paper currency to one half, followed by the stoppage of cash-payments at the bank; and at last the whole privileges of the Mississippi Company were withdrawn, and the notes of the bank declared to be of no value after the

1st of November 1720. Law had by this time lost all influence in the councils of government, his life was in danger from an infuriated and disappointed people, and he was therefore fain to avail himself of the permission of the regent (who appears still to have cherished a regard for him) to retire from the scene of his splendour and disgrace. After wandering for a time through various countries, he proceeded to England, where he resided for several years. In 1725, he returned again to the continent, fixed his residence at Venice, and died there almost in poverty, on 21st March 1729.

Such was the end of the career of the famous John Law, who, of all men, has an undoubted title to be ranked as a prince of adventurers. In him the dubious reputation formerly enjoyed by Scotland, of sending forth such characters, was fully maintained. He was descended from an ancient family in Fife; but his father, William Law, in the exercise of the business of a goldsmith and banker in Edinburgh, gained a considerable fortune, enabling him to purchase the estate of Lauriston, in the parish of Cramond, which was inherited by his eldest son John. The ancient mansion of Lauriston Castle on this property, beautifully situated near the Firth of Forth, is believed to have been erected in the end of the sixteenth century, by Sir Archibald Napier of Merchiston, father of the celebrated inventor of logarithms, and then proprietor of Lauriston. It is represented in the accompanying engraving. In recent years, the building was greatly enlarged and embellished by

LAURISTON CASTLE, AS IT APPEARED AT THE CLOSE OF THE LAST CENTURY.

Andrew Rutherfurd, Lord Advocate for Scotland, and subsequently one of the judges of the Court of Session. Law is said to have retained throughout a strong affection for his patrimonial property, and a story in reference to this is told of a visit paid to him by the Duke of Argyle in Paris, at the time when his splendour and influence were at the highest. As an old friend, the duke was admitted directly to Mr Law, whom he found busily engaged in writing. The duke entertained no doubt that the great financier was busied with a subject of the highest importance, as crowds of the most distinguished individuals were waiting in the anterooms for an audience. Great was his grace's astonishment when he learned that Mr Law was merely writing to his gardener at Lauriston regarding the planting of cabbages at a particular spot!

Of Law's general character, it is not possible to speak with great commendation. He appears to have been through life a libertine and gambler, and in the latter capacity he supported himself for many years, both before and after his brief and dazzling career as a financier and political economist. In his youth, he had served an apprenticeship to monetary science under his father, and a course of travel and study, aided by a vigorous and inventive, but apparently ill-regulated intellect, enabled him subsequently to mature the stupendous scheme which we have above detailed, and succeed in indoctrinating with his views the regent of France. His first absence from Great Britain was involuntary, and occasioned by his killing, in a duel, the celebrated Beau Wilson (see following article), and thus being obliged to shelter himself by flight from the vengeance of the law. He then commenced a peregrination over the continent, and after a long course of rambling and adventure, settled down at Paris about the period of death of Louis XIV. A pardon for the death of Wilson was sent over to him from England in 1719.

BEAU WILSON.

Towards the end of the reign of William III., London society was puzzled by the appearance of a young aspirant to fashionable fame, who soon became the talk of the town from the style in which he lived. His house was furnished in the most expensive manner; his dress was as costly as the most extravagant dandy could desire, or the richest noble imitate; his hunters, hacks, and racers were the best procurable for money; and he kept the first of tables, dispensing hospitality with a liberal spirit. And all this was done

without any ostensible means. All that was known of him was, that his name was Edward Wilson, and that he was the fifth son of Thomas Wilson, Esq., of Keythorpe, Leicestershire, an impoverished gentleman. Beau Wilson, as he was called, is described by Evelyn as a very young gentleman, 'civil and good-natured, but of no great force of understanding,' and 'very sober and of good fame.' He redeemed his father's estate, and portioned off his sisters. When advised by a friend to invest some of his money while he could, he replied, that however long his life might last, he should always be able to maintain himself in the same manner, and therefore had no need to take care for the future.

All attempts to discover his secret were vain; in his most careless hours of amusement he kept a strict guard over his tongue, and left the scandalous world to conjecture what it pleased. Some good-natured people said he had robbed the Holland mail of a quantity of jewelry, an exploit for which another man had suffered death. Others said he was supplied by the Jews, for what purpose they did not care to say. It was plain he did not depend upon the gaming-table, for he never played but for small sums—and he was to be found at all times, so it was not to be wondered at that it came to be believed that he had discovered the philosopher's stone.

How long he might have pursued his mysterious career, it is impossible to say: it was cut short by another remarkable man on the 9th of April 1694. On that day, Wilson and a friend, one Captain Wightman, were at the 'Fountain Inn,' in the Strand, in company with the celebrated John Law (see preceding article), who was then a man about town. Law left them, and the captain and Wilson took coach to Bloomsbury Square. Here Wilson alighted, and Law reappeared on the scene; as soon as they met, both drew their swords, and after one pass the Beau fell wounded in the stomach, and died without speaking a single word. Law was arrested, and tried at the Old Bailey for murder. The cause of the quarrel did not come out, but there is little doubt that a woman was in the case. Evelyn says: 'The quarrel arose from his (Wilson's) taking away his own sister from lodging in a house where this Law had a mistress, which the mistress of the house thinking a disparagement to it, and losing by it, instigated Law to this duel.' Law declared the meeting was accidental, but some threatening letters from him to Wilson were produced on the trial, and the jury believing that the duel was unfairly conducted, found him guilty of murder, and he was condemned to death. The sentence was commuted to a fine, on the ground of the offence amounting only to manslaughter; but Wilson's brother appealed against this, and while the case was pending a hearing, Law contrived to escape from the King's Bench, and reached the continent in safety, notwithstanding a reward offered for his apprehension. He ultimately received a pardon in 1719.

Those who expected Wilson's death would clear up the mystery attached to his life, were disappointed. He left only a few pounds behind him, and not a scrap of evidence to enlighten public curiosity as to the origin of his mysterious resources.

While Law was in exile, an anonymous work appeared which professed to solve the riddle. This was *The Unknown Lady's Pacquet of Letters*, published with the Countess of Dunois' *Memoirs of the Court of England* (1708), the author, or authoress of which, pretends to have derived her information from an elderly gentlewoman, 'who had been a favourite in a late reign of the then she-favourite, but since abandoned by her.' According to her account, the Duchess of Orkney (William III.'s mistress) accidentally met Wilson in St James's Park, incontinently fell in love with him, and took him under her protection. The royal favourite was no niggard to her lover, but supplied him with funds to enable him to shine in the best society, he undertaking to keep faithful to her, and promising not to attempt to discover her identity. After a time, she grew weary of her expensive toy, and alarmed lest his curiosity should overpower his discretion, and bring her to ruin. This fear was not lessened by his accidental discovery of her secret. She broke off the connection, but assured him that he should never want for money, and with this arrangement he was forced to be content. The 'elderly gentlewoman,' however, does not leave matters here, but brings a terrible charge against her quondam patroness. She says, that having one evening, by her mistress' orders, conducted a stranger to her apartment, she took the liberty of playing eaves-dropper, and heard the duchess open her strong-box and say to the visitor: 'Take this, and your work done, depend upon another thousand and my favour for ever!' Soon afterwards poor Wilson met his death. The confidante went to Law's trial, and was horrified to recognise in the prisoner at the bar the very man to whom her mistress addressed those mysterious words. Law's pardon she attributes to the lady's influence with the king, and his escape to the free use of her gold with his jailers. Whether this story was a pure invention, or whether it was founded upon fact, it is impossible to determine. Beau Wilson's life and death must remain among unsolved mysteries.

DECEMBER 11.

Saints Fuscian, Victoricus, and Gentian, martyrs, about 287. St Damasus, pope and confessor, 384. St Daniel the Stylite, confessor, about 494.

Born.—Dr William Cullen, illustrious professor of medicine, 1712, *Hamilton;* Paul Joseph Barthez, physiologist, 1734, *Montpellier;* Charles Wesley, musician, 1757, *Bristol.*

Died.—Michael VIII. Palæologus, Greek emperor, 1282; Louis, Prince of Condé (the Great Condé), 1686, *Fontainebleau;* Sir Roger l'Estrange, translator of classic authors, 1704; Charles XII. of Sweden, killed at Frederickshall, 1718; Theodore Neuhoff, ex-king of Corsica, 1756, *London.*

PRECOCIOUS MUSICIANS.

There are several unquestionable examples of an almost instinctive musical genius manifesting itself in early infancy. Probably the most remarkable of these, is the instance of the two brothers Wesley, occurring as it did in one family. Charles Wesley, son of a well-known clergyman of the same name,

and nephew of the better known founder of Methodism, was born at Bristol on the 11th of December 1757. Nearly from his birth, his mother used to quiet and amuse the infant with her harpsichord. Even before he could speak, his musical ear was so nice, that he would not permit his mother to play with one hand only, but would take the other and place it on the keys. Soon attempting to play himself, his mother used to tie him in a chair at the harpsichord, where he would amuse himself for hours together. When only two years and nine months old, he astonished his parents by playing a tune in correct time. Soon afterwards, he could play any air he chanced to hear, with a true bass added, as if spontaneously, without study or hesitation. He then seemed to have little respect or reverence for any one not a musician. When asked to play to a stranger, he would inquire, in his childish prattle, 'Is he a musicker?' and, if the answer were in the affirmative, would run to the instrument with ready eagerness.

Samuel Wesley was born in 1766, and evinced a talent for music almost as early as his elder brother Charles. He could play a tune when but two years and eleven months old, and could put a correct bass to airs long before he had acquired a knowledge of musical notation. He constantly attended his brother, playing, or rather making believe to play, on a chair or table, while Charles played the harpsichord. With the advantage of such an example, he soon outstripped his brother. He learned to read from the words of songs in music-books, and could compose music long before he could write. At the age of eight years, he surprised the musical world by an oratorio, entirely his own composition, which he entitled *Ruth*.

As not unfrequently happens in cases of premature development, the flattering promises of youth were not fulfilled, as far as regards Charles Wesley, at least, in riper years. He soon became an excellent player on the organ and harpsichord, at a time, it must be remembered, when the art of playing on keyed instruments, far behind what it is at the present day, was only advancing towards the perfection which, comparatively speaking, it may be said to have now attained. In early life, Charles was brought under the notice of George III., and often had the honour of entertaining the royal leisure by performances of Handel's music. Of great moral worth, amiable qualities, and simplicity of manners, Charles Wesley made many friends in his day, though as a musician, were it not for his precocious exhibition of talent, he would be now quite forgotten. After attaining a certain degree of excellence as a performer, he remained stationary; none of his compositions ever soared above mediocrity, and the height of his eminence was the appointment of organist to the fashionable church of St George's, Hanover Square.

Samuel Wesley attained much greater eminence, both in point of musical and general acquirement. He was possessed by an absorbing passion for music, but this did not prevent him from becoming, in addition, a good Greek, Latin, and Italian scholar. Sheridan said of him: 'I am no judge of Mr Wesley's musical abilities, but I will venture to assert that his intellectual powers and education would enable him to distinguish himself in any walk of life.' These brilliant prospects were clouded by an unhappy misfortune. Mr Wesley, one night, accidentally fell into an excavation for building purposes, that had shamefully been left unguarded, in one of the London streets. The effects of this fall depressed his mental energies; for seven years he remained in a low despondent state of mind, refusing the solace even of his beloved art. He subsequently experienced several recoveries and relapses, before being finally relieved by death. His musical compositions were generally of too elevated a character to please the public at large. He composed a grand mass for Pope Pius VI., for which the pontiff returned thanks in a flattering Latin letter; and, as if to make the *amende honorable* to Protestantism, Wesley composed thereafter a complete cathedral service for the Church of England, on which his fame as a musician now principally rests.

Mozart, already noticed in a previous article, was another striking instance of precocious musical genius. An exception also must be admitted in his case to the general comparison between juvenile prodigies, and those trees, that, blossoming out of season, seldom produce good fruit. Mozart's father was an eminent musician, and his sister an accomplished player on the harpsichord, so it may almost be said, that he and Samuel Wesley were nursed on music; their early attentions stimulated, and their ears soothed with harmony. There is an instance, however, of another precocious musician, who never possessed any such advantages.

William Crotch was born at Norwich, in July 1775. His father, by trade a carpenter, though he had no knowledge of music, was fond of the art, and with great ingenuity succeeded in building an organ, on which he learned to play *God save the King*, and a few other common tunes. About Christmas 1776, when the infant Crotch was not more than a year and a half old, he discovered a great inclination for music, by leaving even his food to attend to it, when the organ was playing; and six months afterwards, he would touch the key-note of his favourite tunes, to induce his father to play them. Soon after this, as he was still unable to name the tunes, he would play the two or three first notes of them, when he thought the key-note did not sufficiently express the one he wished to be played. It seems to have been owing to his having heard the superior performance of a Mrs Lulman, a lady of musical attainments, who tried his father's organ, and who played and sang to her own accompaniment, that young Crotch first attempted to play a tune himself. The same evening, when being carried through the room where the organ was, on his way to bed, the infant screamed and struggled violently to go to the instrument; and, on his wish being complied with, he eagerly beat down the keys with his little fist. The next day, being left with his brother, a youth of fourteen, in the same room, he persuaded the latter to blow the bellows, whilst he himself struck the keys of the organ. At first, he played at random, but presently he produced, with one hand, so much of *God save the King* as to awaken the curiosity of his father, then in his workshop, who came into the room to know who it was that played the instrument. When he found that it was his infant son, he could scarcely credit his ears and eyes. At this time young Crotch, as proved by his baptismal register, was no more than two years and three

weeks old. Next day, he made himself master of the treble of the second part, and the day after he attempted the bass, which he performed correctly in every particular, excepting the note immediately before the close; this being an octave below the preceding sound, was beyond the reach of his little hand. After the lapse of a few more months, he mastered both the treble and bass of 'Hope, thou nurse of young desire,' the well-known song from *Love in a Village*, and ere long, from this period, he could extemporise the bass to any melody, whether performed by himself or others.

The infantine attainments of Crotch could scarcely be described without entering into technical details; but, unlike many infant prodigies, he did much to fulfil the promise of his earlier years, and became thoroughly versed in musical art, and a skilful composer. In 1797, when in his twenty-second year, he was appointed Professor of Music in the university of Oxford, and in 1822 principal of the Academy of Music. He was the author of many pieces for the organ and pianoforte, including the opera *Palestine;* he also issued *Elements of Musical Composition and Thorough-bass;* and *Specimens of various styles of Music of all Ages.* In addition to his great musical talent, Dr Crotch also excelled as a painter, many of his pictures being above mediocrity. That he was not better known may be set down to his very retiring habits.

SIR ROGER L'ESTRANGE.

Roger L'Estrange, born in 1611, was the youngest son of a Norfolk baronet and stanch Royalist. He was educated at Cambridge, and went with Charles I. to the North in 1639. Faithful to his family principles, he obtained from the king a commission for taking the town of Lynn; and falling into the hands of the Parliamentary army, he was arrested, tried, and condemned to be hanged as a spy. Petitioning the Lords, he was reprieved for fourteen days, and the respite being afterwards prolonged, he spent a dreary four years in the prison of Newgate, in the daily expectation of being executed. He then contrived to escape to the continent, where he remained to the dissolution of the Long Parliament, when he adopted the bold expedient of returning to England, and appealing to Cromwell in person. The appeal was successful; he received an indemnity, and was discharged on giving security. His enemies afterwards alleged that he had served Cromwell as a musician, giving him the nickname of 'Oliver's fiddler.' L'Estrange's explanation of this affair affords us a curious peep at the manners of the times. He says, that while the question of indemnity was pending, he one day walked in St James's Park. Hearing an organ touched in a low tone, in the house of a Mr Hickson, he went in, and found a company of five or six persons, about to practise music. They immediately requested him to take a viol and bear a part, which he did; and, soon after, Cromwell walked in, stayed, and listened a while to the music, and then departed, without saying a word to any one.

At the Restoration, L'Estrange finding himself, with many other royalists, forgotten, published his *Memento*, which was the means of obtaining for him the appointment of licenser of the press. He subsequently started and conducted more than one newspaper, and published a great number of political tracts. From James II. he received the honour of knighthood, 'in consideration of his eminent services and unshaken loyalty to the crown;' and, about the same time, he obtained a seat in parliament. At the Revolution, he was deprived of the commission of the peace, and after seeing so many changes of government, wisely retired into private life. Queen Mary condescended to perpetrate a stupid anagram on his name; but a distich, really shewing smartness, was written by one Lee, who by years was so altered as scarcely to be recognised by his old friend Sir Roger:

'Faces may alter, but names cannot change,
I am *strange Lee* altered, you are still *Lee strange.*'

Besides his numerous political tracts, Sir Roger published many translations from the Greek, Latin, and Spanish. His translations, written in a semi-slang style, are full of curious old-English colloquialisms. It has been alleged that he thus aided in corrupting the English language, but a contemporary writer says, 'those who consider the number and greatness of his books will admire he should ever write so many; and those who have read them, considering the style and method they are writ in, will more admire he should write so many.' Dr Johnson was greatly indebted to L'Estrange, as is evidenced from the numerous quotations given in his dictionary. Sir Roger lived to the good old age of eighty-seven, dying on the 11th of December 1704, and his epitaph is still to be seen on one of the pillars in his parish church of St Giles in the Fields.

THEODORE, KING OF CORSICA.

Monarchs have occasionally been deposed, put to death, and subjected to various indignities, but we question much whether any individual, who had once exercised sovereign sway, ever presented so pitiable a spectacle as Theodore von Neuhoff, ex-king of Corsica. His memory is chiefly preserved by the sympathy which his misfortunes excited in England in the last century, and the exertions of Horace Walpole and other eminent personages on his behalf.

This temporary holder of regal power was the son of a Westphalian gentleman of good family, who had held a commission in the French army. His son, who was born in Metz about 1696, entered the same service, but appears afterwards to have quitted it, and rambled, as an adventurer, over the greater part of Europe. At last he was thrown into prison for debt at Leghorn, and on emerging from this confinement, he made the acquaintance of several leaders among the Corsican insurgents, then endeavouring to effect the independence of their country by shaking off the yoke of Genoa. Neuhoff accepted their proffer of the sovereignty of the country in return for assistance to be furnished by himself, and he accordingly, in March 1736, made his appearance on the Corsican coast with a supply of ammunition and money which he had succeeded in obtaining from the Bey of Tunis, by holding out to the latter the promise of an exclusive trade with Corsica, and permission to have a station there for his pirate ships. Eagerly welcomed at first by the Corsicans, Neuhoff was, in the following month of April, elected king by their general assembly, and, at the same time, swore to observe the tenor of a constitution which was then proclaimed. For some months he exercised all the

acts of an independent sovereign, coining money, distributing patents of nobility, and instituting an order of knighthood. He is stated also, with the view of shewing an example of firmness, to have put to death three persons belonging to distinguished families. Among other military enterprises, he undertook successfully the capture of Porto Vecchio from the Genoese, but was foiled in an attempt on Bastia. His popularity ere long diminished, and finding his position both an arduous and insecure one, he made arrangements for conducting the government in his absence, and quitted the island with the intention, as he asserted, of obtaining fresh succour. But his sovereignty of Corsica was never to be resumed. After visiting successively Italy, France, and Holland, he was at last arrested for debt at Amsterdam. Some Jews and foreign merchants, settled in that city, procured his release, and also furnished him with means to equip an armament for the recovery of his dominions. With this he appeared off Corsica in 1738, but was unable to land in consequence of the depression of the insurgents' cause through the assistance furnished to the Genoese by the French. A similar unsuccessful attempt was made by him in 1742.

Neuhoff now proceeded to London, where he met with great kindness and sympathy as an exiled monarch. Additional mishaps, however, befell him here, and he was obliged, in consequence of money which he had borrowed, to endure an imprisonment of some years' duration in the King's Bench Prison. Here, it is said, he used to affect a miserable display of regal state, sitting under a tattered canopy, and receiving visitors with great ceremony. Smollett has introduced a description of him in prison in his novel of *Ferdinand Count Fathom*. At last the exertions of Walpole and others succeeded in raising a sum of money, which enabled Neuhoff to obtain his release from confinement, after making over to his creditors, as an asset, his kingdom of Corsica. The advertisement in the papers of the day announcing the opening of the subscription for the ex-sovereign, was prefixed by the words in which, as is alleged, the great general of Justinian used, in his old age, to solicit alms—'*Date obolum Belisario.*'

Neuhoff did not long survive his liberation, and died in London on 11th December 1756. He was buried in the churchyard of St Ann's, Westminster, where the following epitaph, composed by Horace Walpole, was inscribed on a tablet, with a diadem carved at the summit:

'NEAR THIS PLACE IS INTERRED
THEODORE, KING OF CORSICA,
WHO DIED IN THIS PARISH, DECEMBER 11, 1756,
IMMEDIATELY AFTER LEAVING
THE KING'S BENCH PRISON,
BY THE BENEFIT OF THE ACT OF INSOLVENCY;
IN CONSEQUENCE OF WHICH
HE REGISTERED THE KINGDOM OF CORSICA
FOR THE USE OF HIS CREDITORS.

The grave, great teacher, to a level brings
Heroes and beggars, galley-slaves and kings.
But Theodore this moral learned ere dead:
Fate poured its lessons on his living head,
Bestowed a kingdom, and denied him bread.'

DECEMBER 12.

Saints Epimachus, Alexander, and others, martyrs, 250. St Corentin, bishop and confessor, 5th century. St Columba, abbot in Ireland, 548. St Finian, or Finan, confessor, bishop of Clonard, in Ireland, 6th century. St Cormac, abbot in Ireland. St Valery, abbot, 622. St Colman, abbot in Ireland, 659. St Eadburge, abbess of Menstrey, in Thanet, 751.

Born.—Nicholas Sanson, geographer, 1599, *Abbeville;* Samuel, Viscount Hood, British admiral, 1724, *Butley, Somersetshire;* Dr Erasmus Darwin, poet and physiologist, 1731, *Elston, near Newark;* Sir William Beechey, artist, 1753; Archduchess Maria Louisa, second wife of Napoleon, 1791.

Died.—Darius Nothus, of Persia, 405 B.C.; Henry St John, Viscount Bolingbroke, political and philosophical writer, 1751, *Battersea;* Colley Cibber, dramatist, 1757, *Islington;* Sir Mark Isambard Brunel, engineer of Thames Tunnel, 1849, *London.*

THE TWO EMPRESSES, JOSEPHINE AND MARIA LOUISA.

An historical parallel has sometimes been drawn between Queen Catharine and the Empress Josephine: the one having been divorced by Henry VIII., in order that he might marry Anne Boleyn; and the other divorced by the Emperor Napoleon, in order that he might marry the Archduchess Maria Louisa. But, beyond these points of similarity, the parallel fails. Henry sought to throw a stigma on her of whom he was tired as a wife; Napoleon had political reasons only for what he did. Josephine bowed meekly to her fate; but Catharine felt keenly that she was an injured woman. A little has been said, in a former article (vol. i. p. 731), concerning a prophecy or fortune-teller's story to which Josephine gave credence; but something may be added here relating more nearly to Maria Louisa.

In 1809, Napoleon was approaching the zenith of his power. His conquests had made nearly all the sovereigns of Europe suppliants for his favour. Austria had long held out, but the terrible defeat at Wagram had brought her, too, into subjection. Napoleon's ambition, never satisfied, sought for still more and more of the adjuncts of imperial power. He had married a lady with no royal blood in her veins, and by this lady he had no child to inherit his imperial throne; thus a double reason was afforded to a man of his character for getting rid of his poor wife. And, in addition, the French themselves were uneasy at the future prospects of their country, in the event of the emperor dying without issue. M. Thiers, though a glorifier of Napoleon, does not hide the real character of the line of conduct adopted by him on this occasion. On the 26th of October 1809, Napoleon stated his views to the Chancellor Cambacérès: 'He loved that old companion of his life, Josephine,' says the historian, 'though he was not scrupulously faithful to her, and it wrung his heart to part from her; but, as his popularity declined, he liked to suppose that it was not his fault, but the want of a future, which menaced his glorious throne with premature decay. To consolidate what he felt trembling under his feet, was his engrossing thought; if a new wife were chosen, obtained, placed in the
